DICTIONARY

OF

GREEK AND ROMAN ANTIQUITIES.

EDITED BY WILLIAM SMITH, Ph.D.,

AND ILLUSTRATED BY NUMEROUS ENGRAVINGS ON WOOD.

Third American Edition, Carefully Revised,

AND

CONTAINING NUMEROUS ADDITIONAL ARTICLES RELATIVE TO THE BOTANY, MINERALOGY,
AND ZOOLOGY OF THE ANCIENTS.

BY

CHARLES ANTHON, LL.D.,

PROFESSOR OF THE GREEK AND LATIN LANGUAGES IN COLUMBIA COLLEGE, NEW-YORK, AND
RECTOR OF THE GRAMMAR SCHOOL.

NEW YORK:
HARPER & BROTHERS, PUBLISHERS,
FRANKLIN SQUARE.
1870.

**Entered, according to Act of Congress, in the year one thousand
eight hundred and forty-three, by**

CHARLES ANTHON.

**in the Clerk's Office of the District Court of the Southern District
of New York.**

TO

WILLIAM B. ASTOR, ESQ.,

AN ALUMNUS OF OUR COMMON ALMA MATER, AND A STRIKING PROOF HOW GREATLY
AN UNCEASING ATTACHMENT TO CLASSICAL STUDIES TENDS TO ELEVATE
AND ADORN THE CHARACTER OF THE AMERICAN MERCHANT,

This Work is Inscribed,

BY

HIS FRIEND AND WELL-WISHER,

C. A

P R E F A C E

TO THE AMERICAN EDITION.

THE merits of the present work are so fully set forth in the preface of the London editor as to render any additional remarks on this subject almost unnecessary. The student has here a guide to an accurate knowledge of Greek and Roman Antiquities, before which the meager compilations of Potter and Adams must sink into utter insignificance; and he is put in possession of a vast body of information in a most interesting department of study, which it might otherwise have cost him the labour of a whole life to accumulate. All the most recent and valuable discoveries of the German scholars are here placed within his reach, and there is nothing to prevent their speculations becoming as familiar to him as household words. The work is, in truth, a German one in an English garb, and will be found to contain all that fineness and accuracy of detail for which the scholars of Germany have so long and justly been celebrated. It is equally intended, also, for the general reader, and as a work of popular reference will be found to be invaluable, not only from its accuracy of research, but from the wide field over which it ranges. In a word, the present volume supplies what has long been felt as a great desideratum in English literature.

In order to render the work, however, if possible, still more useful, the American editor has added a large number of articles relative to the Botany, Mineralogy, and Zoology of the ancients, topics interesting and curious in themselves, and which, it is conceived, fall naturally within the scope of such a work as the present one. The contributions by the American editor are distinguished from those of the English writers by having an asterisk prefixed. In preparing them, the editor has availed himself of various sources of information, but more particularly of three, which it affords him great pleasure to mention here. The first is the Collection of Scientific and other Terms, by his learned friend, Francis Adams, Esq., of Scotland, and which has appeared as an Appendix to the Greek Lexicon of Professor Dunbar. It embraces the opinions, not only of the ancient naturalists, but of the most celebrated, also, among the moderns, and has afforded the American editor the most numerous, as well as the richest materials for his labours. The second source whence information has been obtained on various topics connected with the natural history of the ancients is the noble edition of Cuvier's Animal Kingdom, by Griffith and others, in 16 volumes, 8vo, a work full of curious learning, and replete with interesting observations on the naturalists of antiquity and the opinions entertained by them. On the subject of Ancient Mineralogy, the editor acknowledges himself deeply indebted to the excellent work published some years ago by Dr. Moore, at that time Professor of Ancient Languages in Columbia College, now President of that institution; and he takes the greater pleasure in stating his obligations to the labours of this distinguished scholar, since it affords him, also, the opportunity of congratulating his Alma Mater on having her highest office filled by one so well qualified to advance her best interests, and to gain for her the esteem and approbation of all who wish her well.

As regards the general appearance of the work, some changes of form have been made which may here be enumerated. In the English edition, the articles relating to Grecian Antiquities have their heading in Greek characters. This, although no obstacle, of course, to the student or professed scholar, is a serious impediment in the way of the general reader, and might mar the popularity of the work. To guard against such a result, great care has been taken to change all the headings of the Greek articles (except such as relate to legal matters) to Roman characters, while, at the same time, in order to satisfy the scholar, the Greek title is written immediately after the Roman. Should any words, by this arrangement, be thrown out of the alphabetical order, their places can be discovered in an instant by the General Index at the end of the volume. In the English edition, again, the references and authorities are given in the body of the article, a plan calculated to deter the general reader, and which, at best, is one of very doubtful propriety, since it mars the ap

pearance of an English sentence, and destroys, in some degree, its continuity. This is remedied in the American edition by throwing all the authorities into foot-notes at the bottom of the page, an arrangement so natural, and, withal, so convenient, that it is surprising it should not have been adopted by the English editor.

Another blemish in the English edition is the plan of appending to each article the initials of the writer's name, which, to say the least of it, gives a very awkward and clumsy appearance to the page. In the American edition a different arrangement is adopted. A full reference is given at the end of the volume to the different articles furnished by the different contributors, and these are so classified that it can be ascertained at a glance what portions have been supplied by each. This, indeed, gives the American a decided advantage over the English edition.

We have remarked above, that the present work is intended to supersede the compilations of Potter and Adams. In order to facilitate this most desirable change, an Index Raisonné has been appended to the volume, in which the whole subject of Greek and Roman Antiquities is classified under appropriate heads, so that, by means of this index, the present work, though having the form of a Dictionary, may be made, with the utmost ease, to answer all the purposes of a College text-book. No conscientious and honest instructor, therefore, can hesitate for an instant between the work which is here presented to him and the ordinary text-books of the day. In the preparation of the indexes, and, indeed, in the arrangement of the entire work, the editor has to acknowledge the valuable aid of his friend, Mr. Henry Drisler, sub-rector of the Grammar-school of Columbia College, to whose accuracy and faithful care the previous volumes of the Classical Series are so largely indebted.

Before concluding the present preface, it may be proper to remark, that in a review of Mure's *Tour in Greece*, which appeared in the *London Quarterly* for June, 1842, mention is made of an ancient bridge, discovered by that traveller in Laconia, which the reviewer thinks disproves an assertion made in the present work relative to the arch, namely, that the Romans were *undoubtedly* the first people who applied the arch to the construction of bridges. The bridge discovered by Mr. Mure, over a tributary of the Eurotas, was regarded by him as a work of the remotest antiquity, probably of the heroic age itself; and he even goes so far as to suppose that either Homer himself or Telemachus may have crossed this bridge in travelling into Laconia! The visionary nature of such speculations must present itself to every mind; and we have preferred, therefore, waiting for farther information on this subject, and allowing the article in the Dictionary to remain unaltered. Mr. Mure's Homeric bridge may be found at last to be as modern a structure as Fourmont's temple of the goddess Oga or Onga, near Amyclæ, supposed to have been built about 1500 B.C., but which Lord Aberdeen proved to be a modern Greek chapel!

Columbia College, February 13, 1843.

P R E F A C E

TO THE LONDON EDITION.

THE study of Greek and Roman Antiquities has, in common with all other philological studies, made great progress in Europe within the last fifty years. The earlier writers on the subject, whose works are contained in the collections of Groenovius and Grævius, display little historical criticism, and give no comprehensive view or living idea of the public and private life of the ancients. They were contented, for the most part, with merely collecting facts, and arranging them in some systematic form, and seemed not to have felt the want of anything more: they wrote about antiquity as if the people had never existed: they did not attempt to realize to their own minds, or to represent to those of others, the living spirit of Greek and Roman civilization. But, by the labours of modern scholars, life has been breathed into the study: men are no longer satisfied with isolated facts on separate departments of the subject, but endeavour to form some conception of antiquity as an organic whole, and to trace the relation of one part to another.

There is scarcely a single subject included under the general name of Greek and Roman Antiquities which has not received elucidation from the writings of the modern scholars of Germany. The history and political relations of the nations of antiquity have been placed in an entirely different light since the publication of Niebuhr's Roman History, which gave a new impulse to the study, and has been succeeded by the works of Böckh, K. O. Müller, Wachsmuth, K. F. Hermann, and other distinguished scholars. The study of the Roman law, which has been unaccountably neglected in this country, has been prosecuted with extraordinary success by the great jurists of Germany, among whom Savigny stands pre-eminent, and claims our profoundest admiration. The subject of Attic law, though in a scientific point of view one of much less interest and importance than the Roman law, but without a competent knowledge of which it is impossible to understand the Greek orators, has also received much elucidation from the writings of Meier, Schömann, Bunsen, Platner, Hndtwalcker, and others. Nor has the private life of the ancients been neglected. The discovery of Herculaneum and Pompeii has supplied us with important information on the subject, which has also been discussed with ability by several modern writers, among whom W. A. Becker, of Leipzig, deserves to be particularly mentioned. The study of ancient art likewise, to which our scholars have paid little attention, has been diligently cultivated in Germany from the time of Winckelmann and Lessing, who founded the modern school of criticism in art, to which we are indebted for so many valuable works.

While, however, so much has been done in every department of the subject, no attempt has hitherto been made, either in Germany or in this country, to make the results of modern researches available for the purposes of instruction, by giving them in a single work, adapted for the use of students. At present, correct information on many matters of antiquity can only be obtained by consulting a large number of costly works, which few students can have access to. It was therefore thought that a work on Greek and Roman Antiquities, which should be founded on a careful examination of the original sources, with such aids as could be derived from the best modern writers, and which should bring up the subject, so to speak, to the present state of philological learning, would form a useful acquisition to all persons engaged in the study of antiquity.

It was supposed that this work might fall into the hands of two different classes of readers, and it was therefore considered proper to provide for the probable wants of each, as far as was possible. It has been intended not only for schools, but also for the use of students at universities, and of other persons, who may wish to obtain more extensive information on the subject than an elementary work can supply. Accordingly, numerous references have been given, not only to the classical authors, but also to the best modern writers, which will point out the sources of information on each subject, and enable the reader to extend his inquiries farther if he wishes

At the same time, it must be observed, that it has been impossible to give at the end of each article the whole of the literature which belongs to it. Such a list of works as a full account of the literature would require would have swelled the work much beyond the limits of a single volume, and it has therefore only been possible to refer to the principal modern authorities. This has been more particularly the case with such articles as treat of the Roman constitution and law, on which the modern writers are almost innumerable.

A work like the present might have been arranged either in a systematic or an alphabetical form. Each plan has its advantages and disadvantages, but many reasons induced the editor to adopt the latter. Besides the obvious advantage of an alphabetical arrangement in a work of reference like the present, it enabled the editor to avail himself of the assistance of several scholars who had made certain departments of antiquity their particular study. It is quite impossible that a work which comprehends all the subjects included under Greek and Roman Antiquities can be written satisfactorily by any one individual. As it was therefore absolutely necessary to divide the labour, no other arrangement offered so many facilities for the purpose as that which has been adopted; in addition to which, the form of a Dictionary has the additional advantage of enabling the writer to give a complete account of a subject under one head, which cannot so well be done in a systematic work. An example will illustrate what is meant. A history of the patrician and plebeian orders at Rome can only be gained from a systematic work by putting together the statements contained in many different parts of the work, while in a Dictionary a connected view of their history is given, from the earliest to the latest times, under the respective words. The same remark will apply to numerous other subjects.

The initials of each writer's name are given at the end of the articles he has written, and a list of the names of the contributors is prefixed to the work. It may be proper to state, that the editor is not answerable for every opinion or statement contained in the work: he has endeavoured to obtain the best assistance that he could; but he has not thought it proper or necessary to exercise more than a general superintendence, as each writer has attached his name to the articles he has written, and is therefore responsible for them. It may also not be unnecessary to remark, in order to guard against any misconception, that each writer is only responsible for his own articles, and for no other parts of the work.

Some subjects have been included in the present work which have not usually been treated of in works on Greek and Roman Antiquities. These subjects have been inserted on account of the important influence which they exercised upon the public and private life of the ancients. Thus, considerable space has been given to the articles on Painting and Statuary, and also to those on the different departments of the Drama. There may seem to be some inconsistency and apparent capriciousness in the admission and rejection of subjects, but it is very difficult to determine at what point to stop in a work of this kind. A Dictionary of Greek and Roman Antiquities, if understood in its most extensive signification, would comprehend an account of everything relating to antiquity. In its narrower sense, however, the term is confined to an account of the public and private life of the Greeks and Romans, and it is convenient to adhere to this signification of the word, however arbitrary it may be. For this reason, several articles have been inserted in the work which some persons may regard as out of place, and others have been omitted which have sometimes been improperly included in writings on Greek and Roman Antiquities. Neither the names of persons and divinities, nor those of places, have been inserted in the present work, as the former will be treated of in the "Dictionary of Greek and Roman Biography and Mythology," and the latter in the "Dictionary of Greek and Roman Geography."

The subjects of the woodcuts have been chosen by the writers of the articles which they illustrate, and the drawings have been made under their superintendence. Many of these have been taken from originals in the British Museum, and others from the different works which contain representations of works of ancient art, as the Museo Borbonico, Museo Capitolino, Millin's *Peintures de Vases Antiques*, Tischbein's and D'Hancarville's engravings from Sir William Hamilton's Vases, and other similar works. Hitherto little use has been made in this country of existing works of art for the purpose of illustrating antiquity. In many cases, however, the representation of an object gives a far better idea of the purposes for which it was intended, and

the way in which it was used, than any explanation in words only can convey. Besides which, some acquaintance with the remains of ancient art is almost essential to a proper perception of the spirit of antiquity, and would tend to refine and elevate the taste, and lead to a just appreciation of works of art in general.

Considerable care has been taken in drawing up the list of articles, but it is feared that there may still be a few omissions. Some subjects, however, which do not occur in the alphabetical list, are treated of in other articles; and it will be found, by reference to the Index, that many subjects are not omitted which appear to be so. The reader will occasionally find some words referred for explanation to other articles, which are not treated of under the articles to which the references are made. Such instances, however, occur but rarely, and are rectified by the index, where the proper references are given. They have only arisen from the circumstance of its having been found advisable, in the course of the work, to treat of them under different heads from those which were originally intended. Some inconsistency may also be observed in the use of Greek, Latin, and English words for the names of the articles. The Latin language has generally been adopted for the purpose, and the subjects connected with Greek antiquity have been inserted under their Greek names, where no corresponding words existed in Latin. In some cases, however, it has, for various reasons, been found more convenient to insert subjects under their English names, but this has only been done to a limited extent. Any little difficulty which may arise from this circumstance is also remedied by the index, where the subjects are given under their Greek, Latin, and English titles, together with the page where they are treated of. The words have been arranged according to the order of the letters in the Latin alphabet.

Mr. George Long, who has contributed to this work the articles relating to Roman Law, has sent the editor the following remarks, which he wishes to make respecting the articles he has written, and which are accordingly subjoined in his own words:

"The writer of the articles marked with the letters G. L. considers some apology necessary in respect of what he has contributed to this work. He has never had the advantage of attending a course of lectures on Roman Law, and he has written these articles in the midst of numerous engagements, which left little time for other labour. The want of proper materials, also, was often felt, and it would have been sufficient to prevent the writer from venturing on such an undertaking, if he had not been able to avail himself of the library of his friend, Mr. William Wright, of Lincoln's Inn. These circumstances will, perhaps, be some excuse for the errors and imperfections which will be apparent enough to those who are competent judges. It is only those who have formed an adequate conception of the extent and variety of the matter of law in general, and of the Roman Law in particular, who can estimate the difficulty of writing on such a subject in England, and they will allow to him who has attempted it a just measure of indulgence. The writer claims such indulgence from those living writers of whose labours he has availed himself, if any of these articles should ever fall in their way. It will be apparent that these articles have been written mainly with the view of illustrating the classical writers; and that a consideration of the persons for whose use they are intended, and the present state of knowledge of the Roman Law in this country, have been sufficient reasons for the omission of many important matters which would have been useless to most readers, and sometimes unintelligible."

"Though few modern writers have been used, compared with the whole number who might have been used, they are not absolutely few, and many of them, to Englishmen, are new. Many of them, also, are the best, and among the best of the kind. The difficulty of writing these articles was increased by the want of books in the English language; for, though we have many writers on various departments of the Roman Law, of whom two or three have been referred to, they have been seldom used, and with very little profit."

It would be improper to close these remarks without stating the obligations this work is under to Mr. Long. It was chiefly through his advice and encouragement that the editor was induced to undertake it, and during its progress he has always been ready to give his counsel whenever it was needed. It is, therefore, as much a matter of duty as it is of pleasure to make this public acknowledgment to him.

WILLIAM SMITH.

A DICTIONARY

OF

GREEK AND ROMAN ANTIQUITIES, ETC

ABACUS.

*ABAC'ULUS (ἀβακίσκος), a diminutive of ABACUS, is principally applied, when used at all, to the tiles or squares of a tessellated pavement. (*Vid.* ABACUS, II.)

AB'ACUS (ἀβαξ) denoted generally and primarily a square tablet of any material. Hence we find it applied in the following special significations:

I. In architecture it denoted the flat square stone which constituted the highest member of a column, being placed immediately under the architrave. Its use is to be traced back to the very infancy of architecture. As the trunk of the tree, which supported the roof of the early log-hut, required to be based upon a flat square stone, and to have a stone or tile of similar form fixed on its summit to preserve it from decay, so the stone column in after days was made with a square base, and was covered with an Abacus. The annexed figure is drawn from that in the British Museum, which was taken from the Parthenon at Athens, and is a perfect specimen of the capital of a Doric column.

In the more ornamented orders of architecture, such as the Corinthian, the sides of the abacus were curved inward, and a rose or some other decoration was frequently placed in the middle of each side; but the name Abacus was given to the stone thus diversified and enriched, as well as in its original form.¹

II. The diminutive ABACULUS (ἀβακίσκος) denoted a tile of marble, glass, or any other substance used for making ornamental pavements.

Pliny, in his account of glass, says, "It is artificially stained as in making the small tiles, which some persons call abaculi." Moschion says that the magnificent ship built by Archimedes for Hiero, king of Syracuse, contained a pavement made of such tiles, of various colours and materials.²

III. ABACUS was also employed in architecture to denote a panel, coffer, or square compartment in the wall or ceiling of a chamber. As panels are

ABACUS.

intended for variety and ornament, they were enriched with painting.¹ Pliny, in describing the progress of luxury with respect to the decoration of apartments, says that the Romans were now no longer satisfied with panels,² and were beginning even to paint upon marble.

IV. ABACUS farther denoted a wooden tray, *i. e.*, a square board surrounded by a raised border. This may have been the article intended by Cato, when, in his enumeration of the things necessary in furnishing a farm (*olivetum*), he mentions "one abacus."³

Such a tray would be useful for various purposes.⁴ It might very well be used for making bread and confectionary; and hence the name of abacus (ἀβαξ, ἀβάκιον) was given to the μάκτρα, *i. e.*, the board or tray for kneading dough.⁵

V. A tray of the same description, covered with sand or dust, was used by mathematicians for drawing diagrams.⁶

VI. It is evident that this contrivance would be no less serviceable to the arithmetician; and to this application of it Persius alludes, when he censures the man who ridiculed "the numbers on the abacus and the partitions in its divided dust."⁷ In this instance the poet seems to have supposed perpendicular lines or channels to have been drawn in the sand upon the board; and the instrument might thus, in the simplest and easiest manner, be adapted for arithmetical computation.

It appears that the same purpose was answered by having a similar tray with perpendicular wooden divisions, the space on the right hand being intended for units, the next space for tens, the next for hundreds, and so on. Thus was constructed "the abacus on which they calculate,"⁸ *i. e.*, reckon by the use of stones.⁹ The figure following is designed to represent the probable form and appearance of such an abacus.

The reader will observe, that stone after stone might be put into the right-hand partition until they amounted to 10, when it would be necessary to take them all out as represented in the figure, and instead of them to put one stone into the next partition. The stones in this division might in like manner amount to 10, thus representing $10 \times 10 = 100$, when it would be necessary to take out the 10, and instead of them to put one stone into the third partition, and so on. On this principle, the stones in the abacus, as delineated in the figure, would be equivalent to 359,310.

1. (Plin., H. N., xxxiii., 56; xxxv., 13.)—2. ("Non placet jam abaci?" H. N., xxxv., 1.)—3. (De Re Rust., 10.)—4. (*Vid.* Cratin., *Fragm.*, ed. Runkel, p. 27.—Pollux, vi., 90; x., 105.—Bekker, *Anec. Grec.*, i., 27.)—5. (Hesych., s. v. Μάκτρα.—Schol. in Theoc., iv., 61.)—6. (Eustath. in Od., i., 107, p. 1397.)—7. ("Abaco numeros, et secto in pulvere metas?" Pers., Sat., i., 131.)—8. (ἀβάκιον ἐφ' οὗ ψηφίζουσιν: Eustath. in Od. iv., 249, p. 1494.)—9. (Ψῆφοι, calculi.)

1. (Vitruv., iii., 3; iv., 1, 7.)—2. (H. N., xxxvi., 67.)—3. (Δάπεδον ἐν ἀβακίοις συγκεῖμενον ἐκ παντοίων λίθων. *Anud.* Athen., v., 207.)

It is evident that the same method might be employed in adding, subtracting, or multiplying weights and measures, and sums of money. Thus the stones, as arranged in the figure, might stand for 3 *stadia*, 5 *plethra*, 9 *fathoms*, 3 *cubits*, and 1 *foot*. The abacus, however, can never be much used by us at the present day, owing to our various divisions of weights and measures, &c. We should need one abacus for dollars, cents, &c.; another for avoirdupois weight; a third for troy weight, and so on. In China, however, where the whole system is decimal, that is, where every measure, weight, &c., is the tenth part of the next greater one, this instrument, called *Shwanpan*, is very much used, and with astonishing rapidity. It is said that, while one man reads over rapidly a number of sums of money, another can add them so as to give the total as soon as the first has done reading.

That the spaces of the abacus actually denoted different values, may be inferred from the following comparison in Polybius: "All men are subject to be elevated and again depressed by the most fleeting events; but this is particularly the case with those who frequent the palaces of kings. They are like the stones upon abaci," which, according to the pleasure of the calculator,³ are at one time the value of a small copper coin,⁴ and immediately afterward are worth a talent of gold.⁵ Thus courtiers at the monarch's nod may suddenly become either happy or miserable."

VII. By another variation the ABACUS was adapted for playing with dice or counters. The Greeks had a tradition ascribing this contrivance to Palamedes; hence they called it "the abacus of Palamedes."⁶ It probably bore a considerable resemblance to the modern backgammon-board, dice⁷ being thrown for the moves, and the "men"⁸ placed according to the numbers thrown on the successive lines or spaces of the board.

VIII. The term ABACUS was also applied to a kind of cupboard, sideboard, or cabinet, the exact form of which can only be inferred from the incidental mention of it by ancient writers. It appears that it had partitions for holding cups and all kinds of valuable and ornamental utensils:

"Nec per multiplices abaco splendente cavernas
Argenti nigri pocula defodiam."⁹

This passage must evidently have referred to a piece of furniture with numerous cells, and of a complicated construction. If we suppose it to have been a square frame with shelves or partitions, in some degree corresponding to the divisions which have been described under the last two heads, we shall see that the term might easily be transferred from all its other applications to the sense now under consideration.

We are informed that luxuries of this description were first introduced at Rome from Asia Minor

1. (v., 26.)—2. (ταῖς ἐπὶ τῶν ἀβακίων ψήφοις.)—3. (ψηφιδόστος.)—4. (χαλκοῖν.)—5. (τάλαντον.)—6. (τὸ Παλαμήδειον ἀβάκιον: Eustath. in Od., i., 107, p. 1396.)—7. (κύβοι.)—8. πτεροί.—9. (Sidon. Apoll., Car xvii., 7, 8.)

after the victories of Cn. Manlius Vulso, A.U.C. 567.¹

In the above passage of Sidonius, the principal use of the abacus now described is indicated by the word *argenti*, referring to the vessels of silver which it contained, and being probably designed, like our word "plate," to include similar articles made of gold and other precious substances.²

The term abacus must, however, have been applicable to cupboards of a simple and unadorned appearance. Juvenal says of the triclinium and drinking-vessels of a poor man,

"Lectus erat Cōdro Procula minor, urceoli sex
Ornamentum abaci, necnon et parvulus infra
Cantharus."³

The abacus was, in fact, part of the furniture of a triclinium, and was intended to contain the vessels usually required at meals.

IX. Lastly, a part of the theatre was called *ἄβakes*, "the abaci." It seems to have been on or near the stage; farther than this its position cannot be at present determined. We may, however, infer that the general idea, characteristic of abaci in every other sense, viz., that of a square tablet, was applicable in this case also.

ABALIENA'TIO. (Vid. MANCIPIUM; MANCIPIATIO.)

ABDICA'TIO. (Vid. MAGISTRATUS, APOCERYXIS.)

*AB'IES, the "*Fir*," a genus of trees of the coniferous tribe, well known for the valuable timber which is produced by many of the species. The origin of the Latin name is unknown; that of the English appellation is the Saxon *furh-wudu*, "fir-wood." The Abies *Picea*, or "Silver Fir," is the kind styled by Virgil *pulcherrima* ("most beautiful"), and richly merits the name. Antiquarians have lost themselves in vain attempts to reconcile the declaration of Cæsar (5, 12), that he found in Britain all the trees of Gaul except the beech and abies, with the well-known fact that fir-wood is abundant in the ancient English mosses, and has been met with even beneath the foundations of Roman roads. What Cæsar meant was, no doubt, that he did not meet with the *silver fir* in Britain; of the pine he says nothing, and therefore it is to be presumed that he found it.—The common *ἐλάρη* of the Greeks must have been either the *Pinus abies* or the *Pinus Orientalis* (Tournefort). There is some difficulty in distinguishing the male and female species of Theophrastus. Stackhouse holds the former to be the *Pinus abies*, or common "fir-tree," and the latter the *Pinus picea*, or "Yellow-leaved Fir."⁴

*AB'IGA, the herb "ground-pine," called also "*St. John's wort*." The Latin name is derived from this plant's having been used to produce abortion.⁵ The Abiga is the same with the *Chamæpitys* (Χαμαίπιτυς) of the Greeks. The three species of the latter described by Dioscorides have been the subject of much diversity of opinion. The 1st would seem to have been the *Ajiga Chamæpitys*; the 3d the *Ajiga iva* (according to Bauhin and Sprengel); while the 2d, according to the latter, is either the *Teucrium supinum* or *montanum*.⁶ These plants, rich in essential oil, are tonic and aromatic. All that we find in Dioscorides and in Pliny (who copies him), which does not refer to these properties, is merely hypothetical, and does not merit refutation.⁷

ABLEG'TI. (Vid. EXTRAORDINARI.)

ABLEG'MINA (*ἀπολεγμῖνα*) were the parts of the victim which were offered to the gods in sacrifice. The word is derived from *ablegere*, in imitation of

1. (Liv., xxxix., 6.—Plin., H. N., xxxix., 8.)—2. (Vid. Cic., Tusc., v., 21.—Varro, de Ling. Lat., ix., 33, p. 489, ed. Spen gel.)—3. (Sat., iii., 187.)—4. (Adams, Append., s. v. ἐλάρη.)—5. ("Quod abigit partus." Vid. Plin., H. N., xxiv., 6.)—6. (Adams, Append., s. v. χαμαίπιτυς.)—7. (Dioscorid., iii., 175.—Fœs in Plin., l. c.)

the Greek ἀπολέγειν, which is used in a similar manner. These parts were also called *Porricia*, *Prosegmina*, *Proscoda*. (Vid. SACRIFICES.)

ABOLLA, a woollen cloak or pall, is probably only a varied form of pallium (ᾠρος), with which this word is nearly, if not altogether, identical in signification. The form and manner of wearing the abolla may be seen in the figures annexed, which are taken from the bas-reliefs on the triumphal arch of Septimius Severus at Rome.

The word was in use before the Augustan age; for it occurs in a passage cited by Nonius Marcellus from one of the satires of Varro. Nonius Marcellus quotes the passage to show that this garment was worn by soldiers (*vestis militaris*), and thus opposed to the toga. There can be no doubt that it was more especially the dress of soldiers, because the toga, which was used instead of it in the time of peace, though of a similar form and application, was much too large, and wrapped in too many folds about the body to be convenient in time of war. But it is also clear, from many passages in ancient authors, that the abolla was by no means confined in its use to military occasions.¹

Juvenal, speaking of a person who heard unexpectedly that it was necessary for him to attend upon the emperor, says, "He took up his cloak in a great hurry."² This action suited the use of a garment, made simply to be thrown over the shoulders and fastened with a fibula. The same poet calls a very cruel and base action *facinus majoris abollæ*, literally "a crime of a larger cloak." The expression has been explained as meaning "a crime of a deeper dye," and "a crime committed by a philosopher of a graver character." Probably it meant a crime so enormous as to require a larger cloak to hide it. This is supported by the authority of the ancient scholiast on Juvenal, who explains *majoris abollæ* as equivalent to *majoris pallii*. (Vid. PALLIUM.)

The Periplus of the Erythrean Sea mentions *abollæ* among the articles imported into the kingdom of the Axumites in Abyssinia; and the expression ἱματίον ἀβόλλαι, used by the writer, is an additional proof that the abolla was a kind of ἱματίον, i. e., a square or rectangular piece of woollen cloth, a cloak, or pall.

*ABRAMIS (Ἀβραμῖς), the name of a fish mentioned by Oppian³ and Athenæus.⁴ According to Coray, it is the *Bream*, namely, the *Cyprinus Brama*, L., or *Abramis Vulgaris* (Cuvier). Rondelet, however, with whom Gesner is disposed to concur, supposes it a species or variety of the *Θρίσσα* (*Thyrissa*).⁵

ABROGATIO. (Vid. LEX.)

*ABROT'ONUM (ἀβρότονον), a plant, of which two species are described by Dioscorides,¹ the male and the female. The former of these, by the almost general agreement of the commentators and botanical authorities, is referred to the *Artemisia Abrotanum*, L., or Southernwood. About the other species there is great diversity of opinion. Fuchsius makes it the *Artemisia Pontica*; Dodonæus, the *A. arborescens*; and Matthioli, the *Sanfolina Chamæcyparissus*, or common Lavender Cotton. Adams decides in favour of the last. Galen recognises the two species described by Dioscorides; but Nicander, Paulus Ægineta, and most of the other writers on the *Materia Medica*, notice only one species, which no doubt was the *A. abrotanum*.²

*ABSINTHIUM (ἀψίνθιον), a plant, of which Dioscorides describes three species. The first of these is pretty generally acknowledged to be the *Artemisia absinthium*, or common wormwood; but Sprengel hesitates whether he should not also comprehend the *A. Pontica* under it, which latter, indeed, Bauhin held to be the true Roman wormwood. The second species is the *Artemisia maritima*. The third is held by Sprengel to be the *A. palmata*, L., which, it appears, is indigenous in Santonge. The *A. santonica*, L., being confined to Tartary and the northern parts of Persia, it is not likely that the ancients were acquainted with it.³

ABSOLUTIO. (Vid. JUDICIUM.)

ABSTINENDI BENEFICIUM. (Vid. HERES.)

*ACA'CALIS or ACALL'IS (ἀκακῆλις, ἀκαλλῆλις), a plant; according to Sprengel, the *Tamarix Orientalis*, called *Tamarix articulata* by Vahl.⁴

*ACA'CIA (ἀκακία), a plant, which, according to Sprengel, and most of the authorities, is the *Acacia Vera*, Willd.; but, according to Dierbach, it is the *Acacia Senegal*. Hill remarks, that the tree which produces the *succus acaciæ* is the same as that which yields the gum arabic. The acacia gets the English name of the Egyptian thorn.⁵

ACA'INA (ἀκαίνα), a measure of length, equivalent to ten Greek feet.

*ACALE'PHE (ἀκαλήφη, or κνίδη), i. a kind of shellfish, belonging to the genus *Urtica* ("Sea-nettle"), of which there are several species. Linnæus places the *Urtica* among *Zoophyta*, but it belongs more properly to the class *Mollusca*. Sprengel decides, that the *Urtica marina* of the ancients is the *Actinia senilis*.⁶ Coray gives its French name as *Ortie de mer*. Pennant says, the ancients divided their κνίδη into two classes, those which adhere to rocks (the *Actinia* of Linnæus), and those that wander through the element. The latter are called by late writers *Urtica solutæ*; by Linnæus, *Medusa*; by the common people, "Sea jellies," or "Sea blubbers."⁷—II. A species of plant, the "nettle." Dioscorides describes two species, which Sprengel holds to be the *Urtica dioica* ("great nettle") and the *U. urens* ("little nettle").⁸

*ACANTHA (ἄκανθα), the Thorn. Eight species are described by Theophrastus, none of which are satisfactorily determined by Stackhouse and Schneider. There is great diversity of opinion respecting the two species described by Dioscorides.⁹ Sprengel, upon the whole, inclines to the opinion of Sibthorp, that the ἄκανθα λευκή is the *Cirsium Acarna*, Cand.; and the ἄκανθα Ἀραβική the *Onopordum Arabicum*. Botanists even yet find great difficulty in distinguishing the different species and genera of Thorns and Thistles, and the nomenclature of this tribe of plants is very unsettled.¹⁰

*ACANTHIAS GAL'EOS (ἀκανθίας γαλέος), a

1. (Sueton., Calig., c. 35.—Martial., i., 133; viii., 48.)—2. ("Rapta propter abollam," iv., 75.)—3. (Hal., i., 244.)—4. (vii., 12, b.)—5. (Adams, Append., s. v.)

1. (Mat. Med., iii., 26.)—2. (Adams, Append., s. v.)—3. (Adams, Append., s. v. ἀψίνθιον.)—4. (Adams, Append., s. v. ἀκαλλῆλις.)—5. (Adams, Append., s. v. ἀκακία.)—6. (Comment in Dioscorid.)—7. (Aristot., H. A., iv., 5.—Adams, Append., s. v. ἀκαλήφη.)—8. (Dioscor., iv., 72.—Adams, Append., s. v.)—9. (iii., 12.)—10. (Adams, Append., s. v.)

species of fish, the *Squalus Acanthias*, L., or *Spinax Acanthias* of later authorities ; in English, the "Piked Dog" or "Hound Fish." It is common on the shores of England and in the Mediterranean. Pennant also says that it swarms on the Scottish coast. It weighs about 20 lbs. This is the species of shark often taken between Edinburgh and Aberdeen.¹

*ACANTHIS (ἄκανθίς), so called by Aristotle, is probably the same plant as the ἡκαλανθίς of Aristophanes, and the ἄκανθυλλίς of Hesychius. It is the Acanthis of Pliny and Virgil. Gesner, with great probability, refers it to the "Siskin," namely, the *Fringilla spinus*, L., or *Carduelis spinus*, Cuvier. Professor Rennie says it is called "Aberdevine" near London.²

*ACANTHUS (ἄκανθος), I. the name by which the broad raffled leaf used in the enrichment of the Corinthian capital is known. It is thus called because of its general resemblance to the leaves of a species of the Acanthus plant. (Vid. COLUMNÆ.)

II. Under this name have been described by ancient authors at least three totally different plants. First, a prickly tree, with smooth evergreen leaves, and small, round, saffron-coloured berries, frequently alluded to by Virgil ; this is conjectured to have been the *Holly*. Secondly, a prickly Egyptian tree, described by Theophrastus as having pods like those of a bean ; it is probable that this was the *Acacia Arabica*. Thirdly, an herb mentioned by Dioscorides, with broad prickly leaves, which perish at the approach of winter, and again sprout forth with the return of spring. To this latter plant the name is now applied. The word in all cases alludes to the prickly nature of the leaves or stems. It is this last species which is usually supposed to have given rise to the notion of the Corinthian capital. But it appears from the investigation of Dr. Sibthorp, that it is nowhere to be found, either in the Greek islands, or in any part of the Peloponnesus ; and that the plant which Dioscorides must have meant was the *Acanthus spinosus*, still called ἄκανθα, which is found, as he describes it, on the borders of cultivated grounds or of gardens, and is frequent in rocky moist situations.³

*ACANTHYLLIS (ἄκανθυλλίς). As has been stated under Acanthis, the ἄκανθυλλίς of Hesychius is most probably the "Siskin ;" but that of Aristotle is certainly different, being the *Picus varius* according to Camus.⁴

ACAPNA LIGNA (α priv., and καπνός), called also *cocla*, were logs of wood dried with great care in order to prevent smoke. Pliny says that wood soaked with the lees of oil (*amurca*) burned without smoke.⁵

Acapnon mel, which was considered the best kind of honey, was obtained without driving out the bees from their hives by smoke, which was the usual method of procuring it.⁶

ACATION (ἄκάτιον, a diminutive of ἄκατος, a small vessel),⁷ a small vessel or boat, which appears to have been the same as the Roman *scapha* ; since Suetonius,⁸ in relating the escape of Cæsar from Alexandria, says that he jumped into a *scapha*, which Plutarch, in narrating the same events, calls an ἄκάτιον. Thucydides⁹ speaks of ἄκάτιον ὑψηλόν, which is explained by the scholiast, Πλοῦριον ἐκατέρωθεν ἑρεσόμενον, ἐν ᾧ ἕκαστος τῶν ἐλάνοντων ὀκτώπας ἐρέτει.

The ἄκάτια were also sails, which, according to the description of Xenophon, were adapted for fast sailing. They are opposed by him to the μεγάλα ἱστία.¹⁰

ACCEN'SI. I. The ACCENSUS was a public officer who attended on several of the Roman magistrates. He anciently preceded the consul, who had not the fasces, which custom, after being long disused, was restored by Julius Cæsar in his first consulship.¹ It was the duty of the accensi to summon the people to the assemblies, and those who had lawsuits to court ; and also, by command of the consul and prætor, to proclaim the time, when it was the third hour, the sixth hour, and the ninth hour.² Accensi also attended on the governors of provinces,³ and were commonly freedmen of the magistrate on whom they attended. Varro describes the word from *acciendo*, because they summoned the people ; other writers suppose it to come from *accensere*.

II. The ACCENSI were also a class of soldiers in the Roman army. It appears that after the full number of the legion had been completed, some supernumerary soldiers were enlisted, who might be always ready to supply any vacancies in the legion. These soldiers, who were called *adscriptivi* or *adscriptitii* (because, says Festus, *supplendis legionibus adscribebantur*), were usually unaccustomed to military service, and were assigned to different centuries to be instructed in their duties. After they had been formed into a regular corps, they obtained the name of *accensi*, and were reckoned among the light-armed troops.⁴ In later times they were also called *supernumerarii*.⁵ They were placed in battle in the rear of the army, behind the triarii.⁶ They had properly no military duty to perform, since they did not march in troops against the enemy. They were, according to the census of Servius Tullius, taken from the fifth class of citizens.⁷

ACCEPTILATIO is defined to be a release by mutual interrogation between debtor and creditor, by which each party is exonerated from the same contract. In other words, acceptilatio is the form of words by which a creditor releases his debtor from a debt or obligation, and acknowledges he has received that which in fact he has not received. This release of debt by acceptilatio applies only to such debts as have been contracted by stipulatio, conformably to a rule of Roman law, that only contracts made by words can be put an end to by words. But the astuteness of the Roman lawyers found a mode of complying with the rule, and at the same time extending the acceptilatio to all kinds and to any number of contracts. This was the invention of Gallus Aquilius, who devised a formula for reducing all and every kind of contracts to the stipulatio. This being done, the acceptilatio would immediately apply, inasmuch as the matter was by such formula brought within the general rule of law above mentioned. The acceptilatio must be absolute and not conditional. A part of a debt or obligation might be released as well as the whole, provided the thing was in its nature capable of division. A pupillus could not release a debt by acceptilatio, without the consent of his tutor, but he could be released from a debt. The phrase by which a creditor is said to release his debtor by acceptilatio is, *debitori acceptum, or accepto facere or ferre, or acceptum habere*. When anything which was done on the behalf of or for the state, such as a building, for instance, was approved by the competent authorities, it was said, *in acceptum ferri or referri*.⁸

ACCES'SIO is a legal term, by which is expressed the produce or increase of anything, and, at the same time, the notion of such produce or in-

crease becoming the property of him to whom the thing itself belongs. The rule of law was expressed thus: *Accessio cedit principali*.¹ Examples of accessio are contained under the heads of ALLUVIO, CONFUSIO, FRUCTUS, &c.

*ACCIPEN'SER. (*Vid.* ACIPEN'SER.)

*ACCIPITER. (*Vid.* HIERAX.)

ACCLAMATIO was the public expression of approbation or disapprobation, pleasure or displeasure, by loud acclamations. On many occasions, there appear to have been certain forms of acclamations always used by the Romans; as, for instance, at marriages, *Io Hymen, Hymenæe*, or *Talassio* (explained by Livy²); at triumphs, *Io triumphe, Io triumphe*; at the conclusion of plays the last actor called out *Plaudite* to the spectators; orators were usually praised by such expressions as *Bene et præclare, Belle et festivo, Non potest melius*, &c.³ Other instances of acclamations are given by Ferrarius, in his *De Veterum Acclamationibus et Plausu*; in Grævius, *Rom. Antiq.*, vol. vi.

ACCUBITA, the name of couches which were used in the time of the Roman emperors, instead of the triclinium, for reclining upon at meals. The mattresses and feather-beds were softer and higher, and the supports (*fulcræ*) of them lower in proportion, than in the triclinium. The clothes and pillows spread over them were called *accubitalia*.⁴

*ACCUSATIO. (*Vid.* CRIMEN, JUDICIUM.)

*ACER. (*Vid.* SPHENDAMNUS.)

ACERRA (*λιθανωρίς, λιθανωρίς*), the incense-box used in sacrifices.

Horace,⁵ enumerating the principal articles necessary in a solemn sacrifice to Juno, mentions 'Flowers and a box full of frankincense.' In Virgil, Æneas worships "with corn and with frankincense from the full acerra."

"*Farre pio et plena supplex veneravit acerra.*"⁶

Servius explains the last word as meaning *arca thuris*.

Pliny, enumerating the principal works of Parthian of Ephesus, says that he painted *Sacerdotem adstante puero cum acerra et corona*.⁷ The picture, therefore, represented a priest preparing to sacrifice, with the boy standing beside him, and holding the incense-box and a wreath of flowers. This was, no doubt, a very common and favourite subject for artists of every kind. It frequently occurs in bas-reliefs representing sacrifices, and executed on vases, frizes, and other ancient monuments. It occurs three times on the Column Trajana at Rome, and once on the Arch of Constantine.

The annexed figure is taken from a bas-relief in the museum of the Capitol.

The acerra was also, according to Festus, a small altar placed before the dead, on which perfumes were burned. *Acerra ara, quæ ante mortuum poni solebat, in qua odores incendebantur*. There was a law in the Twelve Tables which restricted the use of acerræ at funerals.⁸

ACETABULUM (*ὄξις, ὀξύβαφον, ὀξύβαφρον*), a vinegar-cup.

Among the various ways in which the Greeks and Romans made use of vinegar (*acetum*) in their cookery and at their meals, it appears that it was customary to have upon the table a cup containing vinegar, into which the guests might dip their bread, lettuce, fish, or other viands, before eating them. Of this fact we have no direct assurance; but it is implied in one of the Greek names of this utensil, viz., *ὀξύβαφον*, from *ὄξις*, *acid*, and *βάπτω*, *to dip or immerse*. It also suits the various secondary applications of these terms, both in Latin and in Greek, which suppose the vessel to have been wide and open above. In fact, the acetabulum must have been in form and size very like a modern teacup. It probably differed from the *τρυβλίον*, a vessel to which it was in other respects analogous, in being of smaller capacity and dimensions.

These vinegar-cups were commonly of earthenware,¹ but sometimes of silver, bronze, or gold.²

The accompanying figure is taken from Panofka's Work on the names and forms of Greek vases. He states that on the painted vase, belonging to a collection at Naples, from which he took this figure, the name *ὀξύβαφα* is traced underneath it. This may therefore be regarded as an authentic specimen of the general form of an antique vinegar-cup

From proper vinegar-cups, the Latin and Greek terms under consideration were transferred to all cups resembling them in size and form, to whatever use they might be applied.

As the vinegar-cup was always small, and probably varied little in size, it came to be used as a measure. Thus we read of an acetabulum of honey or of salt, which is agreeable to our practice of measuring by teacups, wine-glasses, or table-spoons. We are informed that, as a measure, the *ὀξύβαφον*, or *acetabulum*, was a cyathus and a half, or the fourth part of a *κοτύλη*, or *hemana*.³

The use of these cups by jugglers is distinctly mentioned. They put stones or other objects under certain cups, and then by sleight of hand abstracted them without being observed, so that the spectators, to their great amusement and surprise, found the stones under different cups from those which they expected. Those persons, who were called in Latin *acetabularii*, because they played with *acetabula*, were in Greek called *ψήφοπαῖκται*, because they played with stones (*ψῆφοι*); and under this name the same description of performers is mentioned by Sextus Empiricus.

In the Epistles of Alciphron,⁴ a countryman who had brought to the city an ass laden with figs, and had been taken to the theatre, describes his speechless astonishment at the following spectacle: "A man came into the midst of us and set down a three-legged table (*τρίποδα*). He placed upon it three cups, and under these he concealed some

1. (*κεράμεια μικρά*: Schol. Aristoph.—*ἐστὶ τὸ ὀξύβαφον εἶδος κύλικος μικρῆς κεραμείας*: Athenæus, xi., p. 494.)—2. (Athenæus, vi., p. 230.)—3. (Böckh, Gewichte, &c., p. 22.)—4. (iii 20.)

small white round pebbles, such as we find on the banks of rapid brooks. He at one time put one of these under each cup; and then, I know not how, showed them all under one cup. At another time he made them disappear altogether from under the cups, and showed them in his mouth. Then having swallowed them, and having caused those who stood near to advance, he took one stone out of a person's nose, another out of his ear, and a third out of his head. At last he caused them all to disappear entirely." In this passage Alciphron calls the cups *μικράς παροψίδας*. It may be observed, that *παροψίς* was equivalent to *ὀξύθαφον* when used in its wider acceptation, and denoted a basin or cup set on the table by the side of the other dishes, to hold either vinegar, pickles (*acetaria*), sauce, or anything else which was taken to give a relish to the substantial viands. The word (*paropsis*) was adopted into the Latin language, and is found in Juvenal, Martial, and other writers of the same period.

*ACE'TUM (*ὄξος*), vinegar. The kinds most in repute among the ancients were the Egyptian and Ciprian.¹ Pliny gives a full account of the medical properties of vinegar. Among other applications, it was employed when leeches had been introduced into the stomach, or adhered to the larynx. Strong salt and water would, however, have been more efficacious in making these loosen their hold, and in facilitating the vomiting of them forth. Vinegar was also given in long-standing coughs, just as modern practitioners give oxymels in chronic catarrhs.²

*ACHA'INES (*ἀχαιῖνης*), the Daguet or young stag.³

ACH'ANE (*ἀχάνη*). A Persian measure equivalent to 45 Attic *μέδμοι*. According to Hesychius, there was also a Boeotian *ἀχάνη* equivalent to one Attic *μέδμνος*.⁴

*ACHA'TES (*ἀχάτης*), an agate, a precious stone or gem. The agate is a semi-pellucid stone of the flint class. Theophrastus describes it as a beautiful and rare stone from the river Achates in Sicily (now the *Drillo*, in the *Val di Noto*), which sold at a high price; but Pliny tells us that in his time it was, though once highly valued, no longer in esteem, it being then found in many places, of large size, and diversified appearance. The ancients distinguished agates into many species, to each of which they gave a name importing its difference from the common agate, whether it were in colour, figure, or texture. Thus they called the red, *Hemachates*, which was sprinkled with spots of jasper, or blood-red chalcedony, and was the variety now called dotted agate. The white they termed *Leucachates*; the plain yellowish or wax-coloured, *Cerachates*, which was a variety little valued because of its abundance. Those which approached to or partook of the nature of other stones, they distinguished by names compounded of their own generic name, and that of the stone they resembled or partook of; thus, that species which seemed allied to the Jaspers they called *Jaspachates* (the jasper-agate of modern mineralogists); that which partook of the nature of the Carnelian, *Sardachates*; and those which had the resemblance of trees and shrubs on them, they called for that reason *Dendrachates*. This last is what we call at the present dendritic agate, described in the Orphic poem under the name of *ἀχάτης δεινδρήεις*. The *Corallachates* was so called from some resemblance that it bore to coral. Pliny describes it as sprinkled like the sapphire with spots of gold. Dr. Moore thinks, that in this latter case the ancients confounded with agate the yellow

fluor spar, containing, as it sometimes does, disseminated particles of iron pyrites. The agate was also called in Greek *αλαχάτης*.⁵

*ACHERD'US (*ἀχερδος*), the wild pear-tree,⁶ also a kind of thorn of which hedges were made Sprengel suggests that it is the *Cralægn Ararum*.⁷

*ACHERO'IS (*ἀχερωίς*), the white poplar-tree.⁸

*ACH'ETAS (*ἀχέτας*), according to Hesychius, the male Cicada; but this is clearly either a mistake or an error of the text, as there can be no doubt that it is merely an *ετυμολογία* applied to the larger species of Cicada, and signifying "vocal." (Vid. Cicada.)

*ACHILLE'OS (*Ἀχιλλεύς*), a plant, fabled to have been discovered by Achilles, and with which he cured the wound of Telephus.⁹ The commentators on Pliny make it the *Sideritis heraclea*. It is difficult, however, to decide the question from the text of the Roman writer merely. On recurring to that of Dioscorides, we may, perhaps, conclude as follows: the Achilleos with the golden flower is the *Achillea tomentosa seu Abrotanifolia*; the kind with the purple flower is the *A. tanacetifolia*; and the one with white flowers, the *A. nobilis seu magna*.¹

AC'IES. (Vid. ARMY.)

ACIL'IA LEX. (Vid. REPETUNDÆ.)

ACIL'IA CALPUR'NIA LEX. (Vid. AMBITUS.)

ACIN'ACES (*ἀκινάκης*), a poniard.

This word, as well as the weapon which it denotes, is Persian. Herodotus says,² that when Xerxes was preparing to cross the Hellespont with his army, he threw into it, together with some other things, "A Persian sword, which they call an acinaces." As the root *ac*, denoting sharpness, an edge or a point, is common to the Persian, together with the Greek and Latin, and the rest of the Indo-European languages, we may ascribe to this word the same general origin with *ἀκμή*, *ἀκρόκη*, *acuo*, *acies*, and many other Greek and Latin words allied to these in signification. Horace³ calls the weapon *Medus acinaces*, intending by the mention of the Medes to allude to the wars of Augustus and the Romans against Parthia.

Acinaces is usually translated a *cimeter*, a *falcon*, a *sabre*, and is supposed to have been curved; but this assumption is unsupported by any evidence. It appears that the acinaces was short and straight. Julius Pollux describes it thus:¹⁰ "A Persian dagger fastened to the thigh." Josephus, giving an account of the assassins who infested Judæa before the destruction of Jerusalem by the Romans, says, "They used daggers, in size resembling the Persian acinaces; but curved, and like those which the Romans call *sica*, and from which robbers and murderers are called *sicarii*."¹¹ The curvature of the daggers here described was probably intended to allow them to fit closer to the body, and thus to be concealed with greater ease under the garments. Thus we see that the Persian acinaces differed from the Roman *sica* in this, that the former was straight, the latter curved.

Another peculiarity of the acinaces was, that it was made to be worn on the right side of the body, whereas the Greeks and Romans usually had their swords suspended on the left side. Hence Valerius Flaccus speaks of Myraces, a Parthian, as *Insignis manibus, insignis acinace dextro*.¹² The same fact is illustrated by the account given by Ammianus Marcellinus of the death of Cambyses, king of Persia, which was occasioned by an accidental wound from his own acinaces: "*Suomet pugione, quem ap-*

*tatum femori dextro gestabat, subita vi ruina nudato, vulneratus.*¹ The Latin historian here gives *pugio* as the translation of the Persian term.

The form of the acinaces, with the method of using it, is illustrated in a striking manner by two classes of ancient monuments. In the first place, in the bas-reliefs which adorn the ruins of Persepolis, the acinaces is invariably straight, and is commonly suspended over the right thigh, never over the left, but sometimes in front of the body. The figures in the annexed woodcut are selected from engravings of the ruins of Persepolis, published by Le Bruyn, Chardin, Niebuhr, and Porter.

A golden acinaces was frequently worn by the Persian nobility.² It was also often given to individuals by the kings of Persia as a mark of honour.³

After the defeat of the Persian army at the battle of Platea, the Greeks found golden poniards on the bodies of the slain.⁴ That of Mardonius, the Persian general, was long kept as a trophy in the temple of Athena Parthenos, on the acropolis of Athens.⁵

The acinaces was also used by the Caspii.⁶ It was an object of religious worship among the Scythians and many of the northern nations of Europe.⁷

The second class of ancient monuments consists of sculptures of the god Mithras, two of which are in the British Museum. The annexed woodcut is taken from the larger of the two, and clearly shows the straight form of the acinaces.

*ACIPEN'SER ('Ακκιπήσιος), the Sturgeon, or *Acipenser Sturio*, L. Ludovicus Nonnius holds, that the *Silurus* of Ausonius is the sturgeon, but this opinion is very questionable. The ἔλσιν⁸ and the

γαλέος 'Ρόδιος¹ were varieties of this fish. It is also called ὀνίσκος by Durio in Athenæus.²

ACLIS, a kind of dart.

Virgil attributes this weapon to the Osci, one of the ancient nations of Italy:

"Teretes sunt acilides illis

Tela, sed hæc lento mos est aptare flagello."³

From this account it appears that the peculiarity of the acilis consisted in having a leathern thong attached to it; and the design of this contrivance probably was, that, after it had been thrown to a distance, it might be drawn back again.

The acilis was certainly not a Roman weapon. It is always represented as used by foreign nations, and distinguishing them from Greeks and Romans.⁴

ACNA, AC'NUA. (Vid. Acrus.)

'AKOHN MAPTYPEIN (ἀκοὴν μαρτυρεῖν). By the Athenian law, a witness could properly only give evidence of what he had seen himself, not of what he had heard from others;⁵ but when an individual had heard anything relating to the matter in dispute from a person who was dead, an exception was made to the law, and what he had heard from the deceased person might be given in evidence, which was called ἀκοὴν μαρτυρεῖν.⁶ It would appear, however, from a passage in Isæus, that a witness might give evidence respecting what he had not seen, but that this evidence was considered of lighter value.⁷

*AC'ONE (ἀκόνη), the whetstone or *Novaculite* (Kirman), the same as the *whet slate* of Jameson, and consisting principally of silex and alum. Theophrastus informs us that the Armenian whetstones were in most repute in his time. The Cyprian were also much sought after. Pliny confounds these with diamonds.⁸

*ACONITUM (ἀκόνιτον), a plant, of which Dioscorides enumerates two species, the *paradaliaghes*, and the *λυκοκτόνον*. The latter of these is considered by Dodonæus, Woodville, Sprengel, and most of the authorities, to be the *Aconitum Napellus*, or Wolf's-bane. Respecting the former species there is greater diversity of opinion; however, Sprengel is inclined, upon the whole, to agree with Dodonæus and Sibthorp in referring it to the *Doronicum paradaliaghes*, or Leopard's-bane. It would seem to be the *κάρμαρον* of Hippocrates, and the *σκορπίος* of Theophrastus.⁹

*ACONTIAS (ἀκοντία), the name of a serpent. There can be no doubt that this is the *Jaculus* of Lucan.¹⁰ Ælian is the only author who confounds it with the *Chersydrus*. Aëlius calls it *Cenchrites*, from the resemblance which its spots bear to the seeds of millet (κέρχρος). It is called *cafezate* and *alterarate* in the Latin translation of Avicenna. According to Belon, it is about three palms long, and the thickness of a man's little finger; its colour that of ashes, with black spots. Sprengel thinks it may have been a variety of the *Coluber Berus*, or Viper.¹¹

*AC'ORUS (ἀκορος), a plant, which most of the commentators hold to be the *Acorus Calamus*, or Sweet Flag. Sprengel, however, in his annotations on Dioscorides, prefers the *Pseudacorum*.¹²

ACQUISITIO is used to express the acquisition of ownership, or property generally. The several modes of acquiring property among the Romans, and the incidents of property when acquired, are treated of under the various heads of IN JURE CESSIO, MANCIPIATIO, USUCAPIO, ACCESSIO, &c., and see DOMINIUM.

*ACRATOPHORUM, a small vessel for hold-

1. (Athen., vii., p. 295.)—2. (vii., p. 294.)—3. (Æn., vii., 730.)—4. (Sil. Ital., iii., 362.—Val. Flac., Argonaut., vi., 99.)—5. (Demosth., c. Steph., p. 1130.)—6. (Demosth., c. Steph., p. 1130.)—7. (Id., c. Leoch., p. 1097.—Id., c. Eubul., p. 1300.—Meyer and Schömann, Attisch. Proc., p. 669.—Petitus, Leg. Att., iv., 7, § 9, seq., p. 445, seq.)—8. (De Hæred. Philoctem., p. 150.)—9. ing wine, a wine-cup. The name is derived from *ἰκράτων*, "unmixed wine," and *φέρα*, "to bear." Pollux mentions it in his account of ancient drinking vessels, and describes it as resting, not on a flat bottom, but on small astragals. (*Vid.* TALUS.)¹

ACROAMA (*ἀκρόαμα*) signified among the Romans a concert of players on different musical instruments, and also an interlude, called *embolia* by Cicero,² which was performed during the exhibition of the public games. The word is also frequently used for the actors and musicians, who were often employed at private entertainments;³ and it is sometimes employed in the same sense as *anagnostæ*, who were usually slaves, whose duty it was to read or repeat passages from books during an entertainment, and also at other times.⁴

*ACROASIS (*ἀκρόασις*). I. A literary discourse or lecture. The term (itself of Greek origin) is applied by the Latin writers to a discourse or disputation, by some instructor or professor of an art, to a numerous audience. The corresponding Latin term is *Auditio*.⁵ II. It also signifies a place or room where literary men meet, a lecture-room or school.⁶

ACROLITHOI (*ἀκρόλιθοι*), statues, of which the extremities (head, feet, and hands) were only of stone, and the remaining part of the body of bronze or gilded wood.⁷

*ACROPODĪUM (*ἀκροπόδιον*), the base or pedestal of a statue, so called from its supporting the extremities or soles of the feet (*ἄκρος*, πούς).

ACROSTOLION (*ἀκροστόλιον*), the extremity of the *στόλος*. The *στόλος* projected from the head of the prow, and its extremity (*ἀκροστόλιον*), which was frequently made in the shape of an animal or a helmet, &c., appears to have been sometimes covered with brass, and to have served as an *ἐμβολή* against the enemy's vessels.⁸

*ACROSTICHIS, an acrostic, a number of verses so contrived, that the first letters of each, being read in the order in which they stand, shall form some name or other word. The word signifies literally the beginning of a line or verse (*ἄκρος*, *στίχος*). "According to some authorities, a writer named Porphyrius Optatianus, who flourished in the fourth century, has the credit of having been the inventor of the acrostic. It is very probably, however, of earlier date. Eusebius, the bishop of Cæsarea, who died in A.D. 340, gives, in his *Life of Constantine*, a copy of Greek verses, which he asserts were the composition of the Erythraean Sibyl, the initial letters of which made up the words *ΙΗΣΟΥ ΧΡΙΣΤΟΣ ΘΕΟΥ ΥΙΟΣ ΣΩΤΗΡ*, that is, *Jesus Christ, the Son of God, the Saviour*. These verses, which are a description of the coming of the day of judgment, have been translated into Latin hexameters, so as to preserve the acrostic in that language, in the words *JESUS CHRISTUS DEI FILIUS SERVATOR*. The translation, however, wants one of the peculiar qualities of the original; for it will be observed that the initial letters of the five Greek words, being joined together, form the word *ΙΧΘΥΣ*, that is, the *fish*, which St. Augustine, who quotes the verses in his work entitled *De Civitate Dei*, informs us is to be understood as a mystical epithet of our Saviour, who lived in this abyss of mortality without contracting sin, in like manner as a fish exists in the midst of the sea without acquiring any flavour of salt from the salt water. This may therefore be called an acrostic without an acrostic."⁹

ACROTERIUM (*ἀκροτήριον*) signifies the extremity of anything. I. It is used in Architecture to designate the statues or other ornaments placed

on the summit of a pediment. According to some writers, the word only means the pediment on which the ornaments are placed.¹ II. It signified also the *ἀκροστόλιον* or *ὑπλάστον* of a ship, which were usually taken from a conquered vessel as a mark of victory.² III. It was also applied to the extremities of a statue, wings, feet, hands, &c.³

ACROTHĒNION (*ἀκροθηνίον*), generally used in the plural, means properly the top of the heap (*ἄκρος*, *θῆκη*), and is thence applied to those parts of the fruits of the earth, and of the booty taken in war, which were offered to the gods. In the Phœnissæ of Euripides, the chorus call themselves *δορὸς ἀκροθηνίων*.⁴

ACTA DIURNA (proceedings of the day) was a kind of gazette published daily at Rome under the authority of the government. It contained an account of the proceedings of the public assemblies, of the law courts, of the punishment of offenders, and a list of births, marriages, deaths, &c. The proceedings of the public assemblies and the law courts were obtained by means of reporters (*actuarii*). The proceedings of the senate (*acta senatus*) were not published till the time of Julius Cæsar,⁵ and this custom was prohibited by Augustus.⁶ An account of the proceedings of the senate was still preserved, though not published, and some senator seems to have been chosen by the emperor to compile the account.⁷ The *acta diurna* were also called *acta populi*, *acta publica*, *acta urbana*, and usually by the simple name of *acta*. These *acta* were frequently consulted and appealed to by later historians.⁸

ACTA SENATUS. (*Vid.* ACTA DIURNA.)

ACTIA (*ἀκτία*) was a festival celebrated every three years at Actium in Epirus, with wrestling, horse-racing, and sea-fights, in honour of Apollo.⁹ There was a celebrated temple of Apollo at Actium, which is mentioned by Thucydides¹⁰ and Strabo.¹¹ After the defeat of Antony off Actium, Augustus enlarged the temple, and instituted games to be celebrated every five years in commemoration of his victory.¹²

*ACTE (*ἄκτῃ*). Dioscorides describes two species of *Elder*, which are undoubtedly the *Sambucus nigra* and *ebulus*, namely, the common and the dwarf elder. The *ἄκτῃ* of Theophrastus is the former of these.¹³

ACTIO is defined by Celsus¹⁴ to be the right of pursuing by judicial means what is a man's due.

With respect to its subject-matter, the *actio* was divided into two great divisions, the *in personam actio*, and the *in rem actio*. The *in personam actio* was against a person who was bound to the plaintiff by contract or delict; the *in rem actio* applied to those cases where a man claimed a corporeal thing (*corporalis res*) as his property, or claimed a right, as, for instance, the use and enjoyment of a thing, or the right to a road over a piece of ground (*actus*). The *in rem actio* was called *vindicatio*; the *in personam actio* was called *condictio*, because originally the plaintiff gave the defendant notice to appear on a given day for the purpose of choosing a *judex*.

The old actions of the Roman law were called *legis actiones*, or *legitimæ*, either because they were expressly provided for by the laws of the Twelve Tables, or because they were strictly adapted to the words of the laws, and therefore could not be varied. In like manner, the old writs in this country contained the matter or claim of the plaintiff expressed according to the legal form.¹⁶

The five modes of proceeding by legal action, as named and described by Gaius,¹ were SACRAMENTO, PER JUDICIS POSTULATIONEM, PER CONDICTIONEM, PER MANUS INJECTIONEM, PER PIGNORIS CAPTIONEM.

But these forms of action gradually fell into disuse, in consequence of the excessive nicety required, and the failure consequent on the slightest error in the pleadings; of which there is a notable example given by Gaius himself,² in the case of a plaintiff who complained of his vines (*vites*) being cut down, and was told that his action was bad, inasmuch as he ought to have used the term trees (*arbores*), and not vines; because the law of the Twelve Tables, which gave him the action for damage to his vines, contained only the general expression "trees" (*arbores*). The Lex Æbutia and two Leges Juliae abolished the old *legitimæ actiones*, except in the case of *damnum infectum* (*Vid. DAMNUM INFECTUM*), and in matters which fell under the cognizance of the Centumviri. (*Vid. CENTUMVIRI*.)

In the old Roman constitution, the knowledge of the law was most closely connected with the institutions and ceremonial of religion, and was accordingly in the hands of the patricians alone, whose aid their clients were obliged to ask in all their legal disputes. Appius Claudius Cæcus, perhaps one of the earliest writers on law, drew up the various forms of actions, probably for his own use and that of his friends: the manuscript was stolen or copied by his scribe C. P. Flavius, who made it public; and thus, according to the story, the plebeians became acquainted with those legal forms which hitherto had been the exclusive property of the patricians.³

Upon the old legal actions being abolished, it became the practice to prosecute suits according to certain prescribed forms, or formulæ, as they were called, which will be explained after we have noticed various divisions of actions, as they are made by the Roman writers.

The division of *actiones* in the Roman law is somewhat complicated, and some of the divisions must be considered rather as emanating from the schools of the rhetoricians than from any other source. But this division, though complicated, may be somewhat simplified, or, at least, rendered more intelligible, if we consider that an action is a claim or demand made by one person against another, and that, in order to be a valid legal claim (*actio utilis*), it must be founded on a legal right. The main division of actions must therefore have a reference or analogy to the main division of rights; for in every system of law the form of the action must be the expression of the legal right. Now the general division of rights in the Roman law is into rights of dominion or ownership, which are rights against the whole world, and into rights arising from contract, and quasi contract, and delict. The *actio in rem* implies a complainant, who claims a certain right against every person who may dispute it, and the object and end of the action is to compel an acknowledgment of the right by the particular person who disputes it. By this action the plaintiff maintains his property in or to a thing, or his rights to a benefit from a thing (*scrivitures*). Thus the *actio in rem* is not so called on account of the subject-matter of the action, but the term is a technical phrase to express an action which is in no way founded on contract, and therefore has no determinate individual as the other necessary party to the action; but every individual who disputes the right, becomes, by such act of disputing, a party liable to such action. The *actio in rem* does not ascertain the complainant's right, and from the nature of the action the complainant's right cannot be ascertained by it, for it is a right against all the

world; but the action determines that the defendant has or has not a claim which is valid against the plaintiff's claim. The *actio in personam* implies a determinate person or persons against whom the action lies, the right of the plaintiff being founded on the acts of the defendant or defendants; it is therefore in respect of something which has been agreed to be done, or in respect of some injury for which the plaintiff claims compensation. The *actio mixta* of Justinian's legislation¹ was so called from its being supposed to partake of the nature of the *actio in rem* and the *actio in personam*. Such was the action among co-heirs as to the division of the inheritance, and the action for the purpose of settling boundaries which were confused.

Rights, and the modes of enforcing them, may also be viewed with reference to the sources from which they flow. Thus the rights of Roman citizens flowed in part from the sovereign power, in part from those to whom power was delegated. That body of law which was founded on, and flowed from, the edicts of the prætors and curule ædiles, was called *jus honorarium*, as opposed to the *jus civile*, in its narrower sense, which comprehended the *leges, plebiscita, senatus consulta*, &c. The *jus honorarium* introduced new rights and modified existing rights; it also provided remedies suitable to such new rights and modifications of old rights, and this was effected by the actions which the prætors and ædiles allowed. On this jurisdiction of the prætors and ædiles is founded the distinction of actions into *civiles* and *honorariæ*, or, as they are sometimes called, *prætoricæ*, from the greater importance of the prætor's jurisdiction.

There were several other divisions of actions, all of which had reference to the forms of procedure.

A division of actions was sometimes made with reference to the object which the plaintiff had in view. If the object was to obtain a thing, the action was called *persecutoria*. If the object was to obtain damages (*pæna*) for an injury, as in the case of a thing stolen, the action was *pænalis*; for the thing itself could be claimed both by the *vindicatio* and the *condictio*. If the object was to obtain both the thing and damages, it was probably sometimes called *actio mixta*, a term which had, however, another signification also, as already observed. The division of *actiones* into *directæ* or *vulgares*, and *utiles*, must be traced historically to the *actiones fictitiæ* or fictions, by which the rights of action were enlarged and extended. The origin of this division was in the power assumed by the prætor to grant an action in special cases where no action could legally be brought, and in which an action, if brought, would have been *inanis* or *inutilis*. After the decline of the prætor's power, the *actiones utiles* were still extended by the contrivances of the *juris prudentes* and the rescripts of the emperors. Whenever an *actio utilis* was granted, it was framed on some analogy to a legally recognised right of action. Thus, in the examples given by Gaius,² he who obtained the *honorum possessio* by the prætor's edict, succeeded to the deceased by the prætorian, and not the civil law: he had, therefore, no direct action (*directa actio*) in respect of the rights of the deceased, and could only bring his action on the fiction of his being what he was not, namely, *heres*.

Actions were also divided into *ordinariæ* and *extraordinariæ*. The *ordinariæ* were those which were prosecuted in the usual way, first before the prætor, *in jure*, and then before the judex, *in judicio*. When the whole matter was settled before or by the prætor in a summary way, the name *extraordinaria* was applicable to such action. (*Vid. INTERDICT.*)

The foundation of the division of actions into *actiones stricti juris, bonæ fidei, et arbitrarie*, is not quite clear. In the *actiones stricti juris*, it appears

¹. (iv., 12.)—². (iv., 11.)—³. (Cic., de Orat., i., 41.—Id., pro Marcella, c. 11.—Dig., l. tit. 2, s. 2, § 7.)

1. (Inst., iv., tit. 6, s. 20.)—². (iv., 34.)

that the formula of the prætor expressed in precise and strict terms the matter submitted to the judex, whose authority was thus confined within limits. In the *actiones bonæ fidei*, or *ex fide bona*,¹ more latitude was given, either by the formula of the prætor, or was implied in the kind of action, such as the action *ex emptio, vendito, locato*, &c., and the special circumstances of the case were to be taken into consideration by the judex. The *actiones arbitrarie* were so called from the judex in such case being called an arbiter, probably, as Festus says, because the whole matter in dispute was submitted to his judgment; and he could decide according to the justice and equity of the case, without being fettered by the prætor's formula. It should be observed, also, that the judex properly could only condemn in a sum of money; but the arbiter might declare that any particular act should be done by either of the parties, which was called his *arbitrium*, and was followed by the *condemnatio* if it was not obeyed.

The division of actions into *perpetuæ* and *temporales* had reference to the time within which an action might be brought, after the right of action had accrued. Originally those actions which were given by a *lex, senatus consultum*, or an imperial constitution, might be brought without any limitation as to time; but those which were granted by the prætor's authority were generally limited to the year of his office. A time of limitation was, however, fixed for all actions by the late imperial constitutions.

The division of actions into *actiones in jus* and *in factum* is properly no division of actions, but has merely reference to the nature of the formula. In the formula *in factum concepta*, the prætor might direct the judex barely to inquire as to the fact which was the only matter in issue; and on finding the fact, to make the proper *condemnatio*: as in the case of a freedman bringing an action against his patronus. In the formula *in jus* the fact was not in issue, but the legal consequences of the fact were submitted to the discretion of the judex. The formula *in factum* commenced with the technical expression, *Si paret*, &c., "If it should appear," &c.; the formula *in jus* commenced, *Quod A. A., &c.*, "Whereas A. A. did so and so."²

The actions which had for their object the punishment of crimes were considered public, as opposed to those actions by which some particular person claimed a right or compensation, and which were therefore called *privatæ*. The former were properly called *judicia publica*; and the latter, as contrasted with them, were called *judicia privata*. (*Vid. JUDICIUM*.)

The actions called *noxales* were when a *filius familias* (a son in the power of his father), or a slave, committed a theft, or did any injury to another. In either case the father or owner might give up the wrong-doer to the person injured, or else he must pay competent damages. These actions, it appears, take their name either from the injury committed, or because the wrong-doer was liable to be given up to punishment (*noxæ*) to the person injured. Some of these actions were of legal origin, as that of theft, which was given by the Twelve Tables; that of *damnum injuria*, which was given by the Aquilia Lex; and that of *injuriarum et vi bonorum raptorum*, which was given by the edict, and therefore was of prætorian origin. This instance will serve to show that the Roman division and classification of actions varied according as the Roman writers contemplated the sources of rights of action, or the remedies and the modes of obtaining them.

An action was commenced by the plaintiff summoning the defendant to appear before the prætor or other magistrate who had *jurisdictio*: this process was called *in jus vocatio*; and, according to the

laws of the Twelve Tables, was in effect a dragging of the defendant before the prætor if he refused to go quietly. This rude proceeding was modified in later times, and in many cases there could be no *in jus vocatio* at all, and in other cases it was necessary to obtain the prætor's permission under pain of a penalty. It was also established that a man could not be dragged from his own house; but if a man kept his house to avoid, as we should say, being served with a writ, he ran the risk of a kind of sequestration (*actor in bona mittebatur*). The object of these rules was to make the defendant appear before the competent jurisdiction; the device of entering an appearance for the defendant does not seem to have suggested itself to the Roman lawyers.¹ If the defendant would not go quietly, the plaintiff called on any by-stander to witness (*antestari*) that he had been duly summoned, touched the ear of the witness, and dragged the defendant into court.² The parties might settle their dispute on their way to the court, or the defendant might be bailed by a vindex.³ The vindex must not be confounded with the vades. This settlement of disputes on the way was called *transactio in via*, and serves to explain a passage in St. Matthew.⁴

When before the prætor, the parties were said *jure agere*. The plaintiff then prayed for an action, and if the prætor allowed it (*dabat actionem*), he then declared what action he intended to bring against the defendant, which was called *edere actionem*. This might be done in writing, or orally, or by the plaintiff taking the defendant to the *album*, and showing him which action he intended to rely on.⁵ As the formula comprehended, or were supposed to comprehend, every possible form of action that could be required by a plaintiff, it was presumed that he could find among all the formulæ some one which was adapted to his case, and he was accordingly supposed to be without excuse if he did not take pains to select the proper formula.⁶ If he took the wrong one, or if he claimed more than his due, he lost his cause;⁷ but the prætor sometimes gave him leave to amend his claim or *intentio*.⁸ If, for example, the contract between the parties was for something *in genere*, and the plaintiff claimed something *in specie*, he lost his action: thus the contract might be, that the defendant undertook to sell the plaintiff a quantity of dyestuff or a slave; if the plaintiff claimed Tyrian purple or a particular slave, his action was bad; therefore, says Gaius, according to the terms of the contract, so ought the claim of the *intentio* to be. It will be observed that, as the formulæ were so numerous and comprehensive, the plaintiff had only to select the formula which he supposed to be suitable to his case, and it would require no farther variation than the insertion of the names of the parties and of the thing claimed, or the subject-matter of the suit, with the amount of damages, &c., as the case might be. When the prætor had granted an action, the plaintiff required the defendant to give security for his appearance before the prætor (*in jure*) on a day named, commonly the day but one after the *in jus vocatio*, unless the matter in dispute was settled at once. The defendant, on finding a surety, was said *vades dare*,⁹ *radimonium promittere* or *facere*; the surety, *vas*, was said *spondere*; the plaintiff, when satisfied with the surety, was said *radari reum*, to let him go on his sureties, or to have sureties from him. When the defendant promised to appear *in jure* on the day named, without giving any surety, this was called *radimonium purum*. In some cases *recuperatores* (*vid. JUDEX*) were named, who, in case

1. (Dig. 2, tit. 4.)—2. (Hor., Serm. I., ix., 75., seqq.—Plautus, Currel., v., 2.)—3. (Cic., Top., 2.—Gaius, iv., 46.)—4. (r., 25.—It is not easy to state correctly the changes in procedure which took place after the abolition of the *legitima actiones*. Compare Gaius, iv., 25, 46.)—5. (Dig. 2, tit. 13.)—6. (Cic., pro Ros. Com., c. 8.)—7. ("Causa cadebat." Cic., de Orat., i., 36.)—8. (Gaius, iv., 53, seqq.)—9. (Hor., Serm. I., i., 11.)

1 (Cic., Top., 17.)—2. (Gaius, iv., 46, 47.)

on the defendant making default, condemned him in the sum of money named in the *vadimonium*.

If the defendant appeared on the day appointed, he was said *vadimonium sistere*; if he did not appear, he was said *vadimonium deseruisse*, and the prætor gave to the plaintiff the *bonorum possessio*.¹ Both parties, on the day appointed, were summoned by a crier (*præco*), when the plaintiff made his claim or demand, which was very briefly expressed, and may be considered as corresponding to our declaration at law.

The defendant might either deny the plaintiff's claim, or he might reply to it by a plea, *exceptio*. If he simply denied the plaintiff's claim, the cause was at issue, and a *iudex* might be demanded. The forms of the *exceptio* also were contained in the prætor's edict, or, upon hearing the facts, the prætor adapted the plea to the case. The *exceptio* was the defendant's defence, and was often merely an equitable answer or plea to the plaintiff's legal demand. The plaintiff might claim a thing upon his contract with the defendant, and the defendant might not deny the contract, but might put in a plea of fraud (*dolus malus*), or that he had been constrained to come to such agreement. The *exceptio* was in effect something which negated the plaintiff's demand, and it was expressed by a negative clause: thus, if the defendant should assert that the plaintiff fraudulently claimed a sum of money which he had not given to the defendant, the *exceptio* would run thus: *Si in ea re nihil dolo malo Auli Agerii factum sit neque fiat*. Though the *exceptio* proceeded from the defendant, it was expressed in this form, in order to be adapted for insertion in the formula, and to render the *condemnatio* subject to the condition.

Exceptions were *peremptoria* or *dilatoria*. Peremptory exceptions were a complete and perpetual answer to the plaintiff's demand, such as an exception of *dolus malus* or of *res judicata*. Dilatory exceptions were, as the name imports, merely calculated to delay the plaintiff's demand; as, for instance, by showing that the debt or duty claimed was not yet due. Gaius considers the *exceptio litis dividuæ et rei residuæ*² as belonging to this class. If a plaintiff prosecuted his action after a dilatory exception, he lost altogether his right of action. There might be dilatory exceptions, also, to the person of the plaintiff, of which class is the *exceptio cognitoria*, by which the defendant objects either that the plaintiff is not entitled to sue by a *cognitor*, or that the cognitor whom he had named was not qualified to act as a cognitor. If the exception was allowed, the plaintiff could either sue himself, or name a proper cognitor, as the case might be. If a defendant neglected to take advantage of a peremptory *exceptio*, the prætor might afterward give him permission to avail himself of it; whether he could do the same in the case of a dilatory, was a doubtful question.³

The plaintiff might reply to the defendant's *exceptio*, for the defendant, by putting in his plea, became an actor. (*Vid. Acron.*) The defendant's plea might be good, and a complete answer to the plaintiff's demand, and yet the plaintiff might allege something that would be an answer to the plea. Thus, in the example given by Gaius,⁴ if the auctioneer (*argentarius*) claimed the price of a thing sold by auction, the defendant might put in a plea, which, when inserted in the formula, would be of this shape: *Ut ita demum emptor damnetur, si ei res quam emerit tradita sit*; and this would be in form a good plea. But if the conditions of sale were that the article should not be handed to the purchaser before the money was paid, the *argentarius* might put in a *replectio* in this shape: *Nisi prædictum est ne aliter emptori res traderetur quam si pretium emptor solverit*.

If the defendant answered the *replectio*, his answer was called *duplicatio*; and the parties might go on to the *triplicatio* and *quadruplicatio*, and even farther, if the matters in question were such that they could not otherwise be brought to an issue.

It remains to speak of the *præscriptio*, so called from being written at the head or beginning of the formula, and which was adapted for the protection of the plaintiff in certain cases.¹ For instance, if the defendant was bound to make to the plaintiff a certain fixed payment yearly or monthly, the plaintiff had a good cause of action for all the sums of money already due; but, in order to avoid making his demand for the future payments not yet due, it was necessary to use a *præscriptio* of the following form: *Ea res agatur cujus rei dies fuit*.

A person might maintain or defend an action by his *cognitor* or *procurator*, or, as we should say, by his attorney. The plaintiff and defendant used a certain form of words in appointing a cognitor, and it would appear that the appointment was made in the presence of both parties. The cognitor needed not to be present, and his appointment was complete when by his acts he had signified his assent.² No form of words was necessary for appointing a *procurator*, and he might be appointed without the knowledge of the opposite party.

In many cases both plaintiff and defendant might be required to give security (*satisdare*); for instance, in the case of an *actio in rem*, the defendant who was in possession was required to give security, in order that, if he lost his cause and did not restore the thing, nor pay its estimated value, the plaintiff might have an action against him or his sureties. When the *actio in rem* was prosecuted by the formula *petitoria*, that stipulation was made which was called *judicatum solvi*. As to its prosecution by the *spontio*, see *SPONSIO* and *CENTUMVIRI*. If the plaintiff sued in his own name, he gave no security; nor was any security required if a cognitor sued for him, either from the cognitor or the plaintiff himself, for the cognitor actually represented the plaintiff, and was personally liable. But if a procurator acted for him, he was obliged to give security that the plaintiff would adopt his acts; for the plaintiff was not prevented from bringing another action when a procurator acted for him. Tutors and curators generally gave security, like procurators. In the case of an *actio in personam*, the same rules applied to the plaintiff as in the *actio in rem*. If the defendant appeared by a cognitor, the defendant had to give security; if by a procurator, the procurator had to give security.

When the cause was brought to an issue, a *iudex* or *iudices* might be demanded of the prætor who named or appointed a *iudex*, and delivered to him the formula which contained his instructions. The *iudices* were said *dari* or *addici*. So far the proceedings were said to be *in iure*: the prosecution of the *actio* before the *iudex* requires a separate discussion.

The following is an example of a formula taken from Gaius:³ *Iudex esto. Si paret Aulium Agerium apud Numerium Negidium mensam argenteam deposuisse eamque dolo malo Numerii Negidii Aulo Agerio redditam non esse quanti ea res erit tantam pecuniam iudex Numerium Negidium Aulo Agerio condemnato si non paret, absolvito*.

The nature of the formula, however, will be better understood from the following analysis of it by Gaius: It consisted of four parts, the *demonstratio*, *intentio*, *adjudicatio*, *condemnatio*. The *demonstratio* is that part of the formula which explains what the subject-matter of the action is. For instance, if the subject-matter be a slave sold, the *demonstratio* would run thus: *Quod Aulus Agerius Numerio Negidio hom-*

1. (Hor., *Serm. I.*, ix, 36, seqq.—Cic., *pro P. Quinctio*, c. 6.)
—2. (iv, 122.)—3. (Gaius, iv., 125.)—4. (iv., 126.)

1. (Gaius, iv., 130, seqq.—Cic., *de Orat.*, i., 37.)—2. (Cic., *pro Q. Roscio*, c. 2.—Hor., *Serm. I.*, v., 35.)—3. (iv., 47.)

mem vendidit. The *intentio* contains the claim or demand of the plaintiff: *Si paret hominem ex jure Quiritium Auli Agerii esse.* The *adjudicatio* is that part of the formula which gives the *judex* authority to adjudicate the thing which is the subject of dispute to one or other of the litigant parties. If the action be among partners for dividing that which belongs to them all, the adjudication would run thus: *Quantum adjudicari oportet judex Titio adjudicato.* The *condemnatio* is that part of the formula which gives the *judex* authority to condemn the defendant in a sum of money, or to acquit him: for example, *Judex Numerium Negidium Aulo Agerio sestertium milia condemna: si non paret, absolve.* Sometimes the *intentio* alone was requisite, as in the formulæ called *præjudiciales* (which some modern writers make a class of actions), in which the matter for inquiry was, whether a certain person was a freedman, what was the amount of a *dos*, and other similar questions, when a fact solely was the thing to be ascertained.

Whenever the formula contained the *condemnatio*, it was framed with the view to pecuniary damages; and, accordingly, even when the plaintiff claimed a particular thing, the *judex* did not adjudge the defendant to give the thing, as was the ancient practice at Rome, but condemned him in a sum of money equivalent to the value of the thing. The formula might either name a fixed sum, or leave the estimation of the value of the thing to the *judex*, who in all cases, however, was bound to name a definite sum in the condemnation.

The formula then contained the pleadings, or the statements and counter-statements, of the plaintiff and the defendant; for the *intentio*, as we have seen, was the plaintiff's declaration; and if this was met by a plea, it was necessary that this also should be inserted in the formula. The formula also contained the directions for the *judex*, and gave him the power to act. The resemblance between the English and Roman procedure is pointed out in a note in Starkie's *Law of Evidence*.¹

The following are the principal actions which we read of in the Roman writers, and which are briefly described under their several heads: *Actio—Aque pluviae arcendæ; Bonorum vi raptorum; Certi et Incerti; Commodati; Communis dividundo; Confessoria; Damni injuria dati; Dejecti vel effusi; Depensi; Depositi; De dolo malo; Empti et venditi; Exercitoria; Ad Exhibendum; Familiae erciscundæ; Fiduciaria; Finium regundorum; Furti; Hypothecaria; Injuriarum; Insolidaria; Judicialis; Quod jussu; Legis Aquilæ; Locati et conducti; Mandati mutui; Negativa; Negotiorum gestorum; Noxalis; De pauperie; De peculio; Pignoratitia or Pignoratitia; Publiciana; Quanti minoris; Rationibus distrahendis; De recepto; Redhibitoria; Rei uxoria or Dotis; Restitutoria and Rescissoria; Rutiliana; Serviana; Pro socio; Tutoria; Tutela.*

ACTOR signified generally a plaintiff. In a civil or private action, the plaintiff was often called *petitor*; in a public action (*causa publica*) he was called *accusator*.² The defendant was called *reus*, both in private and public causes: this term, however, according to Cicero,³ might signify either party, as indeed we might conclude from the word itself. In a private action the defendant was often called *adversarius*, but either party might be called *adversarius* with respect to the other. Originally, no person who was not *sui juris* could maintain an action; a *filius familias*, therefore, and a slave, could not maintain an action; but in course of time certain actions were allowed to a *filius familias* in the absence of his parent or his procurator, and also in case the parent was incompetent to act from madness or other like cause.⁴ Wards brought their actions by their guardian or tutor; and in case they

wished to bring an action against their tutor, the prætor named a tutor for the purpose.¹ *Peregrini*, or aliens, originally brought their action through their patronus; but afterward in their own name, by a fiction of law, that they were Roman citizens. A Roman citizen might also generally bring his action by means of a cognitor or procurator. (*Vid. Actio*.) A *universitas*, or corporate body, sued and was sued by their *actor* or *syndicus*.²

Actor has also the sense of an agent or manager of another's business generally. The *actor publicus* was an officer who had the superintendence or care of slaves and property belonging to the state.³

ACTOR. (*Vid. HISTRIO*.)

ACTUARI, short-hand writers, who took down the speeches in the senate and the public assemblies.⁴ In the debate in the Roman senate upon the punishment of those who had been concerned in the conspiracy of Catiline, we find the first mention of short-hand writers, who were employed by Cicero to take down the speech of Cato.

The ACTUARI MILITÆ, under the Roman emperors, were officers whose duty it was to keep the accounts of the army, to see that the contractors supplied the soldiers with provisions according to agreement, &c.⁵

ACTUS, a Roman measure of length. "*Actus vocabatur, in quo boves agerentur cum aratro, uno impetu justo. Hic erat cxx pedum; duplicatusque in longitudinem jugerum faciebat.*"⁶ This actus is called by Columella *actus quadratus*; he says, "*Actus quadratus undique finibus pedibus cxx. Hoc duplicatum facit jugerum, et ab eo, quod erat junctum, jugeri nomen usurpavit; sed hunc actum provinciæ Bætica rustici acnuum (or acnum) vocant.*" Varro⁸ says, "*Actus quadratus qui et latus est pedes cxx, et longus totidem, is modus acnuæ Latine appellatur.*" The *actus quadratus* was therefore equal to half a jugerum, or 14,400 square Roman feet. The *actus minimus* or *simplex*⁷ was 120 feet long and four broad, and therefore equal to 480 square Roman feet.

ACTUS. (*Vid. SERVITUTES*.)

ACUS, *dim.* ACICULA (βελόνη, βελονίς, βελίς), a needle, a pin.

We may translate *acus* a needle, when we suppose it to have had at one end a hole or eye¹⁰ for the passage of thread; and a pin, when, instead of a hole, we suppose it to have had a knob, a small globe, or any other enlarged or ornamental termination.

The annexed figures of needles and pins, chiefly taken from originals in bronze, vary in length from an inch and a half to about eight inches.

Pins were made not only of metal, but also of wood, bone, and ivory. Their principal use was to assist in fastening the garments, and more particularly in dressing the hair. The mode of plaiting the hair, and then fastening it with a pin or needle,

(τρήμμα, τρυπαλά.)

is shown in the annexed figure of a female head, taken from a marble group which was found at Apt, in the south of France.¹

This fashion has been continued to our own times, the females of Italy. Martial alludes to it in the following epigram, in which he supposes the hair to be anointed with perfumes and decorated with ribands:

"*Tenuia ne madidi violent bombycina crines,
Fingat acus tortas, sustineatque comas.*"²

The acus was employed as an instrument of torture, being inserted under the nails.

Honesty was enjoined upon children by telling them that it was wrong even to steal a pin.

Μηδὲ βελόνης ἐναυμὶ ἐπιθυμῆς, πᾶμφιλε,
Ὅ γὰρ θεὸς βλέπει σε πηλοῖον παρών.³

*AD'AMAS (ἀδάμας), a name given by the ancients to several hard substances, and among the rest, probably to the Diamond. Psellus describes the gem *adamas* as follows: *χραιοὺν μὲν ἔχει ὑελίζουσαν καὶ στικλήν*, "its colour resembles crystal, and is splendid."⁴ "It is probable," observes Dr. Moore, "that Pliny, when speaking of the gem called *adamas*,⁵ had in view, among other things, the diamond; but it is plain, from the fables he relates of it, that this substance 'of highest value, not only among gems, but all human things, and for a long time known to kings only, and to very few of them,' was unknown to him. He has evidently confounded in his description several widely different minerals; to which, from their hardness, or their, in some respect or other, indomitable nature, the Greeks gave the name ἀδάμας, 'adamant.' Thus steel was very frequently so called;⁶ and those grains of native gold, which, when the gangue containing them was reduced to powder in a mortar, resisted the pestle and could not be comminuted by it, were called *adamas*.⁶ Something of this sort Pollux meant by that 'flower of gold,'⁷ or choicest gold, which he calls *adamas*;⁸ and Plato, too, by 'the branch or knot of gold,'⁹ which, from its density, very hard and deep coloured, was called *adamas*.¹⁰ It was, no doubt, this native gold that was spoken of in the authors from whom Pliny drew, when he wrote that *adamas* is found in gold mines; that it accompanies gold; that it seems to occur nowhere but in gold; that it is not larger than a cucumber seed, nor unlike to it in colour. Of the six kinds he mentions, that described as occurring in India, not in gold, but bearing some resemblance to crystal, may have been the diamond; though even here it is probable that he, and those from whom he copies, mistook fine crystals of quartz for diamonds, or, rather, call such crystals *adamas*. The description given is

precisely that of a crystal of quartz, in which the prism has entirely disappeared, leaving a double six-sided pyramid upon a common base.¹ The manner in which Dionysius Periegetes characterizes *adamas* may lead us to suspect that he also spoke of crystals of quartz; for the diamond in its unpolished state, as known to the ancients, would hardly have been styled 'all-resplendent,'² and afterward 'brilliant.'³ The locality, too, in the former case, being Scythia. The variety of *adamas* which Pliny calls *siderites*, was magnetic iron ore;⁴ and the Cyprian was probably emery, or some similar substance used in engraving gems."⁵

*ADARK'ES (ἀδαρκης). Matthiolus admits his ignorance of what this substance is, and Matthias Faber was in error when he referred it to the *Lapis Spongites*.⁶ From the description of it given by Dioscorides and Paulus Ægineta, it was evidently nothing but the efflorescence which gathers about reeds in certain salt lakes.⁷

ADDIC'TIO. (Vid. NEXI.)

ADDIC'TIO. (Vid. ACTIO.)

ADDIX, ADDIXIS (ἄδδix, ἄδδixis), a Greek measure, according to Hesychius equal to four χοῖνικες.

ADEIA (ἀδεῖα). When any one in Athens, who had not the full privileges of an Athenian citizen, such as a foreigner, a slave, &c., wished to accuse a person of any offence against the people, he was obliged to obtain first permission to do so, which permission was called *ἀδεῖα*.⁸ An Athenian citizen who had incurred ἄρκια (vid. ATIMIA) was also obliged to obtain *ἀδεῖα* before he could lay an information against any one.⁹

ADEMP'TIO. (Vid. LEGATUM.)

ADGNA'TIO. (Vid. HERES; TESTAMENTUM.)

ADGNA'TI. (Vid. COGNATI.)

*AD'ANTON, a plant. There can be no doubt that it is the *Adiantum Capillus*, or "Maiden-hair." Both Nicander and Theophrastus say of it, that it derives its name from the circumstance of its not being wet by rain (ἀ, neg., and δαῖνω, "to wet"). Apuleius mentions *Callitrichon*, *Polytrichon*, and *Asplenon* as synonyms of it.¹⁰

ΔΙΚΙΪΑΣ πρὸς τὸν δῆμον γραφή, and ἀπατήσεως τοῦ δῆμου γραφή, were actions brought in the Athenian courts against persons who were considered to have misled the people, the courts of justice, or the senate of Five Hundred, by misrepresentations or false promises, into acts of injustice, or into measures injurious to the interests of Athens. If an individual was found guilty, he was punished with death. The law relating to these offences is preserved by Demosthenes.¹¹

ADIT'IO HEREDITA'TIS. (Vid. HEREDITAS.)

ADJUDICA'TIO. (Vid. ACTIO.)

ADLEC'TI were those persons who were admitted to the privileges and honours of the prætorship, quaestorship, ædileship, and other public offices, without having any duties to perform.¹² In inscriptions we constantly find, *adlectus inter tribunos, inter quaestores, inter prætores*, &c. The name also was applied, according to Festus, to those senators who were chosen from the equites on account of the small number of senators; but it appears more probable that the adlecti were the same as the conscripti. Livy says, *Conscriptos in novum senatum appellabant lectos*.¹³

ADLEC'TOR, a collector of taxes in the provinces in the time of the Roman emperors.¹⁴

Theod., xii., tit. vi., s. 12.)

ADMISSIONA'LES were chamberlains at the imperial court, who introduced persons to the presence of the emperor.¹ They were divided into four classes; the chief officer of each class was called *proximus admissionum*;² and the *proximi* were under the *magister admissionum*.³ The admissionales were usually freedmen.⁴

Friends appear to have been called *amici admissionis prima*, *secunda*, or *tertia*. According to some writers, they were so called in consequence of the order in which they were admitted; according to others, because the *alium* was divided into different parts, separated from one another by hangings, into which persons were admitted according to the different degrees of favour in which they were held.⁵

ADONIA (ἄδωνια), a festival celebrated in honour of Aphrodite and Adonis in most of the Grecian cities.⁶ It lasted two days, and was celebrated by women exclusively. On the first day they brought into the streets statues of Adonis, which were laid out as corpses; and they observed all the rites customary at funerals, beating themselves and uttering lamentations.⁷ The second day was spent in merriment and feasting, because Adonis was allowed to return to life, and spend half of the year with Aphrodite.⁸

*ADONIS (ἄδωνις, or ἑώκοιτος), the Flying-fish, or *Eocœtus volitans*, L.⁹

ADOPTION (GREEK). Adoption was called by the Athenians *εἰσποιήσις*, or sometimes simply *ποιήσις* or *θεύσις*. The adoptive father was said *ποιεῖσθαι*, *εἰσποιεῖσθαι*, or sometimes *ποιεῖν*; and the father or mother (for a mother after the death of her husband could consent to her son being adopted) was said *ἐκποιεῖν*: the son was said *ἐκποιεῖσθαι*, with reference to the family which he left; and *εἰσποιεῖσθαι* with reference to the family into which he was received. The son, when adopted, was called *ποιητός*, *εἰσποιητός*, or *θετός*, in opposition to the legitimate son born of the body of the father, who was called *γνήσιος*.

A man might adopt a son either in his lifetime or by his testament, provided he had no male offspring and was of sound mind. He might also, by testament, name a person to take his property, in case his son or sons should die under age.¹⁰ If he had male offspring, he could not dispose of his property. This rule of law was closely connected with the rule as to adoption; for if he could have adopted a son when he had male children, such son would have shared his property with the rest of his male children, and to that extent the father would have exercised a power of disposition which the law denied him.

Only Athenian citizens could be adopted; but females could be adopted (by testament at least) as well as males.¹¹ The adopted child was transferred from his own family and demus into those of the adoptive father; he inherited his property, and maintained the sacra of his adoptive father. It was not necessary for him to take his new father's name, but he was registered as his son. The adopted son might return to his former family, in case he left a child to represent the family of his adoptive father: unless he so returned, he lost all right which he might have had on his father's side if he had not been adopted; but he retained all rights which he might have on his mother's side, for the act of adoption had no effect so far as concerned the mother of

the adopted person; she still continued his mother after the act of adoption.

The next of kin of an Athenian citizen were entitled to his property if he made no disposition of it by will, or made no valid adoption during his lifetime; they were, therefore, interested in preventing fraudulent adoptions. The whole community were also interested in preventing the introduction into their body of a person who was not an Athenian citizen. To protect the rights of the next of kin against unjust claims by persons who alleged themselves to be adopted sons, it was required that the father should enter his son, whether born of his body or adopted, in the register of his phratia (φρατρικὸν γραμματεῖον) at a certain time, the Thargelia,¹ with the privacy of his kinsmen and phratres (γεννήται, φράτορες). Subsequently to this, it was necessary to enter him in the register of the adoptive father's demus (ληξιαρχικὸν γραμματεῖον), without which registration it appears that he did not possess the full rights of citizenship as a member of his new demus.

If the adoption was by testament, registration was also required, which we may presume that the person himself might procure to be done if he was of age, or if not, his guardian or next friend. If a dispute arose as to the property of the deceased (κλήρον διαδικασία) between the son adopted by testament and the next of kin, there could properly be no registration of the adopted son until the testament was established. If a man died childless and intestate, his next of kin, according to the Athenian rules of succession,² took his property by the right of blood (ἀγχιστεία κατὰ γένος). Though registration might in this case also be required, there was no adoption properly so called, as some modern writers suppose; for the next of kin necessarily belonged to the family of the intestate.

The rules as to adoption among the Athenians are not quite free from difficulty, and it is not easy to avoid all error in stating them. The general doctrines may be mainly deduced from the orations of Isæus, and those of Demosthenes against Macaratus and Leocrates.

ADOPTION (ROMAN). The Roman relation of parent and child arose either from a lawful marriage or from adoption. *Adoptio* was the general name which comprehended the two species, *adoptio* and *adrogatio*; and as the adopted person passed from his own familia into that of the person adopting, *adoptio* caused a *capitis diminutio*, and the lowest of the three kinds. Adoption, in its specific sense, was the ceremony by which a person who was in the power of his parent (*in potestate parentum*), whether a child or grandchild, male or female, was transferred to the power of the person adopting him. It was effected under the authority of a magistrate (*magistratus*), the prætor, for instance, at Rome, or a governor (*præses*) in the provinces. The person to be adopted was emancipated (*vid. MANCIPIATIO*) by his natural father before the competent authority, and surrendered to the adoptive father by the legal form called *in jure cessio*.³

When a person was *sui juris*, i. e., not in the power of his parent, the ceremony of adoption was called *adrogatio*. Originally it could only be effected at Rome, and only by a vote of the populus (*populi auctoritate*) in the comitia curiata (*lege curiata*); the reason of this being that the caput or status of a Roman citizen could not, according to the laws of the Twelve Tables, be affected except by a vote of the populus in the comitia curiata. Clodius, the enemy of Cicero, was adrogated into a plebeian family in order to qualify himself to be elected a tribune plebis.⁴ Females could not be

adopted by the adrogatio. Under the emperors it became the practice to effect the adrogatio by an imperial rescript (*principis auctoritate, ex rescripto principis*); but this practice had not become established in the time of Gaius, or, as it appears, of Ulpian.¹ It would seem, however, from a passage in Tacitus,² that Galba adopted a successor without the ceremony of the adrogatio. By a rescript of the Emperor Antoninus Pius, addressed to the pontifices, those who were under age (*impuberes*), or wards (*pupilli*), could, with certain restrictions, be adopted by the adrogatio. If a father who had children in his power consented to be adopted by another person, both himself and his children became in the power of the adoptive father. All the property of the adopted son became at once the property of the adoptive father.³ A person could not legally be adopted by the adrogatio till he had made out a satisfactory case (*iusta, bona, causa*) to the pontifices, who had the right of insisting on certain preliminary conditions. This power of the pontifices was probably founded on their right to preserve the due observance of the *sacra* of each gens.⁴ It would, accordingly, have been a good ground of refusing their consent to an adrogatio, if the person to be adopted was the only male of his gens, for the *sacra* would in such case be lost. It was required that the adoptive father also had no children, and no reasonable hopes of any; and, as a consequence of this condition, that he should be older than the person to be adopted.

A woman could not adopt a person, for even her own children were not in her power.

Finally, all adoption was effected by the imperial rescript.

The effect of adoption was to create the legal relation of father and son, just as if the adopted son were born of the blood of the adoptive father in lawful marriage. The adopted child was entitled to the name and *sacra privata* of the adopting parent, and it appears that the preservation of the *sacra privata*, which by the laws of the Twelve Tables were made perpetual, was frequently one of the reasons for a childless person adopting a son. In case of intestacy, the adopted child might be the heres of his adoptive father. He became the brother of his adoptive father's daughter, and therefore could not marry her; but he did not become the son of the adoptive father's wife, for adoption only gave to the adopted son the *jura agnationis*.⁵

The phrase of "adoption by testament"⁶ seems to be rather a misapplication of the term; for, though a man or woman might by testament name a heres, and impose the condition of the heres taking the name of the testator or testatrix, this so-called adoption could not produce the effects of a proper adoption. It could give to the person so said to be adopted the name or property of the testator or testatrix, but nothing more. A person on passing from one gens into another, and taking the name of his new familia, generally retained the name of his old gens also, with the addition to it of the termination *anus*. Thus C. Octavius, afterward the Emperor Augustus, upon being adopted by the testament of his uncle the dictator, assumed the name of Caius Julius Cæsar Octavianus; but he caused the adoption to be confirmed by the *curiæ*.⁷

ADORA'TIO (*προσκύνησις*) was paid to the gods in the following manner: The individual stretched out his right hand to the statue of the god whom he wished to honour, then kissed his hand and waved it to the statue. Hence we have in Apuleius, "*Nulli Deo adhuc supplicavit; nullum templum fre-*

quentavit; si sanum aliquod prætereat, nefas habet adorandi gratia manum labris admove."¹ The adoration differed from the *oratio* or prayers, supplications, which were offered with the hands extended and the palms turned upward.² The adoration paid to the Roman emperors was borrowed from the eastern mode of adoration, and consisted in prostration on the ground, and kissing the feet and knees of the emperor.³

ADROGA'TIO. (*Vid.* ADOPTION.)

ADSCRIPTIV. (*Vid.* ACCENS.)

ADSTIPULA'TIO. (*Vid.* STIPULATIO.)

ADULTER'IUM properly signifies, in the Roman law, the offence committed by a man having sexual intercourse with another man's wife. Stuprum (called by the Greeks *ῥηπά*) signifies the like offence with a widow or virgin. It was the condition of the female which determined the legal character of the offence; there was, therefore, no adultery unless the female was married.

In the time of Augustus a lex was enacted (probably about B.C. 17), entitled *Lex Julia de adulteriis coercendis*, the first chapter of which repealed some prior enactments on the same subject, with the provisions of which prior enactments we are, however, unacquainted. In this law the terms *adulterium* and *stuprum* are used indifferently; but, strictly speaking, these two terms differed as above stated. The chief provisions of this law may be collected from the Digest and from Paulus.⁴

It seems not unlikely that the enactments repealed by the Julian law contained special penal provisions against adultery; and it is also not improbable that, by the old law or custom, if the adulterer was caught in the fact, he was at the mercy of the injured husband, and that the husband might punish with death his adulterous wife.⁵ It seems, also, that originally the act of adultery might be prosecuted by any person, as being a public offence; but under the emperors the right of prosecution was limited to the husband, father, brother, patruus, and avunculus of the adulteress.

By the Julian law, if a husband kept his wife after an act of adultery was known to him, and let the adulterer off, he was guilty of the offence of *lenocinium*. The husband or father in whose power the adulteress was, had sixty days allowed for commencing proceedings against the wife, after which time any other person might prosecute.⁶ A woman convicted of adultery was mulcted in half of her *dos* and the third part of her property (*bona*), and banished (*relegata*) to some miserable island, such as Seriphos, for instance. The adulterer was mulcted in half his property, and banished in like manner. This law did not inflict the punishment of death on either party; and in those instances under the emperors in which death was inflicted, it must be considered as an extraordinary punishment, and beyond the provisions of the Julian law.⁷ But, by a constitution of Constantine⁸ (if it is genuine), the offence in the adulterer was made capital. By the legislation of Justinian,⁹ the law of Constantine was probably only confirmed; but the adulteress was put into a convent, after being first whipped. If her husband did not take her out in two years, she was compelled to assume the habit, and to spend the rest of her life in the convent.

The Julian law permitted the father (both adoptive and natural) to kill the adulterer and adulteress in certain cases, as to which there were several nice distinctions established by the law. If the

father killed only one of the parties, he brought himself within the penalties of the Cornelian law *De Sicariis*. The husband might kill persons of a certain class, described in the law, whom he caught in the act of adultery with his wife; but he could not kill his wife. The husband, by the fifth chapter of the Julian law, could detain for twenty hours the adulterer whom he had caught in the fact, for the purpose of calling in witnesses to prove the adultery. If the wife was divorced for adultery, the husband was entitled to retain part of the *dos*.¹ Horace² is supposed to allude to this Julian law.

Among the Athenians, if a man caught another man in the act of criminal intercourse (*μοιχεία*) with his wife, he might kill him with impunity; and the law was also the same with respect to a concubine (*παλλακή*). He might also inflict other punishment on the offender. It appears that among the Athenians also there was no adultery, unless a married woman was concerned.³ But it was no adultery for a man to have connexion with a married woman who prostituted herself, or who was engaged in selling anything in the agora.⁴ The Roman law appears to have been pretty nearly the same.⁵ The husband might, if he pleased, take a sum of money from the adulterer by way of compensation, and detain him till he found sureties for the payment. If the alleged adulterer had been unjustly detained, he might bring an action against the husband; and if he gained his cause, he and his sureties were released. If he failed, the law required the sureties to deliver up the adulterer to the husband before the court, to do what he pleased with him, except that he was not to use a knife or dagger.⁶

The husband might also prosecute the adulterer in the action called *μοιχείας γραφή*. If the act of adultery was proved, the husband could no longer cohabit with his wife under pain of losing his privileges of a citizen (*ἀρχαία*). The adulteress was excluded even from those temples which foreign women and slaves were allowed to enter; and if she was seen there, any one might treat her as he pleased, provided he did not kill her or mutilate her.⁷

ADVERSARIA, note-book, memorandum-book, posting-book, in which the Romans entered memoranda of any importance, especially of money received and expended, which were afterward transcribed, usually every month, into a kind of ledger. (*Tabulæ justæ, codex accepti et expensi*.) Cicero describes the difference between the *adversaria* and *tabulæ* in his *Oratio pro Rosc. Com.*, c. 3: *Quid est, quod negligenter scribamus adversaria? quid est, quod diligenter conficiamus tabulas? qua de causa? Quia hæc sunt menstrua, illæ sunt æternæ; hæc delentur statim, illæ servantur sancte, &c.*

ADUNARIUS. (*Vid. Actor*.)

ADUNATOI (ἀδυνάτοι), were persons supported by the Athenian state, who, on account of infirmity or bodily defects, were unable to obtain a livelihood. The sum which they received from the state appears to have varied at different times. In the time of Lysias⁸ and Aristotle,⁹ one obolus a day was given; but it appears to have been afterward increased to two oboli. The bounty was restricted to persons whose property was under three minæ; and the examination of those who were entitled to it belonged to the senate of the Five Hundred.¹⁰ Pisistratus is said to have been the first to introduce a law for the maintenance of those persons who had been mutilated in war.¹¹

ADVOCATUS seems originally to have signified any person who gave another his aid in any affair or business, as a witness, for instance;¹ or for the purpose of aiding and protecting him in taking possession of a piece of property.² It was also used to express a person who in any way gave his advice and aid to another in the management of a cause; but the word did not signify the orator or patronus who made the speech,³ in the time of Cicero. Under the emperors, it signified a person who in any way assisted in the conduct of a cause,⁴ and was sometimes equivalent to orator.⁵ The advocate's fee was then called *honorarium*. (*Vid. ORATOR, PATRONUS, CINCIA LEX*.)

The *advocatus* is defined by Ulpian⁶ to be any person who aids another in the conduct of a suit or action.

The *advocatus fisci* was an important officer established by Hadrianus.⁷ It was his business to look after the interests of the *fiscus* or the imperial treasury, and, among other things, to maintain its title to *bona caduca*.⁸

ADYTUM. (*Vid. TEMPLE*.)

ÆACIA. (*Vid. AIAKEIA*.)

EBUTIA LEX. (*Vid. ACTIO*.)

ÆDES. (*Vid. HOUSE; TEMPLE*.)

ÆDILES. The name of these functionaries is said to be derived from their having the care of the temple (*ædes*) of Ceres. The ædiles were originally two in number: they were elected from the plebes, and the institution of the office dates from the same time as that of the tribuni plebis, B.C. 494. Their duties at first seem to have been merely ministerial; they were the assistants of the tribunes in such matters as the tribunes intrusted to them, among which are enumerated the hearing of causes of smaller importance. At an early period after their institution (B.C. 446), we find them appointed the keepers of the *senatus consulta*, which the consuls had hitherto arbitrarily suppressed or altered.⁹ They were also the keepers of the plebiscita. Other functions were gradually intrusted to them, and it is not always easy to distinguish their duties from some of those which belong to the censors. They had the general superintendence of buildings, both sacred and private: under this power they provided for the support and repair of temples, curiæ, &c., and took care that private buildings which were in a ruinous state were repaired by the owners or pulled down. The superintendence over the supply and distribution of water at Rome was, at an early period, a matter of public administration. According to Frontinus, this was the duty of the censors; but when there were no censors, it was within the province of the ædiles. The care of each particular source or supply was farmed to undertakers (*redemptores*), and all that they did was subject to the approbation of the censors or the ædiles.¹⁰ The care of the streets and pavements, with the cleansing and draining of the city, belonged to the ædiles; and, of course, the care of the cloacæ. They had the office of distributing corn among the plebes; but this distribution of corn at Rome must not be confounded with the duty of purchasing or procuring it from foreign parts, which was performed by the consuls, quaestors, and prætors, and sometimes by an extraordinary magistrate, as the præfectus annonæ. The ædiles had to see that the public lands were not improperly used, and that the pastures of the state were not trespassed on; and they had power to punish by fine any unlawful act in this respect. They had a general superintendence

ence over buying and selling, and, as a consequence, the supervision of the markets, of things exposed to sale, such as slaves, and of weights and measures: from this part of their duty is derived the name under which the ædiles are mentioned by the Greek writers (*ἀγορανόμοι*). It was their business to see that no new deities or religious rites were introduced into the city, to look after the observance of religious ceremonies, and the celebrations of the ancient feasts and festivals. The general superintendence of police comprehended the duty of preserving order, regard to decency, and the inspection of the baths and houses of entertainment, of brothels, and of prostitutes, who, it appears, were registered by the ædiles. The ædiles had various officers under them, as *præcones*, *scribæ*, and *viatores*.

The *ÆDILES CURULES*, who were also two in number, were originally chosen only from the patricians, afterward alternately from the patricians and the plebes, and at last indifferently from both.¹ The office of curule ædiles was instituted B.C. 365, and, according to Livy, on the occasion of the plebeian ædiles refusing to consent to celebrate the *ludi maximi* for the space of four days instead of three; upon which a *senatus consultum* was passed, by which two ædiles were to be chosen from the patricians. From this time four ædiles, two plebeian and two curule, were annually elected.² The distinctive honours of the ædiles curules were, the *sella curulis*, from whence their title is derived, the *toga prætexta*, precedence in speaking in the senate, and the *jus imaginis*.³ The ædiles curules only had the *jus edicendi*, or the right of promulgating edicts;⁴ but the rules comprised in their edicts served for the guidance of all the ædiles. The edicts of the curule ædiles were founded on their authority as superintendents of the markets, and of buying and selling in general. Accordingly, their edicts had mainly, or perhaps solely, reference to the rules as to buying and selling, and contracts for bargain and sale. They were the foundation of the *actiones ædilitiæ*, among which are included the *actio redhibitoria* and *quanti minoris*.⁵ A great part of the provisions of the ædiles' edict relate to the buying and selling of slaves. The persons both of the plebeian and curule ædiles were *sacrosancti*.⁶

It seems that, after the appointment of the curule ædiles, the functions formerly exercised by the plebeian ædiles were exercised, with some few exceptions, by all the ædiles indifferently. Within five days after being elected or entering on office, they were required to determine by lot, or by agreement among themselves, what parts of the city each should take under his superintendence; and each ædile alone had the care of looking after the paving and cleansing of the streets, and other matters, it may be presumed, of the same local character within his district. The other duties of the office seem to have been exercised by them jointly.

In the superintendence of the public festivals and solemnities, there was a farther distinction between the two sets of ædiles. Many of these festivals, such as those of *Flora*⁷ and *Ceres*, were superintended by either set of ædiles indifferently; but the plebeian games were under the superintendence of the plebeian ædiles, who had an allowance of money for that purpose; and the *finis* levied on the *pecuarii* and others, seem to have been appropriated to these among other public purposes.⁸ The celebration of the *ludi magni* or *Romani*, of the *ludi scenici* or dramatic representations, and the *ludi Megalesii*, belonged especially to the curule ædiles, and it was on such occasions that they

often incurred a prodigious expense, with the view of pleasing the people and securing their votes in future elections. This extravagant expenditure of the ædiles arose after the close of the second Punic war, and increased with the opportunities which individuals had of enriching themselves after the Roman arms were carried into Greece, Africa, and Spain. Even the prodigality of the emperors hardly surpassed that of individual curule ædiles under the Republic; such as C. J. Cæsar the dictator, P. C. Lentulus Spinther, and, above all, M. Æmilius Scaurus, whose expenditure was not limited to bare show, but comprehended objects of public utility, as the reparation of walls, dockyards, ports, and aqueducts.¹ An instance is mentioned by Dion Cassius² of the *ludi Megalesii* being superintended by the plebeian ædiles; but it was done pursuant to a *senatus consultum*, and thus the particular exception confirms the general rule.

In B.C. 45, J. Cæsar caused two curule ædiles and four plebeian ædiles to be elected; and thenceforward, at least so long as the office of ædile was of any importance, six ædiles were annually elected. The two new plebeian ædiles were called *Cereales*, and their duty was to look after the supply of corn. Though their office may not have been of any great importance after the institution of a *præfectus annonæ* by Augustus, there is no doubt that it existed for several centuries, and at least as late as the time of Gordian.

The ædiles belonged to the class of the *minores magistratus*. The plebeian ædiles were originally chosen at the *comitia centuriata*, but afterward at the *comitia tributa*,³ in which *comitia* the curule ædiles also were chosen. It appears that, until the *lex annalis* was passed, a Roman citizen might be a candidate for any office after completing his twenty-seventh year. This *lex annalis*, which was passed at the instance of the tribune L. V. Tappulus, B.C. 180, fixed the age at which each office might be enjoyed.⁴ The passage of Livy does not mention what were the ages fixed by this law; but it is collected, from various passages of Roman writers, that the age fixed for the ædileship was thirty-six. This, at least, was the age at which a man could be a candidate for the curule ædileship, and it does not appear that there was a different rule for the plebeian ædileship.

The ædiles existed under the emperors; but their powers were gradually diminished, and their functions exercised by new officers created by the emperors. After the battle of Actium, Augustus appointed a *præfectus urbis*, who exercised the general police, which had formerly been one of the duties of the ædiles. Augustus also took from the ædiles, or exercised himself, the office of superintending the religious rites, and the banishing from the city of all foreign ceremonials; he also assumed the superintendence of the temples, and thus may be said to have destroyed the ædileship by depriving it of its old and original functions. This will serve to explain the curious fact mentioned by Dion Cassius,⁵ that no one was willing to hold so contemptible an office, and Augustus was therefore reduced to the necessity of compelling persons to take it: persons were accordingly chosen by lot, out of those who had served the office of *quæstor* and *tribune*; and this was done more than once. The last recorded instance of the splendours of the ædileship is the administration of Agrippa, who volunteered to take the office, and repaired all the public buildings and all the roads at his own expense, without drawing anything from the treasury.⁶ The ædileship had, however, lost its true character before this time. Agrippa had already

1. (Cic., Off., ii., 17.—Plin., H. N., xxxiii., 3; xxxvi., 15.—2. (xliii., 48.)—3. (Dion. Hal., vi., 90; ix., 43, 49.—Livy, ii., 56, seq.—4. (Livy, xl., 44.)—5. (Iv., c. 24.)—6. (Dion. Cas., xlix., 43.—Plin., H. N., xxxvi., 15.)

beet consul before he accepted the office of ædile, and his munificent expenditure in this nominal office was the close of the splendour of the ædileship. Augustus appointed the curule ædiles specially to the office of putting out fires, and placed a body of 600 slaves at their command; but the præfecti vigillum afterward performed this duty. In like manner, the *curatores viarum* were appointed by him to superintend the roads near the city, and the *quatuorviri* to superintend those within Rome. The *curatores operum publicorum* and the *curatores alvei Tiberis*, also appointed by Augustus, stripped the ædiles of the remaining few duties that might be called honourable. They lost also the superintendence of wells or springs, and of the aqueducts.¹ They remained, under the early emperors, a kind of police, for the purpose of repressing open licentiousness and disorder: thus the baths, eating-houses, and brothels were still subject to their inspection, and the registration of prostitutes was still within their duties.² We read of the ædiles under Augustus making search after libellous books, in order that they might be burned.

The coloniae, and the municipia of the later period, had also their ædiles, whose numbers and functions varied in different places. They seem, however, as to their powers and duties, to have resembled the ædiles of Rome. They were chosen annually.³

The history, powers, and duties of the ædiles are stated with great minuteness and accuracy by Schubert, *De Romanorum Aedilibus*, lib. iv., Rigmontii, 1828.

ÆDITUI, ÆDITUMI, ÆDITIMI (called by the Greeks *νεωκόροι*, *ζυγόροι*, and *ὑποζυγόροι*), were persons who took care of the temples, attended to the cleaning of them, &c.⁴ They appear to have lived in the temples, or near them, and to have acted as ciceroni to those persons who wished to see them.⁵ In ancient times, the æditui were citizens, but under the emperors freedmen.⁶

*Æ'DON (Ἀφών), without doubt the *Motacilla Luscinia*, L., and *Sylvia Luscinia* (Latham), or the Nightingale. We sometimes read ἁδονίς, or ἁδωνίς in Doric. The nightingale is also called *φιλολύλα* and *πρόκνη* by the poets. That it is the male bird only which sings, was well understood by the ancients.⁷ Virgil, however, has on one occasion given the power of song to the female bird.⁸ From some papers in the Classical Journal, it would appear that the nightingale sings by day as well as by night.⁹

ÆGIS is a Greek word (*αἰγίς*, -ίδος), signifying, literally, a goatskin, and formed on the same analogy with *νεβρίς*, a fawnskin.¹⁰

According to ancient mythology, the ægis worn by Jupiter was the hide of the goat Amalthea, which had suckled him in his infancy. Hyginus relates¹¹ that, when he was preparing to resist the Titans, he was directed, if he wished to conquer, to wear a goatskin with the head of the Gorgon. To this particular goatskin the term ægis was afterward confined. Homer always represents it as part of the armour of Jupiter, whom, on this account, he distinguishes by the epithet *ægis-bearing* (*αἰγίοχος*). He, however, asserts that it was borrowed on different occasions both by Apollo¹² and by Minerva.¹³

The skins of various quadrupeds having been used by the most ancient inhabitants of Greece for clothing and defence, we cannot wonder that the

goatskin was employed in the same manner; and the particular application of it which we have now to consider will be understood from the fact that the shields of the ancient Greeks were in part supported by a belt or strap (*τελαμὸν*, *baltus*) passing over the right shoulder, and, when not elevated with the shield, descending transversely to the left hip. In order that a goatskin might serve this purpose, two of its legs would probably be tied over the right shoulder of the wearer, the other extremity being fastened to the inside of the shield. In combat, the left arm would be passed under the hide, and would raise it together with the shield, as is shown in a marble statue of Minerva, preserved in the museum at Naples, which, from its style of art, may be reckoned among the most ancient in existence.

Other statues of Minerva, also of very high antiquity, and derived, no doubt, from some still more ancient type, represent her in a state of repose, and with the goatskin falling obliquely from its loose fastening over her right shoulder, so as to pass round the body under the left arm. The annexed figure is taken from a colossal statue of Minerva at Dresden. The softness and flexibility of the goatskin are here expressed by the folds produced in it by the girdle with which it is encircled.

Another mode of wearing this garment, also of peaceful expression, is seen in a statue of Minerva at Dresden, of still higher antiquity than that last referred to, and in the very ancient image of the same goddess from the Temple of Jupiter at Ægina. In both of these the ægis covers the right as

1. (Frontinus, ii.)—2. (Tacit., Ann., ii., 85.)—3. (De Aedil. Col., &c., Otto., Lips., 1732.)—4. (Herod., vi., 134.)—5. (Liv., xxx., 17.—Gell., xii., 10.—Suet., Dom., 1.—Varro, De Ling. (Il., xv., 220, 307–318, 309; xxiv., 20.)—14. (Il., ii., 447–449; xviii., 204; xxi., 400.)

well as the left shoulder, the breast, and the back, falling behind so as almost to reach the feet. Schorn¹ considers this as the original form of the ægis.

By a figure of speech, Homer uses the term ægis to denote not only the goatskin, which it properly signified, but, together with it, the shield to which it belonged. By thus understanding the word, it is easy to comprehend both why Minerva is said to throw her father's ægis around her shoulders,² and why, on one occasion, Apollo is said to hold it in his hand, and to shake it so as to terrify and confound the Greeks,³ and on another occasion to cover with it the dead body of Hector, in order to protect it from insult.⁴ In these passages we must suppose the ægis to mean the shield, together with the large expanded skin or belt by which it was suspended from the right shoulder.

As the Greeks prided themselves greatly on the rich and splendid ornaments of their shields, they supposed the ægis to be adorned in a style corresponding to the might and majesty of the father of the gods. In the middle of it was fixed the appalling Gorgon's head,⁵ and its border was surrounded with golden tassels (*ὀφάκων*), each of which was worth a hecatomb.⁶ In the figures above exhibited, the serpents of the Gorgon's head are transferred to the border of the skin.

By the later poets and artists, the original conception of the ægis appears to have been forgotten or disregarded. They represent it as a breastplate covered with metal in the form of scales, not used to support the shield, but extending equally on both sides from shoulder to shoulder, as in the annexed figure, taken from a statue at Florence.

With this appearance the descriptions of the ægis by the Latin poets generally correspond.⁷

It is remarkable that, although the ægis properly belonged to Jupiter, and was only borrowed from him by his daughter, and although she is commonly exhibited either with the ægis itself, or with some emblem of it, yet we seldom find it as an attribute of Jupiter in works of art. There is, however, in the museum at Leyden a marble statue of Jupiter, found at Utica, in which the ægis hangs over his left shoulder. It has the Gorgon's head, serpents on the border, and a hole for the left arm to pass through. The annexed figure is taken from a cameo engraved by Nisus, a Greek artist. Jupiter is here represented with the ægis wrapped round the fore

part of his left arm. The shield is placed underneath it, at his feet. In his right hand he holds the thunderbolt.

The Roman emperors also assumed the ægis, intending thereby to exhibit themselves in the character of Jupiter. Of this the armed statue of Hadrian in the British Museum presents an example. In these cases the more recent Roman conception of the ægis is of course followed, coinciding with the remark of Servius,¹ that this breast-armour was called ægis when worn by a god; *lorica*, when worn by a man.

Hence Martial, in an epigram on the breastplate of Domitian, says,

"Dum vacat hæc, Caesar, poterit lorica vocari.

*Pectore cum sacro sederit, ægis erit."*²

In these lines he in fact addresses the emperor as a divinity.

*ÆGYPTIL'LA, a name common to several species of agate. It was, perhaps, the ancient denomination of what is still called Egyptian pebble; a striped jasper; the quartz agate onyx of Haüy.³

*ÆIZO'ON (*ἀειζών*), a plant, of which Dioscorides⁴ describes three species: the first, or *ἡ τὸ μέγα*, being the *Sempervivum arboreum*, according to Sibthorp and Sprengel; the second, or *ἡ τὸ μικρόν*, the *Sedum rupestre* or *reflexum* (Rock or Yellow Stonecrop); and the third, the *Sedum stellatum*, according to Columna and Sprengel. The *ἀειζών* of Theophrastus⁵ is the same as the first species of Dioscorides, the characters of which, notwithstanding the high authority of Sibthorp and Sprengel, who are of a different opinion, Dr. Adams thinks he is justified in identifying with those of the *Sempervivum tectorum*, or Houseleek.⁶

ÆI'SITOI. (*Vir. PRYTANEION.*)

ÆLIA SENTIA LEX. This law, which was passed in the time of Augustus (about A.D. 3), contained various provisions. By one clause it was provided that manumitted slaves, who, during their servitude, had undergone certain punishments for offences, should not become either Roman citizens or Latini, but should belong to the class of peregrini dediticii. (*Vir. DEDITICII.*) The law also contained various provisions as to the manumission of slaves, and as to the mode in which a manumitted slave, who had only obtained the privileges of a Latinus, might become a Roman citizen. The law also made void all manumission of slaves effected for the purpose of defrauding a creditor or a patron, whether such manumission was effected in the life-

1. (Böttiger, *Amalthea*, ii., 215.)—2. (Il., v., 738; xviii., 204.)—3. (Il., xv., 229, 307, seqq.)—4. (xviii., 20.)—5. (Il., v., 741.)—6. (Il., ii., 446, seqq.)—7. (*Virg.* *Æn.*, viii., 435, seqq.—*Val. Flacc.*, vi., 174. *Virg.* *Apollinaris*, Carm., xv.—*Sil. Ital.*, ix., 442.)

1. (*Æn.*, viii., 435.)—2. (*vii.*, 1.)—3. (*Moore's Anc. Mineralogy*, p. 181.—*Plin.*, xxxvii., 10.)—4. (*iv.* 88.)—5. (*H. P.*, v., 15.)—6. (*Adams*, *Append.*, s. v.)

time of the master, or by his testament. It prescribed certain formalities to be observed in the case of manumission when the owner of the slave (*dominus*) was under twenty; the effect of which was, that though a person of the age of fourteen could make a will, he could not by will give a slave his freedom.

ÆNEATORÆS (*ahenatores**) were those who blew upon wind instruments in the Roman army; namely, the *buccinatores*, *cornicines*, and *tubicines*.³ Æneatores were also employed in the public games.⁴ A *collegium æneatorum* is mentioned in inscriptions.⁵

ÆOLIPYLÆ (*αἰόλου πύλαι*) were, according to the description of Vitruvius,⁶ hollow vessels, made of brass, which were used in explaining the origin, &c., of the winds. These vessels, which had a very small orifice, were filled with water and placed on the fire, by which, of course, steam was created.

ÆQUITAS. (*Vid. Jus*.)

ÆRA, a point of time from which subsequent or preceding years may be counted. The Greeks had no common æra till a comparatively late period. The Athenians reckoned their years by the name of the chief archon of each year, whence he was called *ἀρχὸν ἐπώνυμος*; the Lacedæmonians by one of the ephors; and the Argives by the chief priestess of Juno, who held her office for life.⁷ The following æras were adopted in later times: 1. The æra of the Trojan war, B.C. 1184, which was first made use of by Eratosthenes. 2. The Olympiad æra, which began B.C. 776, and was first made use of by Timæus of Sicily, and was adopted by Polybius, Diodorus, Dionysius of Halicarnassus, and Pausanias. (*Vid. OLYMPIAD*.) 3. The Philippic or Alexandrian æra, which began B.C. 323. 4. The æra of the Seleucidæ, which began in the autumn of B.C. 312. 5. The æras of Antioch, of which there were three, but the one in most common use began in November, B.C. 49.

The Romans reckoned their years from the foundation of the city (*ab urbe condita*) in the time of Augustus and subsequently, but in earlier times the years were reckoned by the names of the consuls. We also find traces of an æra from the banishment of the kings, and of another from the taking of the city by the Gauls. The date of the foundation of Rome is given differently by different authors. That which is most commonly followed is the one given by Varro, which corresponds to B.C. 753.⁸ It must be observed that 753 A.U.C. is the first year before, and 754 A.U.C. the first year after the Christian æra. To find out the year B.C. corresponding to the year A.U.C., subtract the year A.U.C. from 754; thus, 605 A.U.C.=149 B.C. To find out the year A.D. corresponding to the year A.U.C., subtract 753 from the year A.U.C.; thus, 767 A.U.C.=14 A.D.

ÆRARIII, those citizens of Rome who did not enjoy the perfect franchise; i. e., those who corresponded to the *Isoteles* and *Atimi* at Athens. The name is a regular adjective formed from *æs* (bronze), and its application to this particular class is due to the circumstance that, as the ærarii were protected by the state without being bound to military service, they naturally had to pay the *æs militare*, which was thus originally a charge on them, in the same way as the sums for knights' horses were levied on the estates of rich widows and orphans.⁹ (*Vid. ÆS HORDEARIUM*.) The persons who constituted this class were either the inhabitants of other towns which had a relation of isopolity with Rome (the

inquilini), or clients and the descendants of freedmen. The decemvirs enrolled in the tribes all who were ærarians at that time:¹ and when the tribes comprised the whole nation, the degradation of a citizen to the rank of an ærarian (which was called *ærarium facere*;² *referre aliquem in ærarios*;³ or *in tabulas Cæribum referri jubere**) might be practised in the case of a patrician as well as of a plebeian. Hence ærarius came to be used as a term of reproach. Thus Cicero, speaking of the corrupt judges who tried Clodius, says,⁵ *Maculosi senatores, nudi equites, tribuni non tam ærati, quam, ut appellantur, ærarii*. He is alluding to the Aurelian law, which settled that the judges should be selected from the senators, the knights, and the tribuni ærarii. These *tribuni ærarii*, who constituted an order in the later days of the republic, and were, in fact, the representatives of the most respectable plebeians, were originally heads of tribes, who acted as general inspectors and collectors of the *æs militare* for the payment of the troops.⁶ In the same way the publicani, or farmers of the taxes, constituted a numerous class of the equestrian order.

ÆRARIUM, the public treasury at Rome. After the banishment of the kings, the temple of Saturn was used as the place for keeping the public treasure, and it continued to be so till the later times of the empire.⁷ Besides the public money, the standards of the legions were kept in the ærarium;⁸ and also all decrees of the senate were entered there, in books kept for the purpose.⁹

The ærarium was divided into two parts: the common treasury, in which were deposited the regular taxes, and which were made use of to meet the ordinary expenses of the state; and the sacred treasury (*ærarium sanctum, sanctius*)¹⁰, which was never touched except in cases of extreme peril. The twentieth part of the value of every slave who was enfranchised,¹¹ and some part of the plunder of conquered nations, were deposited in the sacred treasury.¹² Augustus established a separate treasury under the name of *ærarium militare*, to provide for the pay and support of the army, and he imposed several new taxes for that purpose.¹³

The *ærarium*, the public treasury, must be distinguished from the *fiscus*, the treasury of the emperors.¹⁴ (*Vid. FISCUS*.)

The charge of the treasury was originally intrusted to the *quæstors* and their assistants, the *tribuni ærarii*; but in B.C. 49, when no *quæstors* were elected, it was transferred to the *ædiles*, in whose care it appears to have been till B.C. 28, when Augustus gave it to the *prætors*, or those who had been *prætors*.¹⁵ Claudius restored it to the *quæstors*;¹⁶ but Nero made a fresh change, and committed it to those who had been *prætors*, and whom he called *præfecti ærarii*.¹⁷ In the time of Vespasian, the charge of the treasury appears to have been again in the hands of the *prætors*;¹⁸ but in the time of Trajan, if not before, it was again intrusted to the *præfects*, who appear to have held their office for two years.¹⁹

*ÆRUGO (*ίόγ*), Verdigris. "Among the ancients, as it still is, verdigris was a common green pigment; and Dioscorides²⁰ and Pliny²¹ specify several varieties of native *ærugo*, or *ίόγ*, classing with it, in this case, what we may suppose to have been green carbonate, instead of acetate of copper; as,

for example, 'the efflorescence upon stones which contained copper,' and what was 'scraped from the stone out of which copper was melted.' Various modes of making verdigris are described by Theophrastus, Dioscorides, and Pliny, which agree in principle, and some of them even as to their details, with the processes now employed. Among the various adulterations of it, that which was made with the sulphate of iron (*abramentum sutorium*) was, as we learn from Pliny, the one best calculated to deceive; and the mode of detecting it, suggested by him, deserves notice. It was to rub the counterfeit ærugo on papyrus steeped with the gall-nut, which immediately thereon turned black.¹

ÆRUSCATORÆS were vagrants who obtained their living by fortune-telling and begging.² They were called by the Greeks ἀγύρται. (Vid. AGURTAI.) Festus explains *æruscare* by *ara undique colligere*.

ÆS (χαλκός), a composition of metals, in which copper is the predominant ingredient. Its etymology is not known. The Italians and French often use the words *rame* and *ottone*, and *airain*, to translate the word *æs*; but, like the English term *brass*, which is also employed in a general way to express the same composition, all are incorrect, and are calculated to mislead. Brass, to confine ourselves to our own language, is a combination of *copper* and *zinc*, while all the specimens of ancient objects formed of the material called *æs*, are found upon analysis to contain no zinc; but, with very limited exceptions, to be composed entirely of *copper* and *tin*. To this mixture the term *bronze* is now exclusively applied by artists and founders; and it is desirable that, being now generally received, it should always be used, in order to prevent misapprehension, and to distinguish at once between the two compositions. The word *bronze* is of Italian origin, and of comparatively modern date, and derived in all probability from the brown colour (*bruno*) which the artists of the period of the revival (as it is called) of the Arts, and those who followed them, gave their metal works; various fine specimens of such productions of the *cinque-cento* age are still preserved in the Museum of Florence and in other collections; and when the surface of the cast has not been injured by accident or by exposure to the weather, the rich brown tint originally imparted to them is as perfect as when it was first produced. The natural colour of bronze, when first cast, is a reddish brown; the different tints which are seen on works of sculpture of this class being almost always given by artificial means: that which modern taste prefers, and which is now usually seen on bronze works, namely, a bright bluish green, may, however, be considered natural to it, as it is simply the effect of oxidation, from exposure to the influence of the atmosphere. Sometimes the operations of time and weather are anticipated by the skillful application of an acid over the surface of the metal. The finest bronzes of antiquity are remarkable for the colour of this *patina*, as it is called by antiquaries.

The employment of *æs* (*bronze*) was very general among the ancients; money, vases, and utensils of all sorts, whether for domestic or sacrificial purposes, ornaments, arms offensive and defensive, furniture, tablets for inscriptions, musical instruments, and, indeed, every object to which it could be applied, being made of it. The proportions in which the component parts were mixed seem to have been much studied; and the peculiarities and excellence of the different sorts of bronze were marked by distinctive names, as the *æs Corinthiacum*, *æs Deliacum*, *æs Ægineticum*, *æs Hepatizon*, and others; but of which, it must be confessed, we know little or nothing beyond the titles, except that

we collect from some of the writers of antiquity, that, with the view of producing effects of colour or variety of texture, the artists sometimes mixed small proportions of gold, silver, lead, and even iron, in the composition of their bronze.

No ancient works in brass, properly so called, have yet been discovered, though it has been affirmed that zinc was found in an analysis made of an antique sword;¹ but it appeared in so extremely small a quantity, that it hardly deserved notice; if it was indeed present, it may rather be attributed to some accident of nature than to design. For farther particulars on the composition of bronze, and the practice of the ancients in different processes of metal-working, the reader is referred to the article on bronze.

ÆS (money, *nummi aenei* or *aeri*). Since the most ancient coins in Rome and the old Italian states were made of *æs*, this name was given to money in general, so that Ulpian says, *Etiam aureos nummos as dicimus*.² For the same reason we have *as alienum*, meaning debt, and *era* in the plural, pay to the soldiers.³ The Romans had no other coinage except bronze or copper (*as*) till A.U.C. 485 (B.C. 269), five years before the first Punic war, when silver was first coined; gold was not coined till sixty-two years after silver.⁴ For this reason, Argentinus, in the Italian mythology, was made the son of Æsculapius.⁵

The earliest copper coins were cast, not struck. In the collection of coins at the British Museum there are four *ases* joined together, as they were taken from the *mcuā*, in which many were cast at once. In most *ases* the edge shows where they were severed from each other. The first coinage of *æs* is usually attributed to Servius Tullius, who is said to have stamped the money with the image of cattle (*pecus*), whence it was called *pecunia*.⁶ According to some accounts, it was coined from the commencement of the city;⁷ and according to others, the first coinage was attributed to Janus or Saturn.⁸ We know that the old Italian states possessed a bronze or copper coinage from the earliest times.

The first coinage was the *as* (vid. *As*), which originally was a pound weight; but *as*, in course of time, the weight of the *as* was reduced not only in Rome, but in the other Italian states, and this reduction in weight was not uniform in the different states, it became usual in all bargains to pay the *ases* according to their weight, and not according to their nominal value. The *as grave*⁹ was not, as has been supposed by some, the old heavy coins as distinguished from the lighter modern; but, as Niebuhr¹⁰ has remarked, it signified any number of copper coins reckoned according to the old style, by weight. There was, therefore, no occasion for the state to suppress the circulation of the old copper coins, since in all bargains the *ases* were not reckoned by tale, but by weight. The weight thus supplied a common measure for the national money, and for that of the different states of Italy; and, accordingly, a hundred pounds, whether of the old or modern money, were of the same value. The name of *æs grave* was also applied to the uncoined metal.¹¹

Under the Roman empire, the right of coining silver and gold belonged only to the emperors; but the copper coinage was left to the *ærarium*, which was under the jurisdiction of the senate.

Bronze or copper (*χαλκός*) was very little used

1. (Mongez, *Mém. de l'Institut.*)—2. (Dig. 50, tit. 16, s. 159. —Compare Hor., *Ep. ad Pis.*, 345.—Id., *Ep. i*, vii., 23.)—3. (Liv., v., 4.—Plin., H. N., xxxiv., 1.)—4. (Plin., H. (Liv., iv., 41, 60; v., 2; xxxii., 26.—Sen. ad Helv., 12.)—10. (Rom. Hist., i., p. 458.)—11. (Servius, in Virg., *Æn.*, vi., 562.—"Massa, as rude, metallum infectum:" Isidor., xvi., 18, 13.)

1. (Theophrast., *περί Αἰθ.*, c. 102.—Vitruv., vii., 12.—Moore's *Anc. Mineralogy*, p. 64, seq.)—2. (Gell., xiv., 1; ix., 2.—Sen. de Clem., ii., 6.)

by the Greeks for money in early times. Silver was originally the universal currency, and copper appears to have been seldom coined till after the time of Alexander the Great. At Athens a copper coinage was issued as early as B.C. 406, in the archonship of Callias;¹ but it was soon afterward called in, and the silver currency restored.² It is not improbable, however, that the copper coin called *χαλκοῦς* was in circulation in Athens still earlier. The smallest silver coin at Athens was the quarter obol, and the *χαλκοῦς* was the half of that, or the eighth of an obol. The copper coinage issued in the archonship of Callias probably consisted of larger pieces of money, and not merely of the *χαλκοῦς*, which appears to have been used previously on account of the difficulty of coining silver in such minute pieces. The *χαλκοῦς* in later times was divided into *lepta*, of which, according to Suidas (s. v. *Γάλαντον* and *Ὀβολός*), it contained seven. There was another copper coin current in Greece, called *τύμβολον*, of which the value is not known. Pollux³ also mentions *κόλλυβος* as a copper coin of an early age; but, as Mr. Hussey has remarked, this may have been a common name for small money; since *κόλλυβος* signified generally "changing money," and *κολλυβιστής* "a money-changer." In later times, the obol was coined of copper as well as silver. As early as B.C. 185, we find talents paid in copper by Ptolemy Epiphanes.⁴

ÆS CIRCUMFORANEUM, money borrowed from the Roman bankers (*argentarii*), who had shops in porticos round the forum.⁵

ÆS EQUESTRE, the sum of money given by the Roman state for the purchase of the knight's horse (*ea pecunia, qua equus emendus erat*).⁶ This sum, according to Livy,⁷ amounted to 10,000 ases.

ÆS HORDEARIUM, or HORDIARIUM, the sum of money paid yearly for the keep of a knight's horse; in other words, a knight's pay.⁸ This sum, which amounted to 2000 ases for each horse, was charged upon the rich widows and orphans, on the principle that, in a military state, the women and children ought to contribute largely for those who fought in behalf of them and the commonwealth.⁹ The knights had a right to distrain for this money, if it was not paid, in the same manner as they had the right to distrain for the *as equestre*, and the soldiers for the *as militare*.¹⁰ It has been remarked by Niebuhr,¹¹ that a knight's monthly pay, if his yearly pension of 2000 ases be divided by twelve, does not come to anything like an even sum; but that, if we have recourse to a year of ten months, which was used in all calculations of payments at Rome in very remote times, a knight's monthly pay will be 200 ases, which was just double the pay of a foot soldier.

ÆS MILITARE. (Vid. ÆRARIUM.)

ÆS MANUARIUM was the money won in playing with dice, *manibus collectum*. *Manus* was the throw in the game. All who threw certain numbers were obliged to put down a piece of money; and whoever threw the Venus (the highest throw) won the whole sum, which was called the *as manuarium*.¹²

ÆS UXORIUM. (Vid. MARRIAGE.)

•ÆSCULUS, a species of tree commonly ranked in the family of oaks. Martyn¹³ is inclined to make it the same with what is called, in some parts of England, the bay-oak, and corresponds to the

Quercus latifolia mas, *qua breviter pediculus est*, as described by Bauhin. Fée, however,¹ condemns this opinion, on the ground that Virgil, in the passage on which Martyn is commenting, places the *Æsculus* and *Quercus* in opposition to each other, as distinct kinds of trees. Martyn therefore is wrong, according to this writer, in making the *Æsculus* identical with the *Quercus latifolia* of Bauhin, since this last is only a variety of, and very little distinct from, the *Quercus arbor*. If it were certain that the *æsculus* of Virgil was the same with that of Pliny,² there would be no difficulty whatever in determining its botanical character; for the *æsculus* of Pliny is well known being the *φηγός* of Theophrastus,³ or our *Quercus Æsculus*. Pliny's *Fagus* is our beech, and not an oak; and the description which he gives of the tree shows this very clearly. On the other hand, Theophrastus ranks his *φηγός* among oaks. Pliny thus places his *æsculus* between the *quercus*, the *robur*, the *ilex*, and the *suber*. Everything then agrees; and, besides, the etymology of *æsculus* from *esca* ("food"), like that of *φηγός* from *φάγω* ("to eat"), is not unreasonable. But the *æsculus* of Pliny does not correspond to the *æsculus* of Virgil. The former is one of the smallest kinds of oak, whereas the latter is described by the poet as "*maxima*," and in figurative language as touching the skies with its top, and reaching to Tartarus with its roots. Pliny, too, considers the *æsculus* as rare in Italy, whereas Horace speaks of wide groves of the *æsculus* in Daunia. This poet, therefore, like Virgil, takes the term *æsculus* in a different sense from the naturalist. In order to relieve the question from the embarrassment in which it is thus left, some botanists have imagined that Virgil means the chestnut, a bold but not very reasonable idea.

ÆSTIMATIO LITIS. (Vid. IUDEX.)

ÆSYMNETES. (Vid. AISUMNETES.)

*ÆTITES (*ἀετίτης*), the Eagle-stone. It is the same with the *ἡ τῶν τίκτων* of Theophrastus, or the Prolific stone, of which the ancients give such wonderful accounts, making it famous for assisting in delivery, preventing abortions, and discovering thieves! Pliny⁴ says of it, "*Est autem lapis iste prægnans indur; quum quatuor, alio velut in utero sonante*;" and Dioscorides⁵ remarks, *ἀετίτης λίθος ὡς ἐτέρον ἐγκύμων λίθον ὑπάρχειν*. Sir John Hill⁶ says, that custom has given the name of *Ætites* to every stone having a loose nucleus in it. Cleaveland observes, that the ancients gave it the name of *Eagle-stone* (*ἀερός*, "an eagle"), from an opinion that this bird transports them to its nest to facilitate the laying of its eggs. It is an argillaceous oxyde of iron.⁷

*ÆTOS (*ἀετός*). I. The Eagle. (Vid. AQUILA.)

II. A species of Ray fish, called by Pliny *Aquila*, and now known as the *Raja Aquila*, L. Oppian enumerates it among the viviparous fishes.⁸

AFFINES, AFFINITAS, or AFFINIS, AFFINITAS. Affines are the cognati of husband and wife; and the relationship called *affinitas* can only be the result of a lawful marriage. There are no degrees of *affinitas* corresponding to those of cognati, though there are terms to express the various kinds of *affinitas*. The father of a husband is the socer of the husband's wife, and the father of a wife is the socer of the wife's husband; the term *socrus* expresses the same affinity with respect to the husband's and wife's mothers. A son's wife is *nurus* or daughter-in-law to the son's parents; a wife's husband is *gener* or son-in-law to the wife's parents.

Thus the *avus*, *avia*; *pater*, *mater*; of the wife

become by the marriage respectively the socer magnus, prosocus, or socrus magna—socer, socrus—of the husband, who becomes with respect to them severally progener and gner. In like manner, the corresponding ancestors of the husband respectively assume the same names with respect to the son's wife, who becomes with respect to them pronurus and nurus. The son and daughter of a husband or wife born of a prior marriage are called prignus and prignua with respect to their stepfather or stepmother; and, with respect to such children, the stepfather and stepmother are severally called vitricus and noverca. The husband's brother becomes levir with respect to the wife, and his sister becomes glos (the Greek γλώσς). Marriage was unlawful among persons who had become such affines as above mentioned. A person who had sustained such a capitis diminutio as to lose both his freedom and the civitas, lost also all his affines.¹

*AGALL' OCHON (ἀγαλλοχόν), the *Lignum Aloes*, or *Aloexylon Agallochum*, Lour. Such, at least, is the opinion of the commentators on Mesue, of Celsius, Bergius, Matthiolus, Lamarck and Sprengel. Avicenna and Abu'l Fadli describe several species, or, more properly, varieties of it.²

ΑΓΑΜΙΟΥ ΓΡΑΦΗ (ἀγαμίου γραφή). (Vid. MARIAGE.)

*AGARTKON (ἀγαρτικόν), the *Bolsetus igniarius*, called in English *Touchwood* or *Spunk*, a fungous excrescence, which grows on the trunk of the oak and other trees. Dioscorides, Paulus Aegineta, and other writers on Toxicology, make mention of a black or poisonous Agaric, which may be decided to have been the *Agaricus Muscarius*. Dr. Christison confirms the ancient statements of its poisonous nature.³

AGA'SO, a groom, a slave whose business it was to take care of the horses. The word is also used for a driver of beasts of burden, and is sometimes applied to a slave who had to perform the lowest menial duties.⁴

*AGASSEUS (ἀγασσεύς), a species of dog described by Oppian.⁵ It may be conjectured to have been either the Harrier or the Beagle. Pennant is in favour of the latter.⁶

AGATHOERGOI (ἀγαθοεργοί). In time of war the kings of Sparta had a body-guard of three hundred of the noblest of the Spartan youths (ἱππείς), of whom the five eldest retired every year, and were employed for one year, under the name of ἀγαθοεργοί, in missions to foreign states.⁷ It has been maintained by some writers that the ἀγαθοεργοί did not attain that rank merely by seniority, but were selected from the ἱππείς by the ephors without reference to age.⁸

AG' ELE (ἀγέλη), an assembly of young men in Crete, who lived together from their eighteenth year till the time of their marriage. An ἀγέλη consisted of the sons of the most noble citizens, who were usually under the jurisdiction of the father of the youth who had been the means of collecting the ἀγέλη. It was the duty of this person, called ἀγέλαρχος, to superintend the military and gymnastic exercises of the youths (who were called ἀγέλαστοι), to accompany them to the chase, and to punish them when disobedient. He was accountable, however, to the state, which supported the ἀγέλαι at the public expense. All the members of an ἀγέλη were obliged to marry at the same time.⁹ In Sparta the youths entered the ἀγέλαι, usually called βόται, at the end of their seventh year.

AGE'MA (ἄγμα from ἄγω), the name of a chosen

body of troops in the Macedonian army, which usually consisted of horsemen. The agema seems to have varied in number; sometimes it consisted of 150 men, at other times of 300, and in later times it contained as many as 1000 or 2000 men.¹

*AGE'RATON (ἀγέρατον), a plant, which Matthiolus and Adams make to have been the *Achillea ageratum*. Dodonæus and Sprengel, however, are undecided about it. It would appear to be the *Eupatorium* of the translator of Mesue.²

ΑΓΕΩΡΤΙΟΥ ΔΙΚΗ (ἀγεωργίου δίκη), an action which might be brought in the Athenian courts by a landlord against the farmer who had injured his land by neglect, or an improper mode of cultivation.³

AGER ARCIFINIUS. (Vid. AGRIMENSORES.)

AGER DECUMANUS. (Vid. AGRARIE LEGES.)

AGER LIMITATUS. (Vid. AGRIMENSORES.)

AGER PUBLICUS. (Vid. AGRARIE LEGES.)

AGER RELIGIOSUS. (Vid. AGRARIE LEGES.)

AGER SACER. (Vid. AGRARIE LEGES.)

AGER SANCTUS (τέμενος). Τέμενος originally signified a piece of ground, appropriated for the support of some particular chief or hero.⁴ In the Homeric times, the kings of the Greek states seem to have been principally supported by the produce of these demesnes. The word was afterward applied to land dedicated to a divinity. In Attica, there appears to have been a considerable quantity of such sacred lands (τέμνη), which were let out by the state to farm; and the income arising from them was appropriated to the support of the temples and the maintenance of public worship.⁵

According to Dionysius,⁶ land was set apart at Rome as early as the time of Romulus for the support of the temples. The property belonging to the temples increased considerably in later times, especially under the emperors.⁷

Lands dedicated to the gods were also called *Agri consecrati*. Houses, also, were consecrated; as, for instance, Cicero's, by Clodius. By the provisions of the Lex Papiria, no land or houses could be dedicated to the gods without the consent of the plebs.⁸ The time when this law was passed is uncertain; but it was probably brought forward about B.C. 305, if Livy⁹ alludes to the same law.

AGER VECTIGALIS. (Vid. AGRARIE LEGES.)

AGETORIA (αγητορία). (Vid. CARNERIA.)

AGGER (χῶμα), from *ad* and *gero*, was used in general for a heap or mound of any kind. It was more particularly applied to a mound, usually composed of earth, which was raised round a besieged town, and was gradually increased in breadth and height till it equalled or overtopped the walls.¹⁰ At the siege of Avaricum, Cæsar raised in 25 days an agger 330 feet broad and 80 feet high.¹¹ The agger was sometimes made not only of earth, but of wood, hurdles, &c.; whence we read of the agger being set on fire.¹² The agger was also applied to the earthen wall surrounding a Roman encampment, composed of the earth dug from the ditch (*fossa*), which was usually 9 feet broad and 7 feet deep; but, if any attack was apprehended, the depth was increased to 12 feet, and the breadth to 13 feet. Sharp stakes, &c., were usually fixed upon the agger, which was then called *vallum*. When both words are used (as in Cæsar, *agger ac vallum*¹³), the agger means the mound of earth, and the vallum the sharp stakes, &c., which were fixed upon the agger.

AGMEN (*agmen proprie dicitur, cum exercitus iter facit, ab agendo, id est, eundo vocatus*), the marching order of the Roman army. According to Polybius,² the Roman armies commonly marched in his time in the following manner: "In the van are usually placed the extraordinaries (*ἐπιλεκτοί, extraordinarii*); and after these the right wing of the allies, which is followed by the baggage of both these bodies. Next to these marches the first of the Roman legions, with its baggage also behind it. The second legion follows, having behind it, likewise, both its own baggage and the baggage of the allies, who are in the rear; for the rear of all the march is closed with the left wing of the allies. The cavalry marches sometimes in the rear of the respective bodies to which it belongs, and sometimes on the flanks of the beasts that are loaded with the baggage, keeping them together in due order, and covering them from insult. When any attack is expected to be made upon the rear, the extraordinaries of the allies, instead of leading the van, are posted in the rear; in all the other parts the disposition remains the same. Of the two legions, and the two wings of the allies, those that are on one day foremost in the march, on the following day are placed behind; that, by thus changing their rank alternately, all the troops may obtain the same advantage in their turn of arriving first at water and at forage. There is also another disposition which is used when any immediate danger threatens, and the march is made through an open country. At such times, the hastati, the principes, and the triarii are ranged in three parallel lines, each behind the other, with the baggage of the hastati in the front. Behind the hastati is placed the baggage of the principes, who are followed likewise by that of the triarii; so that the baggage of the several bodies is placed in alternate order. The march being thus disposed, the troops, as soon as any attack is made, turning either to the left or to the right, advance forward from the baggage towards that side upon which the enemy appears; and thus, in a moment of time, and by one single movement, the whole army is formed at once in order of battle, except only that the hastati are perhaps obliged to make an evolution; and the beasts of burden, also, with all those that attend upon the baggage, being now thrown into the rear of all the troops, are covered by them from danger."—(Hampton's translation.) An account of the marching order of a Roman army is also given by Cæsar,³ Josephus,⁴ and Vegetius.⁵

The form of the army on march differed, however, according to circumstances, and the nature of the ground. An *agmen pilatum* was an army in close array, *quod sine jumentis incedit, sed inter se densum est, quo facilius per iniquiora loca transmittatur*.⁶ The *agmen quadratum* was the army arranged in the form of a square, with the baggage in the middle.⁷

The form of the Grecian army on march in the time of Xenophon is described in the *Anabasis*.⁸ It appears that, during a march in the daytime, either the cavalry or the heavy-armed, or the targeteers, marched in the van, according to the nature of the ground; but that in the nighttime the slowest troops always marched first, by which plan the army was less likely to be separated, and the soldiers had fewer opportunities of leaving the ranks without discovery.

AGNA'TI. (*Id. COGNATI.*)

AGNOMEN. (*Id. COGNOMEN.*)

*AGNUS (*ἄγνος*). All are agreed, as Schneider

remarks, that this is the *Vitex agnus castus*, L., or Chaste-tree. Galen makes it to be the same as the *λύγος*. The latter occurs in the *Odyssey* of Homer,¹ and also in the *Iliad*,² and may there mean any flexible twig.³

AGONA'LIA, AGO'NIA,⁴ or AGON'NIUM,⁵ a Roman festival, instituted by Numa Pompilius in honour of Janus,⁶ and celebrated on the 9th of January, the 20th of May, and the 10th of December. The morning of these festivals, or, at least, the morning of the 10th of December, was considered a *dies nefastus*. The etymology of this name was differently explained by the ancients: some derived it from *Agonius*, a surname of Janus; some from the word *agone*, because the attendant, whose duty it was to sacrifice the victim, could not do so till he had asked the rex sacrificulus, *Agone?* and others from *agonia*, because the victims were formerly called by that name.⁷ The *Circus Agonalis*, built by the Emperor Alexander, is supposed by some writers to have been erected on the spot where the victims were sacrificed during the agonalia.

ΑΓΩΝΕΣ ἀτιμητοὶ καὶ τιμητοί. All causes in the Athenian courts were distinguished into two classes: ἀγῶνες ἀτιμητοί, suits not to be assessed, in which the fine or other penalty was determined by the laws; and ἀγῶνες τιμητοί, suits to be assessed, in which the penalty had to be fixed by the judges. When the judges had given their votes in favour of the plaintiff, they next had to determine, provided that the suit was an ἄγων τιμητός, what fine or punishment was to be inflicted on the defendant (παθεῖν ἢ ἀποτίσαι).⁸ The plaintiff generally mentioned in the pleadings the punishment which he considered the defendant deserved (τιμᾶσθαι); and the defendant was allowed to make a counter-assessment (ἀντιτιμᾶσθαι, or ὑποτιμᾶσθαι), and to argue before the judges why the assessment of the plaintiff ought to be changed or mitigated.⁹ In certain causes, which were determined by the laws, any of the judges was allowed to propose an additional assessment (προστίμημα); the amount of which, however, appears to have been usually fixed by the laws. Thus, in certain cases of theft, the additional penalty was fixed at five days' and nights' imprisonment. Demosthenes¹⁰ quotes the law: Δεδέσθαι δ' ἐν τῇ ποδοκᾶκῃ τὸν πύδα πένθ' ἡμέρας καὶ νύκτας ἰσας, ἐν προστίμῃσιν ἢ ἡλιαία, προστιμᾶσθαι δὲ τὸν βουλόμενον, ὅταν περὶ τοῦ τμήματος ᾖ. In this passage we perceive the difference between the active προστιμᾶν, which is used of the assessment of the *Helixæ* (the court), and the middle προστιμᾶσθαι, which means the assessment proposed by one of the judges. In the same manner, τιμᾶν is used of the assessment made by the court, and τιμᾶσθαι of that proposed by the plaintiff.¹¹

According to some writers, the penalty was fixed in all private causes by the laws, with the exception of the αἰκίας δίκη;¹² and if not absolutely, it was fixed in proportion to the injury which the defendant had received. Thus, in the action for injury (βλάβος δίκη), if the injury had been done unintentionally, the single, and if intentionally, the double assessment was to be made.¹³ But, on the other hand, all penalties which had not the character of compensation were fixed absolutely; as, for instance, in the case of libellous words (κακηγορία), at 500 drachmas;¹⁴ and in the action for non-ap-

pearance of a witness (*λειπομαρτυρίου δίκη*), at 1000 drachmas.¹

AGONOTHĒTAI (*ἀγωνοθέται*) were persons, in the Grecian games, who decided disputes and adjudged the prizes to the victors. Originally, the person who instituted the contest and offered the prize was the *ἀγωνοθέτης*, and this continued to be the practice in those games which were instituted by kings or private persons. But in the great public games, such as the Isthmian, Pythian, &c., the *ἀγωνοθέται* were either the representatives of different states, as the Amphictyons at the Pythian games, or were chosen from the people in whose country the games were celebrated. During the flourishing times of the Grecian republics, the Eleans were the *ἀγωνοθέται* in the Olympic games, the Corinthians in the Isthmian games, the Amphictyons in the Pythian games, and the Corinthians, Argives, and inhabitants of Cleonæ in the Nemean games. The *ἀγωνοθέται* were also called *αλεγμῆνται*, *ἀγωνάρχαι*, *ἀγωνοδίκαι*, *ἀθλοθέται*, *ραβδοῦχοι* or *δαδονόμοι* (from the staff they carried as an emblem of authority), *βραβεῖς*, *βραβευταί*.

AG'ORA (*ἀγορά*) properly means an assembly of any nature, and is usually employed by Homer for the general assembly of the people. The *ἀγορά* seems to have been considered an essential part in the constitution of the early Grecian states, since the barbarity and uncivilized condition of the Cyclopes is characterized by their wanting such an assembly.² The *ἀγορά*, though usually convoked by the king, as, for instance, by Telemachus in the absence of his father,³ appears to have been also summoned at times by some distinguished chieftain, as, for example, by Achilles before Troy.⁴ The king occupied the most important seat in these assemblies, and near him sat the nobles, while the people sat or stood in a circle around them. The power and rights of the people in these assemblies have been the subject of much dispute. Platner, Tittmann, and more recently Nitzsch, in his commentary on the Odyssey, maintain that the people were allowed to speak and vote; while Heeren⁵ and Müller⁶ think "that the nobles were the only persons who proposed measures, deliberated, and voted, and that the people were only present to hear the debate, and to express their feeling as a body; which expressions might then be noticed by a prince of a mild disposition." The latter view of the question is confirmed by the fact, that in no passage in the Odyssey is any one of the people represented as taking part in the discussion; while, in the Iliad, Ulysses inflicts personal chastisement upon Thersites for presuming to attack the nobles in the *ἀγορά*.⁷ The people appear to have been only called together to hear what had been already agreed upon in the council of the nobles, which is called *βουλή*⁸ and *ὄδοκος*,⁹ and sometimes even *ἀγορά*.¹⁰

Among the Athenians, the proper name for the assembly of the people was *ἐκκλησία*, and among the Dorians *ἀλία*. The term *ἀγορά* was confined at Athens to the assemblies of the phylæ and demi.¹¹ In Crete the original name *ἀγορά* continued to be applied to the popular assemblies till a late period.¹²

The name *ἀγορά* was early transferred from the assembly itself to the place in which the assembly was held; and thus it came to be used for the market-place, where goods of all descriptions were bought and sold. The expression *ἀγορά πλίνθουσα*,

"full market," was used to signify the time from morning to noon, that is, from about nine to twelve o'clock.

AGORANŌMI (*ἀγορανόμοι*) were public functionaries in most of the Grecian states, whose duties corresponded in many respects to those of the Roman aediles. At Athens their number was ten, five for the city and five for the Piræus, and not twenty, as Meier erroneously states, misled by a false reading in Harpocration. They were chosen by lot.¹ Under the Roman empire, the *agoranomi* were called *λογισταί*.² They corresponded in the provinces to the *curatores civilatis* or *reipublicæ*.³

The principal duty of the *agoranomi* was, as their name imports, to inspect the market, and to see that all the laws respecting its regulation were properly observed. They had the inspection of all things which were sold in the market, with the exception of corn, which was subject to the jurisdiction of the *σιτοφύλακες*.⁴ They regulated the price and quantity of all things which were brought into the market, and punished all persons convicted of cheating, especially by false weights and measures. They had, in general, the power of punishing all infraction of the laws and regulations relating to the market, by inflicting a fine upon the citizens, and personal chastisement upon foreigners and slaves, for which purpose they usually carried a whip.⁵ They had the care of all the temples and fountains in the market-place,⁶ and received the tax (*ξενικὸν τέλος*) which foreigners and aliens were obliged to pay for the privilege of exposing their goods for sale in the market. The public prostitutes were also subject to their regulations.⁷

AGRA'NIA (*ἀγρανία*), a festival celebrated at Argos, in memory of one of the daughters of Proetus, who had been afflicted with madness.

ΑΓΡΑΦΙΟΥ ΓΡΑΦΗ (*ἀγραφίου γραφή*). The names of all persons at Athens who owed any sum of money to the state (*οἱ τῷ δημοσίῳ ὀφειλόντες*) were registered by the *practores* (*πράκτορες*) upon tablets kept for that purpose in the Temple of Minerva, on the Acropolis;⁸ and hence the expression of being registered on the Acropolis (*ἐγγεγραμμένος ἐν Ἀκροπόλει*) always means indebted to the state.⁹ If the name of an individual was improperly erased, he was subject to the action for non-registration (*ἀγραφίου γραφή*), which was under the jurisdiction of the *thesmothetæ*; but if an individual was not registered, he could only be proceeded against by *ἐνδείξις*, and was not liable to the *ἀγραφίου γραφή*.¹⁰ Hesychius, whose account has been followed by Hemsterhuys and Wesseling, appears to have been mistaken in saying that the *ἀγραφίου γραφή* could be instituted against debtors who had not been registered.¹¹

ΑΓΡΑΦΟΙ ΝΟΜΟΙ. (*Vid. NOMOI*.)

ΑΓΡΑΦΟΥ ΜΕΤΑΛΛΟΥ ΓΡΑΦΗ (*ἀγράφου μετάλλου γραφή*) was an action brought before the *thesmothetæ* at Athens, against an individual who worked a mine without having previously registered it. The state required that all mines should be registered, because the twenty-fourth part of their produce was payable to the public treasury.¹²

AGRA'RIÆ LEGES. "It is not exactly true that the agrarian law of Cassius was the earliest that was so called: every law by which the commonwealth disposed of its public land bore that

same; as, for instance, that by which the domain of the kings was parcelled out among the commonalty, and those by which colonies were planted. Even in the narrower sense of a law whereby the state exercised its ownership in removing the old possessors from a part of its domain, and making over its right of property therein, such a law existed among those of Servius Tullius.¹

The history of the enactments called agrarian laws, either in the larger and more correct sense, or in the narrower sense of the term, as explained in this extract, would be out of place here. The particular objects of each agrarian law must be ascertained from its provisions. But all these numerous enactments had reference to the public land; and a great majority of them were passed for the purpose of settling Roman colonies in conquered districts, and assigning to the veteran soldiers, who formed a large part of such colonists, their shares in such lands. The true meaning of all or any of these enactments can only be understood when we have formed a correct notion of property in land, as recognised by Roman law. It is not necessary, in order to obtain this correct notion, to ascend to the origin of the Roman state, though, if a complete history of Rome could be written, our conception of the real character of property in land, as recognised by Roman law, would be more enlarged and more precise. But the system of Roman law, as it existed under the emperors, contained both the terms and the notions which belonged to those early ages, of which they are the most faithful historical monuments. In an inquiry of the present kind, we may begin at any point in the historical series which is definite, and we may ascend from known and intelligible notions which belong to a later age, towards their historical origin, though we may never be able to reach it.

Gaius,² who probably wrote under the Antonines, made two chief divisions of Roman land; that which was *divini juris*, and that which was *humani juris*. Land which was *divini juris* was either *sacer* or *religiosus*.³ Land which was *sacer* was consecrated to the *Dii Superi*; land which was *religiosus* belonged to the *Dii Manes*. Land was made *sacer* by a *lex* or *senatus consultum*; and, as the context shows, such land was land which belonged to the state (*populus Romanus*). An individual could make a portion of his own land *religiosus* by the interment in it of one of his family: but it was the better opinion that land in the provinces could not thus be made *religiosus*; and the reason given is this, that the ownership or property in provincial lands is either in the state (*pop. Rom.*) or in the *Cæsar*, and that individuals had only the possession and enjoyment of it (*possessio et usus fructus*). Provincial lands were either *stipendiaria* or *tributaria*: the *stipendiaria* were in those provinces which were considered to belong to the Roman state; the *tributaria* were in those provinces which were considered as the property of the *Cæsar*. Land which was *humani juris* was divided into public and private: the former belonged to the state, the latter to individuals.

It would seem to follow, from the legal form observed in making land *sacer*, that it thereby ceased to be public; for if it still continued public, it had not changed its essential quality. Niebuhr⁴ has stated that "all Roman land was either the property of the state (common land, domain) or private property—*aut publicus aut privatus*;" and he adds that "the landed property of the state was either consecrated to the gods (*sacer*), or allotted to men to reap its fruits (*profanus, humani juris*)."⁵ Niebuhr then refers to the view of Gaius, who makes the latter the primary division; but he relies

on the authority of Frontinus, supported by Livy,⁶ as evidence of the correctness of his own division. It is obvious, however, on comparing two passages in Frontinus (*De Re Agraria*, xi., xiii.), that Niebuhr has mistaken the meaning of the writer, who clearly intends it to be inferred that the sacred land was not public land. Besides, if the meaning of Frontinus was what Niebuhr has supposed it to be, his authority is not equal to that of Gaius on a matter which specially belongs to the province of the jurist, and is foreign to that of the agrimensor. The passage of Livy, also, certainly does not prove Niebuhr's assertion. The form of *dedition* in Livy⁷ may be easily explained.

Though the origin of that kind of property called public land must be referred to the earliest ages of the Roman state, it appears from Gaius that under the emperors there was still land within the limits of the Empire, the ownership of which was not in the individuals who *possessed* and enjoyed it, but in the *populus Romanus* or the *Cæsar*. This *possession* and enjoyment are distinguished by him from ownership (*dominium*). The term *possessio* frequently occurs in those jurists from whom the Digest was compiled; but in these writers, as they are known to us, it applies only to private land, and the *ager publicus* is hardly, if at all, ever noticed by them. Now this term *Possessio*, as used in the Digest, means the occupation of *private* land by one who has no kind of right to it; and this *possessio* was protected by the prætor's interdict, even when it was without *bona fides* or *justa causa*: but the term *Possessio* in the Roman historians—Livy, for instance—signifies the occupation and enjoyment of *public* land; and the true notion of this, the original *possessio*, contains the whole solution of the question of the agrarian laws. For this solution we are mainly indebted to Niebuhr and Savigny.

This latter kind of *possessio*, that which has private land for its object, is demonstrated by Savigny (the term here used can hardly be said to be too strong) to have arisen from the first kind of *possessio*: and thus it might readily be supposed that the Roman doctrine of *possessio*, as applied to the occupation of private land, would throw some light on the nature of that original *possessio* out of which it grew. In the imperial period, public land had almost ceased to exist in the Italian peninsula, but the subject of possession in private lands had become a well-understood branch of Roman law. The remarks in the three following paragraphs are from Savigny's valuable work, *Das Recht des Besitzes*.⁸

1. There were two kinds of land in the Roman state, *ager publicus* and *ager privatus*: in the latter alone private property existed. But, conformably to the old constitution, the greater part of the *ager publicus* was given over to individual citizens to occupy and enjoy; yet the state had the right of resuming the possession at pleasure. Now we find no mention of any legal form for the protection of the occupier, or possessor as he was called, of such public land against any other individual, though it cannot be doubted that such a form actually existed. But if we assume that the interdict which protected the possession of an individual in private land was the form which protected the possessor of the public land, two problems are solved at the same time: an historical origin is discovered for possession in private land, and a legal form for the protection of possession in public land.

An hypothesis, which so clearly connects into one consistent whole facts otherwise incapable of such connexion, must be considered rather as evolving a latent fact, by placing other known facts in their true relative position, than as involving any independent assumption. But there is historical evidence in support of the hypothesis.

1. (viii., 14.)—2. (i., 38.)—3. (5th edit., p. 172.)

3. (Compare Frontinus, *de Re Agraria*, xiii.)—4. (Appendix,

2. The words *possessio*, *possessor*, and *possidere* are the technical terms used by writers of very different ages, to express the occupation and the enjoyment of the public lands; that is, the notion of a right to occupy and enjoy public land was in the early ages of the Republic distinguished from the right of property in it. Nothing was so natural as to apply this notion, when once fixed, to the possession of private land as distinct from the ownership; and, accordingly, the same technical terms were applied to the possession of private land. Various applications of the word *possessio*, with reference to private land, appear in the Roman law, in the *honorum possessio* of the prætorian heres and others. But all the uses of the word *possessio*, as applied to *ager privatus*, however they may differ in other respects, agreed in this: they denoted an actual exclusive right to the enjoyment of a thing, without the strict Roman (Quiritarian) ownership.

3. The word *possessio*, which originally signified the right of the possessor, was in time used to signify the object of the right. Thus *ager* signified a piece of land, viewed as an object of Quiritarian ownership; *possessio*, a piece of land, in which a man had only a bonitarian or beneficial interest, as, for instance, Italic land not transferred by *manipatio*, or land which from its nature could not be the subject of Quiritarian ownership, as provincial lands and the old *ager publicus*. *Possessio* accordingly implies *usus*; *ager* implies *proprietas* or ownership. This explanation of the terms *ager* and *possessio* is from a jurist of the imperial times, quoted by Savigny;¹ but its value for the purpose of the present inquiry is not on that account the less. The *ager publicus*, and all the old notions attached to it, as already observed, hardly occur in the extant Roman jurists; but the name *possessio*, as applied to private land, and the legal notions attached to it, are of frequent occurrence. The form of the interdict — *uti possidetis* — as it appears in the Digest, is this: *Uti eas ædes...possidetis...vim fieri veto*. But the original form of the interdict was: *Uti nunc possidetis eum fundum*, &c. (Festus in *Possessio*); the word *fundus*, for which *ædes* was afterward substituted, appears to indicate an original connexion between the interdict and the *ager publicus*.

We know nothing of the origin of the Roman public land, except that it was acquired by conquest, and when so acquired it belonged to the state, that is, to the *populus*, as the name *publicus* (*populicus*) imports. We may suppose that in the early periods of the Roman state, the conquered lands being the property of the *populus*, might be enjoyed by the members of that body, in any way that the body might determine. But it is not quite clear how these conquered lands were originally occupied. The following passage from Appian² appears to give a probable account of the matter, and one which is not inconsistent with such facts as are otherwise known: "The Romans," he says, "when they conquered any part of Italy, seized a portion of the lands, and either built cities in them, or sent Roman colonists to settle in the cities which already existed. Such cities were considered as garrison places. As to the land thus acquired from time to time, they either divided the cultivated part among the colonists, or sold it, or let it to farm. As to the land which had fallen out of cultivation in consequence of war, and which, indeed, was the larger part, having no time to allot it, they gave public notice that any one who chose might in the mean time cultivate this land, on payment of part of the yearly produce, namely, a tenth of the produce of arable land, and a fifth of the produce of oliveyards and vineyards. A rate was also fixed to be paid by those who pastured cattle on this undivided land, both for the larger and smaller ani-

mals. The rich occupied the greater part of this undivided land, and at length, feeling confident that they should never be deprived of it, and getting hold of such portions as bordered on their shares, and also of the smaller portions in the possession of the poor, some by purchase and others by force, they became the cultivators of extensive districts instead of mere farms. And, in order that their cultivators and shepherds might be free from military service, they employed slaves instead of freemen; and they derived great profit from their rapid increase, which was favoured by the immunity of the slaves from military service. In this way the great became very rich, and slaves were numerous all through the country. But this system reduced the numbers of the Italians, who were ground down by poverty, taxes, and military service; and whenever they had a respite from these evils, they had nothing to do, the land being occupied by the rich, who also employed slaves instead of freemen." This passage, though it appears to contain much historical truth, leaves the difficulty as to the original mode of occupation unsettled; for we can scarcely suppose that there were not some rules prescribed as to the occupation of this undivided land more precise than such a permission or invitation for a general scramble. It must, indeed, have happened occasionally, particularly in the later times of the Republic, that public land was occupied, or *squatted on* (to use a North American phrase), by soldiers or other adventurers.

But, whatever was the mode in which these lands were occupied, the possessor, when once in possession, was, as we have seen, protected by the prætor's interdict. The patron who permitted his client to occupy any part of his possessions as tenant at will (*precario*), could eject him at pleasure by the *interdictum de precario*; for the client did not obtain a possession by such permission of his patron. The patron would, of course, have the same remedy against a trespasser. But any individual, however humble, who had a possession, was also protected in it against the aggression of the rich; and it was "one of the grievances bitterly complained of by the Gracchi, and all the patres of their age, that while a soldier was serving against the enemy, his powerful neighbour, who coveted his small estate, ejected his wife and children." (Nieb.) The state could not only grant the occupation or possession of its public land, but could sell it, and thus convert public into private land. A remarkable passage in Orosius³ shows that public lands, which had been given to certain religious corporations to *possess*, were sold in order to raise money for the exigencies of the state. The *selling* of that land which was *possessed*, and the circumstance of the possession having been a *grant* or public act, are both contained in this passage.

The public lands which were occupied by possessors were sometimes called, with reference to such possession, *occupatorii*; and, with respect to the state, *concessi*. Public land which became private by sale was called *questorius*; that which is often spoken of as assigned (*assignatus*) was marked out and divided (*limitatus*) among all the plebeians in equal lots, and given to them in absolute ownership, or it was assigned to the persons who were sent out as a colony. Whether the land so granted to the colony should become Roman or not, depended on the nature of the colony. The name *ager publicus* was given to public lands which were acquired even after the plebs had become one of the estates in the Roman Constitution, though the name *publicus*, in its original sense, could no longer be strictly applicable to such public lands. It should be observed, that after the establishment of the plebs, the possession of public land was the peculiar privi-

1. (Javolenus Dig. 50, tit. 16, s. 115.)—2. (Bell. Civ., i., 7.)

1. (Savigny, p. 176, note.)

lege of the patricians, as before the establishment of the plebs it seems to have been the only way in which public lands were enjoyed by the populus: the assignment, that is, the grant by the state of the ownership of public land in fixed shares, was the privilege of the plebs. In the early ages, when the populus was the state, it does not appear that there was any assignment of public lands among them, though it may be assumed that public lands would occasionally be sold; the mode of enjoyment of public land was that of *possessio*, subject, as already observed, to an annual payment to the state. It may be conjectured that this ancient *possessio*, which we cannot consider as having its origin in anything else than the consent of the state, was a good title to the use of the land so long as the annual payments were made. At any rate, the plebs had no claim upon such ancient possessions. But with the introduction of the plebs as a separate estate, and the constant acquisition of new lands by conquest, it would seem that the plebs had as good a title to a share of the newly-conquered lands, as the patricians to the exclusive enjoyment of those lands which had been acquired by conquest before the plebs had become an estate. The determination of what part of newly-conquered lands (arable and vineyards) should remain public, and what part should be assigned to the plebs, which, Niebuhr says, "it need scarcely be observed, was done after the completion of every conquest," ought to have been an effectual way of settling all disputes between the patricians and plebs as to the possessions of the former; for such an appropriation, if it were actually made, could have no other meaning than that the patricians were to have as good title to possess their share as the plebs to the ownership of their assigned portions. The plebs, at least, could never fairly claim an assignment of public land, appropriated to remain such, at the time when they received the share of the conquered lands to which they were entitled. But the fact is, that we have no evidence at all as to such division between lands appropriated to remain public and lands assigned in ownership, as Niebuhr assumes. All that we know is, that the patricians possessed large tracts of public land, and that the plebs from time to time claimed and enforced a division of part of them. In such a condition of affairs, many difficult questions might arise; and it is quite as possible to conceive that the claims of the plebs might in some cases be as unjust and ill-founded as the conduct of the patricians was alleged to be rapacious in extending their possessions. It is also easy to conceive that, in the course of time, owing to sales of possessions, family settlements, and other causes, boundaries had often become so confused that the equitable adjustment of rights under an agrarian law was impossible; and this is a difficulty which Appian¹ particularly mentions.

Pasture-lands, it appears, were not the subject of assignment, and were probably possessed by the patricians and the plebs indifferently.

The property of the Roman people consisted of many things besides land. The conquest of a territory, unless special terms were granted to the conquered, seems to have implied the acquisition by the Roman state of the conquered territory and all that it contained. Thus not only would land be acquired, which was available for corn, vineyards, and pasture, but mines, roads, rivers, harbours, and, as a consequence, tolls and duties. If a Roman colony was sent out to occupy a conquered territory or town, a part of the conquered lands was assigned to the colonists in complete ownership. (*VID. COLONIA.*) The remainder, it appears, was left or restored to the inhabitants. Not that we are to understand that they had the property in the land as

they had before; but it appears that they were subject to a tax, the produce of which belonged to the Roman people. Niebuhr seems to suppose that the Roman state might at any time resume such restored lands; and, no doubt, the right of resumption was involved in the tenure by which these lands were held; but it may be doubted if the resumption of such lands was ever resorted to except in extraordinary cases, and except as to conquered lands which were the public lands of the conquered state. Private persons, who were permitted to retain their lands subject to the payment of a tax, were not the possessors to whom the agrarian laws applied. In many cases, large tracts of land were absolutely seized, their owners having perished in battle or been driven away, and extensive districts, either not cultivated at all or very imperfectly cultivated, became the property of the state. Such lands as were unoccupied could become the subject of *possessio*; and the possessor would in all cases, and in whatever manner he obtained the land, be liable to a payment to the state, as above mentioned in the extract from Appian. This *possessio* was a real interest, for it was the subject of sale: it was the use (*usus*) of the land; but it was not the *ager* or property. The *possessio* strictly could not pass by the testament of the possessor, at least not by the *mancipatio*.¹ It is not easy, therefore, to imagine any mode by which the possession of the heres was protected, unless there was a legal form, such as Savigny has assumed to exist for the general protection of possessions in the public lands.

The possessor of public land never acquired the ownership by virtue of his possession; it was not subject to usucapion. The ownership of the land which belonged to the state could only be acquired by the grant of the ownership, or by purchase from the state. The state could at any time, according to strict right, sell that land which was only possessed, or assign it to another than the possessor. The possession was, in fact, with respect to the state, a *precarium*; and we may suppose that the lands so held would at first receive few permanent improvements. In course of time, and particularly when the possessors had been undisturbed for many years, possession would appear, in an equitable point of view, to have become equivalent to ownership; and the hardship of removing the possessors by an agrarian law would appear the greater, after the state had long acquiesced in their use and occupation of the public land.

In order to form a correct judgment of some of those enactments which are most frequently cited as agrarian laws, it must be borne in mind that the possessors of public lands owed a yearly tenth, or fifth, as the case might be, to the state. Indeed, it is clear, from several passages,² that, under the Republic at least, the receipt of anything by the state from the occupier of land was a legal proof that the land was public; and conversely, public land always owed this annual payment. These annual payments were, it seems, often withheld by the possessors, and thus the state was deprived of a fund for the expenses of war.

The object of the agrarian law of Sp. Cassius is supposed by Niebuhr to have been "that the portion of the populus in the public lands should be set apart; that the rest should be divided among the plebeians; that the tithe should again be levied, and applied to paying the army." The agrarian law of Licinius Stolo limited each individual's possession of public land to 500 jugera, and imposed some other restrictions; but the possessor had no better title to the 500 jugera which the law left him than he formerly had to what the law took from him. The surplus land, according to the provisions of the law, was to be divided among the plebeians.

The Licinian law not effecting its object, T. S. Gracchus revived the measure for limiting the possession of public land to 500 jugera. The arguments of the possessors against this measure, as they are stated by Appian,¹ are such as might reasonably be urged; but he adds that Gracchus proposed to give to each possessor, by way of compensation for improvements made on the public land, the full ownership of 500 jugera, and half that quantity to each of his sons, if he had any. If it is true, as Appian states, that the law of Gracchus forbade the rich from purchasing any of the lands which might be allotted to the plebeians by his agrarian law, this part of the measure was as unjust as it was impolitic. The lands which the Roman people had acquired in the Italian peninsula by conquest were greatly reduced in amount by the laws of Gracchus and by sale. Confiscations in the civil wars, and conquests abroad, were indeed continually increasing the public lands; but these lands were allotted to the soldiers and the numerous colonists to whom the state was continually giving lands (see the list in Frontinus, *De Colonis Italiae*). The system of colonization which prevailed during the Republic was continued under the emperors, and considerable tracts of Italian land were disposed of in this manner by Augustus and his successors. Vespasian assigned lands in Samnium to his soldiers, and grants of Italian lands are mentioned by subsequent emperors, though we may infer that, at the close of the second century of our æra, there was little public land left in the peninsula. Vespasian sold part of the public lands called *subseciva*, a term which expressed such parts as had not been assigned, when the other parts of the same district had been measured and distributed. Domitian, according to Aagenus, gave the remainder of such lands all through Italy to the possessors. The conquests beyond the limits of Italy furnished the emperors with the means of rewarding the veterans by grants of land; and in this way the institutions of Rome were planted on a foreign soil. But, according to Gaius, property in the land was not acquired by such grant; the ownership was still in the state, and the provincial landholder had only the possession. If this be true, as against the Roman people or the Cæsar, his interest in the land was one that might be resumed at any time, according to the strict rules of law, though it is easily conceived that such foreign possessions would daily acquire strength, and could not safely be dealt with as possessions had been in Italy by the various agrarian laws which had convulsed the Roman state. This assertion of the right of the *populus Romanus* and of the emperors might be no wrong "inflicted on provincial land-owners by the Roman jurisprudence," as Niebuhr affirms. This same writer also observes, that Frontinus speaks of the "*arva publica* in the provinces, in contradistinction to the *agri privati* there;" but this he does not. This contradistinction is made by his commentator Aagenus, who, as he himself says, only conjectures the meaning of Frontinus; and, as we think, he has not discovered it.² The tax paid by the holders of *ager privatus* in the provinces was the only thing which distinguished the beneficial interest in such land from Italian land, and might be, in legal effect, a recognition of the ownership according to Roman law. And this was Savigny's earlier opinion with respect to the tax paid by provincial lands; he considered such tax due to the Roman people, as the sovereign or ultimate owner of the lands. His later opinion, as expressed in the *Zeitschrift für Geschichtliche Rechtswissenschaft*,³ is, that under the Cæsars a uniform system of direct taxation was established in the provinces, to which all provincial land was subject; but land in Italy was free from this tax,

and a provincial town could only acquire the like freedom by receiving the privilege expressed by the term *jus italicum*. The complete solution of the question here under discussion could only be effected by ascertaining the origin and real nature of this provincial land-tax; and as it may be difficult, if not impossible, to ascertain such facts, we must endeavour to give a probable solution. Now it is consistent with Roman notions that all conquered land should be considered as the property of the Roman state; and it is certain that such land, though assigned to individuals, did not by that circumstance alone become invested with all the characters of Roman land which was private property. It had not the privilege of the *jus italicum*, and, consequently, could not be the object of Quiritarian ownership, with its incidents of *mancipatio*, &c. All land in the provinces, including even that of the *liberæ civitates*, and the *ager publicus* properly so called, could only become an object of Quiritarian ownership by having conferred upon it the privilege of Italian land, by which it was also released from the payment of the tax. It is clear that there might be and was *ager privatus*, or private property, in provincial land; but this land had not the privileges of Italian land, unless such privilege was expressly given to it, and, accordingly, it paid a tax. As the notions of landed property in all countries seem to suppose a complete ownership residing in some person, and as the provincial landowner, whose lands had not the privilege of the *jus italicum*, had not that kind of ownership which, according to the notions of Roman law, was complete ownership, it is difficult to conceive that the ultimate ownership of provincial lands (with the exception of those of the *liberæ civitates*) could reside anywhere else than in the *populus Romanus*, and, after the establishment of the imperial power, in the *populus Romanus* or the Cæsar. This question is, however, one of some difficulty, and well deserves farther examination. It may be doubted, however, if Gaius means to say that there could be no Quiritarian ownership of private land in the provinces; at least this would not be the case in those districts to which the *jus italicum* was extended. The case of the Recentoric lands, which is quoted by Niebuhr,¹ may be explained. The land here spoken of was land in Sicily. One object of the measure of Rullus was to exact certain extraordinary payments (*vedigal*) from the public lands, that is, from the possessors of them; but he excepted the Recentoric lands from the operation of his measure. If this is private land, Cicero argues, the exception is unnecessary. The argument, of course, assumes that there was or might be private land in Sicily; that is, there was or might be land which would not be affected by this part of the measure of Rullus. Now the opposition of public and private land in this passage certainly proves, what can easily be proved without it, that individuals in the provinces owned land as individuals did in Italy; and such land might with propriety be called *privatus*, as contrasted with that called *publicus* in the provinces: in fact, it would not be easy to have found another name for it. But we know that *ager privatus* in the provinces, unless it had received the *jus italicum*, was not the same thing as *ager privatus* in Italy, though both were private property. Such a passage, then, leads to no necessary conclusion that the ultimate ownership or dominion of this private land was not in the Roman people. It may be as well here to remark farther, that any conclusions as to Roman law, derived solely from the orations of Cicero, are to be received with caution; first, because on several occasions (in the *Pro Cæcina* for instance) he states that to be law which was not, for the purpose of

1. (Bell. Civ., i., 10.)—2. (Frontinus, de Re Agraria.)—3. (vol. i., p. 254.)

1 (Cic., c. Rull., i., 4.)

maintaining his argument; and, secondly, because it was a subject on which his knowledge was probably not very exact.

It only remains briefly to notice the condition of the public land with respect to the *fructus*, or vectigal, which belonged to the state. This, as already observed, was generally a tenth, and hence the *ager publicus* was sometimes called *decumanus*; it was also sometimes called *ager vectigalis*. The tithes were generally farmed by the publicani, who paid their rent mostly in money, but sometimes in grain. The letting was managed by the censors, and the lease was for five years. The form, however, of leasing the tithes was that of a sale, *mancipatio*. In course of time, the word *locatio* was applied to these leases. The phrase used by the Roman writers was originally *fructus locatio*, which was the proper expression; but we find the phrase *agrum fruendum locare* also used in the same sense, an expression which might appear somewhat ambiguous; and even *agrum locare*, which might mean the leasing of the public lands, and not of the tithes due from the possessors of them. It is, however, made clear by Niebuhr, that in some instances, at least, the phrase *agrum locare* does mean the leasing of the tithes; whether this was always the meaning of the phrase, it is not possible to affirm.

Though the term *ager vectigalis* originally expressed the public land, of which the tithe was leased, it afterward came to signify lands which were leased by the state or by different corporations. This latter description would comprehend even the *ager publicus*; but this kind of public property was gradually reduced to a small amount; and we find the term *ager vectigalis*, in the later period, applied to the lands of towns which were so leased that the lessee, or those who derived their tithe from him, could not be ejected so long as they paid the vectigal. This is the *ager vectigalis* of the Digest,¹ on the model of which was formed the *emphyteusis*, or *ager emphyteuticarius*. (*Vis. EMPHYTEUSIS*.) The rights of the lessee of the *ager vectigalis* were different from those of a possessor of the old *ager publicus*, though the *ager vectigalis* was derived from, and was only a new form of, the *ager publicus*. Though he had only a *jus in re*, and though he is distinguished from the owner (*dominus*), yet he was considered as having the possession of the land. He had, also, a right of action against the town, if he was ejected from his land, provided he had always paid his vectigal.²

AGRAULIA (*ἀγρᾶνλία*) was a festival celebrated by the Athenians in honour of Agraulos, the daughter of Cecrops. We possess no particulars respecting the time or mode of its celebration; but it was, perhaps, connected with the solemn oath, which all Athenians, when they arrived at manhood (*ἐφηβοί*), were obliged to take in the temple of Agraulos, that they would fight for their country, and always observe its laws.³

Agraulos was also honoured with a festival in Cyprus, in the month Aphrodisias, at which human victims were offered.⁴

AGRETAI (*ἀγρεταί*), the name of nine maidens, who were chosen every year, in the Island of Cos, as priestesses of Athena (Minerva).

AGRIANIA (*ἀγριανία*) was, according to Hesychius, a festival celebrated at Argos, in memory of a deceased person, and was, probably, the same as the festival called AGRANIA. The Agriania was also celebrated at Thebes, with solemn sports.

AGRIMENSORES, or "land-surveyors," a col-

lege established under the Roman emperors. Like the juriconsults, they had regular schools, and were paid handsome salaries by the state. Their business was to measure unassigned lands for the state, and ordinary lands for the proprietors, and to fix and maintain boundaries. Their writings on the subject of their art were very numerous; and we have still scientific treatises on the law of boundaries, such as those by Frontinus and Hyginus. They were sometimes vested with judicial power, and were called *spectabiles* and *clarissimi* in the time of Theodosius and Valentinian. As partitioners of land, the agrimensores were the successors of the augurs, and the mode of their *limitatio* was derived from the old augural method of forming the *templum*. The word *templum*, like the Greek *τέμενος*, simply means a division; its application to signify the vault of the heavens was due to the fact that the directions were always ascertained according to the true cardinal points. At the inauguration of a king¹ or consul,² the augur looked towards the east, and the person to be inaugurated towards the south. Now, in a case like this, the person to be inaugurated was considered the chief, and the direction in which he looked was the main direction. Thus we find that in the case of land-surveying the augur looked to the south:³ for the gods were supposed to be in the north, and the augur was considered as looking in the same manner in which the gods looked upon the earth.⁴ Hence the main line in land-surveying was drawn from north to south, and was called *cardo*, as corresponding to the axis of the world; the line which cut it was termed *decumanus*, because it made the figure of a cross, like the numeral X. These two lines were produced to the extremity of the ground which was to be laid out, and parallel to these were drawn other lines, according to the size of the quadrangle required. The limits of these divisions were indicated by balks, called *limites*, which were left as high roads, the ground for them being deducted from the land to be divided. As every sixth was wider than the others, the square bordering upon this would lose *pro tanto*. The opposition of *via* and *limes* in this rectangular division of property has not been sufficiently attended to by scholars. It appears that, if the line from north to south was called *limes*, that from east to west would be named *via*, and *vice versa*. Virgil was, as is well known, very accurate in his use of words, and we may entirely depend on inferences drawn from his language. First, he uses *limes* in its stricter sense as a term of land-surveying:

"*Ante Jovem multi subigebant arva coloni,
Nec signare quidem, aut partiri limite campum
Fas erat.*"⁵

Again, in speaking of planting vines in regular rows, he says:

"*Omnis in unguem
Arboribus positis secto via limite quadret;*"⁶

i. e., "let every vine be exactly perpendicular to the *limes* which it cuts." He says *quadret*, for the term *via* might be used in speaking of a line which cut another obliquely, as it is used in the description of the ecliptic, in Virgil:

"*Via secta per ambas,
Obliquus qua se signorum verteret ordo.*"⁷

These passages are sufficient to prove that *via* and *limes* are used in opposition to one another. The following authorities will show that *via* means the principal or high road; and *limes*, a narrower cross road, where roads are spoken of. In the first place, the Twelve Tables laid down that the *via* should be eight feet wide when straight, but twelve

feet at the turning; and it is expressly distinguished by Festus from the *iter* of two feet wide, and the *actus* of four feet wide. Secondly, in Livy¹ we have "*intra eam (portam) extraque lata sunt via, et extra limites*," &c., "*eo limite*," &c.; and in the same author,² "*transversis limitibus in viam Latinam est egressus*," and Tacitus³ says, "*Per limitem via sparguntur festinatione consecrandi victores*." When land was not divided, it was called *arcifinius*, or *arcifinalis*; the *ager publicus* belonged to this class.

The reader will find two very valuable articles on the *Limitatio* and the *Agrimensores* in the Appendices to Niebuhr's *Roman History*, vol. ii.

*AGRIMONIA, the herb *Agrimonia*, called also *Eupatorium* (Ἐπαρώσιον), from its having been discovered by Mithradates Eupator.⁴

AGRIONIA (ἀγρίωνια), a festival which was celebrated at Orchomenus, in Bœotia, in honour of Dionysus, surnamed Ἀγρίωνιος. It appears from Plutarch⁵ that this festival was solemnized only by women and priests of Dionysus. It consisted of a kind of game, in which the women for a long time acted as if seeking Dionysus, and at last called out to one another that he had escaped to the Muses, and had concealed himself with them. After this they prepared a repast; and having enjoyed it, amused themselves with solving riddles. This festival was remarkable for a feature which proves its great antiquity. Some virgins, who were descended from the Minyans, and who probably used to assemble around the temple on the occasion, fled, and were followed by the priest armed with a sword, who was allowed to kill the one whom he first caught. This sacrifice of a human being, though originally it must have formed a regular part of the festival, seems to have been avoided in later times. One instance, however, occurred in the days of Plutarch.⁶ But, as the priest who had killed the woman was afterward attacked by disease, and several extraordinary accidents occurred to the Minyans, the priest and his family were deprived of their official power. The festival is said to have been derived from the daughters of Minyas, who, after having for a long time resisted the Bacchanian fury, were at length seized by an invincible desire of eating human flesh. They therefore cast lots on their own children, and as Hippasus, son of Leucippe, became the destined victim, they killed and ate him, whence the women belonging to that race were at the time of Plutarch still called the destroyers (ὀλέται or αἰολαίται), and the men mourners (ψολοεῖς).⁷

*AGRIOPHYLLON (ἀγριοφύλλον), a plant, the same with the *Peucedanum* (Πευκέδανον), our "Hogsfennel" or "Sulphur-wort."⁸

AGRONOMI (ἀγρονόμοι) are described by Aristotle as the country police, whose duties corresponded in most respects to those of the astynomi in the city.⁹ They appear to have performed nearly the same duties as the hylori (ὕλωροι). Aristotle does not inform us in what state they existed; but, from the frequent mention of them by Plato, it appears probable that they belonged to Attica.¹⁰

*AGROSTIS (ἄγρωστις), a plant. Schueider and Sprengel remark, that nearly all the commentators agree in referring it to the *Triticum repens*, L., or Couch-grass. Stackhouse, however, is content with simply marking the ἄγρωστις of Theophrastus as the *Agrostis*. The brief description of the ἄγρωστις ἐν τῷ Πarnassῷ, given by Dioscorides, would seem to point to the *Parnassia palustris*, or "Grass of Parnassus."¹¹

ΑΓΡΟΤΕΡΕΑΣ ΘΥΣΙΑ (ἀγροτέρας θυσία), a festival celebrated every year at Athens in honour of Artemis, surnamed Agrotēra (from ἄγρᾱ, chase). It was solemnized, according to Plutarch,¹ on the sixth of the month of Boëdromion, and consisted in a sacrifice of 500 goats, which continued to be offered in the time of Xenophon.² Its origin is thus related: When the Persians invaded Attica, Callimachus the polemarch, or, according to others, Miltiades, made a vow to sacrifice to Artemis Agrotēra as many goats as there should be enemies slain at Marathon. But when the number of enemies slain was so great that an equal number of goats could not be found at once, the Athenians decreed that 500 should be sacrificed every year. This is the statement made by Xenophon; but other ancient authors give different versions. Ælian, whose account, however, seems least probable, states³ the time of the festival to have been the sixth of Thargelion, and the number of goats yearly sacrificed 300. The scholiast on Aristophanes⁴ relates that the Athenians, before the battle, promised to sacrifice to Artemis one ox for every enemy slain; but when the number of oxen could not be procured, they substituted an equal number of goats.

ΑΓΡΥΝΙΑ (ἀγρυνία), a nocturnal festival celebrated at Arbelā, in Sicily, in honour of Dionysus.⁵

ΑΓΥΡΜΟΣ (ἀγυρμός). (Vid. ELEUSINIA.)

ΑΓΥΡΤΑΙ (ἀγύρται), mendicant priests, who were accustomed to travel through the different towns of Greece, soliciting alms for the gods whom they served. These priests carried, either on their shoulders or on beasts of burden, images of their respective deities. They appear to have been of Oriental origin, and were chiefly connected with the worship of Isis,⁶ Opis, and Arge,⁷ and especially of the great mother of the gods; whence they were called μητραγύρται. They were, generally speaking, persons of the lowest and most abandoned character. They undertook to inflict some grievous bodily injury on the enemy of any individual who paid them for such services, and also promised, for a small sum of money, to obtain forgiveness from the gods whom they served for any sins which either the individual himself or his ancestors had committed.⁸ Thus Œdipus calls Tiresias,

Μάγον τοιόνδε μηχανορῳόν
δῶλον ἀγύρτην.⁹

These mendicant priests came into Italy, but at what time is uncertain, together with the worship of the gods whom they served.¹⁰

The name of ἀγύρται was also applied to those individuals who pretended to tell people's fortunes by means of lots. This was done in various ways. The lots frequently consisted of single verses taken from well-known poems, which were thrown into an urn, whence they were drawn either by the persons who wished to learn their fortunes or by boys. It was also usual to write the verses on a tablet,¹¹ and those who consulted them found out the verses which foretold their destinies by throwing dice.

ΑΙΑΚΕΙΑ (Αἰάκεια), a festival of the Æginetans in honour of Æacus, the details of which are not known. The victor in the games which were solemnized on the occasion, consecrated his chaplet in the magnificent temple of Æacus.¹²

ΑΙΑΝΤΕΙΑ (Αἰάντεια), a festival solemnized in Salamis in honour of Ajax, of which no particulars are known.¹³

*AIGEIROS (αἰγερός), without doubt the *Populus nigra*, or Black Poplar.¹⁴

1. (xxxi., 24.)—2. (xxii., 12.)—3. (Hist., iii., 25.)—4. (Dioscor., iv., 41.—Plin., H. N., xxv., 6.)—5. (Quæst. Rom., 102.)—6. (Quæst. Græc., 33.)—7. (Müller, Die Minyen, p. 166, seq.)—8. (Apul., de Herb., c. 95.—Theophrast., H. P., ix., 14.—Dioscor., iii., 82.)—9. (Polit., vi., 5.)—10. (Plato, Legg., vi., 9.—Timæi Lexicon, and Ruhnkens's note, in which several passages are quoted from Plato.)—11. (Dioscor., iv. 30, 32.—Theophrast., H. P., i., 6, seq.)

(Müller, Æginetica, p. 140.)—13. (Vid. Hesych., s. v.)—14. (Dioscor., i., 109.—Theophrast., H. P., i., 8; ii., 3, &c.)

*AIGITHALOS (αἰγυθαλός), a species of bird. Aristotle applies this term to the genus *Parus*, of which he describes the following species: 1. The σιζίτης, which is the *Parus major*, L., the Great Titmouse or Ox-eye. 2. The ὀρένιος, which would seem to correspond to the *Parus caudatus*, L., or Long-tailed Titmouse. 3. The ἐλάχιοςτος, which answers to the *Parus caruleus*, L., or Blue Titmouse.¹

*AIGILOPS (αἰγίλωψ), a plant about which there has been great diversity of opinion. Robert Stephens and most of the older commentators contend that it is the *Avena sterilis*, or *Folle avoine* of the French. Matthiolus rejects this opinion, and holds it to be an herb called *Coquiele* in French, which grows in fields of barley. Dodonæus, Sibthorp, Stackhouse, and Sprengel agree in referring it to the *Egilops ovala*.² Theophrastus farther applies the name to a species of Oak, which Stackhouse makes to be the *Quercus Egilops*.³

*AIGYPYROS (αἰγύπριος), Buckwheat. Sprengel mentions that the learned Anguillara believed it to be the *Ononis antiquorum*, or Rest-harrow; he himself, however, in the second edition of his "*Rei Herbaria Historia*," inclines to a species of *Eryngium*. All this, however, is merely conjectural.⁴

*AIGOTHELAS (αἰγοθήλας), the Goat-sucker, a bird of the genus *Caprimulgus*. It applies more especially to the species called Fern-owl in England, to which Professor Rennie gives the scientific name of *Nyctichelidon Europæus*.⁵

*AIGYPIOS (αἰγύπιος). Ælian describes it as being a bird intermediate between the Eagle and the Vulture.⁶ Gesner decides that it is the same as the γυπαίετος and the *Vultur niger* of Pliny; and Schneider suggests that it probably was the *Vultur percnopterus*, or Alpine eagle. (Vid. GYPS.)⁶

*AIGOLOS (αἰγώλος), a bird of the rapacious tribe, briefly noticed by Aristotle.⁷ It is rendered *Uvula* by Gaza, but cannot be satisfactorily determined. (Vid. GLAUX.)⁸

AIKIAS ΔΙΚΗ (αἰκίας δίκη), an action brought at Athens before the court of the Forty (οἱ τετταράκοντα), against any individual who had struck a citizen of the state. Any citizen who had been thus insulted might proceed in two ways against the offending party, either by the αἰκίας δίκη, which was a private action, or by the ὕβρεως γραφή, which was looked upon in the light of a public prosecution, since the state was considered to be wronged in an injury done to any citizen. It appears to have been a principle of the Athenian law, to give an individual who had been injured more than one mode of obtaining redress.⁹

It was necessary to prove two facts in bringing the αἰκίας δίκη before the Forty. First, That the defendant had struck the plaintiff with the intention of insulting him (ἐφ' ὕβρει), which, however, was always presumed to have been the intention, unless the defendant could prove that he only struck the plaintiff in joke. Thus Ariston, after proving that he had been struck by Conon, tells the judges that Conon will attempt to show that he had only struck him in play.¹⁰ Secondly, It was necessary to prove that the defendant struck the plaintiff first, and did not merely return the blows which had been given by the plaintiff (ἔρχειν χειρῶν ἀδίκων, or merely ἀδίκων ἄρχειν).¹¹

In this action, the sum of money to be paid by the defendant as damages was not fixed by the laws; but the plaintiff assessed the amount according to the injury which he thought he had re-

ceived, and the judges determined on the justice of the claim.¹

AIKLON (ἄικλον, αἰκλον, or ἄικνον, αἰκνον),² is said by Polemo³ to be a Doric word; its derivatives, ἐπάικλα and μεσαἰκλῖαι, were used only by the Dorians. Modern writers differ greatly respecting its meaning; but, from an examination of the passages in which it occurs, it appears to be used in two senses: I. A meal in general. Thus Alcman uses συναἰκλῖαι for συνδείπνια.⁴ II. The chief dish or course in a meal. The dessert or after-course was called ἐπάικλον.⁵ The ἄικλον among the Spartans was composed of the contributions which every one who came to the public banquets (φειδίτια) was bound to bring, and consisted chiefly of pork and black broth, or blood-broth (μέλας ζωμός, αἱμάτια), with the addition of cheese and figs; sometimes, but rarely, they received contributions of fish, hares, and poultry. The ἐπάικλον, or dessert, which varied the plainness of the meal, consisted of voluntary gifts to the table. The richer citizens sent maize bread, fowls, hares, lambs, and other dishes, cooked in a superior manner, a part of a sacrifice, or the fruits of the season, while others contributed the proceeds of the chase. It was the custom, when one of these presents was helped round, to name the person who sent it.⁶ Sometimes they procured a good dessert by imposing penalties on each other, or by giving the place of honour at the table to him who contributed the best dish.⁷ The contributions were eaten as they were sent; or, if their flavour was not approved, they were made up afresh into a savoury mess called a ματῆν. Boys were allowed an ἐπάικλον consisting of barley meal kneaded with oil, and baked in laurel leaves.⁸

ΑΙΤΙΝΗΤΩΝ ΕΟΡΤΗ (Αἰτινητῶν εορτή), a festival of the Æginetans in honour of Poseidon, which lasted sixteen days, during which time every family took its meals quietly and alone, no slave being allowed to wait, and no stranger invited to partake of them. From the circumstance of each family being closely confined to itself, those who solemnized this festival were called μονοράγοι. Plutarch traces its origin to the Trojan war, and says that, as many of the Æginetans had lost their lives, partly in the siege of Troy and partly on their return home, those who reached their native island were received indeed with joy by their kinsmen; but, in order to avoid hurting the feelings of those families who had to lament the loss of their friends, they thought it proper neither to show their joy nor to offer any sacrifices in public. Every family, therefore, entertained privately their friends who had returned, and acted themselves as attendants, though not without rejoicings.

*ΑΙΘΥΙΑ (αἰθῦια), the *Mergus* of the Latins, the modern Cormorant. As there are several species of this genus, it is difficult to say, in general, to which of them the ancient name is most applicable. The *Pelicanus corbo* is a common species.¹⁰

*ΑΙΧ (αἶς). I. (Vid. TRAGOS.)—II. The name of a bird briefly noticed by Aristotle.¹¹ Belon conjectures that it was the Lapwing, namely, the *Vanellus Cristatus*.¹²

*ΑΙΛΟΥΡΟΣ (αἰλουρος), the *Felis Catus*, or Wild Cat. Some apply the name κάττης to the Domestic Cat.¹³ (Vid. FELIS.)

*ΑΙΜΑΤΙΤΗΣ (αιματίτης), the well-known stone called Bloodstone. (Vid. HÆMATITES.)

* **ΑΙΜΟΠΟΥΣ** (*αἰμόπους*), (-*οῖς*, or -*ος*), a species of Serpent. The celebrated Paul Hermann told Dr. Mead that he had found in Africa a serpent, the poison of which was immediately followed by hæmorrhages from all the pores of the body, and which he concluded to be the same as the Hæmorrhus of antiquity. It should also be remarked, that the effects produced by the poison of the *Coluber werneri* of India are said to be very similar to those of the Hæmorrhus as described by the ancient writers.¹

* **ΑΙΡΑ** (*αἶρα*), a plant, the same with the *Lolium temulentum*, L., or Darnel. It may be confidently pronounced to be the "*infelix lolium*" of Virgil; and that it is the *ζιζάνια* of Scripture was first suggested by Isidorus, an opinion which has been espoused, without acknowledgment, by Henry Stephens, and by Dr. Campbell of Aberdeen, and other Biblical commentators. It farther deserves to be mentioned, that the translators of the works of the Arabian medical authors render the *αἶρα* of the Greeks by *zizaniæ*.²

ΑΙΣΥΜΝΗΤΕΣ (*αἰσυμένης*), an individual who was sometimes invested with unlimited power in the Greek states. His power, according to Aristotle, partook in some degree of the nature both of kingly and tyrannical authority, since he was appointed legally, and did not usurp the government, but, at the same time, was not bound by any laws in his public administration.³ Hence Theophrastus⁴ calls the office *ρυπανὴς αἰσπρῆς*. It was not hereditary, nor was it held for life; but it only continued for a certain time, or till some object was accomplished. Thus we read that the inhabitants of Mytilene appointed Pittacus *αἰσυμένης*, in order to prevent the return of Alcæus and the other exiles.⁵ Dionysius compares it with the dictatorship at Rome. In some states, such as Cyme and Chalcædon, it was the title borne by the regular magistrates.⁶

ΑΙΟΡΑ, or **ΕΟΡΑ** (*αἶώρα*, *ἐώρα*), a festival at Athens, accompanied by sacrifices and banquets, whence it is sometimes called *εὐδειπνος*. The common account of its origin is as follows: Icarus was killed by shepherds to whom he had given wine, and who, being unacquainted with the effects of this beverage, fancied, in their intoxication, that he had given them poison. Erigone, his daughter, guided by a faithful dog, discovered the corpse of her father, whom she had sought a long time in vain; and, praying to the gods that all Athenian maidens might perish in the same manner, hung herself. After this occurrence, many Athenian women actually hung themselves, apparently without any motive whatever; and when the oracle was consulted respecting it, the answer was, that Icarus and Erigone must be propitiated by a festival.⁷ According to the *Ethymologicum Magnum*, the festival was celebrated in honour of Erigone, daughter of Ægisthus and Clytemnestra, who came to Athens to bring the charge of matricide against Orestes before the Æreopagus; and, when he was acquitted, hung herself, with the same wish as the daughter of Icarus, and with the same consequences. According to Hesychius, the festival was celebrated in commemoration of the tyrant Temaleus, but no reason is assigned. Enstathius⁸ calls the maiden who hung herself Acora. But, as the festival is also called *Ἀλγῆρις* (apparently from the wanderings of Erigone, the daughter of Icarus), the legend which was first mentioned seems to be the most entitled to belief. Pollux⁹ mentions a song made by

Theodorus of Colophon, which persons used to sing while swinging themselves (*ἐν ταῖς αἰώρας*). It is therefore probable that the Athenian maidens, in remembrance of Erigone and the other Athenian women who had hung themselves, swung themselves during this festival, at the same time singing the above-mentioned song of Theodorus.¹

ΑΛΑΒΑΣΤΕΡ, the name usually given by artists and antiquaries to that variety of marble which mineralogists call *gypsum*. Alabaster is sometimes described as of two kinds; but this is an error, as one of the substances so called is a *carbonate* of lime, and therefore not alabaster in the common acceptance of the term; while the other, the real alabaster or *gypsum*, is a *sulphate* of lime. Alabaster (*gypsum*) is translucent or semi-transparent, and is usually of a white—a yellowish white—and greenish colour, though sometimes strong brown tints and spots appear in it. When the varieties of colour occur in the same stone, and are disposed in bands or horizontal strata, it is often called onyx alabaster; and when dispersed irregularly, as if in clouds, it is in like manner distinguished as agate alabaster. These varieties in the colour are alluded to by Pliny: "*Candore interstincto variis coloribus.*" Though much softer than other marbles, and on that account ill adapted for sculpture on a large scale, it is capable of being worked to a very fine surface, and of receiving a polish.

Alabaster has been supposed to derive its name originally from Alabastron, a town of Egypt, where there was a manufactory of vessels made of a stone which was found in the neighbouring mountains. Pliny² speaks of alabastrites, using that term for the various kinds of this marble, as well as onyx, probably from the texture being somewhat different from that of the Greek, Sicilian, and Italian marbles, which he was more accustomed to see, and which were commonly used by sculptors, and from which he thus desired to distinguish it. He observes that it was chiefly procured in his time from Alabastron and Damascus.³

Alabaster, both in its form of carbonate of lime and gypsum (for, from the confusion that exists in the description of some monuments of antiquity, it becomes necessary to advert to both varieties under that denomination), was employed very extensively by the ancients. It was much used by the Egyptians for different sorts of vases, relievi, ornaments, covers of sarcophagi, canopies, and sculpture in general; but, from the absence of any remains of sculpture in that material, it may be assumed that alabaster (*gypsum*) was little, if ever, used by the artists of ancient Greece and Italy for statues, relievi, or busts. Vessels or pots used for containing perfumes, or, rather, ointments, were often called by the ancients *alabastra* or *alabastris*. It appears, from the account of Pliny, that these pots were usually made of the onyx alabaster, which was considered to be better adapted than any other stone for the preservation of perfumes.⁴ Martial says *cosmis redolent alabastra*,⁵ and Horace appears to allude to the same vessels in his invitation to Virgil.⁶ The term seems to have been employed to denote vessels appropriated to these uses, even when they were not made of the material from which it is supposed they originally received their name. Theocritus thus speaks of golden alabastra (*χρυσέαι ἄλabastra*).⁷ These vessels were of a tapering shape, and very often had a long narrow neck, which was sealed; so that when Mary, the sister of Lazarus, is said by St. Mark⁸ to break the alabaster-box of ointment for the purpose of anointing our Saviour, it appears probable that she only broke the extremity of the neck, which was thus

1. (Nicand., Ther., 282.—Adams, Append., s. v.)—2. (Theophrast., H. P., i., 5.—Dioscor., ii., 122.—Matth., xiii., 25.—Adams, Append., s. v.)—3. (Polit., iv., 8, § 2.)—4. (Apud Dionys. Halic., v., 73.)—5. (Theophrast. ap. Dionys. Halic., v., 73.)—6. (Wachsmuth, Hellen. A. orthum., I., i., p. 200.—Hermann, Pol. Antiq. of Greece, § 63.—7. (Hygin., Poet. Astron., ii., 4.)—8. (in Id., iii., p. 329.)—9. (iv., 7, § 55.)

1. (Viz. etiam Athen., xiv., p. 618.)—2. (H. N., xxxvi., 12, xxxvii., 54.)—3. (H. N., xxxvi., 12.)—4. (H. N., xxxvii., 54.)—5. (H. N., xiii., 3; xxxvi., 12.)—6. (xi., viii., 9.)—7. (Carm. iv., xii., 7.)—8. (Idyl., xv., 114.)—9. (xiv., 3.)

closed. The alabastron mentioned by the Evangelists was according to Eniphanius, a measure, which contained $\frac{1}{2}$ ξέστης, or one κοτύλη (16 47 cubic inches, or .48 pints).

ALABASTRITES. (*Vid.* ALABASTER.)

ALAIA (ἀλαία) is the name of the games which were annually celebrated at the festival of Minerva, surnamed Alea, near Tegea, in the neighbourhood of the magnificent temple of the same goddess.¹

ALARII were the troops of the allies in the Roman army, and were so called because they were usually stationed in the wings (*Alae*). The alarii consisted both of horse and foot soldiers, and were commanded by præfecti, in the same manner as the legions were commanded by tribuni.² The cavalry of the allies was called *equites alarii*, to distinguish them from the cavalry of the legions (*equites legionarii*); and the infantry was called *cohortes alarie*,³ to distinguish them from the *cohortes legionariae*.

***ALAU'DA** (κόρυδος, κορύδαλος, and κορύδων), the Lark. Aristotle describes two species of this bird, the one of which is evidently the *Alauda cristata*, L., or Crested Lark; the other the *Alauda campestris*, or Field Lark. The former is the *Galerita* of Pliny, and is clearly the species alluded to by Aristophanes in his *Aves*.⁴

ALBUM is defined to be a tablet of any material on which the prætor's edicts, and the rules relating to actions and interdicts, were written. The tablet was put up in a public place, in order that all the world might have notice of its contents. According to some authorities, the album was so called, because it was either a white material or a material whitened, and, of course, the writing would be a different colour. According to other authorities, it was so called because the writing was in white letters. If any person wilfully altered or erased (*corrupti*) anything in the album, he was liable to an action *albi corrupti*, and to a heavy penalty.⁵

Probably the word album originally meant any tablet containing anything of a public nature. Thus, Cicero informs us that the *Annales Maximi* were written on the album by the pontifex maximus.⁶ But, however this may be, it was, in course of time, used to signify a list of any public body; thus we find the expression *album senatorium*, used by Tacitus,⁷ to express the list of senators, and corresponding to the word *leucoma* used by Dion Cassius.¹⁰ The phrase *album decurionum* signifies the list of decuriones whose names were entered on the album of a municipium, in the order prescribed by the lex municipalis, so far as the provisions of the lex extended.¹¹

ALBUS GALE'US, or **ALBOGALE'US**, a white cap worn by the flamen dialis at Rome.¹² According to Festus (*s. v.*), it was made of the skin of a white victim sacrificed to Jupiter, and had an olive twig inserted in the top. Its supposed form, as derived from coins, and from a bas-relief on a Roman temple, is that of a cap fitted closely to the head, and tied under the chin.¹³ (*Vid.* APEX.)

ALCATHOIA (ἀλκαθόια) is the name of games celebrated at Megara, in commemoration of the hero Alcaethous, son of Pelops, who had killed a lion which had destroyed Euippus, son of King Megareus.¹⁴

***AL'CE** or **ALCES**¹⁵ (in Greek Ἄλκη), the name of an animal described by Cæsar and other ancient writers, and the same with the modern *Elk* or *Moose Deer*. "It was the opinion of Buffon, that the Euro-

pean Elk was not known to the Greeks, nor does it appear to have been noticed by Aristotle. That it was, however, the Ἄλκη of Pausanias, the Alea of Cæsar and Pliny, the Elch of the Celts, and the Ælg or Elg of the northern Europeans, there can be little doubt. Pausanias describes it as being "between a stag and a camel;" and though the accounts of Cæsar² and Pliny³ are mingled with fable, and the former states that his *Alces* are "*mutile cornibus*" (which might arise from the accounts of those who had seen the animal at the period when the horns had exfoliated), the general description and the localities given by both are almost conclusive as to the animal meant to be designated. The "*labrum superius prægrande*," "huge upper lip," of Pliny is very expressive, and the extraordinary development of this part might well recall to a casual observer the general traits of the head of a camel. Whether it was the ἵππελαφος (*hippelaphus*) of Aristotle, is a question which will admit of much discussion. (*Vid.* HIPPELAPHUS.)—The movements of the Elk are rather heavy, and the shoulders being higher than the croup, it can never gallop, but shuffles or ambles along, its joints cracking at every step, with a sound heard to some distance. Increasing its speed, the hind feet straddle to avoid treading on its fore heels, and it tosses the head and shoulders like a horse about to break from a trot to a gallop. It does not leap, but steps without effort over a fallen tree, a gate, or a split fence. During its progress, it holds the nose up, so as to lay the horns horizontally back. This attitude prevents its seeing the ground distinctly; and, as the weight is carried very high upon the elevated legs, it is said sometimes to trip by treading on its fore heels, or otherwise, and occasionally to give itself a heavy fall. It is probably owing to this occurrence that the Elk was believed by the ancients to have frequent attacks of epilepsy, and to be obliged to smell its hoof before it could recover; hence the Teutonic name of *Elend* ("miserable"), and the reputation especially of the fore hoofs as a specific against the disease.¹⁶

***AL'CEA** (ἀλκα or ἀλκαία), most probably the *Malva alcea*, or Vervain Mallow.⁴

***ALCE'DO.** (*Vid.* HALCYON.)

***ALCIBIADIUM** (Ἀλκιβιάδιον), a species of Anchusa. (*Vid.* ANCHUSA.)

***ALCYONE.** (*Vid.* HALCYON.)

ALEA, gaming, or playing at a game of chance of any kind. Hence *aleo*, *aleator*, a gamester, a gambler. Playing with *tali*, or *tesserae*, was generally understood, because this was by far the most common game of chance among the Romans.

Gaming was forbidden by the Roman laws, both during the times of the Republic and under the emperors.⁵ Hence Horace, alluding to the progress of effeminate and licentious manners, says that boys of rank, instead of riding and hunting, now showed their skill in playing with the hoop, or even at games of chance, although they were illegal (*vetita legibus alea*).⁶ Gaming was also condemned by public opinion. "*In his gregibus*," says Cicero, "*omnes aleatores, omnes adulteri, omnes impuri impudique versantur*."⁷ To detect and punish excesses of this description belonged to the office of the *ædiles*.⁸

Games of chance were, however, tolerated in the month of December at the Saturnalia, which was a period of general relaxation;⁹ and among the Greeks, as well as the Romans, old men were allowed to amuse themselves in this manner.¹⁰

The following line of Publius Syrus shows that

1. (Paus., viii., 47, § 3.)—2. (Liv., x., 43; xxxi., 21.—Cæs., Bell. Gall., i., 51.—Cicinius, ap. Gell., xvi., 4.)—3. (Cæs., Bell. Gall., i., 39.—Suet., Octav., 38.—Plin., Ep., 19.)—4. professed gamblers made a regular study of their art:

"*Aleator, quanto in arte est melior, tanto nequior.*"

Ovid alludes to those who wrote treatises on the subject:

"*Sunt alii scriptæ, quibus alea luditur, artes.*"¹

These were the Hoyles of ancient times, among whom we find no less a personage than the Emperor Claudius himself: "*Aleam studiosissime ludit, de cuius arte librum quoque emisit.*"² The Emperors Augustus and Domitian were also fond of gaming.³

Alea sometimes denotes the implement used in playing, as in the phrase *jacta alea est*, "the die is cast," uttered by Julius Cæsar immediately before he crossed the Rubicon;⁴ and it is often used for chance, or uncertainty in general.⁵

*ΑΛΕΚΤΟΡ (ἀλέκτωρ), the Cock. (Vid. GALULUS.)

ΑΛΕΚΤΡΟΥΜΑΝΤΕΙΑ (ἀλεκτρομαντεία), a mode of divination practised by the Greeks. The letters of the alphabet were written in a circle; a grain of wheat or barley was laid upon each letter; and a cock, consecrated or provided for the occasion, was placed within the circle. The required information was obtained by putting together those letters off which the cock picked the grains of corn. To obtain a fuller answer, they laid grains of corn upon the letters a second time, and repeated the process.

ΑΛΕΚΤΡΥΟΝΩΝ ΑΓΩΝ, or ΑΛΕΚΤΡΥΟΝΟΜΑΧΙΑ (ἀλεκτρονύων ἄγων, or ἀλεκτρονομαχία), a public cockfight, which was held every year in one of the theatres of Athens. Cockfights, in general, were exceedingly common among the Greeks and Romans; but the origin of this one in particular, which was sanctioned by the laws of the state, is not known; for the account of its origin given by Ælian⁶ is too absurd and improbable to deserve credit. He says that, when Themistocles marched with his Athenians against the Persians, he saw two cocks fighting against each other, and took the opportunity of addressing his soldiers, and reminding them that these cocks were neither fighting for their country nor for the gods, but only for victory, &c. This speech is said to have greatly animated the courage of the Athenians; and, after the war, they commemorated the event which had proved so useful to them by the annual festival in the theatre.

ΑΛΕΠΤΕΡΙΟΝ. (Vid. ALIPTÆ.)

*ΑΛ'ΓΑ, a general name given by the Latin writers to all aquatic plants, which, living in the waters, are accustomed to be thrown up on the banks of rivers or the shores of the sea. Such, in the case of fresh water, are the Convolvulus, the Potamogeton, the Naiades, &c.; and in that of the salt water, the debris of marine plants, and especially the *Fucus*.⁷ The term βρόνυ is applied to the sea-algæ by Theophrastus.⁸

ΑΛΙΤΑ (ἀλίξ, χόυνδος), I. A kind of grain resembling spelt, which was also called *zea*.⁹ II. A broth, soup, or porridge made out of this grain, and very highly esteemed by the Romans. Pliny states that it was a Roman invention, and that, in his opinion, it was not in use till after the time of Pompey the Great.¹⁰ The Greeks had a somewhat similar preparation, which they called *πιτσάνη*. Alica was procured from the neighbourhood of Verona and Pisa, and other parts of Italy, and from Egypt. The best came from Campania; that from Egypt was very inferior. It was prepared by first bruising the grain in a wooden mortar to separate the husks, and then pounding it a second and third time to break it

into smaller pieces. The different qualities of alica made by each of these processes were called respectively *grandissima* or *aphærcma* (ἀφαίρεμα), *secundaria*, and *minima*. In order to make the alica white and tender, it was mixed with chalk from the hills between Naples and Puteoli.¹ It was used as a medicine, for which purpose it was either soaked in water mixed with honey (mead, *aqua mulsa*); or boiled down into a broth, or into porridge. Pliny gives a full account of the mode of preparing and administering it, and of the diseases in which it was employed.²

A spurious kind of alica was made from the inferior spelt (*zea*) of Africa, the ears of which were broader and blacker, and the straw shorter, than in the Italian plant. Pliny mentions also another spurious kind of alica, which was made from wheat.³ Another sort of alica was made from the juice of the plantain.⁴

ΑΛΙΜΑ, or ΑΛΙΜΟΣ ΤΡΟΦΗ (ἄλιμα, or ἄλιμος τροφή), (from α, negative, and λιμός, "hunger"), a refreshment used by Epimenides, Pythagoras, and other philosophers. Plato states, in his Dialogue on Laws, that the ἄλιμα of Epimenides was composed of mallows and asphodel. Suidas explains it as a plant which grew near the sea (probably the sea-leek), which was the chief ingredient in the φάρμακον Ἐπιμενίδιον, and was thought to promote long life. Hesychius interprets σφόδελος by ἄλιμος. Pliny states that some said that alimon was called asphodelos by Hesiod, which he thinks an error; but that the name *alimon* was applied by some to a dense white shrub, without thorns, the leaves of which resembled those of the olive, but were softer, and were used for food; and by others to a potherb which grew by the sea, "whence," says Pliny, "its name," confounding ἄλιμος, from α and λιμός, with ἄλιμος from ἄλις.⁵ The name appears generally to signify a medicinal preparation of equal weights of several herbs, pounded and made into a paste with honey. A similar preparation for quenching thirst (ἀδιψος τροφή) was used by Pythagoras.

ALIMENTARIUM PUERI ET PUELLÆ. In the Roman republic, the poorer citizens were assisted by public distributions of corn, oil, and money, which were called *congiaria*. These distributions were not made at stated periods, nor to any but grown-up inhabitants of Rome. The Emperor Nerva was the first who extended them to children, and Trajan appointed them to be made every month, both to orphans and to the children of poor parents. These children were called *pueri et puellæ alimentarii*, and also (from the emperor) *pueri puellæque Ulpiani*; and the officers who administered the institution were called *quæstores pecuniæ alimentariæ*, *quæstores alimentorum*, *procuratores alimentorum*, or *præfecti alimentorum*.

The fragments of an interesting record of an institution of this kind by Trajan have been found at Velleia, near Placentia, from which we learn the sums which were thus distributed. The money was raised in this case by lending out a sum on interest at five per cent., from the treasury of the town, on the security of lands and houses. A similar institution was founded by the younger Pliny at Comum.⁶ Trajan's benevolent plans were carried on upon a larger scale by Hadrian and the Antonines. Under Commodus and Pertinax the distribution ceased. In the reign of Alexander Severus, we again meet with alimentarii pueri et puellæ, who were called *Mammaeani*, in honour of the emperor's mother. We learn, from a decree of Hadrian,⁷ that boys enjoyed the benefits of this institution up to their eighteenth, and girls up to their

1 (Trist., ii., 471.)—2. (Suet., Claud., 33.)—3. (Suet., Aug., 70, 71.)—Dom., 21.)—4. (Suet., Jul., 32.)—5. fourteenth year; and, from an inscription,¹ that a boy four years and seven months old received nine times the ordinary monthly distribution of corn.²

ALIP'TÆ (ἀλείπται), among the Greeks, were persons who anointed the bodies of the athlete preparatory to their entering the palastra. The chief object of this anointing was to close the pores of the body, in order to prevent much perspiration, and the weakness consequent thereon. To effect this object, the oil was not simply spread over the surface of the body, but also well rubbed into the skin.³ The oil was mixed with fine African sand, several jars full of which were found in the baths of Titus, and one of these is now in the British Museum. This preparatory anointing was called ἡ παρασκευαστική τρίψις. The athlete was again anointed after the contest, in order to restore the tone of the strained muscles: this anointing was called ἡ ἀποθεραπευτή. He then bathed, and had the dust, sweat, and oil scraped off his body, by means of an instrument similar to the strigil of the Romans, and called στήλεγξις, and afterward ξύστρα. The alip'tæ took advantage of the knowledge they necessarily acquired of the state of the muscles of the athlete, and their general strength or weakness of body, to advise them as to their exercises and mode of life. They were thus a kind of medical trainers, ἱατροαλείπται.⁴ Sometimes they even superintended their exercises, as in the case of Milesias.⁵

Among the Romans, the alip'tæ were slaves, who scrubbed and anointed their masters in the baths. They, too, like the Greek ἀλείπται, appear to have attended to their masters' constitution and mode of life.⁶ They were also called unctores. They used in their operations a kind of scraper called strigil, towels (lintea), a cruise of oil (guttus), which was usually of horn, a bottle (vid. AMPULLA), and a small vessel called lenticula. (Vid. BATHS.)

The apartment in the Greek palastra where the anointing was performed was called ἀλείπτήριον; that in the Roman baths was called unctuarium.

*ALIS'MA, an aquatic herb, supposed to be the same with the Water Plantain. Pliny speaks of it as an antidote against certain venomous creatures, and also against the bite of a rabid dog. For this he is not so much to be blamed, since even some modern practitioners have recommended it as antihydrophobic. Sprengel makes the Alisma of which Pliny speaks the *A. Parnassifolium*; this species, however, has never been found in Greece. Sibthorp is more correct in designating it the *A. plantago*.⁷

*ALLIUM (σκόροδον), Garlic. There seems no reason to doubt that the σκόροδον of Theophrastus and Dioscorides is the *Allium sativum*, manured Garlic, although Stackhouse prefers the *A. scorodoprasum*. R. Stephens suggests that the wild Garlic should be called ἄρροσκοροδον, and not ὀρίσκόροδον. Pliny informs us that garlic was much used among the Italian rustics as a medicine.⁸ Galen also speaks of it as such.⁹ Among the Athenians it was a great favourite as an article of food, and seems to have been sold at the same shops with bread and wine.¹⁰ Fighting-cocks were also fed upon it, to make them more pugnacious.¹¹ Great prophylactic virtues were formerly ascribed to this plant, and, among other active properties, that, in particular, of neutralizing the venom of serpents.¹²

1. (Fabretti, 235, 619.)—2. (Aurel. Vict., Epit. xii., 4.—Capitolinus, Ant. Pi., 8.—Id., M. Aur., 26.—Id., Pert., 9.—Spart., Hist., 7.—Lamprid., Sev. Alex., 57.—F. A. Wolf, "Von einer alten Stiftung Trajans.")—3. (Plutarch, de Tuenda Sanitate, c. 15, p. 302, Tauch.)—4. (Celsus, i., 1.—Plin., H. N., xxix., 1, 2.)—5. II., i., 171.—Adams, Append., s. v. ὀρίσκόροδον.)—8. (II N., xix., 6.)—9. (Meth. Med., xii., 18.)—10. Mitchell, in Aristoph., Acharn., 150 (174).—11. (Aristoph., Eq., 493.)—12. (Æmil. Macer, as cited by Fée.)

So diversified, indeed, were its characteristics, that it need excite no surprise to find it adored on the one hand, along with the other species of *allium*, by the people of Egypt, and banished on the other from the tables of the delicate at Rome. Horace assigns it as fit food only for reapers;¹ it was, however, a great favourite also with the Roman soldiers and sailors.² The inhabitants of the southern counties of Europe, who often experience the need of exciting the digestive powers of the stomach, hold garlic in much higher estimation, on this account, than those of more northern regions. Theophrastus makes the *Allium cyprum* the largest in size of the several species of this plant.³

ALLUVIO. "That," says Gaius,⁴ "appears to be added to our land by alluvio, which a river adds to our land (*ager*) so gradually that we cannot estimate how much is added in each moment of time; or, as it is commonly expressed, it is that which is added so gradually as to escape observation. But if a river (at once) takes away a part of your land, and brings it to mine, this part still remains your property." There is the same definition by Gaius in his *Res Cotidianæ*,⁵ with this addition: "If the part thus suddenly taken away should adhere for a considerable time to my land, and the trees on such part should drive their roots into my land, from that time such part appears to belong to my land." The *acquisitio per alluvionem* was considered by the Roman jurists to be by the *jus gentium*, in the Roman sense of that term.

According to a constitution of the Emperor Antoninus Pius, there was no *jus alluvionis* in the case of *agri limitati*.⁶ *Circumlvio* differs from alluvio in this, that the whole of the land in question is surrounded by water, and subject to its action. Cicero⁷ enumerates the *jura alluvionum* and *circumlvionum* as matters included under the head of *causæ centumvrales*.

The doctrine of alluvio, as stated by Bracton in the chapter *De acquirendo Rerum Dominio*,⁸ is taken from the Digest,⁹ and is in several passages a copy of the words of Gaius, as cited in the Digest.

*AL'NUS (κλήθρα¹⁰), the Alder. The wood of this tree, which is lighter than that of many others, was first employed, according to the poets, for the purposes of navigation.¹¹ It was also much used among the Romans for water-pipes,¹² and is still ranked among the best materials, next to metal, for these, and for under-ground purposes generally. The alder is an inhabitant of swamps and meadows in all Europe, the north of Africa and Asia, and North America. Virgil is not consistent with himself as regards the name of this tree. In his sixth Eclogue¹³ he makes the sisters of Phæthon to have been changed into alders; but in the *Æneid*¹⁴ he gives the poplar, as Ovid does.¹⁵ The species of alder most common in Greece is the *Alnus oblongata*, Wild.

*AL'OE, the Aloe, or Aloes-tree. Neither Hippocrates nor Theophrastus notices this plant, but Dioscorides, on the other hand, describes two kinds of it.¹⁶ He says it is mostly brought from India, but that the plant grows in Arabia and the maritime parts of Asia. The story related by some writers, that Aristotle recommended the aloe to Alexander as one of the most valuable products of Socotora, appears unworthy of belief, and yet it probably was the Socotorine aloe with which the ancients were most familiar. Fée thinks that the African aloe was unknown to the Greeks and Romans, but that

1. (Epod. iii., 4.)—2. (Plaut., Pen., v., 5, 54.—Aristoph., Acharn., i. c.)—3. (Theophrast., H. P., vii., 4.—Dioscor., ii., 181.)—4. (i., 70, seq.)—5. (Dig. 40, tit. 1, s. 7.)—6. (Dig. 40, tit. 1, s. 16.)—7. (De Orat., i., 38.)—8. (fol. 9.)—9. (41, tit. 1, s. 7.)—10. (Theophrast., H. P., i., 4; iii., 3.—Hom., Odys., γ., 64.)—11. (Fée, Flore de Virgile, p. xiv.)—12. (Plin., H. N., xvi., 42.)—13. (v. 63.)—14. (x., 190.)—15. (Met., ii., 340, seq.)—16. (ii., 22.)

a species quite rare at the present day ("aloes lucide, ou en larmes") was one of the kinds employed by them.¹ Aloes, though still much used in medicine, are prescribed in very few of the cases mentioned by Pliny.² According to Ainslie, however, the inhabitants of India still use them with great success in affections of the eyes. Olaus Celsius³ derives the word *aloe* from the Arabic *alloe*. Pliny mentions a mineral substance called *aloe*, which is the same with the bitumen of Judæa, and which was employed in Egypt in embalming bodies.⁴

ALŌ'A (ἀλώα or ἄλωα), an Attic festival, but celebrated principally at Eleusis, in honour of Demeter and Dionysus, the inventors of the plough and protectors of the fruits of the earth. It took place every year after the harvest was over, and only fruits were offered on this occasion, partly as a grateful acknowledgment for the benefits the husbandman had received, and partly that the next harvest might be plentiful. We learn from Demosthenes⁵ that it was unlawful to offer any bloody sacrifice on the day of this festival, and that the priests alone had the privilege to offer the fruits. The festival was also called *θαλάσσια*,⁶ or *συγκομιστήρια*.

ΑΛΟΓΙΟΥ ΓΡΑΦΗ (ἀλογίου γραφή), an action which might be brought before the logistæ (λογισταί), at Athens, against all ambassadors who neglected to pass their accounts when their term of office expired.⁷

*ALOPECIAS, a species of fish, called by Pliny the Sea-fox (*Vulpes marina*), and the same, probably, with the *Pox-shark* of modern naturalists.⁸ The name comes from the Greek ἀλώπηξ, "a fox."

*ALY'PECIS (ἀλωπεκίς), a species of vine producing clusters of grapes resembling the tail of a fox. It is now extinct.¹⁰

*ALOPECURUS (ἀλωπέκουρος), a plant, which Sprengel suggests may be the *Saccharum cylindricum*, and Stackhouse the *Phleum crinitum*, Fl. 7æc., or Hairy Cat's-tail grass. Its spike is described by Theophrastus as being "soft, downy, tick, and like the tails of foxes."¹¹ This agrees well with the spike of the *Alopecurus*, L., or Foxtail grass.¹² The name comes from ἀλώπηξ, "a fox," and οὐρά, "a tail."

*ALOPEX. (Vid. VULPES.)

*AL/SINE (ἀλσίνη), an herb, which Sprengel, in his History of Botany, recognises as the *Stellaria nemorum*, or Wood Stitchwort; but, in his notes to Dioscorides, he expresses himself doubtfully concerning it. Schneider is undecided whether the ἀλσίνη of Theophrastus be the same as that of Dioscorides.¹³

ALTA'RE. (Vid. ARA.)

*ALTER'CUM, the Arabian (?) name, according to Pliny, of the Hyoscyamus.¹⁴

*ALUM, a plant. (Vid. SYMPHYTON.)

*ALUMEN. (Vid. STYPTERIA.)

*ALY'PON (ἀλῡπον), an herb, supposed to be the same with that which produced Turbit. Sprengel and Sibthorp mark it as the *Globularia alypum*.¹⁵

*ALYSSON (ἄλυσσον), a plant. The ἄλυσσον of Galen and Paulus Ægineta is the *Manabium alyssum*, vulgarly called Galen's Madwort. That of Dioscorides is a very different plant, and cannot be very satisfactorily determined. Sprengel hesitates whether to refer it, with Dodonæus, to the *Farsicia chypæata*, or, with Columna, to the *Veronica arvensis*, or *montana*, L., our Speedwell.¹⁶

ALUTA. (Vid. CALCEUS.)

ALU'TAI (ἀλῡται), persons whose business it was to keep order in the public games. They received their orders from an ἀλῡταρχῆς, who was himself under the direction of the agonothetæ, or hellanodiceæ. They are only found at Olympia; in other places, the same office was discharged by the *μαστιγοφόροι*.

*ALPHESTES (ἀλφηστής), a species of fish, the same with the *Cynedus* of Pliny. It is the *Labrus cynedus*, L., in French *Canude*. According to Rondelet, it is about a foot long, and its flesh is easy of digestion. In the *Dict. of Nat. Hist.*, the Alphest is described as being a small fish, having a purple back and belly, with yellow sides.¹

AMANUENSIS, or AD MANUM SERVUS, a slave or freedman, whose office it was to write letters and other things under his master's direction. The amanuensis must not be confounded with another sort of slaves, also called *ad manum servi*, who were always kept ready to be employed in any business.²

*AMAR'ACUS (ἀμάρακος), a plant. Dioscorides and the scholiast on Nicander³ state that the Amaraeus is the same as the Sampsuehus (σάμψυχον); and yet Galen and Paulus Ægineta treat of them separately. Matthioli seems to think it highly probable that it is the common *Marjoram*, but the late commentators are much at variance about it. Thus Sprengel, in the first edition of his R. H. H., marks it as the *Origenum marjoranoides*, but in the second, according to Schneider, he is disposed to refer the ἀμάρακος χλωρίς of Theophrastus to the *Hyacinthus Cosmosus*. Stackhouse prefers the *Origenum Ægyptiacum*, and Dierbach the *Teucrium Marum*, or Mastich. Upon reference to the Commentary of Matthioli on the *μάρων* of Dioscorides,⁴ it will be seen that this last opinion had been formerly entertained, and it would appear to be a very plausible one.⁵

*AMARANTHUS (ἀμάραντος), the Amaranth, or Never-fading, as its name indicates, from ἀ, priv., and *μαραινω*, "to wither." According to Pliny,⁶ the amaranth appears in the month of August, and lasts until autumn. That of Alexandria was the most esteemed. What the same writer, however, states, that the flowers of the amaranth bloom anew on being plunged into water, is not very exact. As the flowers are of a very dry kind, they have not much humidity to lose, and therefore may be preserved merely for a long time. The description which Pliny gives of his *Amaranthus*, which is also that of Theophrastus, points at once to the *Celosia cristata*, a plant originally from Asia, but cultivated in Italy a long time before Pliny's day. Bauhin believes that this plant is to be found in Theophrastus⁷ under the name of φλόξ, which Theodore Gaza translates by *flamma*. The ἀμάραντος of Dioscorides⁸ is another plant, probably the *Gnaphalium Stachas* of Linnaeus. The ancients, far less advanced than the moderns in the art of manufacturing stuffs, were unable, as Pliny informs us, to imitate the softness of the amaranth. The moderns, however, have succeeded in this, and have even surpassed, in the fabrication of their velvet, the beautiful downy surface of this flower. The common name of the plant, therefore, *passe-velours*, given to it when the art of fabricating stuffs was yet in its infancy, suits no longer, and the Italian appellation, *fior di velluto* ("velvet-flower"), is much more applicable.⁹

AMARUN'THIA or AMARU'SIA (ἀμαρύνθια or ἀμαρῡσία), a festival of Artemis Amarynthia, or Amarsia, celebrated, as it seems, originally at Ama-

1. (in Plin., H. N., xxvii., 4, p. 294.)—2. (H. N., xxvii., 4.)—3. (i., 136.)—4. (Fée, in Plin., l. c.)—5. (c. Neer., p. 1385.) 6. (Hesych., s. v.)—7. (Suid.—Hesych.—Meier, Att. Process, p. 363.)—8. 1. (Adams, Append., s. v.)—2. (Suet., Jul., 74; Octav., 67 Ner., 44; Tit., 3; Vesp., 3.—Cic., De Orat., iii., 60, 225.—Pignori, De Servis, 109.)—3. (Ther., 503.)—4. (iii., 42.)—5. (Adams, Append., s. v.)—6. (H. N., xxi., 8.)—7. (vi., 6.)—8. (iv., 57.)—9. (Fée, in Plin., l. c.)

rynthus, in Eubœa, with extraordinary splendour; but it was also solemnized in several places in Attica, such as Athmonē;¹ and the Athenians held a festival, as Pausanias says, in honour of the same goddess, in no way less brilliant than that in Eubœa.² The festival in Eubœa was distinguished for its splendid processions; and Strabo himself³ seems to have seen, in the temple of Artemis Amarynthia, a column on which was recorded the splendour with which the Eretrians at one time celebrated this festival. The inscription stated that the procession was formed of three thousand heavy-armed men, six hundred horsemen, and sixty chariots.⁴

AMBARVALIA. (Vid. ARVALES FRATRES.)

*AMBER. (Vid. ELECTRUM.)

AMBILUS TRIUM. (Vid. LUSTRUM.)

AMBITUS, which literally signifies "a going about," cannot, perhaps, be more nearly expressed than by our word *canvassing*. After the plebs had formed a distinct class at Rome, and when the whole body of the citizens had become very greatly increased, we frequently read, in the Roman writers, of the great efforts which it was necessary for candidates to make in order to secure the votes of the citizens. At Rome, as in every community into which the element of popular election enters, solicitation of votes, and open or secret influence and bribery, were among the means by which a candidate secured his election to the offices of state.

Whatever may be the authority of the piece entitled "Q. Ciceronis de Petitione Consulatus ad M. Tullium Fratrem," it seems to present a pretty fair picture of those arts and means by which a candidate might lawfully endeavour to secure the votes of the electors, and also some intimation of those means which were not lawful, and which it was the object of various enactments to repress. As the terms which relate to the canvassing for public places often occur in the Roman writers, it may be convenient to mention the principal among them here.

A candidate was called *petitor*, and his opponent, with reference to him, *competitor*. A candidate (*candidatus*) was so called from his appearing in the public places, such as the fora and Campus Martius, before his fellow-citizens, in a whitened toga. On such occasions, the candidate was attended by his friends (*deductores*), or followed by the poorer citizens (*seclatores*), who could in no other manner show their good-will or give their assistance.⁵ The word *assiduitas* expressed both the continual presence of the candidate at Rome, and his continual solicitations. The candidate, in going his rounds or taking his walk, was accompanied by a *nomenclator*, who gave him the names of such persons as he might meet; the candidate was thus enabled to address them by their name, an indirect compliment which could not fail to be generally gratifying to the electors. The candidate accompanied his address with a shake of the hand (*prensatio*). The term *benignitas* comprehended generally any kind of treating, as shows, feasts, &c. Candidates sometimes left Rome, and visited the coloniae and municipia, in which the citizens had the suffrage; thus Cicero proposed to visit the Cisalpine towns when he was a candidate for the consulship.⁶

That ambitus, which was the object of several penal enactments, taken as a generic term, comprehended the two species, *ambitus* and *largitiones* (bribery). *Liberalitas* and *benignitas* are opposed by Cicero, as things allowable, to *ambitus* and *largitio*, as things illegal.⁷ Money was paid for votes; and in order to ensure secrecy and secure the elector, persons called *interpretes* were employed to make the bargain, *sequestres* to hold the money till it was

to be paid,¹ and *divisores* to distribute it.² The offence of ambitus was a matter which belonged to the *judicia publica*, and the enactments against it were numerous. One of the earliest, though not the earliest of all, the Lex Æmilia Bœbia (B.C. 182), was specially directed against *largitiones*. The Lex Cornelia Fulvia (B.C. 159) punished the offence with exile. The Lex Acilia Calpurnia (B.C. 67) imposed a fine on the offending party, with exclusion from the senate and all public offices. The Lex Tullia (B.C. 63), passed in the consulship of Cicero, in addition to the penalty of the Acilian law, inflicted ten years' exile on the offender; and, among other things, forbade a person to exhibit gladiatorial shows (*gladiatores dare*) within any two years in which he was a candidate, unless he was required to do so, on a fixed day, by a testator's will.³ Two years afterward, the Lex Aufidia was passed, by which, among other things, it was provided that, if a candidate promised (*promittit*) money to a tribe, and did not pay it, he should be unpunished; if he did pay the money, he should farther pay to each tribe (annually?) 3000 sesterces as long as he lived. This enactment occasioned the witticism of Cicero, who said that Clodius observed this law by anticipation, for he promised, but did not pay.⁴ The Lex Licinia (B.C. 58) was specially directed against the offence of *sodalitium*, or the wholesale bribery of a tribe by gifts and treating;⁵ and another lex, passed (B.C. 52) when Pompey was sole consul, had for its object the establishment of a speedier course of proceeding on trials for ambitus. All these enactments failed in completely accomplishing their object. That which no law could suppress, so long as the old popular forms retained any of their pristine vigour, was accomplished by the imperial usurpation. Julius Cæsar, when dictator, nominated half the candidates for public offices, except the candidates for the consulship, and notified his pleasure to the tribes by a civil circular; the populus chose the other half.⁶ The Lex Julia de Ambitu was passed in the time of Augustus; but the offence of ambitus, in its proper sense, soon disappeared, in consequence of all elections being transferred from the comitia to the senate, which Tacitus, in speaking of Tiberius, briefly expresses thus: "The comitia were transferred from the campus to the patres."

While the choice of candidates was thus partly in the hands of the senate, bribery and corruption still influenced the elections, though the name of ambitus was, strictly speaking, no longer applicable. But in a short time, the appointment to public offices was entirely in the power of the emperors; and the magistrates of Rome, as well as the populus, were merely the shadow of that which had once a substantial form. A Roman jurist of the imperial period (Modestinus), in speaking of the Julia Lex de Ambitu, observes, "This law is now obsolete in the city, because the creation of magistrates is the business of the princeps, and does not depend on the pleasure of the populus; but if any one in a municipium should offend against this law in canvassing for a sacerdotium or magistratus, he is punished, according to a senatus consultum, with infamy, and subjected to a penalty of 100 aurei."⁷

The trials for ambitus were numerous in the time of the Republic. The oration of Cicero in defence of L. Murena, who was charged with ambitus, and that in defence of Cn. Plancius, who was charged with that offence specially called *sodalitium*, are both extant.⁸

ΑΜΒΑΣΥΣΕΩΣ ΓΡΑΦΗ (*ἀμβλῶσεως γραφή*), an action brought in the Athenian courts against an individual who had procured the abortion of a male

1. (Paus., i., 31, s. 3).—2. (Hesych., s. v. Ἀμάρυνθια)—3. (x. i., p. 324, ed. Taucha).—4. (Compare Schol. in Pind., Ol. xiii., sub fin.).—5. (Cic., pro Muren., c. 34).—6. (Cic., ad Att., i., 1).—7. (Cic., De Orat., ii., 25.—Compare pro Muren., c. 36.)

1. (Cic., pro Cluent., 26.)—2. (Cic., ad Att., i., 16).—3. (Cic., in Vatini., 15.).—4. (Cic., ad Att., i., 16.).—5. (Cic., Ol. Planc., 15.).—6. (Suet., Jul., 41).—7. (Dig. 48, tit. 14 § 1.—8. (Sigonius, De Antiquo Jure Pop. Rom., p. 545.)

child by means of a potion (*ἀμβλωθρίδιον*). The loss of a speech of Lysias on this subject has deprived us of the opinions of the Athenians on this crime. It does not appear, however, to have been looked upon as a capital offence.¹

Among the Romans, this crime (*partus abactio*, or *abortus procuratio*) seems to have been originally unnoticed by the laws. Cicero relates that, when he was in Asia, a woman who had procured the abortion of her offspring was punished with death;² but this does not appear to have been in accordance with the Roman law. Under the emperors, a woman who had procured the abortion of her own child was punished with exile;³ and those who gave the potion which caused the abortion were condemned to the mines if of low rank, or were banished to an island, with the loss of part of their property, if they were in respectable circumstances.⁴

AMBROSIA (*ἀμβροσία*), festivals observed in Greece in honour of Dionysus, which seem to have derived their name from the luxuries of the table, or from the indulgence of drinking. According to Tzetzes on Hesiod,⁵ these festivals were solemnized in the month of Lenæon, during the vintage.

AMBROSIA (*ἀμβροσία*). I. The food of the gods, which conferred upon them eternal youth and immortality, and was brought to Jupiter by pigeons.⁶ It was also used by the gods for anointing their body and hair;⁷ whence we read of the ambrosial locks of Jupiter (*ἀμβροσίου χαιται*).⁸ II. A plant, the same with the *Ambrosia maritima*.⁹

AMBURBIUM or AMBURBIA'LE, a sacrifice which was performed at Rome for the purification of the city, in the same manner as the *ambarvalia* was intended for the purification of the country. The victims were carried through the whole town, and the sacrifice was usually performed when any danger was apprehended in consequence of the appearance of prodigies, or other circumstances.¹⁰ Scaliger supposes that the *amburbium* and *ambarvalia* were the same, but their difference is expressly asserted by Servius¹¹ and Vopiscus (*amburbium celebratum, ambarvalia promissa*).¹²

ΑΜΕΛΙΟΥ ΔΙΚΗ (*ἀμελίων δίκη*), an action mentioned by Hesychius, which appears to have been brought by a landlord against his tenant, for the same reason as the *ἀγεωργίου δίκη*: at least we have no information of the difference between them, though it is probable that some existed. (*Vid. ΑΓΕΩΡΓΙΟΥ ΔΙΚΗ*.)

AMENTUM, a leathern thong, either applied for fastening the sandal to the foot, or tied to the middle of the spear, to assist in throwing it.

The thong of the sandal is more frequently called *corrigia*, *ligula*, or *lorum*; so that *amentum* is commonly employed in the latter of the two significations above expressed: *e. g.*,

"*Intendunt acres arcus, amentaque torquent.*"¹³

"*Amentum digitis tendit prioribus,
Et totis jaculum dirige viribus.*"¹⁴

We are not informed how the amentum added to the effect of throwing the lance; perhaps it was by giving it rotation, and hence a greater degree of steadiness and directness in its flight, as in the case of a ball shot from a rifle-gun. This supposition both suits the expressions relative to the insertion of the fingers, and accounts for the frequent use of the verb *torquere*, to whirl or twist, in connexion with this subject. Compare the above-cited passage of Virgil with such as the following: *Amentatas hastas torquebat*.¹⁵

1. (Meier, Att. Process, p. 310).—2. (Pro Cluent., c. 11).—3. (Dig. 47, tit. 11, s. 4; 48, tit. 8, s. 8; tit. 19, s. 39).—4. (Dig. 48, tit. 19, s. 38, § 5).—5. (Op. et D., v., 504).—6. (Od., v., 93; xii., 63).—7. (Il., xiv., 170).—8. (Il., i., 529).—9. (Dioscor., iii., 118).—10. (Obsequ., De Prodig., c. 43.—Apul., Metamorph., iii., ab init., p. 49, Bipont.—Lucan., i., 593).—11. (In Virg., Eclog. iii., 77).—12. (Aurel., c. 20).—13. (Virg., Æn., ix., 665).—14. (Senec., Hippol., ii.).—15. (Cic., De Orat., i., 57.)

"*Inserit amento digitos, nec plura locutus
In juvenem torsit jaculum.*"¹

In the annexed figure, taken from Sir W. Hamilton's Etruscan Vases,² the amentum seems to be attached to the spear at the centre of gravity, a little above the middle.

*AMETHYST'US (*ἀμέθυστον* or *-ος*), the Amethyst, a precious stone of a purple or violet colour in different degrees of deepness. In modern mineralogy, the name has been applied to two precious stones of essentially different natures: 1. the Oriental amethyst, which is a rare variety of adamantine spar or corundum; and, 2. the Occidental or common amethyst.³ The ancients, on the other hand, reckoned five species, differing in degrees of colour. Their Indian amethyst, to which Pliny assigns the first rank among purple or violet-coloured gems, appears to have been our Oriental species, which is nothing more than a violet-coloured sapphire. "Those amethysts, again, which Pliny describes as easily engraved (*scalpturis faciles*), may have been the violet-coloured fluor spar, now called false amethyst; and the variety of quartz which is now commonly styled amethyst, is well described by the Roman writer as that fifth kind, which approaches crystal, the purple vanishing and fading into white. Some mineralogists think that the amethyst of the ancients was what we call garnet; but there seems little in its description resembling the garnet, except that one kind of it approached the hyacinth in colour, as Pliny and Epiphanius observe; that is, had a very strong shade of red; and so, sometimes, has our amethyst. We see our amethyst, indeed, plainly indicated in one of the reasons assigned by Pliny for its name, that it does not reach the colour of wine (*ἄ, priv.*, and *μέθυ*, "wine"), but first fades into violet. He afterward suggests another, which is the more common derivation, saying that the Magi falsely asserted that these gems were preservative against intoxication (*ἄ, priv.*, and *μέθυ*, "to intoxicate"). Theophrastus twice mentions the amethyst (*ἀμέθυστον*), but not in such a way as to determine it; classing it in one place with crystal, as diaphanous, and afterward observing that it is wine-coloured.⁴

1. (Ovid, Met., xii., 321).—2. (iii., pl. 33).—3. (Fée in Plin. xxxvii., 9).—4. (Moore's Anc. Mineral., p. 168.—De Lac. de Gemm., i., 5.)

*AM'IA, a fish of the tunny species, the same with the *Scomber amia*, in Italian, *Leccio*. Schweiglæuser¹ says its French name is *boniton*. Rondolet mentions that he had seen individuals which measured three and a half feet in length. Its head was the part most esteemed by the *bon vivants* of Greece and Rome. The etymologist remarks that it is gregarious, and hence its name, from *ἄμα*, "together," and *ἔλναι*, "to go." The *Amia* is the same as the *Τράκτης* of Ælian,² the *Ταδός* of Aristotle,³ Oppian, and Athenæus, and the *Glaucius* of Ovid and others.⁴

*AMIANTHUS (*ἀμίανθος*), a variety of Asbestos, called in French *Alum de Plume*. It consists principally, according to Chevenix, of silex, magnesia, lime, and alumine, and from it was formed the celebrated *Linum asbestinum*, or Asbestos-linen. Napkins and other articles made of this were, when soiled, thrown into the fire, and cleansed by this process as others are by washing. Hence the name *Amianthus* given to the species in question, signifying *pure, undefiled* (from *ἀ*, priv., and *μῑανός*, "defiled"), because, being indestructible in any ordinary fire, it was restored to its original purity and whiteness simply by casting it into the flames. Where *amianthus* occurs, as it does in many countries, with fibres sufficiently long and flexible for that purpose, it is often now, as anciently it was, spun and woven into cloth; and has in modern times been successfully manufactured into paper, gloves, purses, ribands, girdles, and many other things. The natives of Greenland even use it for the wicks of lamps, as the ancients also did.⁵

AMIC'TUS, dim. AMIC'ULUM.

The verb *amicire* is commonly opposed to *induere*, the former being applied to the putting on of the outer garment, the pallium, læna, or toga (*ἱμῑτιον*, *φῶρος*); the latter, to the putting on of the inner garment, the tunic (*χιτῶν*). *Græco pallio amictus*.⁶ *Vestis amictos, non togis*.⁷ In consequence of this distinction, the verbal nouns *amictus* and *indutus*, even without any farther denomination of the dress being added, indicate respectively the outer and the inner clothing.⁸ The Ass says, in Apuleius,⁹ *Deam, Strico cinctam amiculo, mihi gerendam imponunt*, meaning, "They place on me the goddess, covered with a small silken scarf." The same author says that the priests of the Egyptians used linen *indutui et amictui*; i. e., both for their inner and outer clothing.

In Greek, *amicire* is expressed by *ἀμφέννυσθαι*, *ἀμπεῖν* *ῥθαι*, *ἐπιβάλλεσθαι*, *περιβάλλεσθαι*: and *induere* by *ἐνδύνειν*. Hence came *ἀμπεχόνη*, *ἐπίδημα* and *ἐπιδόλαιον*, *περίδημα* and *περιδόλαιον*, an outer garment, a sheet, a shawl; and *ἐνδύμα*, an inner garment, a tunic, a shirt. When Socrates was about to die, his friend Apollodorus brought him both the inner and the outer garment, each being of great excellence and value, in order that he might put them on before drinking the hemlock: *ἤξιον ἐνδύντα αὐτὸν τὸν χιτῶνα, καὶ τοιμῶπιον περιβαλλόμενον, εἶτα οὕτω πίνειν τὸ φάρμακον*.¹⁰

AMMA (*ἄμμα*), a Greek measure of length, equal to forty *πῆχες* (cubits), or sixty *πόδες* (feet); that is, twenty yards 8.1 inches English. It was used in measuring land.¹¹

*AMMI, a plant, the same, according to Sprengel, with the *Ammi Copticum*. Matthioli and Dodonæus, who give drawings of it, seem to point to the same plant, namely, Bishop's-weed. It must not be

confounded, however, with the plant called Bishop's-weed in Scotland, which is the *Ægopodium podagraria*.¹

*AMMODYTES (*ἀμμοδύτης*), a species of serpent, which Aëtius describes as being a cubit in length, and of a sand colour, with black spots. Matthioli, in his commentary on Dioscorides, de termines it to have been a species of viper. It was most probably, then, only a variety of the *ἔχης*, or *Coluber ammodytes*. This is the serpent known by the name of the Horned viper of Illyricum; its venom is active. In the Latin translation of Avicenna it is called *Amindatus* and *Coularus*, which are corruptions of *Ammodytes* and *Coluber*.²

*AMMONI'ACUM (*ἀμμονιακόν*), Gum Ammoniac. Even at the present day it is not well ascertained what species of *Ferula* it is which produces this gum. Dioscorides gives it the name of *ἀγασθλῆς*. The *ἀμμονιακὸν θνῆγμα* was the finest kind of it, and was so called because used as a perfume in sacred rites.³ The *ἄλς Ἀμμονιακός*, or *Sal Ammoniac*, was a *Fossil salt*, procured from the district of Africa adjoining the temple of Jupiter Ammon. It therefore was totally different from the *Sal Ammoniac* of the moderns, which is *Hydrochlorus Ammoniac*.⁴

*AMPELLIS (*ἀμπελίτις γῆ*), a Bituminous Earth, found near Seleucia in Syria. It was black, and resembled small pine charcoal; and when rubbed to powder, would dissolve in a little oil poured upon it. Its name was derived from its being used to anoint the vine (*ἀμπελος*), and preserve it from the attack of worms.⁵

*AMPELO'PRASUM (*ἀμπελόπρασον*), the Allium Ampeloprasum, or Dog-leek, called in French *Porée de chien*.⁶

*AMPELOS. (Vid. Vitis.)

*AMOMUM. (Vid. AMOMON, page 55.)

AMPHIARATA (*ἀμφιαράτα*), games celebrated in honour of the ancient hero Amphiaraus, in the neighbourhood of Oropus, where he had a temple with a celebrated oracle.⁷

AMPHICTYONS. Institutions called Amphictyonic appear to have existed in Greece from time immemorial. Of their nature and object history gives us only a general idea; but we may safely believe them to have been associations of originally neighbouring tribes, formed for the regulation of mutual intercourse and the protection of a common temple or sanctuary, at which the representatives of the different members met, both to transact business, and celebrate religious rites and games. This identity of religion, coupled with near neighbourhood, and that, too, in ages of remote antiquity, implies, in all probability, a certain degree of affinity, which might of itself produce unions and confederacies among tribes so situated, regarding each other as members of the same great family. They would thus preserve among themselves, and transmit to their children, a spirit of nationality and brotherhood; nor could any better means be devised than the bond of a common religious worship, to counteract the hostile interests which, sooner or later, spring up in all large societies. The causes and motives from which we might expect such institutions to arise existed in every neighbourhood; and, accordingly, we find many Amphictyonies of various degrees of importance, though our information respecting them is very deficient.

Thus we learn from Strabo that there was one of some celebrity, whose place of meeting was a sanctuary of Poseidon,⁸ at Calauria, an ancient settlement of the Ionians in the Saronic Gulf. The

(Müller, Dorians, b. ii., c. 10, s. 5.—Strabo, viii., 6.)

original members were Epidaurus, Hermæum, Nauplia, Prasîæ in Laconia, Ægina, Athens, and the Boeotian Orchomenus,¹ whose remoteness from each other makes it difficult to conceive what could have been the motives for forming the confederation, more especially as religious causes seem precluded, by the fact that Træzen, though so near to Calauria, and though Poseidon was its tutelary god, was not a member. In after times, Argos and Sparta took the place of Nauplia and Prasîæ, and religious ceremonies were the sole object of the meetings of the association. There also seems to have been another in Argolis,² distinct from that of Calauria, the place of congress being the Ἡραῖον, or temple of Hera. Delos,³ too, was the centre of an Amphictyony — the religious metropolis, or ἱερὴ νῆσος of the neighbouring Cyclades, where deputies and embassies (θεσφοί) met to celebrate religious solemnities in honour of the Dorian Apollo, and apparently without any reference to political objects.

Nor was the system confined to the mother-country; for the federal unions of the Dorians, Ionians, and Æolians, living on the west coast of Asia Minor, seem to have been Amphictyonic in spirit, although modified by exigencies of situation. Their main essence consisted in keeping periodical festivals in honour of the acknowledged gods of their respective nations. Thus the Dorians⁴ held a federal festival, and celebrated religious games at Triopium, uniting with the worship of their national god Apollo that of the more ancient and Pelasgic Demeter. The Ionians met for similar purposes, in honour of the Heliconian Poseidon at Mycale; their place of assembly being called the Panionium, and their festival Panionia. (Poseidon was the god of the Ionians, as Apollo of the Dorians.⁵) The twelve towns of the Æolians assembled at Gryneum, in honour of Apollo. That these confederacies were not merely for offensive and defensive purposes, may be inferred from their existence after the subjugation of these colonies by Croesus; and we know that Halicarnassus was excluded from the Dorian union, merely because one of its citizens had not made the usual offering to Apollo of the prize he had won in the Triopic contests. A confederation somewhat similar, but more political than religious, existed in Lycia:⁶ it was called the "Lycian system," and was composed of twenty-three cities.

But, besides these and others, there was one Amphictyony of greater celebrity than the rest, and much more lasting in its duration. This was, by way of eminence, called the Amphictyonic League; and by tracing its sphere of action, its acknowledged duties, and its discharge of them, we shall obtain more precise notions of such bodies in general. This, however, differed from the other associations in having two places of meeting, the sanctuaries of two divinities, which were the temple of Demeter, in the village of Anthela, near Thermopylae,⁷ where the deputies met in autumn, and that of Apollo at Delphi, where they assembled in spring. The connexion of this Amphictyony with the latter not only contributed to its dignity, but also to its permanence. With respect to its early history, Strabo⁸ says, that even in his days it was impossible to learn its origin. We know, however, that it was originally composed of twelve tribes (not cities or states, it must be observed), each of which tribes contained various independent cities or states. We learn from Æschines,⁹ a most competent authority (B.C. 343), that eleven of these tribes were as follows: the Thessalians, Boeotians (not Thebans

only), Dorians, Ionians, Perrhæbians, Magnesians, Locrians, Ceteans or Ceanians, Phthiot or Achæans of Phthia, Malians, and Phocians; other lists leave us in doubt whether the remaining tribe were the Dolopes or Delphians; but, as the Delphians could hardly be called a distinct tribe, their nobles appearing to have been Dorians, it seems probable that the Dolopes were originally members, and afterward supplanted by the Delphians.¹ The preponderance of Thessalian tribes proves the antiquity of the institution; and the fact of the Dorians standing on an equality with such tribes as the Malians, shows that it must have existed before the Dorian conquest, which originated several states more powerful, and, therefore, more likely to have sent their respective deputies, than the tribes mentioned.

We also learn from Æschines that each of these tribes had two votes in congress, and that deputies from such towns as (Dorium and²) Cytinium had equal power with the Lacedæmonians, and that Eretria and Pricne, Ionian colonies, were on a par with Athens (ἰσότητοι τοῖς Ἀθηναίοις). It seems, therefore, to follow, either that each Amphictyonic tribe had a cycle,³ according to which its component states returned deputies, or that the vote of the tribe was determined by a majority of votes of the different states of that tribe. The latter supposition might explain the fact of their being a larger and smaller assembly—a βουλὴ and ἐκκλησία—at some of the congresses; and it is confirmed by the circumstance that there was an annual election of deputies at Athens, unless this city usurped functions not properly its own.

The council itself was composed of two classes of representatives, one called pylagoræ, the other hieromnemes. Of the former, three were annually elected at Athens to act with one hieromnemon appointed by lot.⁴ That his office was highly honourable we may infer from the oath of the Heliasts,⁵ in which he is mentioned with the nine archons. On one occasion we find that the president of the council was a hieromnemon, and that he was chosen general of the Amphictyonic forces, to act against the Amphiassians.⁶ Hence it has been conjectured, that the hieromnemes, also called ἱερογυμναστές, were superior in rank to the pylagoræ.⁷ Æschines also contrasts the two in such a way as to warrant the inference that the former office was the more permanent of the two. Thus he says,⁸ "When Diognetus was hieromnemon, ye chose me and two others pylagoræ." He then contrasts "the hieromnemon of the Athenians with the pylagoræ for the time being." Again, we find inscriptions⁹ containing surveys by the hieromnemes, as if they formed an executive; and that the council concluded their proceedings on one occasion¹⁰ by resolving that there should be an extraordinary meeting previously to the next regular assembly, to which the hieromnemes should come with a decree to suit the emergency, just as if they had been a standing committee. Their name implies a more immediate connexion with the temple, but whether they voted or not is only a matter of conjecture; probably they did not. The ἐκκλησία, or general assembly, included not only the tribes mentioned, but also those who had joined in the sacrifices, and were consulting the god. It was convened on extraordinary occasions by the chairman of the council (Ὁ τοῦ γυνάμτος ἐπιτηρητής).¹¹

Of the duties of this latter body, nothing will give us a clearer view than the oaths taken and the de-

1. (Titmann, p. 39.)—2. (There is a doubt about the reading. *Vid.* Thucyd., iii., 95.—Strabo, ix., 4.)—3. (Strabo, ix., c. 3.)—4. (Aristoph., *Nub.*, 607.)—5. (Demosth., c. Timocr., 170, Bekker.)—6. (Æsch., de F. L.)—7. (Titmann, iv., 4.)—8. (C. Ctes., 115, Bekker. The scholiast on Aristoph., *Nub.*, says, that the hieromnemon was elected for life. This is the opinion of Titmann: Ueber den Bund der Amphictyonen. See Schömann, On the Assemblies, &c., p. 370, transl.)—9. (Böckh, *Corpus Inscript.*, No. 1711, quoted by Müller.)—10. (Æschin., c. crees made. The oath was as follows:¹ "They would destroy no city of the Amphictyons, nor cut off their streams in war or peace; and if any should do so, they would march against him and destroy his cities; and should any pillage the property of the god, or be privy to or plan anything against what was in his temple (at Delphi), they would take vengeance on him with hand, and foot, and voice, and all their might." There are two decrees given by Demosthenes, both commencing thus:² "When 'Ileinagoras was priest, at the spring meeting, it was resolved by the pylagoræ and their assessors, and the general body of the Amphictyons," &c. The resumption in the second case was, that as the Amphissians continued to cultivate the sacred district, Philip of Macedon should be requested to help Apollo and the Amphictyons, and was thereby constituted absolute general of the Amphictyons. He accepted the office, and soon reduced the offending city to subjection. From the oath and the decrees, we see that the main duty of the deputies was the preservation of the rights and dignity of the temple at Delphi. We know, too, that after it was burned down (B.C. 548), they contracted with the Alcmaeonidae for the rebuilding;³ and Athenæus (B.C. 160) informs us,⁴ that in other matters connected with the worship of the Delphian god, they condescended to the regulation of the minutest trifles. History, moreover, teaches that, if the council produced any palpable effects, it was from their interest in Delphi; and though it kept up a standing record of what ought to have been the international law of Greece, it sometimes acquiesced in, and at other times was a party to, the most iniquitous and cruel acts. Of this the case of Crissa is an instance. This town lay on the Gulf of Corinth, near Delphi, and was much frequented by pilgrims from the West.⁵ The Crissæans were charged by the Delphians with undue exactions from these strangers. The council declared war against them, as guilty of a wrong against the god. The war lasted ten years, till, at the suggestion of Solon, the waters of the Pleistus were turned off, then poisoned, and turned again into the city. The besieged drank their fill, and Crissa was soon razed to the ground; and thus, if it were an Amphictyonic city, was a solemn oath doubly violated. Its territory—the rich Cirrhæan plain—was consecrated to the god, and curses imprecated upon whosoever should till or dwell in it. This ended the First Sacred War (B.C. 585), in which the Athenians were the instruments of Delphian vengeance.⁶ The Second, or Phocian War (B.C. 350), was the most important in which the Amphictyons were concerned;⁷ and in this the Thebans availed themselves of the sanction of the council to take vengeance on their enemies, the Phocians. To do this, however, it was necessary to call in Philip of Macedon, who readily proclaimed himself the champion of Apollo, as it opened a pathway to his own ambition. The Phocians were subdued (B.C. 346), and the council decreed that all their cities, except Abæ, should be razed, and the inhabitants dispersed in villages not containing more than fifty inhabitants. Their two votes were given to Philip, who thereby gained a pretext for interfering with the affairs of Greece, and also obtained the recognition of his subjects as Hellenes. To the causes of the Third Sacred War, allusion has been made in the decrees quoted by Demosthenes. The Amphissians till the devoted Cirrhæan plain, and behaved, as Strabo⁸ says, worse than the Crissæans of old (*χείρους ἥσαν περὶ τοὺς ξένους*). Their submission to Philip was immediately followed by the

battle of Chæronea (B.C. 338), and the extinction of the independence of Greece. In the following year a congress of the Amphictyonic states was held, in which war was declared as if by united Greece against Persia, and Philip elected commander-in-chief. On this occasion the Amphictyons assumed the character of national representatives as of old,⁹ when they set a price upon the head of Ephialtes for his treason to Greece at Thermopylæ.

We have sufficiently shown that the Amphictyons themselves did not observe the oaths they took; and that they did not much alleviate the horrors of war, or enforce what they had sworn to do, is proved by many instances. Thus, for instance, Mycenæ was destroyed by Argos (B.C. 535), Thespiæ and Platæa by Thebes, and Thebes herself swept from the face of the earth by Alexander (*ἐκ μέσης τῆς Ἑλλάδος ἀντηρπίσθη*).¹⁰ Indeed, we may infer from Thucydides,¹¹ that a few years before the Peloponnesian war, the council was a passive spectator of what he calls *ὁ ἱερὸς πόλεμος*, when the Lacedæmonians made an expedition to Delphi, and put the temple into the hands of the Delphians, the Athenians, after their departure, restoring it to the Phocians; and yet the council is not mentioned as interfering. It will not be profitable to pursue its history farther; it need only be remarked, that Augustus wished his new city, Nicopolis (A.D. 31), to be enrolled among the members; and that Pausanias, in the second century of our era, mentions it as still existing, but deprived of all power and influence. In fact, even Demosthenes¹² spoke of it as the shadow at Delphi.¹³

After these remarks, we may consider two points of some interest; and, first, the etymology of the word Amphictyon. We are told¹⁴ that Theopompus thought it derived from the name of Amphictyon, a prince of Thessaly, and the supposed author of the institution. Others, as Anaximenes of Lampsacus, connected it with the word *ἀμφικτίονες*, or neighbours. Very few, if any, modern scholars, doubt that the latter view is correct; and that Amphictyon, with Hellen, Dorus, Ion, Xuthus, Thessalus, Larissa the daughter of Pelasgus, and others, are not historical, but mythic personages—the representatives, or poetic personifications, of their alleged foundations or offspring. As for Amphictyon,¹⁵ it is too marvellous a coincidence that his name should be significant of the institution itself; and, as he was the son of Deucalion and Pyrrha, it is difficult to guess of whom his council consisted. True it is that he also appears in Athenian history;¹⁶ but very little is said of him; and the company he keeps there, though kingly, is far from historical. Besides, though Herodotus¹⁷ and Thucydides¹⁸ had the opportunity, they yet make no mention of him. We may conclude, therefore, that the word should be written amphictyon, from *ἀμφικτίονες*, or those that dwell around some particular locality.¹⁹

The next question is one of greater difficulty; it is this: Where did the association originate? were its meetings first held at Delphi or at Thermopylæ? There seems to us a greater amount of evidence in favour of the latter. In proof of this, we may state the preponderance of Thessalian tribes from the neighbourhood of the Maliae Bay, and the comparative insignificance of many of them; the assigned birthplace and residence of the mythic Amphictyon, the names Pylagoræ and Pylæa. Besides, we know that Thessaly was the theatre and origin of many of the most important events of early Greek history, whereas it was only in later times, and after the Dorian conquest of Peloponnesus, that Delphi

Bædar, Nem., 6, 42, ἐν ἀμφικτυόνων ταυραφόνῳ τριετηρίδι. Vid. Fückler, in loc.)

became important enough for the meetings of such a body as the Amphictyonic; nor, if Delphi had been of old the only place of meeting, is it easy to account for what must have been a loss of its ancient dignity. But, whatever was the cause, we have still the fact that there were two places of congress; to account for which, it has been supposed that there were originally two confederations, afterward united by the growing power of Delphi, as connected with the Dorians, but still retaining the old places of meeting. We must, however, admit that it is a matter of mere conjecture whether this were the case or not, there being strong reasons in support of the opinion that the Dorians, on migrating southward, combined the worship of the Hellenic Apollo with that of the Pelasgian Demeter, as celebrated by the Amphictyons of Thessaly. Equally doubtful is the question respecting the influence of Acrisius, king of Argos,¹ and how far it is true that he first brought the confederacy into order, and determined other points connected with the institution.²

ΑΜΦΙΚΥΠΕΛΛ'ΟΝ ΔΕΠΑΣ (ἀμφικύπελλον δέπας), a drinking-vessel, often mentioned by Homer. Its form has been the subject of various conjectures; but the name seems to indicate well enough what it really was. Κύπελλον is found separately as well as in composition, and is evidently a diminutive formed from the root signifying a hollow, which we have in the Greek κύμβα, and the dialectic form κύμβα;³ Latin, *cupa*; German, *kufe*, *kübel*; French, *cuve*, *coupe*; and English, *cup*; it means, therefore, a small goblet or cup. Ἀμφικύπελλος, therefore, according to the analogy of ἀμφίστομος, ἀμφώσας, &c., is that which has a κύπελλον at both sides or both ends; and δέπας ἀμφικύπελλον is a drinking-vessel, having a cup at both ends. That this was the form of the vessel is shown by a passage in Aristotle,⁴ where he is describing the cells of bees as having two openings divided by a floor "like the ἀμφικύπελλα."⁵

AMPHIDROMIA, or ΔΟΜΙΑΜΦΙΟΝ ΗΜΑΡ (ἀμφιδρόμια, or δρομιάμιον ἡμᾶρ), a family festival of the Athenians, at which the newly-born child was introduced into the family and received its name. No particular day was fixed for this solemnity; but it did not take place very soon after the birth of the child, for it was believed that most children died before the seventh day, and the solemnity was, therefore, generally deferred till after that period, that there might be, at least, some probability of the child remaining alive. But, according to Suidas, the festival was held on the fifth day, when the women who had lent their assistance at the birth washed their hands. This purification, however, preceded the real solemnity. The friends and relatives of the parents were invited to the festival of the amphidromia, which was held in the evening, and they generally appeared with presents, among which are mentioned the cuttlefish and the marine polyp.⁶ The house was decorated on the outside with olive-branches when the child was a boy, or with garlands of wool when the child was a girl; and a repast was prepared, at which, if we may judge from a fragment of Ephippus in Athenæus,⁷ the guests must have been rather merry. The child was then carried round the fire by the nurse, and thus, as it were, presented to the gods of the house and to the family, and at the same time re-

ceived its name, to which the guests were witnesses. The carrying of the child round the hearth was the principal part of the solemnity, from which its name was derived. But the scholiast on Aristophanes² derives the name from the fact that the guests, while the name was given to the child, walked or danced around it. This festival is sometimes called from the day on which it took place: if on the seventh day, it is called ἑβδομαί or ἑβδομας; if on the tenth day, δεκάτη, &c.³

AMPHIOR'KIA or AMPHOMOS'IA (ἀμφιῳρκία or ἀμφωμοσία) is the oath which was taken, both by the plaintiff and defendant, before the trial of a cause in the Athenian courts, that they would speak the truth.⁴ According to Pollux,⁵ the ἀμφιῳρκία also included the oath which the judges took, that they would decide according to the laws; or, in case there was no express law on the subject in dispute, that they would decide according to the principles of justice.

AMPHIPPOI. (Vid. DESULTORES.)

ΑΜΦΙΠΡΩΝ'ΟΙ ΝΗ'ΕΣ (ἀμφίπρωμον νῆες), also called ΔΙΠΡΩΠΟΙ, ships in which the poop and the prow were so much alike as to be applicable to the same use. A ship of this construction might be considered as having either two poops or two prows. It is supposed to have been convenient in circumstances where the head of the ship could not be turned with sufficient celerity.⁶

*AMPHISBÆ'NA (ἀμφίβανα), sometimes called the Double-headed Serpent. Buffon says of it, that it can move along with either the head or the tail foremost, whence it had been thought to have two heads. Avicenna says, that it is of equal thickness from head to tail, and that from this appearance it had been supposed to have two heads. Schneider states, that Linnæus⁷ describes a serpent which agrees very well with the ancient accounts of the amphibæna; its tail is obtuse, and as thick as its body, and it moves along either forward or backward;⁸ but, according to Dr. Trail, it is an American species. The amphibæna was probably a variety of the *Anguis fragilis*, L., or Blind Worm. The *Aberdeen serpent* of Pennant, of which mention is made in Linnæus's correspondence with Dr. David Skene of Aberdeen, is a variety of the *Anguis fragilis*. Linnæus denies that the amphibæna is venomous, but many authors, even of modern times, are of a contrary opinion.⁹

AMPHITHEA'TRUM was a place for the exhibition of public shows of combatants and wild beasts, entirely surrounded by seats for the spectators; whereas, in those for dramatic performances, the seats were arranged in a semicircle facing the stage. It is, therefore, frequently described as a double theatre, consisting of two such semicircles, or halves, joined together, the spaces allotted to their orchestras becoming the inner enclosure or area, termed the *arena*. The form, however, of the ancient amphitheatres was not a circle, but invariably an ellipse, although the circular form appears best adapted for the convenience of the spectators. The first amphitheatre appears to have been that of M. Curio, of which a description has been given by Pliny.¹⁰ It consisted of two wooden theatres made to revolve on pivots, in such a manner that they could, by means of windlasses and machinery, be turned round face to face, so as to form one building.

Gladiatorial shows were first exhibited in the forum, and combats of wild beasts in the circus; and it appears that the ancient custom was still preserved till the dictatorship of Julius Cæsar, who

built a wooden theatre in the Campus Martius, for the purpose of exhibiting hunts of wild beasts,¹ "which was called amphitheatre because it was surrounded by seats without a scene."² Most of the early amphitheatres were merely temporary, and made of wood; such as the one built by Nero at Rome,³ and that erected by Atilius at Fidenæ during the reign of Tiberius, which gave way while the games were being performed, and killed or injured 50,000 persons.⁴

The first stone amphitheatre was built by Statilius Taurus, at the desire of Augustus.⁵ This building, which stood in the Campus Martius, near the circus called Agonale, was destroyed by fire in the reign of Nero;⁶ and it has, therefore, been supposed that only the external walls were of stone, and that the seats and other parts of the interior were of timber. A second amphitheatre was commenced by Caligula; but by far the most celebrated of all was the Flavian amphitheatre, afterward called the Colisæum, which was begun by Vespasian, and finished by his son Titus, who dedicated it A.D. 80, on which occasion, according to Eutropius, 5000, and according to Dion, 9000, beasts were destroyed.⁷

This immense edifice, which is even yet comparatively entire, was capable of containing about 87,000 spectators, and originally stood nearly in the centre of the city, on the spot previously occupied by the lake or large pond attached to Nero's palace,⁸ and at no very great distance from the Baths of Titus. It covers altogether about five acres of ground; and the transverse, or longer diameter of the external ellipse, is 615 feet, and the conjugate, or shorter one, 510; while those of the interior ellipse, or arena, are 281 and 176 feet respectively. Where it is perfect, the exterior is 160 feet high, and consists of four orders, viz., Doric, Ionic, and Corinthian, in attached three-quarter columns (that is, columns one fourth of whose circumference appears to be buried in the wall behind them), and an upper order of Corinthian pilasters. With the exception of the last, each of these tiers consists of eighty columns, and as many arches between them, forming open galleries throughout the whole circumference of the building; but the fourth has windows instead of large arches, and those are placed only in the alternate inter-columns, consequently, are only forty in number; and this upper portion of the elevation has, both on that account and owing to the comparative smallness of the apertures themselves, an expression of greater solidity than that below. The arches formed open external galleries, with others behind them; besides which, there were several other galleries and passages, extending beneath the seats for the spectators, and, together with staircases, affording access to the latter. At present, the seats do not rise higher than the level of the third order of the exterior, or about half its entire height; therefore, the upper part of the edifice appears to have contributed very little, if at all, to its actual capacity for accommodating spectators. Still, though it has never been explained, except by conjecturing that there were upper tiers of seats and galleries (although no remains of them now exist), we must suppose that there existed some very sufficient reason for incurring such enormous expense, and such prodigal waste of material and labour beyond what utility seems to have demanded. This excess of height, so much greater than was necessary, was, perhaps, in some measure, with the view that, when the building was covered in with a temporary roofing or awning (*velarium*), as a defence against the sun or rain, it should seem well proportioned as to

height; and also, perhaps, in order to allow those who worked the ropes and other mechanism by which the velarium was unrolled or drawn back again, to perform those operations without incommoding the spectators on the highest seats.

With regard to the velarium itself, nothing at all conclusive and satisfactory can now be gathered; and it has occasioned considerable dispute among the learned, how any temporary covering could be extended over the whole of the building. Some have imagined that the velarium extended only over part of the building; but, independent of other objections, it is difficult to conceive how such an extensive surface could have been supported along the extent of its inner edge or circumference. The only thing which affords any evidence as to the mode in which the velarium was fixed, is a series of projecting brackets, or corbels, in the uppermost story of the exterior, containing holes or sockets, to receive the ends of poles passing through holes in the projection of the cornice, and to which ropes from the velarium were fixed; but the whole of the upper part of the interior is now so dismantled as to render it impossible to decide with certainty in what manner the velarium was fixed. The velarium appears usually to have been made of wool, but more costly materials were sometimes employed. When the weather did not permit the velarium to be spread, the Romans used broad-brimmed hats or caps, or a sort of parasol, which was called *umbrellula*, from *umbra*, shade.¹

Many other amphitheatres might be enumerated, such as those of Verona, Nismes, Catania, Pompeii, &c.; but, as they are all nearly similar in form, it is only necessary to describe certain particulars, so as to afford a tolerably correct idea of the respective parts of each.

The interior of the amphitheatre was divided into three parts, the *arena*, *podium*, and *gradus*. The clear open space in the centre of the amphitheatre was called the arena, because it was covered with sand or sawdust, to prevent the gladiators from slipping, and to absorb the blood. The size of the arena was not always the same in proportion to the size of the amphitheatre, but its average proportion was one third of the shorter diameter of the building.

It is not quite clear whether the arena was no more than the solid ground, or whether it had an actual flooring of any kind. The latter opinion is adopted by some writers, who suppose that there must have been a souterrain, or vaults, at intervals at least, if not throughout, beneath the arena, as sometimes the animals suddenly issued apparently from beneath the ground; and machinery of different kinds was raised up from below, and afterward disappeared in the same manner. That there must have been some substruction beneath the arena, in some amphitheatres at least, is evident, because the whole arena was, upon particular occasions, filled with water, and converted into a naumachia, where vessels engaged in mimic sea-fights, or else crocodiles and other amphibious animals were made to attack each other. Nero is said to have frequently entertained the Romans with spectacles and diversions of this kind, which took place immediately after the customary games, and were again succeeded by them; consequently, there must have been not only an abundant supply of water, but mechanical apparatus capable of pouring it in and draining it off again very expeditiously.

The arena was surrounded by a wall, distinguished by the name of *podium*, although such appellation, perhaps, rather belongs to merely the upper part of it, forming the parapet or balcony before the first or lowermost seats, nearest to the arena. The latter, therefore, was no more than an open oval court,

1. (Σταδίου κυνερητόν).—2. (Dion., xlii., 22.)—3. (Suet., Ner., c. 12.)—Tacit., Ann., xiii., 31.)—4. (Tacit., Ann., i., 62.—Suet., Tib., c. 40.)—5. (Suet., Octav., c. 29.—Dion., i., 23.)—6. (Dion., lxi., 18.)—7. (Suet., Vesp., 9.—Id., Tit., 7.—Eutrop., vii., 21.—Dion., lxi., 25.)—8. (Suet., Ner., 31.)

surrounded by a wall about eighteen feet high, measuring from the ground to the top of the parapet; a height considered necessary, in order to render the spectators perfectly secure from the attacks of the wild beasts. There were four principal entrances leading into the arena, two at the ends of each axis or diameter of it, to which as many passages led directly from the exterior of the building; besides secondary ones, intervening between them, and communicating with the corridors beneath the seats on the podium.

The wall or enclosure of the arena is supposed to have been faced with marble more or less sumptuous; besides which, there appears to have been, in some instances at least, a sort of network affixed to the top of the podium, consisting of railing, or, rather, open trellis-work of metal. From the mention made of this network by ancient writers, little more can now be gathered respecting it than that, in the time of Nero, such netting, or whatever it might have been, was adorned with gilding and amber; a circumstance that favours the idea of its having been gilt metal-work, with bosses and ornaments of the other material. As a farther defence, ditches, called *curipi*, sometimes surrounded the arena.¹

The term *podium* was also applied to the terrace, or gallery itself, immediately above the lower enclosure, and which was no wider than to be capable of containing two, or, at the most, three ranges of movable seats or chairs. This, as being by far the best situation for distinctly viewing the sports in the arena, and also more commodiously accessible than the seats higher up, was the place set apart for senators and other persons of distinction, such as the ambassadors of foreign parts;² and it was here, also, that the emperor himself used to sit, in an elevated place called *suggestus*³ or *cubiculum*;⁴ and likewise the person who exhibited the games, on a place elevated like a pulpit or tribunal (*editoris tribunal*). The vestal virgins also appear to have had a place allotted to them in the podium.⁵

Above the podium were the *gradus*, or seats of the other spectators, which were divided into *mæniana*, or stories. The first *mænium*, consisting of fourteen rows of stone or marble seats, was appropriated to the equestrian order. The seats appropriated to the senators and equites were covered with cushions (*pulvillis*), which were first used in the time of Caligula.⁶ Then, after an interval or space, termed a *præcinctio*, and forming a continued landing-place from the several staircases in it, succeeded the second *mænium*, where were the seats called *populæria*,⁷ for the third class of spectators, or the *populus*. Behind this was the second *præcinctio*, bounded by a rather high wall, above which was the third *mænium*, where there were only wooden benches for the *pullati*, or common people.⁸ The next and last division, namely, that in the highest part of the building, consisted of a colonnade or gallery, where females were allowed to witness the spectacles of the amphitheatre,⁹ some parts of which were also occupied by the *pullati*. At the very summit was the narrow platform for the men who had to attend to the velarium, and to expand or withdraw the awnings, as there might be occasion. Each *mænium* was not only divided from the other by the *præcinctio*, but was intersected at intervals by spaces for passages left between the seats, called *scalæ* or *scalaria*; and the portion between two such passages was called a *cuneus*, because this space gradually widened, like a wedge, from the podium to the top of the building.¹⁰ The entrances to the seats

from the outer porticoes were called *vomitoria*, because, says Macrobius,¹ *Homines glomeratim ingredientes in sedilia se fundunt*.

The situation of the dens wherein the animals were kept is not very clear. It has been supposed that they were in underground vaults, near to, if not immediately beneath, the arena; yet, admitting such to have been the case, it becomes more difficult than ever to understand how the arena could have been inundated at pleasure with water; nor was any positive information obtained from the excavations made several years ago in the arena of the Colisæum. Probably many of the animals were kept in dens and cages within the space immediately beneath the podium (marked *d* in the cut), in the intervals between the entrances and passages leading into the arena, and so far a very convenient situation for them, as they could have been brought immediately into the place of combat.

There were in the amphitheatres concealed tubes, from which scented liquids were scattered over the audience, which sometimes issued from statues placed in different parts of the building.²

Vitruvius affords us no information whatever as to amphitheatres; and, as other ancient writers have mentioned them only incidentally and briefly, many particulars belonging to them are now involved in obscurity.

The annexed woodcut, representing a section, not of an entire amphitheatre, but merely of the exterior wall, and the seats included between that and the arena, will serve to convey an idea of the arrangement of such structures in general. It is that of the Colisæum, and is given upon the authority of Hirt; but it is in some respects conjectural, particularly in the upper part, since no traces of the upper gallery are now remaining. The extreme minuteness of the scale renders it impossible to point out more than the leading form and general disposition of the interior; therefore, as regards the profile of the exterior, merely the heights of the cornices of the different orders are shown, with the figures 1, 2, 3, 4 placed against them respectively.

EXPLANATIONS.

terior, for the attendants who worked the velarium.

pr, pr, The præcinctiones, or landings, at the top of the first and second mænianum, in the pavement of which were grated apertures, at intervals, to admit light into the vomitoria beneath them.

V V V V, Vomitoria.

G G G, The three external galleries through the circumference of the building, open to the arcades of the first three orders of the exterior.

g g, Inner gallery.

Owing to the smallness of the cut, the situation and arrangement of staircases, &c., are not expressible, as such parts could hardly be rendered intelligible except upon a greatly increased scale, and then not in a single section, nor without plans at various levels of the building.

For an account of the games of the amphitheatre, see GLADIATOIRES.

AMPHISBETE'SIS. (*Vid. HEREDITAS.*)

AMPHISTOMOS. (*Vid. ANCORA.*)

AMPHOMOSIA. (*Vid. AMPHIORKIA.*)

AMPHORA (in Greek ἀμφορεύς, or in the full form, as we find it in Homer, ἀμφιφορεύς¹), a vessel used for holding wine, oil, honey, &c.

The following cut represents amphoræ from the Townley and Elgin collections in the British Museum. They are of various forms and sizes; in general they are tall and narrow, with a small neck, and a handle on each side of the neck (whence the name, from ἀμφι, on both sides, and φέρω, to carry,) and terminating at the bottom in a point, which was let into a stand or stuck in the ground, so that the vessel stood upright: several amphoræ have been found in this position in the cellars at Pompeii. Amphoræ were commonly made of earthenware; Homer mentions amphoræ of gold and stone, and the Egyptians had them of brass; glass vessels of this form have been found at Pompeii. The name of the maker or of the

The amphora was also used for keeping oil, honey, and molten gold. A remarkable discovery, made at Salona in 1825, proves that amphoræ were used as coffins. They were divided in half, in the direction of the length, in order to receive the remains, and the two halves were put together again, and buried in the ground; they were found containing skeletons.¹

There is in the British Museum (room VI.) a vessel resembling an amphora, and containing the fine African sand which was mixed with the oil with which the athlete rubbed their bodies. It was found, with seventy others, in the baths of Titus, in the year 1772. The amphora occurs on the coins of Chios, and on some silver coins of Athens.

The Greek ἀμφορεύς and the Roman amphora were also names of fixed measures. The ἀμφορεύς, which was also called μετρητής and κάδος, was equal to 3 Roman urnæ = 8 gallons 7·365 pints, imperial measure. The Roman amphora was two thirds of the ἀμφορεύς, and was equal to 2 urnæ = 8 congi = 5 gallons 7·577 pints; its solid content was exactly a Roman cubic foot. A model amphora was kept in the Capitol, and dedicated to Jupiter. The size of a ship was estimated by amphoræ; and the produce of a vineyard was reckoned sometimes by the number of amphoræ it yielded, and sometimes by the culeus of twenty amphoræ.

AMPHOTIDES. (*Vid. PUGILATUS.*)

AMPHIA'TIO. (*Vid. JUDICIUM.*)

AMPULLA (ἀλκυον, βομβύλιος), a bottle.

The Romans took a bottle of oil with them to the bath for anointing the body after bathing. They also used bottles for holding wine or water at their meals, and occasionally for other purposes. These bottles were made either of glass or earthenware, rarely of more valuable materials.

The dealer in bottles was called *ampullarius*, and part of his business was to cover them with leather (*corium*). A bottle so covered was called *ampulla rubida*.²

As bottles were round and swollen like a bladder, Horace metaphorically describes empty and turgid language by the same name:

"*Projicit ampullas et sesquipedia verba.*"³

"*An tragica desavit et ampullatur in arte?*"⁴

Bottles of both glass and earthenware are preserved in great quantities in our collections of antiquities, and their forms are very various, though always narrow-mouthed, and generally more or less approaching to globular.

AMPYX, AMPYKTER, (ἄμπυξ, ἄμπυκτῆρ), (*frontale*), a frontal.

This was a broad band or plate of metal, which ladies of rank wore above the forehead as part of

place where they were made was sometimes stamped upon them; this is the case with two in the Elgin collection, Nos. 238 and 344. The most common use of the amphora, both among the Greeks and Romans, was for keeping wine. The cork was covered with pitch or gypsum, and (among the Romans) a label (*pittacium*) was attached to the amphora, inscribed with the names of the consuls under whom it was filled. The following cut represents the mode of filling the amphora from a wine-cart, and is taken from a painting on the wall of a house at Pompeii.

¹ (Il., xxiii., 170 – Od., x., 164, 204. — Schol. in Apoll. Rhod., iv., 1187.)

¹ (Steinbüchel's *Alterthum*, p. 67.) — ² (Plaut., *Rud.*, iii., 4, 51, and Stich., i., 3, 77, compared with Festus, s. v. *Rubida*.) — ³ (Ep. ad Pis., 97.) — ⁴ (Epist. I., iii., 14.)

the headdress.¹ Hence it is attributed to the female divinities. Artemis wears a frontal of gold;² and the epithet *χρυσάμπυκες* is applied by Homer, Hesiod, and Pindar to the Muses, the Hours, and the Fates. From the expression *τὴν κνανάμπυκα Θήβαν* in a fragment of Pindar, we may infer that this ornament was sometimes made of blue steel (*κνάναος*) instead of gold; and the scholiast on the above-cited passage of Euripides asserts that it was sometimes enriched with precious stones.

The frontal of a horse was called by the same name, and was occasionally made of similar rich materials. Hence, in the *Iliad*, the horses which draw the chariots of Juno and of Mars are called *χρυσάμπυκες*. Pindar³ describes the bridle with a golden frontal (*χρυσάμπυκα χαλινόν*), which was given to Bellerophon to curb the winged horse Pegasus.

The annexed woodcut exhibits the frontal on the head of Pegasus, taken from one of Sir William Hamilton's vases, in contrast with the corresponding ornament as shown on the heads of two females in the same collection.

Frontals were also worn by elephants.⁴ Hesychius⁵ supposes the men to have worn frontals in Lydia. They appear to have been worn by the Jews and other nations of the East.⁶

AMULETUM (*περίπτον, περίαμμα, φυλακτήριον*), an amulet.

This word in Arabic (*Hamalet*) means that which is suspended. It was probably brought by Arabian merchants, together with the articles to which it was applied, when they were imported into Europe from the East. It first occurs in the Natural History of Pliny.

An amulet was any object—a stone, a plant, an artificial production, or a piece of writing—which was suspended from the neck, or tied to any part of the body, for the purpose of counteracting poison, curing or preventing disease, warding off the evil eye, aiding women in childbirth, or obviating calamities and securing advantages of any kind.

Faith in the virtues of amulets was almost universal in the ancient world, so that the whole art of medicine consisted in a very considerable degree of directions for their application; and in proportion to the quantity of amulets preserved in our collections of antiquities, is the frequent mention of them in ancient treatises on natural history, on the practice of medicine, and on the virtues of plants and stones. Some of the amulets in our museums are merely rough, unpolished fragments of such stones as amber, agate, carnelian, and jasper; others were wrought into the shape of beetles, quadrupeds, eyes, fingers, and other members of the body. There can be no doubt that the selection of stones, either to be set in rings or strung together in necklaces, was often made with reference to their reputed virtues as amulets.

The following passages may exemplify the use of amulets in ancient times. Pliny¹ says, that any plant gathered from the bank of a brook or river before sunrise, provided that no one sees the person who gathers it, is considered as a remedy for tertian ague when tied (*adalligata*) to the left arm, the patient not knowing what it is; also, that a person may be immediately cured of the headache by the application of any plant which has grown on the head of a statue, provided it be folded in the shred of a garment, and tied to the part affected with a red string. Q. Sereus Sammonicus, in his poem on the art of healing, describes the following charm, which was long celebrated as of the highest repute for the cure of various diseases: Write *abracadabra* on a slip of parchment, and repeat the word on other slips, with the omission of the last letter of each preceding slip, until the initial A alone remains. The line so written will assume the form of an equilateral triangle. Tie them together, and suspend them from the neck of the patient by means of linen thread.

According to the scholiast on Juvenal,² athletes used amulets to ensure victory (*nicetaria phylacteria*), and wore them suspended from the neck; and we learn from Dioscorides³ that the efficacy of these applications extended beyond the classes of living creatures, since selenite was not only worn by women, but was also tied to trees, for the purpose of making them fruitful.

Consistently with these opinions, an acquaintance with the use of amulets was considered as one of the chief qualifications of nurses. If, for example, an attempt was made to poison a child, if it was in danger of destruction from the evil eye, or exposed to any other calamity, it was the duty of the nurse to protect it by the use of such amulets as were suited to the circumstances.⁴

From things hung or tied to the body, the term amulet was extended to charms of other kinds. Pliny⁵ having observed that the cyclamen was cultivated in houses as a protection against poison, adds the remark, *Amuletum vocant*. The following epigram by Lucilius contains a joke against an unfortunate physician, one of whose patients, having seen him in a dream, "awoke no more, even though he wore an amulet:"

Ἐρμούγεν' τὸν Ιατρὸν ἰδὼν Διόφαντος ἐν ὕπνῳ
Ὀδὴ ἐτ' ἀνηγέρθη, καὶ περίαμμα φέρων.

*AMYGDALUS (*αμυγδαλή*), the Almond-tree, or *Amygdalus communis*. The Almond-tree is a native of Barbary, whence it had not been transferred into Italy down to the time of Cato. It has, however, been so long cultivated all over the south of Europe, and the temperate parts of Asia, as to have become, as it were, naturalized in the whole of the Old World from Madrid to Canton. For some remarks on the *Amygdalus Persica*, or Peach, *vid. PERSICA*.⁶

*AMOMON (*ἄμωμον*), a plant, and perfume, with regard to which both commentators and botanical writers are very much divided in opinion. Scaliger and Cordus make it the Rose of Jericho (*Rosa Hierichuntica* of Bauhin; *Anastatica hierichuntica* of Linnaeus; *Bumia Syriaca* of Gärtner); Gesner takes it for the Pepper of the gardens (the *Solanum bacciferum* of Tournefort); Cæsalpinus is in favour of the *Piper Cubeba*; and Plukenet and Sprengel, with others, of the *Cissus vitiginea*. The most probable opinion is that advanced by Fée, who makes the plant in question the same with our *Anomum racemosum*. The Romans obtained their *amomum* from Syria, and it came into the latter country by the overland trade from India.⁷ It is said to have been used by the Eastern nations for embalming; and from this word

1. (Π., xxii., 468-470.—Æschyl., Suppl., 434.—Theocrit., i., 33.)—2. (χρυσάμπυκα. Eurip., Hec., 464.)—3. (Olymp., xiii., 92.)—4. (Liv., xxxvii., 40.)—5. (s. v. Ἀντίφ Νόμω.)—6. (Deut., vi., 8; xi., 18.)

1. (H. N., xxiv., 19.)—2. (iii., 68.)—3. (Lib. v.)—4. (Hom., Hymn. in Cer., 227.—Orph., Lith., 222.)—5. (Plin., H. N., xxv., 9.)—6. (Dioscor., i., 176.)—7. (Fée, Flore de Virgile, p. 16.)

some have derived, though by no means correctly, the term *animumy*. The taste of the grains of amomum is represented by Charras as tart, fragrant, very aromatic, and remaining a good while in the mouth.¹ The name *amomum* is supposed to come from the Arabic *lhamāmā*, the ancient Arabians having been the first who made this aromatic known to the Greeks. The root of the Arabic term has reference to the warm taste peculiar to spices. The cardamums, grains of Paradise, and mellagetta pepper of the shops, a class of highly aromatic pungent seeds, are produced by different species of *amomum*, as botanists now employ the term.²

ANABOLEUS (*ἀναβολεύς*). As the Greeks were unacquainted with the use of stirrups, they were accustomed to mount upon horseback by means of a slave, who was termed *ἀναβολεύς* (from *ἀναβύλλειν*).³ This name was also given, according to some writers, to a peg or pin fastened on the spear, which might serve as a resting-place to the foot in mounting the horse.⁴

ANAKALUPTERIA. (*Vid.* MARRIAGE.)

ANAKEIA or **ANAKEION** (*ἀνάκεια* or *ἀνάκειον*), a festival of the Dioscuri, or 'Anaktes, as they were called, at Athens. Athenæus⁵ mentions a temple of the Dioscuri, called 'Ανάκτειον, at Athens; he also informs us⁶ that the Athenians, probably on the occasion of this festival, used to prepare for these heroes in the Prytaneum a meal consisting of cheese, a barley-cake, ripe figs, olives, and garlic, in remembrance of the ancient mode of living. These heroes, however, received the most distinguished honours in the Dorian and Achæan states, where it may be supposed that every town celebrated a festival in their honour, though not under the name of 'Ανάκεια. Pausanias⁷ mentions a festival held at Amphissa, called that of the *ἀνάκτων παίδων*; but adds that it was disputed whether they were the Dioscuri, the Curetes, or the Cabiri. (See DIOSCURIA.)

ANAKEIMENA. (*Vid.* DONARIA.)

ANAKLETERIA (*ἀνακλητήρια*) was the name of a solemnity at which a young prince was proclaimed king, and at the same time ascended the throne. The name was chiefly applied to the accession of the Ptolemaic kings of Egypt.⁸ The prince went to Memphis, and was there adorned by the priests with the sacred diadem, and led into the Temple of Phtha, where he vowed never to make any innovations either in the order of the year or of the festivals. He then carried to some distance the yoke of Apis, in order to be reminded of the sufferings of man. Rejoicings and sacrifices concluded the solemnity.⁹

ANAKOMIDE (*ἀνακομιδή*). When an individual had died in a foreign country, it was not unusual for his fellow-citizens or relatives to remove his ashes or body to his own country, which was called *ἀνακομιδή*. Thus the dead body of Theseus was removed from Scyros to Athens, and that of Aristomenes from Rhodes to Messenia.

ANACRISIS (*ἀνάκρισις*), the pleadings preparatory to a trial at Athens, the object of which was to determine, generally, if the action would lie (*ἐξετάζουσι δὲ καὶ εἰ ὁλως εἰσάγειν χρή*).¹⁰ The magistrates were said *ἀνακρίνειν τὴν δίκην*, or *τοὺς ἀντιδίκους*, and the parties *ἀνακρίνεσθαι*. The process consisted in the production of proofs, of which there were five kinds: 1. the laws; 2. written documents, the production of which, by the opposite party, might be compelled by a *δίκη εἰς ἐμφάνειν καύσασιν*; 3. testimonies of witnesses present (*μαρτυρία*), or affidavits of absent witnesses (*ἐκ-*

μαρτυρία); 4. depositions of slaves extorted by the rack; 5. the oath of the parties.¹¹ All these proofs were committed to writing, and placed in a box secured by a seal (*ἐχίνος*)¹² till they were produced at the trial. The name *ἀνάκρισις* is given to the pleadings, considered expressly as a written document, in Iseus.¹³ If the evidence produced at the *anacrisis* was so clear and convincing that there could not remain any doubt, the magistrate could decide the question without sending the cause to be tried before the dicasts: this was called *διαμαρτυρία*. In this case, the only remedy for the person against whom the decision was given, was to bring an action of perjury against the witnesses (*ψευδομαρτυρῶν δίκη*). These pleadings, like our own, were liable to vexatious delays on the part of the litigants, except in the case of actions concerning merchandise, benefit societies, mines, and dowries, which were necessarily tried within a month from the commencement of the suit, and were therefore called *ἐμνηροί δίκαι*. The word *ἀνάκρισις* is sometimes used of a trial in general (*μηδὲ εἰς ἄγκρισιν ἔλθειν*).¹⁴ The archons were the proper officers for the *ἀνάκρισις*: they are represented by Minerva, in the *Eumenides* of Æschylus, where there is a poetical sketch of the process in the law courts.¹⁵ (*Vid.* ANTIGRAPHE, ANATOMOSIA.) For an account of the *ἀνάκρισις*, that is, the examination which each archon underwent previously to entering on office, see the article ARCHON.

ANADIKTIA. (*Vid.* APPELLATIO.)

***ANAGALLIS** (*ἀναγάλλης*), a plant, of which Dioscorides and Galen describe two species, the male and the female, as distinguished by their flowers, the former having a red flower, and the latter a blue. These are evidently the *Anagallis Arvensis* and *Cærulea*, the Scarlet and Blue Pimpernels.¹⁶

ANAGNOSTES. (*Vid.* ACROAMA.)

ΑΝΑΓΩΓΗΣ ΔΙΚΗ (*ἀναγωγῆς δίκη*). If an individual sold a slave who had some secret disease—such, for instance, as epilepsy—without informing the purchaser of the circumstance, it was in the power of the latter to bring an action against the vendor within a certain time, which was fixed by the laws. In order to do this, he had to report (*ἀνάγειν*) to the proper authorities the nature of the disease, whence the action was called *ἀναγωγῆς δίκη*. Plato supplies us with some information on this action; but it is uncertain whether his remarks apply to the action which was brought in the Athenian courts, or to an imaginary form of proceeding.¹⁷

ANAGO'GIA (*ἀναγωγή*), a festival celebrated at Eryx, in Sicily, in honour of Aphrodite. The inhabitants of the place believed that, during this festival, the goddess went over into Africa, and that all the pigeons of the town and its neighbourhood likewise departed and accompanied her.¹⁸ Nine days afterward, during the so-called *καταγωγή* (return), one pigeon having returned and entered the temple, the rest followed. This was the signal for general rejoicing and feasting. The whole district was said at this time to smell of butter, which the inhabitants believed to be a sign that Aphrodite had returned.¹⁹

***ANAGYRIS** (*ἀνάγυρις*), a shrub, which Nicander²⁰ calls "the acrid Onogryis." It is the *Anagyris fetida*, L., or Fetid Bean-trefoil. Hardouin says its French name is *Bois puant*. According to Lamark, it is a small shrub, having the port of a Cytisus, and rising to the height of five or seven feet.²¹

1. (Royal Pharmacop., p. 139.)—2. (Fée, l. c.)—3. (Xen., De Re Ed., vii, 12.—Id., Hipp., i, 17.—Appian, Pun., 106.)—4. (Xen., De Re Ed., vii, 1.)—5. (iv, p. 235.)—6. (iv, p. 137.)—7. (x, 38, 3.)—8. (Polyb., Reliq., xviii, 38; xxviii, 10.)—9. (Diod. Sic., Frag., lib. xxx.)—10. (Harpocrat., s. v.)

1. (Aristot., Rhet., I, xv, 2.)—2. (Schol. in Aristoph., Vesp., 1430.)—3. (De Aristarch. Hered., p. 79, 11.)—4. (Æschyl., Eumen., 355.)—5. (Miller, Eumeniden, § 70.)—6. (Dioscor., ii., 209.—Adams, Append., s. v.)—7. (Plato, Legg., xi, 2, p. 916.—Arist. in Plat., l. c.—Meier, Att. Process., p. 525.)—8. (Elian, V. H., i, 14.—Athenæus, ix, p. 394.)—9. (Athenæus, ix, p. 395.)—10. (Theriac., 71.)—11. (Dioscor., iii, 158.—Adams, Append., s. v.)

ANARRHUSIS. (Vid. APATURIA.)

*ANAS (ἄνασσα or ἄντρα), the genus Duck. The ancients must have been well acquainted with many species of Duck; but, from the brief notices they have given of them, we have now great difficulty in recognising these. 1. The *βοσκῆς* is described by Aristotle¹ as being like the *ἄνασσα*, but a little smaller; it may therefore be supposed a mere variety of the *Anas Boscas*, or Wild Duck. 2. The *Querquedula* of Varro is referred by Turner to the species of duck called Teal in England, namely, the *Anas crecca*, L. 3. The *πηνέλοψ*, which is enumerated by Aristotle² among the smaller species of geese, was probably a duck, as Gesner suggests. It may therefore be referred to the *Anas Penelope*, L., or Widgeon. (In modern works on Natural History it is incorrectly written *Penelope*.) 4. The *βορένθος* of Aristotle and Ælian, and *βρίνθος* of Phile, although ranked with ducks by Aristotle and Pliny, was probably the *Anser Brenta*, or Brent Goose. 5. The *χρηαλώνης* of Aristotle³ and of Ælian⁴ is held to be the *Anas Bernicula*, or Bernicle Goose, by Eliot. Schneider and Pennant, however, prefer the *Anas Tadorna*, or Sheldrake. 6. The Sacred Goose of Egypt was a particular species, the *Anas Ægyptiaca*, allied to the Bernicle, but distinguished by brighter plumage, and by small spurs on its wings.⁵

ANATHEMATATA. (Vid. DONARIA.)

ANATOCIS'MUS. (Vid. INTEREST ON MONEY.)

ANATMAX'IOY ΓΡΑΦΗ (*ἀναμαχίον γραφή*) was an impeachment of the trierarch who had kept aloof from action while the rest of the fleet was engaged. From the personal nature of the offence, and the punishment, it is obvious that this action could only have been directed against the actual commander of the ship, whether he was the sole person appointed to the office, or the active partner of the perhaps many *συντελεῖς*, or the mere contractor (*ὁ μισθωσάμενος*). In a cause of this kind, the strategi would be the natural and official judges. The punishment prescribed by law for this offence was a modified atimia, by which the criminal and his descendants were deprived of their political franchise, but, as we learn from Andocides, were allowed to retain possession of their property.⁶

ANAXAGOREI'Α (*Ἀναξαγόρεια*), a day of recreation for all the youths at Lampsacus, which took place once every year, in compliance, it was said, with a wish expressed by Anaxagoras, who, after being expelled from Athens, spent here the remainder of his life. This continued to be observed even in the time of Diogenes Laërtius.⁷

*ANAX'URIS, a species of Dock; the *Rumex divaricatus* according to Sprengel.⁸

*ANCHU'SA (*ἄγχουσα*), the herb Alkanet. Four kinds of alkanet are described by Dioscorides⁹ and Galen.¹⁰ With regard to the first, Sprengel hesitates between the *Anchusa tinctoria* and *Lithospermum tinctorium*; the second is the *Echium italicum*, Sibthorp; the third, or *Alciades*, the *Echium diffusum*; and the fourth, or *Lycopis*, the *Lithospermum fruticosum*. This is a plausible account of the *ἄγχουσα* of Dioscorides, but is not unattended with difficulties. That of Theophrastus¹¹ seems indisputably to be the *Anchusa tinctoria*. The *Anchusa sempervirens* does not seem to be described by any ancient author.¹²

ANCILE, the sacred shield carried by the Salii.

According to Plutarch,¹³ Dionysius of Halicarnassus,¹⁴ and Festus,¹⁵ it was made of bronze, and its form was oval, but with the two sides receding inward with an even curvature, and so as to make

it broader at the ends than in the middle. Its shape is exhibited in the following woodcut.

The original ancile was found, according to tradition,¹ in the palace of Numa; and, as no human hand had brought it there, it was concluded that it had been sent from heaven, and was αἰ. δπλον διοπετές. At the same time, the haruspices declared that the Roman state would endure so long as this shield remained in Rome. To secure its preservation in the city, Numa ordered eleven other shields, exactly like it, to be made by the armorer Mamurius Veturius; and twelve priests of Mars Gradius were appointed under the denomination of Salii, whose office it was to preserve the twelve ancilia. They were kept in the temple of that divinity on the Palatine Mount, and were taken from it only once a year, on the calends of March. The feast of the god was then observed during several days, when the Salii carried their shields about the city, singing songs in praise of Mars, Numa, and Mamurius Veturius, and at the same time performing a dance, which probably, in some degree, resembled our morris-dances, and in which they struck the shields with rods, so as to keep time with their voices and with the movements of their dance. The accompanying figure shows one of these rods, as represented on the tomb of a *Pontifex Salius*, or chief of the Salii.² Its form, as here exhibited, both illustrates the manner of using it, and shows the reason why different authors call it by different names, as *ἐγχειρίδιον*, *λόγχη*, *ράβδος*, *virga*.

Besides these different names of the rod, which was held in the right hand, we observe a similar discrepancy as to the mode of holding the shield. Virgil, describing the attire of Picus, a mythical king of Latium, says he held the ancile in his left hand (*laevaque ancile gerebat*³). Other authors represent the Salii as bearing the ancilia on their necks or on their shoulders.⁴ These accounts may be reconciled on the supposition advanced in the article *Ægis*, that the shield was suspended by a leathern band (*lorum*)⁵ proceeding from the right shoulder, and passing round the neck. That the weight of the ancile was considerable, and that the use of it in the sacred dance required no small exertion, is apparent from Juvenal's expression, "*sudavit clypeis ancilibus*."⁶

Besides the Salii, who were men of patrician families, and were probably instructed to perform their public dances in a graceful as well as animated manner, there were servants who executed inferior offices. An ancient gem in the Florentine cabinet, from which the preceding cut has been copied, represents two of them carrying six ancilia on their shoulders, suspended from a pole; and the representation agrees exactly with the statement of Dionysius of Halicarnassus, *πέντας ὑπέρεται ἡρτημένας ἀπὸ κανόνων κομίζουσι*.

1. (Dionys., l. c.—Plut., l. c.—Florus, i. 2.—Serv. in *Æn.*, viii., 664.)—2. (Gruter, *Inscr.*, p. cccclxiv., note 3.)—3. (*Æn.*, vii., 187.)—4. (Stat., *Sylv.*, ii. 129.—Lucan, i. 603; ix. 460.—Lactant., *De Fals. Rel.*, i. 21.)—5. (Juv., ii. 125.)—6. (ii. 126.)

During the festival, and so long as the Salii continued to carry the ancilia, no expedition could be undertaken. It was thought ominous to solemnize marriages at that time, or to engage in any undertaking of great importance.¹

When war was declared, the ancilia were purposely shaken in their sacred depository.² But it is alleged that, towards the close of the Cimbrian war, they rattled of their own accord.³

ANCORA (ἄγκυρα), an anchor.

The anchor used by the ancients was, for the most part, made of iron, and its form, as may be seen from the annexed figure, taken from a coin, resembled that of the modern anchor. The shape of the two extremities illustrates the *unco morsu* and *dente tenaci* of Virgil.⁴ Indeed, the Greek and Latin names themselves express this essential property of the anchor, being allied to ἄγκυλος, ἄγκων, *angulus*, *unrus*, &c.

The anchor, as here represented and as commonly used, was called *bidens*, διπλή, ἀμφίβολος, or ἀμφίστομος, because it had two teeth or flukes. Sometimes it had one only, and then had the epithet ἑτεροστόμος. The following expressions were used for the three principal processes in managing the anchor:

Ancoram solvere, ἄγκυραν χαλῆν, to loose the anchor.

Ancoram jacere, βάλλειν, ῥίπτειν, to cast anchor.

Ancoram tollere, αἶρειν, ἀναρῆσθαι, ἀνασπᾶσθαι, to weigh anchor.

Hence αἶρειν by itself meant to set sail, ἄγκυραν being understood.

The qualities of a good anchor were not to slip, or lose its hold, and not to break, i. e., to be ὑσφαλῆ τε καὶ βέβαιαν.⁵

The following figure, taken from a marble at Rome, shows the cable (*fumis*) passing through a hole in the prow (*oculus*).

We may suppose the anchor to be lying on the deck, in the place indicated by the turn of the cable; and if the vessel be approaching the port, the steps taken will be as Virgil describes:

"Obvertunt pelago proras; tum dente tenaci
Ancora fundabat nares, et litora curvæ
Preterxunt puppes."⁶

And

"Ancora de prora jacitur, stant litore puppes."⁷

1. (Ovid, *Fast.*, iii., 393.)—2. (Serv. in *Æn.*, vii., 603; viii., 1.)—3. (Jul. Obsequens, *De Prodig.*—Liv., *Epit.*, 68.)—4. (*Æn.*, i., 169; vi., 3.)—5. (Heb., vi., 19.)—6. (*Æn.*, vi., 3-5.)—7. (*Æn.*, iii., 277; vi., 901.)

The prow being turned towards the deep sea (*pelago*) and the stern towards the land, the latter extremity is fixed upon the shore (*stai litore*), so that the collected ships, with their *aplustria*, adorn it, as it were, with a fringe or border (*pretezla*). The prow remains in the deeper water, and therefore the anchor is thrown out to attach it to the ground (*fundare*).

When a ship was driving before the wind, and in danger of foundering upon shoals, its course would be checked by casting anchor from the stern. This was done when Paul was shipwrecked at Melite.¹ Four anchors were dropped on that occasion. Athenæus² mentions a ship which had eight iron anchors. The largest and strongest anchor, the "last hope" of the ship, was called *tepa*: and, as it was only used in the extremity of danger, the phrase "*sacram ancoram solvere*" was applied to all persons similarly circumstanced.

To indicate the place where the anchor lay, a bundle of cork floated over it, on the surface of the water,³ being attached, probably, to the ring which, in the preceding figure, is seen fixed to the bottom of the shank; and we may conjecture that the rope tied to that ring was also used in drawing the fluke out of the ground previously to weighing anchor.

In the heroic times of Greece, it appears that anchors were not yet invented: large stones, called *ειναι* (*sleepers*), were used in their stead.⁴ Even in later times, bags of sand, and baskets filled with stones, were used in cases of necessity. According to Pliny,⁵ the anchor was first invented by Eupalamus, and afterward improved by Anacharsis.

*ANDRAPHAX'YS (ἀνδράφαξις or ἀνδράφαξ), an herb, the same with our *Atriplex hortensis*, according to Sprengel, Stackhouse, and Dierbach, who agree in this with the earlier commentators. All the ancient authorities, from Dioscorides to Macer, give it the character of an excellent potherb. It is still cultivated in some gardens as a culinary herb; its English name is *Orach*.⁶

*ANDRACH'NE, Purslane, or *Portulaca oleracea*, L.⁷

ΑΝΑΡΑΠΟΔΙΣ'ΜΟΥ or ΑΝΑΡΑΠΟΔΙΣ'ΕΩΣ ΓΡΑΦ'Η (ἀναραποδισμού or ἀναραποδίσσεως γραφή) was an action brought before the court of the eleven (*οἱ ἑνδεκα*), against all persons who carried off slaves from their masters, or reduced free men to a state of slavery. The grammarians mention an oration of Antiphon on this subject, which has not come down to us.⁸

ΑΝΑΡΑΠ'ΟΔΩΝ ΔΙΚΗ (ἀναραπῶδων δίκη) was the peculiar title of the *διαδικασία* when a property in slaves was the subject of contending claims. The cause belonged to the class of *δίκαι πρὸς τινα*, and was one of the private suits that came under the jurisdiction of the *thesmothetæ*. It is recorded to have been the subject of a lost speech of Dinarchus,⁹ and is clearly referred to in one still extant of Demosthenes.¹⁰

ANDREI'A. (*Vir. SYSSITIA*.)

*ANDRO'DAMAS, one of Pliny's varieties of hæmatite. (*Vir. AIMATITHE*.) It was of a black colour, of remarkable weight and hardness, and attracted silver, copper, and iron. When divested of its fabulous properties, it appears to have been magnetic oxide of iron.¹¹

ANDROGEONIA (Ἀνδρογεωνία), a festival with games, held every year in the Ceramicus at Athens, in honour of the hero Androgens, son of Minos, who had overcome all his adversaries in the festive

1. (Acts, xvii., 29.)—2. (Athenæus, v., 43.)—3. (Paus., viii., 12.—Plin., II. N., xvi., 8.)—4. (See II. i., 436; xiv., 77.—Od., ix., 137; xv., 498.—Apollon. Rhod., i., 1277.)—5. (vii., 57.)—6. games of the Panathæna, and was afterward killed by order of Ægeus.¹ According to Hesiychius, the hero also bore the name of Eurygyes (the possessor of extensive lands), and under this title games were celebrated in his honour, *δ' ἐπ' Εὐρύγιγ' ἁγών*.

ANDROLEPSIA or ANDROLEPSION (*ἀνδρολεψία* or *ἀνδρολεψιον*), the right of reprisals, a custom recognised by the international law of the Greeks, that, when a citizen of one state had killed a citizen of another, and the countrymen of the former would not surrender him to the relatives of the deceased, it should be lawful to seize upon three, and not more, of the countrymen of the offender, and keep them as hostages till satisfaction was afforded, or the homicide given up.² The trierarchs and the commanders of the ships of war were the persons intrusted with this office. The property which the hostages had with them at the time of seizure was confiscated, under the name of *σύλα* or *σύλαι*.³

*ANDROSÆMON (*ἀνδρόσαιμον*), a species of St. John's-wort, but not the *Hypericum androsaemum* of modern botanists. Such, at least, is the opinion of Sibthorp, who refers it to the *H. ciliatum*, Lam. Stephens and Matthioli give it the French name of *Millepertuis*.⁴

*ANDROSACES (*ἀνδρόσακες*). Sprengel justly pronounces this the "crux exegetarum!" In his History of Botany he inclines to the opinion of Gouan, that it is the *Madrepora acclabulum*, a zoophyte; a most improbable conjecture. But, in his edition of Dioscorides, he prefers the plant named *Olivia Androsace*, Brestol. The *ἀνδρόσακες* occurs in the *Materia Medica* of Dioscorides, Galen, Orisbasius, and Paulus Ægineta.⁵

*ANEMONE (*ἀνεμώνη*), the Anemone or Wind-rose. Dioscorides describes three species: the first, which he calls *ἡμερος*, or cultivated, is, according to Sprengel, the *Anemone coronaria*; the second kind, denominated *όππια*, or wild, is the *A. stellata*; the third kind, with dark leaves, is the *A. nemorosa*, or Wood Anemone. The cultivated kind was very variable in the colour of its flowers, these being either blue, violet, purple, or white, whereas the wild kind has merely a flower of purple hue. This may serve to explain the discrepancy in the poetic legends respecting the origin of the anemone. According to one account,⁶ it sprang from the tears shed by Venus for the loss of Adonis when slain by the wild boar; according to another,⁷ from the blood of Adonis himself. The reference may be, in the one case, to the white flower of the wind-rose; in the other, to that of purple hue. The anemone has its name from the Greek term *ἀνεμος*, "wind." The cause of this name's having been given is differently stated. Pliny⁸ says that the flower was so styled, because it never opens except when the wind blows; Hesiychius,⁹ because its leaves are quickly scattered by the wind. The best explanation, however, is the following: the blossoms of the anemone contain no distinct calyx, and are succeeded by a cluster of grains, each terminated by a long, silky, feathery tail. As the species generally grow on open plains, or in high, exposed situations, their feathery grains produce a singular shining appearance when waved by the breeze, and hence, no doubt, the name of the flower has originated, for it means, literally, "Wind-flower;" and this is the appellation actually bestowed upon it by the English.—Sibthorp found the anemone on Mount Parnassus.

*ANETHUM (*ἄνηθον*), the herb Anise or Dill. Sprengel makes the *ἄνηθον* of Dioscorides and The-

ophrastus the *Anethum graveolens*; but, according to Stackhouse, the *ἄνηθον* of Theophrastus is the *A. hortense*, or Garden Dill.¹

ANGOTHE'KE (*ἄγγοθήκη*). (Vid. INCITEGA.)

*ANGUILLA (*ἐγγέλις*), the *Muraena anguilla*, L., or Eel. (Vid. CONGER and MURENA.) Volumes have been written respecting the mode of reproduction on the part of eels. Aristotle believed that they sprang from the mud; Pliny, from fragments which they separated from their bodies by rubbing them against the rocks; others of the ancient writers supposed that they came from the carcasses of animals. The truth is, that eels couple after the manner of serpents; that they form eggs, which, for the most part, disclose in their belly; and that in this case they are viviparous, after the manner of vipers.

*ANGUIS (*ὄφις*), the Snake. (Vid. ASPIS, DRACO, &c.)

ANGUSTICLA VII. (Vid. CLAVUS.)

*ANISUM (*ἀνίσον*) the *Pimpinella anison*, or Anise. It is described by Theophrastus, Dioscorides, Galen, and the other writers on the *Materia Medica*.

ANNALES (i. e., *annales libri*, year-books) were records of the events of each year, which were kept by the chief pontiff (*pontifex maximus*) at Rome, from the commencement of the state to the time of the chief pontiff Publius Mucius Scaevola (consul in 621 A.U.C., 133 B.C.). They were written on a white board (*album*), which the chief pontiff used to put in some conspicuous place in his house, that the people might have the opportunity of reading them. They were called *annales maximi*, or *annales pontificum maximorum*;² and the *commentarii pontificum* mentioned by Livy³ are in all probability the same. These documents appear to have been very meager, recording chiefly eclipses, prodigies, and the state of the markets;⁴ but they were the only historical records which the Romans possessed before the time of Fabius Pictor.⁵ The greater part of those written before the burning of Rome by the Gauls, perished on that occasion; but some fragments seem to have escaped destruction.⁶ This circumstance is a chief cause of the uncertainty of the early history of Rome.⁷

In process of time, individuals undertook to write portions of the Roman history, in imitation of the pontifical annals.⁸ The first of these was Quintus Fabius Pictor, who lived during the second Punic War, and wrote the history of Rome from its foundation down to his own time.⁹ Contemporary with him was Lucius Cincius Alimentus, whose annals embraced the same period.¹⁰ Dionysius states that both Fabius and Cincius wrote in Greek; but it would seem that Fabius wrote in Latin also.¹¹ Marcus Porcius Cato, consul in 559 A.U.C., and afterward censor, wrote an historical work in seven books, which was called "Origines."¹² Aulus Postumius Albinus, consul in 603 A.U.C., wrote annals of the Roman history in Greek.¹³ Lucius Calpurnius Piso Frugi, consul in 621 A.U.C., and afterward censor, wrote annals.¹⁴ Quintus Valerius Antias (about 672 A.U.C.) is frequently cited by Livy, and contemporary with him was Caius Iulius Macer.¹⁵ The Roman annalists were Lucius Cassius Hemina (A.U.C. 608), Quintus Fabius

Maximus Servilianus (612), Caius Fannius (618), Caius Sempronius Tuditanus (625), Lucius Caelius Antipater (631), Caius Sempronius Asellio (620), and, about the end of the same century, Publius Rutilius Rufus, Lucius Cornelius Sisenna, and Quintus Claudius Quadrigarius. Farther information concerning these writers will be found in Clinton's *Fasti Hellenici*, vol. iii.

The precise difference between the terms *annales* and *historia* is still a matter of discussion. Cicero says that the first historical writers among the Romans composed their works in imitation of the *annales maximi*, and merely wrote memorials of the times, of men, of places, and of events, without any ornament; and, provided that their meaning was intelligible, thought the only excellence of style was brevity;¹ but that, in history, ornament is studied in the mode of narration, descriptions of countries and battles are often introduced, speeches and harangues are reported, and a flowing style is aimed at.² Elsewhere he mentions history as one of the highest kinds of oratory, and as one which was as yet either unknown to, or neglected by, his countrymen.³ Aulus Gellius⁴ says that the difference between annals and history is, that the former observe the order of years, narrating under each year all the events that happened during that year. Servius⁵ says that history (*ἀπὸ τοῦ ἱστορεῖν*) relates to events which have happened during the writer's life, so that he has, or might have, seen them; but annals to those things which have taken place in former times. The true distinction seems to be that which regards the annalist as adhering to the succession of time, while the historian regards more the succession of events; and, moreover, that the former relates bare facts in a simple, straightforward style, while the latter arranges his materials with the art of an orator, and traces the causes and results of the events which he records. (See a paper by Niebuhr in the *Rheinisches Museum*, ii., 2, p. 283, translated by Mr. Thirlwall in the *Philological Museum*, vol. ii., p. 661.)

ANNOŃA (from *annus*, like *pomona* from *pomum*) is used, 1. for the produce of the year in corn, fruit, wine, &c., and hence, 2. for provisions in general, especially for the corn which, in the latter years of the Republic, was collected in the storehouses of the state, and sold to the poor at a cheap rate in times of scarcity; and which, under the emperors, was distributed to the people gratuitously, or given as pay and rewards. 3. For the price of provisions. 4. For a soldier's allowance of provisions for a certain time. It is used also in the plural for yearly or monthly distributions of pay in corn, &c.⁶ Similar distributions in money were called *annonæ ævaria*.⁷ In the plural it also signifies provisions given as the wages of labour.⁸

Annona was anciently worshipped as the goddess who prospered the year's increase. She was represented on an altar in the Capitol, with the inscription "Annonæ Sanctæ Ælius Vitalio," &c.,⁹ as a female with the right arm and shoulder bare, and the rest of the body clothed, holding ears of corn in her right hand, and the cornucopia in her left.

ANNA'LIS LEX. (Vid. ÆDILES, p. 25.)

ANNULI. (Vid. RINGS.)

ANNUS. (Vid. YEAR.)

*ANON'IS (ἀνώνις), a plant. Stephens says its popular name is *Resta bovis*, i. e., Rest-harrow. Modern botanists have accordingly given the name of *Anonis antiquorum* to the Rest-harrow of English herbalists.¹⁰ The popular name is derived from the circumstance of this plant's stopping the plough, or harrow, in its progress, by its stringy roots.

ANQUI'SITIO. In criminal trials at Rome, the accuser was obliged, after the day for the trial (*die dictio*) had been fixed, to repeat his charge three times against the accused, with the intervention of a day between each.¹ The *anquisitio* was that part of the charge in which the punishment was specified. The accuser could, during this repetition of the charge, either mitigate² or increase the punishment.³ After the charge had been repeated three times, the proper bill of accusation (*rogatio*) was then first introduced. (Vid. JUDICIUM.) Under the emperors, the term *anquisitio* lost its original meaning, and was employed to indicate an accusation in general;⁴ in which sense it also occurs even in the times of the Republic.⁵

ANSA, the handle of any thing, more particularly of a cup or drinking-vessel; also, the handle of a rudder, called by us the tiller.⁶ Ennius speaks of the ansa or handle of a spear: "*Hastis ansatis concurrent undique telis.*" "*Ansatas mittunt e turribus hastas.*"⁷

The ansa must have been different from the amumentum of a spear. Perhaps it was a rest for the hand, fixed to the middle of the shaft, to assist in throwing it. On this supposition, the *hasta ansata* of Ennius was the same with the *μεσάγκυλον* or *δόρυ ἀγκυλητόν* of Greek authors.⁸ Euripides calls the same weapons simply *ἀγκύλας*.¹⁰

Xenophon, speaking of the large arrows of the Carduchi, says that his soldiers used them as darts (*ἀκόντιοις*), by fixing the *ἀγκύλη* upon them (*ἐναγκυλῶντες*).¹¹ Plutarch¹² relates that Alexander the Great, observing one of his soldiers to be attacking the *ἀγκύλη* to his dart (*τὸ ἀκόντιον ἐναγκυλοῦμενον*), obliged him to leave the ranks, for preparing his arms at a moment when he ought to have had them ready for use. These authorities show that the *ἀγκύλη* was something fastened to the dart, about the middle of the shaft, before the engagement commenced. That it was crooked, or curved, may be concluded from the term itself; and, if so, it would agree with the Latin ansa, a handle, though not with amumentum, which was a leather thong fastened to the same part of the lance. (Vid. AMUMENTUM.)

*ANSER (ἄγην), the Goose. Aristotle briefly describes two species, the Great and the Small gregarious goose.¹³ The latter, no doubt, is the Brent Goose, or *Anas Bernicula*. The other cannot be satisfactorily determined; but it is not unlikely that it was the *Anas anser*. Dr. Trail, however, is inclined rather to think that it was the *Anas Ægyptiaca*, or Sacred Goose of Egypt.¹⁴

ANTÆ (παρσάδες), square pillars (*quadra columnæ*, Nonius). They were commonly joined to the side walls of a building, being placed on each side of the door, so as to assist in forming the portico. These terms are seldom found except in the plural, because the purpose served by antæ required that, in general, two should be erected corresponding to each other, and supporting the extremities of the same roof. Their position, form, and use will be best understood from the following woodcut, in which A A are the antæ.

Vitruvius¹⁵ describes the temple *in antis* (ναὸς ἐν παρσάται) to be one of the simplest kind. It had, as he says, in front, antæ attached to the walls which enclosed the cella; and in the middle, between the antæ, two columns supporting the architrave. According to him,¹⁶ the antæ ought to be of the same thickness as the columns. The three spaces (*intercolumnia*) into which the front of the

Nonium.)—9. (Athenæus, xi.,—Eurip., Phæn., 1148.—Androm., 1133.—Schol. in loc.—Menander, p. 210, ed. Meineke.—Gell., x., 25.—Festus, s. v. Mefanionium.)—10. (Orest., 1477.)—11. (Anab., iv., 2, § 28.)—12. (Apophth.)—13. (Aristot., H. A., vi., 5.)—14. (Adams, Append., s. v.)—15. (iii., 1.)—16. (iv., 4.)

pronaos was divided by the two columns, were sometimes occupied by marble balustrades, or by some kind of rails, with doors or gates. The ruins of temples, corresponding to the description of Vitruvius, are found in Greece and Asia Minor; and we here exhibit as a specimen a restoration of the front of the temple of Artemis Propylæa at Eleusis, together with a plan of the pronaos:

A A, the antæ; B B, the cella or ναός: O, the altar.

An ancient inscription respecting the temple of Serapis at Puteoli, contains the following direction to add antæ to one of the walls: EX. EO. PARIETE. ANTAS. DUAS. AD. MARE. VORSUM. PROJICITO. LONGAS. P. II. GRASSAS. P. I.

When Neoptolemus is attacked by Orestes in the vestibule of the temple at Delphi, he seizes the arms which were suspended by means of nails or pins from one of the antæ (παρὰ τοῦ τοῦ κρηναῖου), takes his station upon the altar, and addresses the people in his own defence. In two other passages, Euripides uses the term by metonymy, to denote either the pronaos of a temple² or the vestibule of a palace;³ i. e., in each case the portico, or space enclosed between the antæ.⁴

From *parastas* came the adjective *parastaticus*, and hence we find *parastatica* employed as the term for a pilaster, which may be considered as the section of a square pillar attached to the wall of a building. The beams of a ceiling were laid upon three kinds of supports, viz., columns, antæ, and parastaticæ or pilasters.⁵

*ANTACÆUS (ἀντάκιος), a variety of the *Acipenser Huso*, or Isinglass Fish. This would appear to be the fish of whose name a poet in Athenæus complains that it was inadmissible into heroic verse.⁶

ANTEAMBULONES were slaves who were accustomed to go before their masters, in order to make way for them through the crowd.⁷ They usually called out *dante locum domino meo*; and if this were not sufficient to clear the way, they used their hands and elbows for that purpose. Pliny relates an amusing tale of an individual who was roughly

handled by a Roman knight, because his slave had presumed to touch the latter in order to make way for his master.¹ The term *anteambulones* was also given to the clients, who were accustomed to walk before their patroni when the latter appeared in public.²

ANTECESSORES, called also ANTECURSORES, were horse-soldiers, who were accustomed to precede an army on march in order to choose a suitable place for the camp, and to make the necessary provisions for the army. They do not appear to have been merely scouts, like the *speculatores*.³ This name was also given to the teachers of the Roman law.⁴

ANTECENA. (Vid. CENA.)

ANTEFIXA, terra-cottas, which exhibited various ornamental designs, and were used in architecture to cover the frieze (*zophorus*) of the entablature.

These terra-cottas do not appear to have been used among the Greeks, but were probably Etrurian in their origin, and were thence taken for the decoration of Roman buildings. Festus describes them in the following terms: *Antefixa quæ ex opere figulino tectis adfiguntur sub stillicidio*.

The name *antefixa* is evidently derived from the circumstance that they were fixed before the buildings which they adorned; and the manner of fixing them, at least in many cases, appears from the remains of them still existing. At Scrofano, supposed to be the ancient Veii, they were found fastened to the frieze with leaden nails. At Velletri, formerly a city of the Volsci, they were discovered (see the following woodcut) with holes for the nails to pass through. They were formed in moulds, and then baked by fire, so that the number of them might be increased to any extent; and copies of the same design were no doubt frequently repeated on the same frieze. Of the great variety and exquisite beauty of the workmanship, the reader may best form an idea by inspecting the collection of them in the British Museum, or by studying the engravings and description of that collection published by Dr. Taylor Combe.

The two imperfect antefixa here represented are among those found at Velletri, and described by Carloni (*Roma*, 1785).

The first of them must have formed part of the upper border of the frieze, or, rather, of the cornice. It contains a panther's head, designed to serve as a spout for the rain-water to pass through in descending from the roof. Similar antefixa, but with comic masks instead of animals' heads, adorned the Temple of Isis at Pompeii.⁸

The second of the above specimens represents two men who have a dispute, and who come before the sceptre-bearing kings or judges to have their cause decided. The style of this bas-relief indicates its high antiquity, and, at the same time,

1. (Eurip., *Androm.*, 1098.)—2. (Iph. in *Taur.*, 1126.)—3. (Phœn., 427.)—4. (Vid. Cratini, *Frags.*, ed. Runkel, p. 16.—Xen., *Hier.*, xi.—Schneider, *Gr.-Deutsch. 1. (Ep. iii., 14, sub fin.)—2. (Martial, ii., 18; iii., 7; x., 74.)—3. (Hirt., *Bell. Afr.*, 12, who speaks of speculatores et antecessores equites.—Suet., *Vitell.*, 17.—Cæs., B. G., v., 47.)—4. (Cod. 1., tit. 17, s. 2, § 9, 11.)—5. (Pompeii, *London*, 1836, vol. i, p. 261.)

proves that the Volsci had attained to considerable taste in their architecture. Their antefixa are remarkable for being painted: the ground of that here represented is blue; the hair of the six men is black or brown; their flesh red; their garments white, yellow, and red; the chairs are white. The two holes may be observed by which this slab was fixed upon the building.

Cato the Censor complained that the Romans of his time began to despise ornaments of this description, and to prefer the marble friezes of Athens and Corinth.¹ The rising taste which Cato deplored may account for the superior beauty of the antefixa preserved in the British Museum, which were discovered at Rome. A specimen of them is here given. It represents Minerva superintending the

construction of the ship *Argo*. The man with the hammer and chisel is Argus, who built the vessel under her direction. The pilot Tiphys is assisted by her in attaching the sail to the yard. The borders at the top and bottom are in the Greek style, and are extremely elegant. Another specimen of the antefixa is given under the article *ΑΝΤΥΧ*.

ANTENNA (κεραία, κέρα), the yard of a ship.

The ships of the ancients had a single mast in the middle, and a square sail, to raise and support which a transverse pole or yard was extended across the mast not far from the top. In winter the yard was let down, and lodged in the vessel or taken on shore. "*Effugit hybernas demissa antennis procellas.*"

When, therefore, the time for leaving the port arrived, it was necessary to elevate the yard, to which the sail was previously attached. For this purpose a wooden hoop was made to slide up and down the mast, as we see it represented in an antique lamp, made in the form of a ship.² To the two extremities of the yard (*cornua*, ἀγκυκέραιαι) ropes were attached, which passed over the top of the mast; and by means of these ropes, and the pulleys (*trochleæ*) connected with them, the yard and sail, guided by the hoop, were hoisted to a sufficient height. The sail was then unfurled, and allowed to fall to the deck of the vessel.³

Cæsar informs us⁴ that, in order to destroy the fleet of the Veneti, his soldiers made use of sharp sickles fastened to long poles. With these they cut the ropes (*funes*) by which the yard of each ship was suspended from the mast. The consequence was, that the yard, with the sail upon it, immediately fell, and the ship became unmanageable. These ropes appear to have been called in Greek κεροῦχοι, whence in Latin *summi ceruchi*.⁵

Besides the ropes already mentioned, two others

hung from the horns of the antenna, the use of which was to turn it round as the wind veered, so as to keep the sail opposite to the wind. This operation is technically described by Virgil in the following line: "*Cornua velatarum obvertimus antennarum.*"⁶ And more poetically where he uses *brachia* for *antennæ*, and adds, "*Una ardua torquent Cornua, detorquentque.*"⁷

When a storm arose, or when the port was attained, it was usual to lower the antenna (*demittere, καθέλκεσθαι, ὑψίεσαι*), and to reef the sail: "*Ardua jamdudum demittite cornua, rector Clamat, et antennis totum subnectite velum.*"⁸

Also before an engagement the antenna was lowered to the middle of the mast (*Antennis ad medium malum demissis*).⁹ We may observe that the two last-cited authors use *antennæ* in the plural for the yard of a single ship, probably because they considered it as consisting of two arms united in the middle.

From numerous representations of ships on antique coins, intaglios, lamps, and bas-reliefs, we here select two gems, both of which show the *velata* antenna, but with the sail reefed in the one, and in the other expanded and swollen with the wind.

The former represents Ulysses tied to the mast, in order to effect his escape from the Sirens; it shows the *cornua* at the extremities of the yard, and the two *ceruchi* proceeding from thence to the top of the mast. Besides these particulars, the other gem represents also the ropes used for turning the antenna so as to face the wind.

ANTEPAGNENTA, doorposts, the jambs of a door.

The inscription quoted in the article *ΑΝΤΕ* contains also a direction to make jambs of silver fir (*antepagnenta abiegna*). Cato,¹ speaking of the construction of a farmhouse, mentions stone lintels and jambs (*jugumenta et antepagnenta ex lapide*). Vitruvius² gives minute instructions respecting the form and proportions of the antepagnenta in the doors of temples; and these are found, in general, to correspond with the examples preserved among the remains of Grecian architecture.³ The common term for a doorpost is *postis*.

ANTESIGNANI appear to have been a body of troops, selected for the defence of the standard (*signum*), before which they were stationed.⁴

ANTESTARI. (*Vid. ACRI*, p. 18.)

***ANTHEMIS** (ἀνθεμίς), a species of plant. (*Vid. CHAMAIMELON*.)

***ANTHEMUM** (ἀνθεμον, -ος, or -ιον), a species of plant, about which some uncertainty prevails. Adams is in favour of its being the genus *Muticaria*, or Wild Chamomile. Sprengel, however, refers the several species of this plant noticed by Theophrastus to the *Anthemis Colla*. Stackhouse also is very unsatisfactory in his views on this subject.⁵

***ANTHERICUS** (ἀνθερίκος), a plant. Sprengel, in the first edition of his *R. H. H.*, compares the *Anthericus Græcus* with it, but in his second the *Asphodelus fistulosus*. Thiebault makes it to be the *Ornithogalum Pyrenaicum*, and Stackhouse the *Aspho-*

1. (Liv., xxxiv., 4.)—2. (Ovid, Trist., III., iv., 9.)—3. (Bartoli, Lucern., iii., 31.—Compare *Isid.*, *Ilisp. Orig.*, xx., 15.)—4. (Val. Flacc., i., 313.—Ovid, Met., xi., 477.)—5. (B. G., iii., 14.)—6. (Lucan., viii., 177.—Val. Flacc., i., 469.)

delus luteus. In a word, all is mere conjecture with regard to it, the description of it by Theophrastus being so imperfect.¹

ANTHESPHORIA (*Ἀνθεσφόρια*), a flower-festival, principally celebrated in Sicily in honour of Demeter and Persephone, in commemoration of the return of Persephone to her mother in the beginning of spring. It consisted in gathering flowers and winning garlands, because Persephone had been carried off by Pluto while engaged in this occupation.² Strabo³ relates that at Hipponium the women celebrated a similar festival in honour of Demeter, which was probably called anthesphoria, since it was derived from Sicily. The women themselves gathered the flowers for the garlands which they wore on the occasion, and it would have been a disgrace to buy the flowers for that purpose. Anthesphoria were also solemnized in honour of other deities, especially in honour of Juno, surnamed *Ἀνθεία*, at Argos,⁴ where maidens, carrying baskets filled with flowers, went in procession, while a tune called *ἱερὰκιον* was played on the flute. Aphrodite, too, was worshipped at Cnossus, under the name *Ἀνθεία*,⁵ and has therefore been compared with Flora, the Roman deity, as the anthesphoria have been with the Roman festival of the *floriferum*.

ANTHESIERIA. (*Vid.* DIONYSIA.)

ANTHESIERION. (*Vid.* CALENDAR, Greek.)

***ANTHIAS** (*ἀνθίας*), a species of fish, the same with the *Labrus anthias*, L., or *Serranus anthias* of Cuvier. Its French name is *Barbier*. The ancients describe several species of this fish, one of which is the *κάλλιχθυς*.⁶ Cuvier describes this as a most beautiful fish, of a fine ruby red, changing to gold and silver, with yellow bands on the cheek.⁷

***ANTHOS**, a bird, which, according to Pliny, feeds on flowers, and imitates the neighing of a horse!⁸ Belon would have it to be the *Emberiza citrinella*, or Yellow Bunting, called in England the Yellow Hammer, and in France *Bruant*. This opinion, however, is somewhat doubtful, since Aristotle describes the *Anthos* as frequenting rivers, whereas the Yellow Hammer delights in trees.⁹

***ANTHRAKX** (*ἀνθράξ*), the Carbuncle. (*Vid.* CARBUNCULUS.)

***ANTHRAKTON**, a species of carbuncle, found, according to Theophrastus, in the island of Chios. Beckmann¹⁰ thinks that Theophrastus¹¹ means the well-known black marble of that island, which, from its resemblance to an extinguished coal, was designated *ἀνθράκτιον* (from *ἀνθράξ*, "a coal"), just as the ruby took its name from one burning. He supposes, moreover, that of this marble were made the mirrors mentioned by Theophrastus; and that Pliny misinterprets him in stating that they were of the *ἀνθράκτιον* of Orchomenus.¹²

***ANTHRENE** (*ἀνθρήνη*), the Hornet, or *Vespa Crabro*, L. Its nest is called *ἀνθρήνιον* by Suidas.

***ANTHYLLIS** (*ἀνθυλλίς*), a species of plant. Sprengel agrees with Prosper Alpinus, that the first species of Dioscorides is the *Cressa cretica*; and with Clusius, that the second is the *Ajuga Reva*. Linnaeus would seem to countenance this opinion in regard to the first species, by giving it the name of *Cressa Anthyllis* in his *Gen. Plant.*¹³

ANTHYPOMOSIA. (*Vid.* HYPOMOSIA.)

ANTIDOSIS (*ἀντίδοσις*), in its literal and general meaning, "an exchange," was, in the language of the Attic courts, peculiarly applied to proceedings under a law which is said to have originated

with Solon.¹ By this, a citizen nominated to perform a *leiturgia*, such as a *trierarchy* or *choregia*, or to rank among the property-tax payers in a class disproportioned to his means, was empowered to call upon any qualified person not so charged to take the office in his stead, or submit to a complete exchange of property; the charge in question, of course, attaching to the first party, if the exchange were finally effected.² For these proceedings the courts were opened at a stated time every year by the magistrates that had official cognizance of the particular subject, such as the *strategi* in cases of *trierarchy* and rating to the property-taxes, and the *archon* in those of *choregia*; and to the tribunal of such an officer it was the first step of the challenger to summon his opponent.³ It may be presumed that he then formally repeated his proposal, and that the other party stated his objections, which, if obviously sufficient in law, might perhaps authorize the magistrate to dismiss the case; if otherwise, the legal resistance, and preparations for bringing the cause before the *dicasts*, would naturally begin here. In the latter case, or if the exchange were accepted, the law directed the challenger to repair to the houses and lands of his antagonist, and secure himself, as all the claims and liabilities of the estate were to be transferred, from fraudulent encumbrances of the real property, by observing what mortgage placards (*ὑποτ*), if any, were fixed upon it, and against clandestine removal of the other effects, by sealing up the chambers that contained them, and, if he pleased, by putting bailiffs in the mansion.⁴ His opponent was at the same time informed that he was at liberty to deal in like manner with the estate of the challenger, and received notice to attend the proper tribunal on a fixed day to take the usual oath. The entries here described seem, in contemplation of law, to have been a complete effectuation of the exchange,⁵ and it does not appear that primarily there was any legal necessity for a farther ratification by the *dicasts*; but, in practice, this must always have been required by the conflict of interests between the parties. The next proceeding was the oath, which was taken by both parties, and purporting that they would faithfully discover all their property, except shares held in the silver mines at Laurion; for these were not rated to *leiturgiae* or property taxes, nor, consequently, liable to the exchange. In pursuance of this agreement, the law enjoined that they should exchange correct accounts of their respective assets (*ἀποφάσεις*) within three days; but, in practice, the time might be extended by the consent of the challenger. After this, if the matter were still uncompromised, it would assume the shape and follow the course of an ordinary lawsuit (*Vid.* ΔΙΚΗ), under the conduct of the magistrate within whose jurisdiction it had originally come. The verdict of the *dicasts*, when adverse to the challenged, seems merely to have rendered imperative the first demand of his antagonist, viz., that he should submit to the exchange, or undertake the charge in question; and as the alternative was open to the former, and a compromise might be acceded to by the latter at any stage of the proceedings, we may infer that the exchange was rarely, if ever, finally accomplished.⁶ The irksomeness, however, of the sequestration, during which the litigant was precluded from the use of his own property, and disabled from bringing actions for embezzlement and the like against others (for his prospective reimbursement was reckoned a part of the sequestered estate), would invariably cause a speedy—perhaps,

in most cases, a fair—adjustment of the burdens incident to the condition of a wealthy Athenian.

ANTIGRAPHE (*ἀντιγραφή*) originally signified the writing put in by the defendant, in all cases, whether public or private, in answer to the indictment or bill of the prosecutor. From this signification it was applied, by an easy transition, to the substance as well as the form of the reply, both of which are also indicated by *ἀντιμωσία*, which means primarily the oath corroborating the statement of the accused. Harpocration has remarked that anti-graphe might denote, as *antimosia* does in its more extended application, the bill and affidavit of either party; and this remark seems to be justified by a passage of Plato.¹ Schömann, however, maintains² that anti-graphe was only used in this signification in the case of persons who laid claim to an unassigned inheritance. Here neither the first nor any other claimant could appear in the character of a prosecutor; that is, no *δίκη* or *ἐγκλημα* could be strictly said to be directed by one competitor against another, when all came forward voluntarily to the tribunal to defend their several titles. This circumstance Schömann has suggested as a reason why the documents of each claimant were denoted by the term in question.

Perhaps the word "plea," though by no means a coincident term, may be allowed to be a tolerably proximate rendering of anti-graphe. Of pleas there can be only two kinds, the dilatory, and those to the action. The former, in Attic law, comprehends all such allegations as, by asserting the incompetency of the court, the disability of the plaintiff, or privilege of the defendant and the like, would have a tendency to show that the cause in its present state could not be brought into court (*μὴ εἰσαγώγιμον εἶναι τὴν δίκην*): the latter, everything that could be adduced by way of denial, excuse, justification, and defence generally. It must be, at the same time, kept in mind, that the process called "special pleading" was at Athens supplied by the magistrate holding the anacrisis, at which both parties produced their allegations, with the evidence to substantiate them; and that the object of this part of the proceedings was, under the directions and with the assistance of the magistrate, to prepare and enunciate the question for the dicasts. The following is an instance of the simplest form of indictment and plea: "Apollodorus, the son of Pasion of Acharnæ, against Stephanus, son of Menecles of Acharnæ, for perjury. The penalty rated, a talent. Stephanus bore false witness against me when he gave in evidence the matters in the tablets. Stephanus, son of Menecles of Acharnæ. I witnessed truly when I gave in evidence the things in the tablet."³ The pleadings might be altered during the anacrisis; but, once consigned to the echinus, they, as well as all the other accompanying documents, were protected by the official seal from any change by the litigants. On the day of trial, and in the presence of the dicasts, the echinus was opened, and the plea was then read by the clerk of the court, together with its antagonist bill. Whether it was preserved afterward as a public record, which we know to have been the case with respect to the *γραφὴ* in some cases,⁴ we are not informed.

From what has been already stated, it will have been observed that questions requiring a previous decision would frequently arise upon the allegations of the plea, and that the plea to the action in particular would often contain matter that would tend essentially to alter, and, in some cases, to reverse the relative positions of the parties. In the first case, a trial before the dicasts would be granted by the magistrate whenever he was loath to incur the responsibility of decision; in the second, a cross-

action might be instituted, and carried on separately, though perhaps simultaneously with the original suit. Cases, also, would sometimes occur, in which the defendant, from considering the indictment as an unwarrantable aggression, or, perhaps, one best repelled by attack, would be tempted to retaliate upon some delinquency of his opponent, utterly unconnected with the cause in hand, and to this he would be, in most cases, able to resort. An instance of each kind will be briefly given by citing the common *παραγραφὴ* as a cause arising upon a dilatory plea; a cross-action for assault (*αἰκίας*) upon a primary action for the same;¹ and a *δοκιμασία*, or "judicial examination of the life or morals" of an orator upon an impeachment for misconduct in an embassy (*παραπρεσβεία*).² All causes of this secondary nature (and there was hardly one of any kind cognizable by the Attic courts that might not occasionally rank among them) were, when viewed in their relation with the primary action, comprehended by the enlarged signification of anti-graphe; or, in other words, this term, inexpressive of form or substance, is indicative of a repellent or retaliative quality, that might be incidental to a great variety of causes. The distinction, however, that is implied by anti-graphe was not merely verbal and unsubstantial; for we are told, in order to prevent frivolous suits on the one hand, and unfair elusion upon the other, the loser in a *παραγραφὴ*, or cross-action upon a private suit, was condemned by a special law to pay the *ἐπιβελία* (*vid. ΕΠΟΒΕΛΙΑ*), ratable upon the valuation of the main cause, if he failed to obtain the votes of one fifth of the jury, and certain court fees (*πρωτανεία*) not originally incident to the suit. That there was a similar provision in public causes we may presume from analogy, though we have no authority to determine the matter.³

ANTIGRAPHEIS (*ἀντιγραφεῖς*) were public clerks at Athens, of whom there were two kinds. The first belonged to the *βούλη*: his duty was to give an account to the people of all the moneys paid to the state. (*Ὅς καθ' ἐκάστην πρωτανείαν ἀπελογίζετο τὰς προσόδους τῷ δήμῳ*.)⁴ In the time of Æschines, the *ἀντιγραφεὺς* τῆς βουλῆς was *χειροτονήτος*;⁵ but in later times he was chosen by lot.⁶ The second belonged to the people, and his duty was to check the accounts of the public officers, such as the treasurers of the sacred moneys, of the war taxes, &c. (*Αὐτοὶ δὲ ᾔσαν ἀντιγραφεῖς, ὁ μὲν τῆς διοικήσεως, ὁ δὲ τῆς βουλῆς*.)⁷

ANTINOEIA (*Ἀντινόεα*), annual festivals and quinquennial games, which the Roman emperor Hadrian instituted in honour of his favourite Antinous, after he was drowned in the Nile, or, according to others, had sacrificed himself for his sovereign, in a fit of religious fanaticism. The festivals were celebrated in Bithynia and at Mantinea, in which places he was worshipped as a god.⁸

*ANTIPATHES, the sort of Coral called *Antipathes farniacaceum*, Pall.⁹

ANTIPHERNA. (*vid. Dos.*)

ANTIQUARIL. (*vid. LIBRARI.*)

*ANTIRRHINON (*ἀντίρρινον* or *ἀντίρρινον*), a plant, which Sprengel makes the same with the *Antirrhinum Orontium*. Hardouin calls it by the French name of *Mufle de veau*, or Calf's Snout, but Stephens and Matthioli by that of *Mouron violet*. Its ordinary name in English is *Snaydragon*.¹⁰

ANTLIA (*ἀντλία*), any machine for raising water; a pump.

1. (Demosth. in Ev. et Mnesib., p. 1153.)—2. (Æsch. in Timarch.)—3. (Meier, Att. Process, p. 652.)—4. (Æsch. adv. Ctes., c. 11, p. 375.)—5. (Æsch., l. c.)—6. (Pollux, Onom., viii, 8, § 12.)—7. (Harpocrat., s. v.)—8. (Æl. Spartianus, Hadr., c. 14.—Dion., lxxix, 10.—Paus., vii, 9, § 4.)—9. (Dioscor., v, 140.—Adams, Append., s. v.)—10. (Theophrast., H. P., ix, 15.—Dioscor., iv, 131.—Adams, Append., s. v.)

1. (Apolog. Soer., p. 27, c.)—2. (Att. Process, p. 465.)—3. (Demosth. in Steph., i, 1115.)—4. (Diog. Laert., iii, c. 5, s. 19.)

The annexed figure shows a machine which is still used on the river Eissach, in the Tyrol, the ancient A'vags. As the current puts the wheel in motion, the jars on its margin are successively immersed and filled with water. When they reach the top, the centrifugal force, conjoined with their oblique position, sends the water sideways into a trough, from which it is conveyed to a distance, and chiefly used for irrigation. Thus, by the incessant action of the current itself, a portion of it is every instant rising to an elevation nearly equal to the diameter of the wheel.

Lucretius¹ mentions a machine constructed on this principle: "*Ut fluvius versare rotas atque haustura videmus.*" The line is quoted by Nonius Marcellus,² who observes that the jars or pots of such wheels (*rotarum cadi*) are properly called "*haustura ab hauriendo,*" as in Greek they are called *ἀντλία*.

In situations where the water was at rest, as in a pond or a well, or where the current was too slow and feeble to put the machine in motion, it was so constructed as to be wrought by animal force, and slaves or criminals were commonly employed for the purpose. Five such machines are described by Vitruvius, in addition to that which has been already explained, and which, as he observes, was turned *sine operarum calcatura, ipsius fluminis impulsu*. These five were: 1. the tympanum; a tread-wheel, wrought *hominibus calcantibus*; 2. a wheel resembling that in the preceding figure, but having, instead of pots, wooden boxes or buckets (*modioli quadrati*), so arranged as to form steps for those who trod the wheel; 3. the chain-pump; 4. the *cochlea*, or Archimedes's screw; and, 5. the *desibica machina*, or forcing-pump.³

Suetonius⁴ mentions the case of a man of equestrian rank condemned to the antlia. The nature of the punishment may be conceived from the words of Artemidorus.⁵ He knew a person who dreamed that he was constantly walking, though his body did not move; and another who dreamed that water was flowing from his feet. It was the lot of each to be condemned to the antlia (*εἰς ἀντλίαν καταδικασθῆναι*), and thus to fulfil his dream.

On the other hand, the antlia with which Martial⁶ watered his garden was probably the pole and bucket universally employed in Italy, Greece, and Egypt. The pole is curved, as shown in the annexed figure; because it is the stem of a fir, or some other tapering tree. The bucket, being attached to

the top of the tree, bends it by its weight, and the thickness of the other extremity serves as a counterpoise. The great antiquity of this method of raising water is proved by representations of it in Egyptian paintings.¹

ANTOMOSIA (*ἀντωμοσία*), a part of the *ἀνάκρισις*, or preliminary pleadings in an Athenian lawsuit. The term was used of an oath taken by both parties; by the plaintiff, that his complaint was well-founded, and that he was actuated by no improper motives; and by the defendant, that his defence was true. It was also called *διωμοσία*. The oath might contain either the direct affirmative or negative, in which case it was called *εὐθυδικία*; or amount to a demurrer or *παραγραφή*. The *ἀντωμοσία* of the two parties correspond to our bills or declarations on the one side, and to the replies, replications, or rejoinders on the other. (*Vid. ANTIGRAPHE.*)

ANTYX (*ἀντυξ*), (probably allied etymologically to AMPYX) (*ἀμπτύξ*), the rim or border of anything, especially of a shield or chariot.

The rim of the large round shield of the ancient Greeks was thinner than the part which it enclosed. Thus the ornamental border of the shield of Achilles, fabricated by Vulcan, was only threefold, the shield itself being sevenfold.² In another part of the Iliad,³ Achilles sends his spear against Æneas, and strikes his shield *ἀντυγ' ὑπὸ πρῶτῃν, ἰ. e.*, "on the outermost border," where (it is added) the bronze was thinnest, and the thinnest part of the ox-hide was stretched over it. In consequence of the great size of this round shield, the extreme border (*ἀντυξ πρῶτῃ*)⁴ touched the neck of the wearer above, and the lower part of his legs below. In the woodcut, in the article ANTEFIXA, we see the *ἀντυξ* on one side of Minerva's shield.

On the other hand, the *ἀντυξ* of a chariot must have been thicker than the body to which it was attached, and to which it gave both form and strength. For the same reason, it was often made double, as in the chariot of Juno (*Διοῖα δὲ περιδρόμοι ἀντυγὲς εἰσις*).⁵ In early times, it consisted of the twigs or flexible stem of a tree (*δρπηκεῖς*), which were polished and shaped for the purpose. Afterward, a splendid rim of metal formed the summit of the chariot, especially when it belonged to a person of wealth and rank.

In front of the chariot, the *ἀντυξ* was often raised above the body, into the form of a curvature, which served the purpose of a hook to hang the reins upon when the charioteer had occasion to leave his vehicle.⁷ Hence Euripides says of Hippolytus, who had just ascended his chariot, *Μάρπτει δὲ χειρὶν ἥνλιας ἀπ' ἀντυγος*.⁸

On Etruscan and Greek vases, we often see the chariot painted with this appendage to the rim much elevated. The accompanying woodcut shows it in a simpler form, and as it appears in the ANTEFIXA, engraved in the work of Carloni, which has been already quoted.

By Synecdoche, *ἀντυξ* is sometimes used for a chariot, the part being put for the whole.⁹ It is

1. (v., 317).—2. (lib. i.).—3. (Vitruv., x., c. 4-7.—Drieberg, Pneum. Entdeckungen der Griechen, p. 44-50).—4. (Tiber., 51).—5. (Oneirocritica, i., 50.)—6. (ix., 19.)

1. (Wilkinson, Manners and Cust. of Anc. Egypt., ii., 1-4).—2. (Il., xviii., 479).—3. (xx., 275).—4. (Il., vi., 118.).—5. (Il., v. 728.).—6. (Il., xxi., 38.).—7. (Il., v., 262, 322.).—8. (Illiad, 9).—9. (Callim., Hymn. in Dian., 140.)

also used metaphorically, as when it is applied by Moschus¹ to the horns of the new moon, and by Euripides² to the frame of a lyre.

Likewise the orbits of the sun and planets, which were conceived to be circular, were called *ἀντρογες οὐρανοῖ*. The orbit of Mars is so denominated in the Homeric Hymn to Mars;³ and the zodiac, in an epigram of Synesius, descriptive of an astrolabe.⁴ Alluding to this use of the term, a celebrated philosopher, having been appointed Prefect of Rome by the Emperor Julian, and having thus become entitled to ride in a chariot with a silver rim, laments that he was obliged to relinquish an ethereal for a silver *ἀντρος*.⁵

APAGELOI (*ἀπάγελ*οι), the name of those youths among the Cretans who had not reached their eighteenth year, and therefore did not belong to any *ἡλικία*. (*Vid.* AGELE.) As these youths usually lived in their father's house, they were called *σκολιοῖ*.⁶

APAGOGE (*ἀπαγωγή*), a summary process, allowed in certain cases by the Athenian law. The term denotes not merely the act of apprehending a culprit caught *in ipso facto*, but also the written information delivered to the magistrate, urging his apprehension.⁷ We must carefully distinguish between the *apago*ge, the *endeixis*, and the *ephegesis*. The *endeixis* was an information against those who took upon themselves some office, or exercised some right, for which they were by law disqualified; or those whose guilt was manifest, so that the punishment only, and not the fact, was to be determined. Pollux says that the *endeixis* was adopted when the accused was absent, the *apago*ge when he was present. Demosthenes distinguishes expressly between the *endeixis* and the *apago*ge.⁸ When the complainant took the accused to the magistrate, the process was called *apago*ge; when he led the magistrate to the offender, it was called *ephegesis*; in the former case, the complainant ran the risk of forfeiting 1000 drachmæ if his charge was ill-founded.⁹ The cases in which the *apago*ge was most generally allowed were those of theft, murder, ill-usage of parents, &c. The punishment in these cases was generally fixed by law; and if the accused confessed, or was proved guilty, the magistrate could execute the sentence at once, without appealing to any of the jury-courts; otherwise it was necessary that the case should be referred to a higher tribunal.¹⁰ The magistrates who presided over the *apago*ge were generally the Eleven (*οἱ ἑνδεκά*);¹¹ sometimes the chief archon,¹² or the thesmothetæ.¹³ The most important passage with regard to the *apago*ge¹⁴ is unfortunately corrupt and unintelligible.¹⁵ The com-

plainant was said *ἀπάγειν τὴν ἀπαγωγήν*; the magistrates, when they allowed it, *παρέδεχοντο τὴν ἀπαγωγήν*.

*APARINE (*ἀπαρίνη*), a species of plant, the same with the *Lappa* of the Romans,¹ and now called *Cleavers*, *Clivers*, or *Goose-grass*. Sprengel, in the first edition of his R. H. H., holds it to be the *Arctium Lappa*, or Burdock; a mistake which he silently corrects in his edition of Dioscorides. According to Galen, it is the *φιλίστιον* and *φιλαιτίριον* of Hippocrates.²

*AP'ATE (*ἀπάτη*), the name of a plant occurring in Theophrastus.³ Great diversity of opinion prevails, however, with respect to the proper reading; some making it *ἀπάπη*, and others *ἀπάκη*. Sprengel refers it to the *Leontodon Taraxacum*, or Dandelion; but Stackhouse hesitates between the *Taraxacum* and the *Hieracium* or Hawkweed.⁴

ΑΠΑΘΗ ΣΕΩΣ τοῦ δήμον γραφή. (*Vid.* ΔΑΙΚΙΑΣ πρὸς τὸν δήμον γραφή.)

APATURIA (*ἀπατούρια*) was a political festival which the Athenians had in common with all the Greeks of the Ionian name,⁵ with the exception of those of Colophon and Ephesus. It was celebrated in the month of Pyanepsion, and lasted for three days. The origin of this festival is related in the following manner: About the year 1100 B.C., the Athenians were carrying on a war against the Boeotians, concerning the district of Cilænæ, or, according to others, respecting the little town of Cenoë. The Boeotian Xanthius or Xanthus challenged Thymætes, king of Attica, to single combat; and when he refused, Melanthus, a Messenian exile of the house of the Nelids, offered himself to fight for Thymætes, on condition that, if victorious, he should be the successor to Thymætes. The offer was accepted; and when Xanthius and Melanthus began the engagement, there appeared behind Xanthius a man in the *τραγή*, the skin of a black she-goat. Melanthus reminded his adversary that he was violating the laws of single combat by having a companion, and while Xanthius looked around, Melanthus slew the *deceived* Xanthius. From that time the Athenians celebrated two festivals, the Apaturia, and that of Dionysus Melanægis, who was believed to have been the man who appeared behind Xanthius. This is the story related by the scholiast on Aristophanes.⁶ This tradition has given rise to a false etymology of the name *ἀπατούρια*, which was formerly considered to be derived from *ἀπατῶν*, to deceive. All modern critics, however,⁷ agree that the name is composed of *ἀ=ἄμα* and *πατρία*, which is perfectly consistent with what Xenophon⁸ says of the festival: 'Ἐν οἷς (*ἀπατουρῶν*) οἱ τε πατέρες καὶ οἱ συγγενεῖς ξύνεισι σφίσιν αὐτοῖς. According to this derivation, it is the festival at which the phratræ met, to discuss and settle their own affairs. But, as every citizen was a member of a phratría, the festival extended over the whole nation, who assembled *according to phratría*. Welcker,⁹ on account of the prominent part which Dionysus takes in the legend respecting the origin of the Attic Apaturia, conceives that it arose from the circumstance that families belonging to the Dionysian tribe of the *Ægicoræ* had been registered among the citizens.

The first day of the festival, which probably fell on the eleventh of the month of Pyanepsion, was called *δορπία* or *δόρπεια*,¹⁰ on which, every citizen went in the evening to the phratrion, or to the house of some wealthy member of his own phratría, and there enjoyed the supper prepared for him.¹¹ That

(Phyllis in Heracle., in Athen., iv., p. 171.—Hesych et Suid., s. v.)—11. (Aristoph., Acharn., 146.)

the cup-bearers (οἰνόπται) were not idle on this occasion, may be seen from Photius.¹

The second day was called Ἀναρρήσις (ἀναρρῆναι), from the sacrifice offered on this day to Zeus, surnamed Φράττωρ, and to Athena, and sometimes to Dionysus Melanægis. This was a state sacrifice, in which all citizens took part. The day was chiefly devoted to the gods, and to it must, perhaps, be confined what Harpocration² mentions, from the Atthis of Istrus, that the Athenians at the apatnria used to dress splendidly, kindle torches on the altar of Hephestus, and sacrifice and sing in honour of him. Proclus on Plato,³ in opposition to all other authorities, calls the first day of the Apaturia Ἀναρρήσις, and the second δοπρία, which is, perhaps, nothing more than a slip of his pen.

On the third day, called κοῦρεῖσις (κοῦρος), children born in that year, in the families of the phratræ, or such as were not yet registered, were taken by their fathers, or, in their absence, by their representatives (κύριοι), before the assembled members of the phratra. For every child, a sheep or goat was sacrificed. The victim was called μεῖον, and he who sacrificed it μεταγωγός, μεταγωγεῖν. It is said that the victim was not allowed to be below,⁴ or, according to Pollux,⁵ above a certain weight. Whenever any one thought he had reason to oppose the reception of the child into the phratra, he stated the case, and, at the same time, led away the victim from the altar.⁶ If the members of the phratra found the objections to the reception of the child to be sufficient, the victim was removed; when no objections were raised, the father, or he who supplied his place, was obliged to establish by oath that the child was the offspring of free-born parents and citizens of Athens.⁷ After the victim was sacrificed, the phratroes gave their votes, which they took from the altar of Jupiter Phratrius. When the majority voted against the reception, the cause might be tried before one of the courts of Athens; and if the claims of the child were found unobjectionable, its name, as well as that of the father, was entered in the register of the phratra, and those who had wished to effect the exclusion of the child were liable to be punished.⁸ Then followed the distribution of wine and of the victim, of which every phratroer received his share; and poems were recited by the elder boys, and a prize was given to him who acquitted himself the best on the occasion.⁹ On this day, also, illegitimate children, on whom the privileges of Athenian citizens were to be bestowed, as well as children adopted by citizens, and newly-created citizens, were introduced; but the last, it appears, could only be received into a phratra when they had previously been adopted by a citizen; and their children, when born by a mother who was a citizen, had a legitimate claim to be inscribed in the phratra of their grandfather, on their mother's side.¹⁰ In later times, however, the difficulties of being admitted into a phratra seem to have been greatly diminished.

Some writers have added a fourth day to this festival, under the name of ἐπιόδα;¹¹ but this is no particular day of the festival, for ἐπιόδα signifies nothing else but a day subsequent to any festival.¹²

ΑΠΕΛΥΘΗΡΟΙ. (Vid. LIBERTI.)

*APER. (Vid. ΚΑΠΡΟΣ.)

ΑΠΕΡΤΑ ΝΑΥΙΣ. (Vid. ΑΦΡΑΚΤΥΣ.)

APEX, a cap worn by the flamines and salii at Rome. The use of it was very ancient, being reckoned among the primitive institutions of Numa.

"Hinc ancilia, ab hoc apices, capidasque repetas."¹

The essential part of the apex, to which alone the name properly belonged, was a pointed piece of olive-wood, the base of which was surrounded with a lock of wool. This was worn on the top of the head, and was held there either by fillets only, or, as was more commonly the case, by the aid of a cap, which fitted the head, and was also fastened by means of two strings or bands (amenta, lora²). These bands had, it appears, a kind of knot or button, called *offendix* or *offendiculum*.³

The flamines were forbidden by law to go into public, or even into the open air, without the apex.⁴ Sulpicius was deprived of the priesthood only because the apex fell from his head while he was sacrificing.⁵

Dionysius of Halicarnassus describes the cap as being of a conical form.⁶ On ancient monuments we see it round as well as conical. From its various forms, as shown on bas-reliefs and on coins of the Roman emperors, who, as priests, were entitled to wear it, we have selected six for the annexed woodcut. The middle figure is from a bas-relief showing one of the salii with the rod in his right hand. (Vid. ANCILE.)

From apex was formed the epithet *apicatus*, applied to the flamen dialis by Ovid.⁷

*APHACE (ἀφάκη), a kind of pulse or vetch. Fuchsius and Matthioli refer it to the *Vicia sepium*; Dalechamp to the *Vicia angustifolia*; Dodonæus and Stackhouse to the *Lathyrus aphace*. To this last Sprengel refers it in the first edition of his R. H. H., but in his edition of Dioscorides he hesitates as to whether it was the *Vicia Bithynica*, the *V. lutea*, or the *V. hybrida*.⁸

*APHARCE (ἀφάρκη), a plant mentioned by Theophrastus,⁹ which Stackhouse suggests may be the *Rhamnus alaternus*, or Evergreen Privet. Sprengel, however, is in favour of the *Phillyrea angustifolia*. Schneider remarks, that some of the characters given by Theophrastus are wanting in the *Phillyrea*.¹⁰

ΑΨΕΤΟΙ ΗΜΕΡΑΙ (ἄψετοι ἡμέραι) were the days, usually festivals, on which the βουλή did not meet at Athens.¹¹

*APHIA (ἀφία), a plant mentioned by Theophrastus, but of which nothing can be made satisfactorily, in consequence of the short notice given by him. Stackhouse suspects that it may be a false reading for *apia*. In another place he suggests that it may be the *Caltha palustris*, or Marsh Marigold.¹²

APHLASTON. (*Vid.* AFLUSTRE.)

ΑΦΟΡΜΗΣ ΔΙΚΗ (*ἀφορμῆς δίκη*) was the action brought against a banker or money-lender (*ραπεζίτης*) to recover funds advanced for the purpose of being employed as banking capital. Though such moneys were also styled *παρακαταθήκαι*, or deposits, to distinguish them from the private capital of the banker (*ἰδία ἀφορμή*), there is an essential difference between the actions *ἀφορμῆς* and *παρακαταθήκαις*, as the latter implied that the defendant had refused to return a deposit entrusted to him, not upon the condition of his paying a stated interest for its use, as in the former case, but merely that it might be safe in his keeping till the affairs of the plaintiff should enable him to resume its possession in security.¹ The former action was of the class *πρὸς τινα*, and came under the jurisdiction of the *thesmothetæ*. The speech of Demosthenes in behalf of Phormio was made in a *παραγραφή* against an action of this kind.

APHRACTUS (*ἀφρακτος ναῦς*), called also *navis aperta*, a ship which had no deck, but was merely covered with planks in the front and hinder part, as is represented in the following cut, taken from a coin of Corcyra.

The ships which had decks were called *κατάφρακτοι*, and *testæ* or *strata*.² At the time of the Trojan war, the Greek ships had no decks,³ but were only covered over in the prow and stern, which covering Homer calls the *ἔκρια νηός*. Thus Ulysses, when preparing for combat with Scylla, says, *Εἰς ἔκρια νηός ἔβαινον Πρώρης*.⁴ Even in the time of the Persian war, the Athenian ships appear to have been built in the same manner, since Thucydides expressly says that "these ships were not yet entirely decked."⁵

APHRODISIA (*Ἀφροδίσια*) were festivals celebrated in honour of Aphrodite in a great number of towns in Greece, but particularly in the island of Cyprus. Her most ancient temple was at Paphos, which was built by Aërias or Cinyras, in whose family the priestly dignity was hereditary.⁶ No bloody sacrifices were allowed to be offered to her, but only pure fire, flowers, and incense;⁷ and, therefore, when Tacitus⁸ speaks of victims, we must either suppose, with Ernesti, that they were killed merely that the priests might inspect their intestines, or for the purpose of affording a feast to the persons present at the festival. At all events, however, the altar of the goddess was not allowed to be polluted with the blood of the victims, which were mostly he-goats. Mysteries were also celebrated at Paphos in honour of Aphrodite; and those who were initiated offered to the goddess a piece of money, and received in return a measure of salt and a phallus. In the mysteries themselves,

they received instructions *ἐν τῇ τέχνῃ μοιχικῇ*. A second or new Paphos had been built, according to tradition, after the Trojan war, by the Arcadian Agapenor; and, according to Strabo,¹ men and women from other towns of the island assembled at New Paphos, and went in solemn procession to Old Paphos, a distance of sixty stadia: and the name of the priest of Aphrodite, *ἀγίτωρ*,² seems to have originated in his heading this procession. Aphrodite was worshipped in most towns of Cyprus, and in other parts of Greece, such as Cythera, Sparta, Thebes, Elis, &c.; and though no Aphrodisia are mentioned in these places, we have no reason to doubt their existence: we find them expressly mentioned at Corinth and Athens, where they were chiefly celebrated by the numerous prostitutes.³ Another great festival of Aphrodite and Adonis, in Sestus, is mentioned by Musæus.⁴

*APIASTELLUM, the herb *Crow-foot*, *Gold Knap*, or *Yellow Crav.* It is the same with the *Batrachium* and *Apium rusticum*.⁵ This same name is also applied sometimes to the *Briony*. Humelbergius, however, thinks that in this latter case. *Apiastellum* is corrupted from *Ophiostaphyle*, which last is enumerated by Dioscorides among the names of the *Briony*.⁶

*APIASTER, the Bee-eater, a species of bird. (*Vid.* MEROPS.)

*APIASTRUM. (*Vid.* MELISSOPHYLLUM.)

*APION (*ἄπιον*), the *Pyrus communis*, or Pear-tree.⁷ (*Vid.* PYRUS.)

*APIOS (*ἄπιος*), a species of Spurge, the *Euphorbia apios*.⁸

*APIS (*μέλισσα* or *-ίττα*), the Bee. "The natural history of the common hive-bee (*Apis mellifica*) is so remarkable, that it need not excite surprise that the ancients were but imperfectly acquainted with it. Among the earliest of the observers of the bee may be enumerated Aristotle⁹ and Virgil,¹⁰ as also Aristomachus of Soli in Cilicia, and Philiscus the Thasian. Aristomachus, we are told by Pliny, attended solely to bees for fifty-eight years; and Philiscus, it is said, spent the whole of his time in forests, investigating their habits.¹¹ Both these observers wrote on the bee. Aristotle notices several other species besides the honey-bee, but in so brief a manner that they cannot be satisfactorily determined." The bee plays an important part among the religious symbols of antiquity, and there appears, according to some inquirers, a resemblance more than accidental between its Latin name and that of the Egyptian *Apis*.¹²

*APIUM (*σέλινον*), a well-known plant. Theophrastus speaks of several sorts: the *σέλινον ἡμερον*, which is generally thought to be our common Parsley; the *ἱπποσέλινον*, which seems to be what is now called *Alesanders*; the *ἐλευσέλινον*, *Wild Celery* or *Smallage*; and the *ὄρεοσέλινον*, or Mountain-parsley. Virgil is generally thought by *Apium* to mean the first sort, that being principally cultivated in gardens. Martyn, however, thinks he means the *Smallage*, which delights in the banks of rivulets, and hence the language of the poet, "*virides apio ripæ*," and "*potis gauderent rivis*." Fée also makes the *Apium* of Virgil the same with the *Apium graveolens*, L., or *ἐλευσέλινον*. Our celery is that variety of the *A. graveolens* which is called *dulce* by Miller. The wild species has a bitter, acrid taste, and is unfit to eat.—According to the generality of writers, the term *apium* comes from *apis*, because bees are fond of this plant. A much better derivation, however, is from the Celtic *apom*,

"water." The French term *ache* comes from *aches*, in the same language, signifying "a brook."

APLUSTRE (*ἀπλάστου*), an ornament of wooden planks, which constituted the highest part of the poop of a ship.

The position of the aplustre is shown in the representations of ancient vessels in the articles ANCHORA and ANTENNA. The forms there exhibited show a correspondence in the general appearance and effect between the aplustre which terminated the stern, and the *ἀκροστόλιον* which advanced towards it, proceeding from the prow. (*Vid.* ACROSTOLION.) At the junction of the aplustre with the stern, on which it was based, we commonly observe an ornament resembling a circular shield: this was called *ἀσπίδιον* or *ἀσπίδοσκη*. It is seen on the two aplustria here represented.

the history of the Argonautic expedition, a bird is described, which perches on the aplustre of the ship *Argo*, and delivers oracular counsel.¹ Afterward, the extremities of this appendage to the stern are smashed by the collision of the Symplegades, while the body of the vessel narrowly escapes on its passage between those islands.²

In the battle at the ships related by Homer,³ as they had their poops landward, and nearest to the Trojans, Hector takes a firm hold of one by its aplustre, while he incites his followers to bring fire and burn them. After the battle of Marathon, some similar incidents are mentioned by Herodotus,⁴ especially the distinguished bravery of Cynægirus, brother of the poet Æschylus, who, having seized the aplustre of a Persian ship, had his hand cut off by a hatchet. In these cases we must suppose the aplustre to have been directed, not towards the centre of the vessel, but in the opposite direction.

The aplustre rose immediately behind the gubernator, who held the rudder and guided the ship, and it served in some degree to protect him from the wind and rain. The figure introduced in the article ANCHORA shows that a pole, spear, or standard (*σηηλίς*, *συνλίς*) was sometimes erected beside the aplustre, to which a fillet or pennon (*ραυλία*) was attached. This served both to distinguish and adorn the vessel, and also to show the direction of the wind. In the figure of a ship, sculptured on the column of Trajan, we see a lantern suspended from the aplustre so as to hang over the deck below the gubernator. In like manner, when we read in Virgil,⁵ "*Puppibus et lati nautæ imposuere coronas*," we must suppose the garlands, dedicated to the domes-

tic or marine divinities, and regarded as symbols of a prosperous voyage, to be attached to the aplustria; and to these and similar decorations, expressive of joy and hope, Gregory Nazianzen appears to allude in the phrase *ἀνθεα πρίμνης*,¹ and Apollonius Rhodius² in the expression *ἀφλάστοιο κύρρυμβα*.

It is evident that the aplustre, formed of comparatively thin boards, and presenting a broad surface to the sky, would be very apt to be shaken by violent and contrary winds. Hence Rutilius, describing a favourable gale, says: "*Inconscussa vehit tranquillus aplustria flatus; Mollia securo vela rudente tremunt*."

In consequence of its conspicuous position and beautiful form, the aplustre was often taken as the emblem of maritime affairs. It was carried off as a trophy by the conqueror in a naval engagement. Juvenal³ mentions it among the decorations of a triumphal arch.

Neptune, as represented on gems and medals, sometimes holds the aplustre in his right hand; and

in the celebrated Apotheosis of Homer, now in the British Museum, the female who personates the *Odyssey* exhibits the same emblem in reference to the voyages of Ulysses.

ΑΠΟΒΑΤΕ (*ἀποβάτης*). (*Vid.* DESULTORES.)

ΑΠΟΚΕΡΥΧΙΣ (*ἀποκέρυξις*) implies the method by which a father could at Athens dissolve the legal connexion between himself and his son. According to the author of the declamation on the subject (*Ἀποκερυνόμενος*), which has generally been attributed to Lucian, substantial reasons were required to ensure the ratification of such extraordinary severity. Those suggested in the treatise referred to are, deficiency in filial attention, riotous living, and profligacy generally. A subsequent act of pardon might annul this solemn rejection; but if it were not so avoided, the son was denied by his father while alive, and disinherited afterward. It does not, however, appear that his privileges as to his tribe or the state underwent any alteration. The court of the archon must have been that in which causes of this kind were brought forward, and the rejection would be completed and declared by the voice of the herald. It is probable that an adoptive father also might resort to this remedy against the ingratitude of a son.⁴

ΑΠΟΚΕΙΡΟΤΟΝΕΙΝ (*ἀποκείροτονειν*). (*Vid.* ARCHAETRESIA.)

*ΑΠΟCYNON (*ἀπόκυννον*), a species of plant, which Matthioli informs us he long despaired of discovering; but that, at last, he was presented with a specimen of a plant which he was satisfied was it. He refers to the *Cynanchus erectus*, L. Dodonæus confounds it with the *Periploca*, to which, as Miller remarks, it bears a striking resemblance. Stephens describes it as being frequent in Burgundy, having an ivy leaf, white flower, and fruit like a bean.⁵

1 (Carm. x., 5.)—2. (l. c.)—3. (x., 135.)—4. (Demosth. in Spud., 1029.—Pett., Leg. Att., 235.)—5. (Dioscor., iv., 91.—Adams, Append., s. v.)

APODECTÆ (*ἀποδέκται*) were public officers at Athens, who were introduced by Cleisthenes in the place of the ancient colacretæ (*κολακρέται*). They were ten in number, one for each tribe, and their duty was to collect all the ordinary taxes, and distribute them to the separate branches of the administration which were entitled to them. They had the power to decide causes connected with the subjects under their management; though, if the matters in dispute were of importance, they were obliged to bring them for decision into the ordinary courts.¹

APOGRAPHE (*ἀπογραφή*) is, literally, a "list or register;" but, in the language of the Attic courts, the terms *ἀπογράφειν* and *ἀπογράφεσθαι* had three separate applications: 1. *Ἀπογραφὴ* was used in reference to an accusation in public matters, more particularly when there were several defendants; the denunciation, the bill of indictment, and enumeration of the accused, would in this case be termed apographe, and differ but little, if at all, from the ordinary graphe.² 2. It implied the making of a solemn protest or assertion before a magistrate, to the intent that it might be preserved by him till it was required to be given in evidence.³ 3. It was a specification of property, said to belong to the state, but actually in the possession of a private person; which specification was made with a view to the confiscation of such property to the state.⁴

The last case only requires a more extended illustration. There would be two occasions upon which it would occur: first, when a person held public property without purchase, as an intruder; and, secondly, when the substance of an individual was liable to confiscation in consequence of a judicial award, as in the case of a declared state debtor. If no opposition were offered, the *ἀπογραφὴ* would attain its object, under the care of the magistrate to whose office it was brought; otherwise a public action arose, which is also designated by the same title.

In a cause of the first kind, which is said in some cases to have also borne the name *πόθεν ἔχει τὰ χρήματα καὶ πόσα ταῦτα εἶη*, the claimant against the state had merely to prove his title to the property; and with this we must class the case of a person that impugned the *ἀπογραφὴ*, whereby the substance of another was, or was proposed to be, confiscated, on the ground that he had a loan by way of mortgage or other recognised security upon a portion of it; or that the part in question did not in any way belong to the state debtor, or person so mulcted. This kind of opposition to the *ἀπογραφὴ* is illustrated in the speech of Demosthenes against Nicostratus, in which we learn that Apollodorus had instituted an *ἀπογραφὴ* against Arethusius, for non-payment of a penalty incurred in a former action. Upon this, Nicostratus attacks the description of the property, and maintains that three slaves were wrongly set down in it as belonging to Arethusius, for they were, in fact, his own.

In the second case, the defence could, of course, only proceed upon the alleged illegality of the former penalty; and of this we have an instance in the speech of Lysias for the soldier. There Polyænus had been condemned by the generals to pay a fine for a breach of discipline; and, as he did not pay it within the appointed time, an *ἀπογραφὴ* to the amount of the fine was directed against him, which he opposes, on the ground that the fine was illegal. The *ἀπογραφὴ* might be instituted by an Athenian citizen; but if there were no private prosecutor, it became the duty of the demarchi to proceed with it officially. Sometimes, however, extra-

ordinary commissioners, as the *συλλογείς* and *ζητῆται*, were appointed for the purpose. The suits instituted against the *ἀπογραφὴ* belonged to the jurisdiction of the Eleven, and, for a while, to that of the Syndici.¹ The farther conduct of these causes would, of course, in a great measure, depend upon the claimant being or not being in possession of the proscribed property. In the first case the *ἀπογράφων*, in the second the claimant, would appear in the character of a plaintiff. In a case like that of Nicostratus above cited, the claimant would be obliged to deposit a certain sum, which he forfeited if he lost his cause (*παρακαταβολή*); in all, he would probably be obliged to pay the costs or court fees (*πρυτανεία*) upon the same contingency.

A private citizen, who prosecuted an individual by means of *ἀπογραφὴ*, forfeited a thousand drachmæ if he failed to obtain the votes of one fifth of the dicasts, and reimbursed the defendant his *prytaneia* upon acquittal. In the former case, too, he would probably incur a modified *atimia*, i. e., a restriction from bringing such actions for the future.

ΑΠΟΛΕΪΨΕΩΣ ΔΙΪΚΗ (*ἀπολείψεως δίκη*). The laws of Athens permitted either the husband or the wife to call for and effect a separation. If it originated with the wife, she was said to leave her husband's house (*ἀπολείπειν*); if otherwise, to be dismissed from it (*ἀποπεμπέσθαι*). The dismissal of the wife seems to have required little, if any, formality; but, as in one instance we find that the husband called in witnesses to attest it, we may infer that their presence upon such an occasion was customary, if not necessary.² If, however, it was the wife that first moved in the matter, there were other proceedings prescribed by a law of Solon; and the case of a virtuous matron like Hipparete, driven, by the insulting profligacy of her husband Alcibiades, to appear before the archon sitting in his court, and there relate her wrongs and dictate their enrolment, must have been trying in the extreme. No κύριος was permitted to speak for her upon this occasion; for, until the separation was completed, her husband was her legal protector, and her husband was now her opponent.³ Whether the divorce was voluntary or otherwise, the wife resorted to the male relative, with whom she would have remained if she had never quitted her maiden state; and it then became his duty to receive or recover from her late husband all the property that she had brought to him in acknowledged dowry upon their marriage. If, upon this, both parties were satisfied, the divorce was complete and final; if otherwise, an action *ἀπολείψεως* or *ἀποπέμψεως* would be instituted, as the case might be, by the party opposed to the separation. In this the wife would appear by her representative, as above mentioned; but of the forms of the trial and its results we have no information.

ΑΠΟΛΛΟΝΙΑ (*Ἀπολλώνια*) is the name of a propitiatory festival solemnized at Sicyon in honour of Apollo and Artemis, of which Pausanias* gives the following account: Apollo and Artemis, after the destruction of the Python, had wished to be purified at Sicyon (*Ἐγιάλεα*); but, being driven away by a phantom (whence, in aftertimes, a certain spot in the town was called *ρόθος*), they proceeded to Carmanos in Crete. Upon this, the inhabitants of Sicyon were attacked by a pestilence, and the seers ordered them to appease the deities. Seven boys and the same number of girls were ordered to go to the river Sythas, and bathe in its waters; then to carry the statues of the two deities into the Temple of Peitho, and thence back to that of Apollo. Similar rites, says Pausanias, still continue to be observed; for, at the festival of Apollo, the boys go to the river Sythas, and carry the two deities into

1. (Poilux, Onom., viii., 97.—Etymolog. Mag.—Harpocrat.—Aristot., Pol., vi., 5, 4.—Demosth., c. Timocr., p. 750, 762.—Aesch., c. Ctes., p. 375.)—2. (Andoc., De Myst., 13.—Antiph., De Chorent., 783.)—3. (Demosth. in Phæmipp., 1040.)—4. (Lysias, De Aristoph. Bonis.,

1. (Πρὸς τοῖς συνδικοῖς ἀπογραφὰς ἀπογράφων. Lysurg., quoted by Harpocrat.)—2. (Lysias in Alcib., 541, l. 7.)—3. (Plut. in Alc.)—4. (ii., 7, § 7.)

the Temple of Peitho, and thence back to that of Apollo.

Although festivals under the name of Apollonia, in honour of Apollo, are mentioned in no other place, still it is not improbable that they existed under the same name in other towns of Greece.

ΑΠΟΜΟΣΙΑ (ἀπομωσία) denoted the affidavit of the litigant who impugned the allegations upon which the other party grounded his petition for postponement of the trial. (Vid. ΗΥΡΟΜΟΣΙΑ.) If it were insisted upon, it would lead to a decision of the question of delay by the court before which the petition was preferred.¹

ΑΠΟΠΕΜΨΕΩΣ ΔΙΚΗ. (Vid. ΑΠΟΛΕΙΨΕΩΣ ΔΙΚΗ.)

ΑΡΟΦΑΝ'ΣΙΣ or ΑΡΟΦ'ΑΣΙΣ (ἀρόφανσις or ἀρόφασις) was used in several significations in the Attic courts. I. It signified the proclamation of the decision which the majority of the judges came to at the end of a trial. This proclamation appears to have been made by means of a herald.² II. It was used to signify the day on which the trial took place.³ III. It was employed to indicate the account of a person's property, which was obliged to be given when an ἀντίδοσις was demanded. (Vid. ΑΝΤΙΔΟΣΙΣ.)

ΑΡΟΦΟΡΑ (ἀροφορά), which properly means "produce or profit" of any kind, was used at Athens to signify the profit which accrued to masters from their slaves.⁴ It thus signified the sum which slaves paid to their masters when they laboured on their own account, and the sum which masters received when they let out their slaves on hire, either for the mines or any other kind of labour, and also the money which was paid by the state for the use of the slaves who served in the fleet.⁵ The term ἀροφορά was also applied to the money which was paid by the allied states to Sparta, for the purpose of carrying on the war against the Persians. When Athens acquired the supremacy, these moneys were called φόροι.

ΑΡΟΦΟΡΕΤΑ (ἀροφόρητα) were presents, which were given to friends at the end of an entertainment to take home with them. These presents appear to have been usually given on festival days, especially during the Saturnalia.⁶

ΑΠΟΨΦΡΑΔΕΣ ΉΜΕΡΑΙ (ἀποψφράδες ἡμέραι) were unlucky or unfortunate days, on which no public business, nor any important affairs of any kind, were transacted at Athens. Such were the last three days but one of every month,⁷ and the twenty-fifth day of the month Thargelion, on which the plynteria were celebrated.⁸

*ΑΡΟΡΗΑΙΔΕΣ (ἀρορήαιδες), a species of sea-animal noticed by Aristotle, belonging to the genus *Murex* according to Rondolet and Gesner. Linnaeus calls it *Cochlea arorhais*.⁹

ΑΡΟΡΗΕΨΤΑ (ἀρορήεψτα), literally "things forbidden," has two peculiar but widely different acceptations in the Attic dialect. In one of these it implies contraband goods, an enumeration of which, at the different periods of Athenian history, is given by Böckh,¹⁰ in the other it denotes certain contumelious epithets, from the application of which both the living and the dead were protected by special laws.¹¹ Among these, ἀνρόφονος, πατράλοιας, and μητράλοιας are certainly to be reckoned; and other words, as βίψασπις, though not forbidden *nominatim*

by the law, seem to have been equally actionable. The penalty for using these words was a fine of 500 drachmae,² recoverable in an action for abusive language. (Vid. ΚΑΚΕΓΟΡΙΑΣ.) It is surmised that this fine was incurred by Midias in two actions on the occasion mentioned by Demosthenes.³

ΑΠΟΣΤΑΣ'ΙΟΥ ΔΙΚΗ (ἀποστασίον δίκη). This is the only private suit which came, as far as we know, under the exclusive jurisdiction of the *poenarch*.⁴ It could be brought against none but a freedman (ἀπελεύθερος), and the only prosecutor permitted to appear was the citizen to whom he had been indebted for his liberty, unless this privilege was transmitted to the sons of such former master. The tenour of the accusation was, that there had been a default in duty to the prosecutor; but what attentions might be claimed from the freedman, we are not informed. It is said, however, that the greatest delict of this kind was the selection of a patron (προστάτης) other than the former master. If convicted, the defendant was publicly sold; but if acquitted, the unprosperous connexion ceased forever, and the freedman was at liberty to select any citizen for his patron. The patron could also summarily punish the above-mentioned delinquencies of his freedman by private incarceration without any legal award.⁵

ΑΠΟΣΤΟΛΕΙΣ (ἀποστολεις) were ten public officers at Athens, whose duty was to see that the ships were properly equipped and provided by those who were bound to discharge the trierarchy. They had the power, in certain cases, of imprisoning the trierarchs who neglected to furnish the ships properly;⁶ and they appear to have constituted a board in conjunction with the inspectors of the docks (οἱ τῶν νεωρίων ἐπιμεληταί) for the prosecution of all matters relating to the equipment of the ships.⁷

ΑΠΟΤΗ'ΕΑ (ἀποθήκη) was a place in the upper part of the house, in which the Romans frequently placed the earthen amphorae in which their wines were deposited. This place, which was quite different from the *cella vinaria*, was above the *furnarium*, since it was thought that the passage of the smoke through the room tended greatly to increase the flavour of the wine.⁸

ΑΠΟΤΗΟ'ΣΙΣ (ἀποθέωσις), the enrolment of a mortal among the gods. The mythology of Greece contains numerous instances of the deification of mortals, but in the republican times of Greece we find few examples of such deification. The inhabitants of Amphipolis, however, offered sacrifices to Brasidas after his death;⁹ and the people of Eggeste built a *heroum* to Philippos, and also offered sacrifices to him on account of his personal beauty.¹⁰ In the Greek kingdoms, which arose in the East on the dismemberment of the empire of Alexander, it does not appear to have been uncommon for the successor to the throne to have offered divine honours to the former sovereign. Such an apotheosis of Ptolemy, king of Egypt, is described by Theocritus in his 17th Idyl.¹¹

The term apotheosis, among the Romans, properly signified the elevation of a deceased emperor to divine honours. This practice, which was common upon the death of almost all the emperors, appears to have arisen from the opinion, which was generally entertained among the Romans, that the souls or manes of their ancestors became deities; and, as it was common for children to worship the manes of their fathers, so it was natural for divine

honours to be publicly paid to a deceased emperor, who was regarded as the parent of his country. This apotheosis of an emperor was usually called *consecratio*; and the emperor who received the honour of an apotheosis was usually said in *deorum numerum referri*, or *consecrari*. Romulus is said to have been admitted to divine honours under the name of Quirinus.¹

None of the other Roman kings appears to have received this honour; and also in the republican times we read of no instance of an apotheosis. Julius Cæsar was deified after his death, and games were instituted to his honour by Augustus.² The ceremonies observed on the occasion of an apotheosis have been minutely described by Herodian³ in the following passage: "It is the custom of the Romans to deify those of their emperors who die leaving successors, and this rite they call apotheosis. On this occasion a semblance of mourning, combined with festival and religious observances, is visible throughout the city. The body of the dead they honour after human fashion, with a splendid funeral; and, making a waxen image in all respects resembling him, they expose it to view in the vestibule of the palace, on a lofty ivory couch of great size, spread with cloth of gold. The figure is made pallid, like a sick man. During most of the day senators sit round the bed on the left side, clothed in black, and noble women on the right, clothed in plain white garments, like mourners, wearing no gold or necklaces. These ceremonies continue for seven days; and the physicians severally approach the couch, and, looking on the sick man, say that he grows worse and worse. And when they have made believe that he is dead, the noblest of the equestrian and chosen youths of the senatorial orders take up the couch, and bear it along the Via Sacra, and expose it in the old forum. Platforms, like steps, are built upon each side, on one of which stands a chorus of noble youths, and on the opposite a chorus of women of high rank, who sing hymns and songs of praise to the deceased, modulated in a solemn and mournful strain. Afterward they bear the couch through the city to the Campus Martius, in the broadest part of which a square pile is constructed entirely of logs of timber of the largest size, in the shape of a chamber, filled with fagots, and on the outside adorned with hangings interwoven with gold, and ivory images, and pictures. Upon this a similar but smaller chamber is built, with open doors and windows, and above it a third and fourth, still diminishing to the top, so that one might compare it to the lighthouses which are called Phari. In the second story they place a bed, and collect all sorts of aromatics and incense, and every sort of fragrant fruit, or herb, or juice; for all cities, and nations, and persons of eminence emulate each other in contributing these last gifts in honour of the emperor. And when a vast heap of aromatics is collected, there is a procession of horsemen and of chariots around the pile, with the drivers clothed in robes of office, and wearing masks made to resemble the most distinguished Roman generals and emperors. When all this is done, the others set fire to it on every side, which easily catches hold of the fagots and aromatics; and from the highest and smallest story, as from a pinnacle, an eagle is let loose, to mount into the sky as the fire ascends, which is believed by the Romans to carry the soul of the emperor from earth to heaven, and from that time he is worshipped with the other gods."

In conformity with this account, it is common to see on medals struck in honour of an apotheosis an altar with fire on it, and an eagle, the bird of Jupiter, taking flight into the air. The number of medals of this description is very numerous. We can,

from these medals alone, trace the names of sixty individuals who received the honours of an apotheosis, from the time of Julius Cæsar to that of Constantine the Great. On most of them the word CONSECratio occurs, and on some Greek coins the word ΑΘΙΕΩCΙC. The following woodcut is taken

from an agate, which is supposed to represent the apotheosis of Germanicus.⁴ In his left hand he holds the cornucopia, and Victory is placing a laurel crown upon him.

A very similar representation to the above is found on the triumphal arch of Titus, on which Titus is represented as being carried up to the skies on an eagle.

Many other monuments have come down to us which represent an apotheosis. Of these the most celebrated is the bas-relief in the Townley gallery in the British Museum, which represents the apotheosis of Homer. It is clearly of Roman workmanship, and is supposed to have been executed in the time of the Emperor Claudius. An interesting account of the various explanations which have been proposed of this bas-relief is given in the *Townley Gallery*, published by the Society for the Diffusion of Useful Knowledge, vol. ii., p. 119, &c.

There is a beautiful representation of the apotheosis of Augustus on an onyx-stone in the royal museum at Paris.

The wives, and other female relatives of the emperors, sometimes received the honour of an apotheosis. This was the case with Livia Augusta, with Poppæa the wife of Nero, and with Faustina the wife of Antoninus.⁵

For farther information on this subject, see Mencken, *Disputatio de Consecratione*, &c.; and Schœpflin, *Tractatus de Apotheosi*, &c., Argent., 1730.

APPARITORES, the general name for the public servants of the magistrates at Rome, namely, the ACCENSI, CARNIFEX, COACTORES, INTERPRETES, LICTORES, PRECONES, SCRIBÆ, STATOR, STRATOR, VIATORES, of whom an account is given in separate articles. They were called apparitores because they were at hand to execute the commands of the magistrates.⁶ Their service or attendance was called *apparitio*.⁷ The servants of the military tribunes were also called apparitores. We read that the Emperor Severus forbade the military tribunes to retain the apparitores, whom they were accustomed to have.⁸

Under the emperors, the apparitores were divided into numerous classes, and enjoyed peculiar privileges, of which an account is given in *Just., Cod. 12, tit. 52-59*.

APPELLATIO (GREEK), (ἐθεσις or ἀναδικία). Owing to the constitution of the Athenian tribunals, each of which was generally appropriated to its

particular subjects of cognizance, and, therefore, could not be considered as homogeneous with, or subordinate to, any other, there was little opportunity for bringing appeals, properly so called. It is to be observed, also, that in general a cause was finally and irrevocably decided by the verdict of the dicasts (δικὰ αὐτοτέλης). There were, however, some exceptions, in which appeals and new trials might be resorted to.

A new trial to annul the previous award might be obtained, if the loser could prove that it was not owing to his negligence that judgment had gone by default, or that the dicasts had been deceived by false witnesses. (Compare ΕΦΗΜΟΣ ΔΙΚΗ, ΚΑΚΟΤΕΧΝΙΩΝ, and ΨΕΥΔΟΜΑΡΤΥΡΙΩΝ ΔΙΚΑΙ.) And upon the expulsion of the thirty tyrants, a special law annulled all the judgments that had been given during the usurpation.¹ The peculiar title of the above-mentioned causes was ἀνάδικοι δίκαι, which was also applied to all causes of which the subject-matter was by any means again submitted to the decision of a court.

An appeal from a verdict of the heliasts was allowed only when one of the parties was a citizen of a foreign state, between which and Athens an agreement existed as to the method of settling disputes between individuals of the respective countries (δίκαι ἀπὸ συμβόλων). If such a foreigner lost his cause at Athens, he was permitted to appeal to the proper court in another state, which (ἐκκλητος πόλις) Böckh, Schömann, and Hudtwalcker suppose to have been the native country of the litigant. Platner, on the other hand, arguing from the intention of the regulation, viz., to protect both parties from the partiality of each other's fellow-citizens, contends that some disinterested state would probably be selected for this purpose. The technical words employed upon this occasion are ἐκκαλεῖν, ἐκκαλεῖσθαι, and ἡ ἐκκλητος, the last used as a substantive, probably by the later writers only, for ἔφεσις.² This, as well as the other cases of appeal, are noticed by Pollux³ in the following words: "Ἐφεσις is when one transfers a cause from the arbitrators (διαίτηται), or archons, or men of the township (δημόται), to the dicasts, or from the senate to the assembly of the people, or from the assembly to a court (δικαστήριον), or from the dicasts to a foreign tribunal; and the cause was then termed ἔφεσις. Those suits were also called ἐκκλητοὶ δίκαι. The deposit staked in appeals, which we now call συμβόλιον, is by Aristotle styled παραβολή." The appeals from the diatetæ are generally mentioned by Demosthenes;⁴ and Hudtwalcker supposes that they were allowable in all cases except when the μὴ οὐσα δίκη was resorted to. (Vid. ΔΙΚΕ.)

It is not easy to determine upon what occasions an appeal from the archons could be preferred; for, after the time of Solon, their power of deciding causes had degenerated into the mere presidency of a court (ἡγεμονία δικαστηρίου), and the conduct of the previous examination of causes (ἀνάκρισις). It has been also remarked,⁵ that upon the plaintiff's suit being rejected in this previous examination as unfit to be brought before a court, he would most probably proceed against the archon in the assembly of the people for denial of justice, or would wait till the expiration of his year of office, and attack him when he came to render the account of his conduct in the magistracy (εἰθύναε). An appeal, however, from the archons, as well as from all other officers, was very possible, when they imposed a fine of their own authority, and without the sanction of a court; and it might also take

place when the king archon had by *λύε* sole voice made an award of dues and privileges (γέρα) contested by two priesthoods or sacerdotal races.¹

The appeal from the demotæ would occur when a person, hitherto deemed one of their members, had been declared by them to be an intruder, and no genuine citizen. If the appeal were made, the demotæ appeared by their advocate as plaintiff, and the result was the restitution of the franchise, or thenceforward the slavery of the defendant.

It will have been observed, that in the last three cases, the appeal was made from few, or single, or local judges to the heliasts, who were considered the representatives of the people or country. With respect to the proceedings, no new documents seem to have been added to the contents of the echinus upon an appeal; but the anacrisis would be confined merely to an examination, as far as was necessary, to those documents which had been already put in by the litigants.

There is some obscurity respecting the two next kinds of appeal that are noticed by Pollux. It is conjectured by Schömann² that the appeal from the senate to the people refers to cases which the former were, for various reasons, disinclined to decide, and by Platner,³ that it occurred when the senate was accused of having exceeded its powers.

Upon the appeal from the assembly to court, there is also a difference of opinion between the two last-mentioned critics, Schömann⁴ maintaining that the words of Pollux are to be applied to a voluntary reference of a cause by the assembly to the dicasts, and Platner suggesting the possible case of one that incurred a præjudicium of the assembly against him (προβολή, καταχειροτονία), calling upon a court (δικαστήριον) to give him the opportunity of vindicating himself from a charge that his antagonist declined to follow up. Platner also supposes the case of a magistrate summarily deposed by the assembly, and demanding to prove his innocence before the heliasts.

APPELLATIO (ROMAN). This word, and the corresponding verb *appellare*, are used in the early Roman writers to express the application of an individual to a magistrate, and particularly to a tribune, in order to protect himself from some wrong inflicted, or threatened to be inflicted. It is distinguished from *provocatio*, which in the early writers is used to signify an appeal to the populus in a matter affecting life. It would seem that the *provocatio* was an ancient right of the Roman citizens. The surviving Horatius, who murdered his sister, appealed from the duumviri to the populus.⁵ The decemviri took away the *provocatio*; but it was restored by a lex consularis *provocatio*, and it was at the same time enacted that in future no magistrate should be made from whom there should be no appeal. On this Livy⁶ remarks, that the plebes were now protected by the *provocatio* and the *tribunicium auxilium*; this latter term has reference to the appellatio, properly so called. Appius⁷ applied (*appellavit*) to the tribunes; and when this produced no effect, and he was arrested by a viator, he appealed (*provocavit*). Cicero⁸ appears to allude to the re-establishment of the *provocatio*, which is mentioned by Livy.⁹ The complete phrase to express the *provocatio* is *provocare ad populum*; and the phrase which expresses the appellatio is *appellare ad*, &c. It appears that a person might *appellare* from one magistrate to another of equal rank; and, of course, from an inferior to a superior magistrate, and from one tribune to another.

When the supreme power became vested in the emperors, the terms *provocatio* and *appellatio* lost their original signification. In the Digest,¹⁰ provo-

1. (Lex. Rhet., 219, 19.)—2. (Att. Process, 771.)—3. (i., 427.)—4. (Att. Process, 771.)—5. (Liv., i., 26.)—6. (iii., 55.)—7. (Liv., iii., 56.)—8. (De Orat., ii., 48.)—9. (iii., 55.)—10. (49 tit. 1, De Appellationibus.)

catio and appellatio are used indiscriminately, to express what we call an appeal in civil matters; but provocatio seems so far to have retained its original meaning as to be the only term used for an appeal in criminal matters. The emperor centred in himself both the power of the populus and the veto of the tribunes; but the appeal to him was properly in the last resort. Appellatio among the Roman jurists, then, signifies an application for redress from the decision of an inferior to a superior, on the ground of wrong decision, or other sufficient ground. According to Ulpian,¹ appeals were common among the Romans, "on account of the injustice or ignorance of those who had to decide (*judicantes*), though sometimes an appeal alters a proper decision, as it is not a necessary consequence that he who gives the last gives also the best decision." This remark must be taken in connexion with the Roman system of procedure, by which such matters were referred to a *judex* for his decision, after the pleadings had brought the matter in dispute to an issue. From the emperor himself there was, of course, no appeal; and, by a constitution of Hadrian, there was no appeal from the senate to the emperor. The emperor, in appointing a *judex*, might exclude all appeal, and make the decision of the *judex* final. The appeal, or *libellus appellatorius*, showed who was the appellant, against whom the appeal was, and what was the judgment appealed from.

Appellatio also means to summon a party before a *judex*, or to call upon him to perform something that he has undertaken to do.² The debtor who was summoned (*appellatus*) by his creditor, and obeyed the summons, was said *respondere*.

APPLICATIONIS JUS. (*Vid.* BANISHMENT.)

APPULEIA LEX. (*Vid.* MAJESTAS.)

APRILIS. (*Vid.* CALENDAR, ROMAN.)

ΑΠΡΟΣΤΑΣΙΟΥ ΓΡΑΦΗ (*ἀπροστασίον γραφή*), an action brought against those *metœci*, or resident aliens, who had neglected to provide themselves with a patron (*προστάτης*), or exercised the rights of full citizens, or did not pay the *μετοίκιον*, a tax of twelve drachmæ exacted from resident aliens. Persons convicted under this indictment forfeited the protection of the state, and were sold as slaves.³

*ΑΠΥΣ (*ἄπυς*), a species of bird, called also *κύβηλλος*.⁴ It is thought to have been the same with the Swift, or *Hirundo apus*, L. Pennant, however, contends that the Cypselus of Aristotle and Pliny was the *Procellaria pelagica*, or *Stormy Petrel*.⁵

AQUÆ DUCTUS usually signifies an artificial channel or water-course, by which a supply of water is brought from a considerable distance upon an inclined plane raised on arches, and carried across valleys and uneven country, and occasionally under ground, where hills or rocks intervene.

As nearly all the ancient aqueducts now remaining are of Roman construction, it has been generally imagined that works of this description were entirely unknown to the Greeks. This, however, is an error, since some are mentioned by Pausanias and others, though too briefly to enable us to judge of their particular construction; whether they consisted chiefly of subterranean channels bored through hills, or, if not, by what means they were carried across valleys, since the use of the arch, which is said to have been unknown to the Greeks, was indispensable for such a purpose. Probably those which have been recorded—such as that built by Pisistratus at Athens, that at Megara, and the celebrated one of Polycrates at Samos⁶—were rather conduits than ranges of building like the Roman ones. Of the latter, few were constructed in the times of the Republic. We are informed by Fron-

tinus that it was not until about B.C. 313 that any were erected, the inhabitants supplying themselves up to that time with water from the Tiber, or making use of cisterns and springs. The first aqueduct was begun by Appius Claudius the Censor, and was named, after him, the *Aqua Appia*.¹ In this aqueduct the water was conveyed from the distance of between seven and eight miles from the city, almost entirely under ground, since, out of 11,190 passus, its entire extent, the water was above ground only 60 passus before it reached the Porta Capena, and then was only partly carried on arches. Remains of this work no longer exist.

Forty years afterward (B.C. 273) a second aqueduct was begun by M. Curius Dentatus, by which the water was brought from the river Anio, 20 miles above Tibur (now Tivoli), making an extent of 43,000 passus, of which only 702 were above ground and upon arches. This was the one afterward known by the name of *Anio Vetus*, in order to distinguish it from another aqueduct brought from the same river, and therefore called *Anio Novus*. Of the Anio Vetus considerable remains may yet be traced, both in the neighbourhood of Tivoli and in the vicinity of the present Porta Maggiore at Rome. It was constructed of blocks of Peperino stone, and the water-course was lined with a thick coating of cement.

In B.C. 179, the censors M. Æmilius Lepidus and M. Flaccus Nobilior proposed that another aqueduct should be built; but the scheme was defeated, in consequence of Licinius Crassus refusing to let it be carried through his lands.² A more abundant supply of water being found indispensable, particularly as that furnished by the Anio Vetus was of such bad quality as to be almost unfit for drinking, the senate commissioned Quintus Marcius Rex, the prætor, who had superintended the repairs of the two aqueducts already built, to undertake a third, which was called, after him, the *Aqua Marcia*.³ This was brought from Sublaqueum (Subiaco) along an extent of 61,710 passus; viz., 54,267 under ground, and 7443 above ground, and chiefly on arches; and was of such elevation that water could be supplied from it to the loftiest part of the Capitoline Mount. Of the arches of this aqueduct a considerable number are yet standing. Of those, likewise, called the *Aqua Tepula* (B.C. 127), and the *Aqua Julia* (B.C. 35), which are next in point of date, remains are still existing; and in the vicinity of the city, these two aqueducts and the Marcia were all united in one line of structure, forming three separate water-courses, one above the other, the lowermost of which formed the channel of the Aqua Marcia, and the uppermost that of the Aqua Julia, and they discharged themselves into one reservoir in common. The Aqua Julia was erected by M. Agrippa during his ædileship, who, besides repairing both the Anio Vetus and the Aqua Marcia, supplied the city with seven hundred wells (*laci*), one hundred and fifty springs or fountains, and one hundred and thirty reservoirs.

Besides repairing and enlarging the Aqua Marcia, and, by turning a new stream into it, increasing its supply to double what it formerly had been, Augustus built the aqueduct called *Alsietina*, sometimes called *Augusta* after its founder. The water furnished by it was brought from the Lake of Alsietinus, and was of such bad quality as to be scarcely fit for drinking; on which account it has been supposed that Augustus intended it chiefly for filling his naumachia, which required more water than could be spared from the other aqueducts, its basin being 1800 feet in length and 1200 in breadth. It was in the reign, too, of this emperor that M. Agrippa built the aqueduct called the *Aqua Virgo*, which

1. (Dig. 49, tit. 1.)—2. (Cic., ad Att., i. 8.)—3. (Phot., p. 478, Pors.—Bekker, Anecd. Gr., p. 201, 434, 440.)—4. (Aristot., H. A., ix. 21.)—5. (British Zoology, p. 354.)—6. (Herod., iii. 60.)

1. (Liv., ix., 29.—Diod. Sic., xx., 36.)—2. (Liv., xl., 51.)—3. (Plin., xxxvi., 24, § 9.)

name it is said to have obtained because the spring which supplied it was first pointed out by a girl to some soldiers who were in search of water. Pliny, however, gives a different origin to the name.¹ Its length was 14,105 passus, of which 12,865 were under ground; and, for some part of its extent above ground, it was decorated with columns and statues. This aquæduct still exists entire, having been restored by Nicholas V., although not completely until the pontificate of Pius IV., 1568, and it still bears the name of *Aqua Vergine*. A few years later, a second aquæduct was built by Augustus, for the purpose of supplying the Aqua Marcia in times of drought.

The two gigantic works of the Emperor Claudius, viz., the Aqua Claudia and Anio Novus, doubled the former supply of water; and although none of the later aquæducts rivalled the Marcia in the vastness and solidity of its constructions, they were of considerably greater extent. The Claudia had been begun by Caligula in the year A.D. 38, but was completed by his successor, and was, although less copious in its supply, not at all inferior to the Marcia in the excellence of its water. The other was, if not so celebrated for the quality of the water itself, remarkable for the quantity which it conveyed to the city, it being in that respect the most copious of them all. Besides which, it was by far the grandest in point of architectural effect, inasmuch as it presented, for about the extent of six miles before it reached the city, a continuous range of exceedingly lofty structure, the arches being in some places 109 feet high. It was much more elevated than any of the other aquæducts, and in one part of its course was carried over the Claudia. Nero afterward made additions to this vast work, by continuing it as far as Mount Cælius, where was a temple erected to Claudius.

The *Aqua Trajana*, which was the work of the emperor whose name it bears, and was completed A.D. 111, was not so much an entirely new and distinct aquæduct as a branch of the Anio Novus brought from Sublaqueum, where it was supplied by a spring of purer water than that of the Anio. It was in the time of this emperor, and of his predecessor Nerva, that the superintendence of all the aquæducts was held by Sextus Julius Frontinus, whose treatise *De Aquæductibus* has supplied us with the fullest information now to be obtained relative to their history and construction.

In addition to the aquæducts which have been already mentioned, there were others of later date: namely, the *Antoniana*, A.D. 212; the *Alexandrina*, A.D. 230; and the *Jovia*, A.D. 300; but these seem to have been of comparatively little note, nor have we any particular account of them.

The magnificence displayed by the Romans in their public works of this class was by no means confined to the capital; for aquæducts more or less stupendous were constructed by them in various and even very remote parts of the empire—at Nicomedia, Ephesus, Smyrna, Alexandria, Syracuse, Metz, Nismes (the Pont du Gard), Lyons, Evora, Merida, and Segovia. That at Evora, which was built by Quintus Sertorius, is still in good preservation; and at its termination in the city has a very elegant *castellum* in two stories, the lower one of which has Ionic columns. Merida in Spain, the Augusta Emerita of the Romans, who established a colony there in the time of Augustus, has among its other antiquities the remains of two aquæducts, of one of which thirty-seven piers are standing, with three tiers of arches; while of the other there are only two which form part of the original constructions, the rest being modern. But that of Segovia, for which some Spanish writers have claimed an antiquity anterior to the sway of the Romans in Spain, is one of the most perfect and magnificent

works of the kind anywhere remaining. It is entirely of stone, and of great solidity, the piers being eight feet wide and eleven in depth; and where it traverses a part of the city, the height is upward of a hundred feet, and it has two tiers of arches, the lowermost of which are exceedingly lofty.

After this historical notice of some of the principal aquæducts both at Rome and in the provinces, we now proceed to give some general account of their construction. Before the mouth or opening into the aquæduct was, where requisite, a large basin (*piscina limosa*), in which the water was collected, in order that it might first deposit its impurities; and similar reservoirs were formed at intervals along its course. The *specus*, or water-channel, was formed either of stone or brick coated with cement, and was arched over at top, in order to exclude the sun, on which account there were apertures or vent-holes at certain distances; or where two or more such channels were carried one above the other, the vent-holes of the lower ones were formed in their sides. The water, however, besides flowing through the *specus*, passed also through pipes either of lead or burned earth (*terra-cotta*), which latter were used not only on account of their greater cheapness, but as less prejudicial to the freshness and salubrity of the water. As far as was practicable, aquæducts were carried in a direct line; yet they frequently made considerable turns and windings in their course, either to avoid boring through hills, where that would have been attended with too much expense, or else to avoid, not only very deep valleys, but soft and marshy ground.

In every aquæduct, the *castella* or reservoirs were very important parts of the construction; and besides the principal ones—that at its mouth and that at its termination—there were usually intermediate ones at certain distances along its course, both in order that the water might deposit in them any remaining sediment, and that the whole might be more easily superintended and kept in repair, a defect between any two such points being readily detected. Besides which, these castella were serviceable, inasmuch as they furnished water for the irrigation of fields and gardens, &c. The principal castellum or reservoir was that in which the aquæduct terminated, and whence the water was conveyed by different branches and pipes to various parts of the city. This far exceeded any of the others, not in magnitude alone, but in solidity of construction and grandeur of architecture. The remains of a work of this kind still exist in what are called the *Nove Sale*, on the Esquiline Hill at Rome; while the *Piscina Mirabile*, near Cuma, is still more interesting and remarkable, being a stupendous construction about 200 feet in length by 130 in breadth, whose vaulted roof rests upon forty-eight immense pillars, disposed in four rows, so as to form five aisles within the edifice, and sixty arches.

Besides the principal castellum belonging to each aquæduct (excepting the Alstetina, whose water was conveyed at once to the baths), there were a number of smaller ones—altogether, it has been computed, 247—in the different regions of the city, as reservoirs for their respective neighbourhoods.

The declivity of an aquæduct (*libramentum aquæ*) was at least the fourth of an inch in every 100 feet,¹ or, according to Vitruvius,² half a foot.

During the times of the Republic, the censors and ædiles had the superintendence of the aquæducts; but under the emperors particular officers were appointed for that purpose, under the title of *cuvatores*, or *præfecti aquarum*. These officers were first created by Augustus,³ and were invested with considerable authority. They were attended outside the city by two lictors, three public slaves, a secretary, and other attendants.

In the time of Nerva and Trajan, about seven

1. (H. N., xxxi., 25.)

1. (Plin., H. N., xxxi., 31.)—2. (viii., 7.)—3. (Suet. Aug., 37.)

employed architects and others were constantly employed, under the orders of the curatores aquarum, in attending to the aqueducts. The officers who had charge of these works were, 1. The *villici*, whose duty it was to attend to the aqueducts in their course to the city. 2. The *castellarii*, who had the superintendence of all the castella both within and without the city. 3. The *circutores*, so called because they had to go from post to post, to examine into the state of the works, and also to keep watch over the labourers employed upon them. 4. The *silicarii*, or paviours. 5. The *lectores*, or plasterers. All these officers appear to have been included under the general term of *aquarii*.¹

AQUÆ DUCTUS. (Vid. SERVITUDES.)

AQUÆ ET IGNIS INTERDICTIO. (Vid. BANISHMENT.)

AQUÆ HAUSTUS. (Vid. SERVITUDES.)

AQUÆ PLUVIÆ ARCENDÆ ACTIO. That water was called *aqua pluvia* which fell from the clouds, and the prevention of injury to land from such water was the object of this action. The action *aquæ pluviae* was allowed between the owners of adjoining land, and might be maintained either by the owner of the higher land against the owner of the lower land, in case the latter, by anything done to his land, prevented the water from flowing naturally from the higher to the lower land, or by the owner of the lower land against the owner of the higher land, in case the latter did anything to his land by which the water flowed from it into the lower land in a different way from what it naturally would. In the absence of any special custom or law to the contrary, the lower land was subject to receive the water which flowed naturally from the upper land; and this rule of law was thus expressed: *aqua inferior superiori servit*. The fertilizing materials carried down to the lower land were considered as an ample compensation for any damage which it might sustain from the water. Many difficult questions occurred in the application to practice of the general rules of law as to *aqua pluvia*; and, among others, this question: What things done by the owners of the land were to be considered as preventing or altering the natural flow of the waters? The conclusion of Ulpian is, that acts done to the land for the purposes of cultivation were not to be considered as acts interfering with the natural flow of the waters. Water which increased from the falling of rain, or in consequence of rain changed its colour, was considered within the definition of *aqua pluvia*; for it was not necessary that the water in question should be only rain-water, it was sufficient if there was any rain-water in it. Thus, when water naturally flowed from a pond or marsh, and a person did something to exclude such water from coming on his land, if such marsh received any increase from rain-water, and so injured the land of a neighbour, the person would be compelled by this action to remove the obstacle which he had created to the free passage of the water.

This action was allowed for the special protection of land (*ager*): if the water injured a town or a building, the case then belonged to *flumina* and *stillicidia*. The action was only allowed to prevent damage, and, therefore, a person could not have this remedy against his neighbour, who did anything to his own land by which he stopped the water which would otherwise flow to his neighbour's land, and be profitable to it. The title in the Digest contains many curious cases, and the whole is well worth perusal.²

AQUARIUM were slaves who carried water for bathing, &c., into the female apartments.³ The *aquarii* were also public officers who attended to the aqueducts. (Vid. AQUÆ DUCTUS.)

1. (Cic., ad Fam., viii., 6.—Cod. xii., tit. 42 or 43, s. 10.)—2. (Dig. 30, tit. 3.—Cic., pro Muræna, c. 10.—Topic., c. 9.—Boethius, Comment. in Cic., Top., iv., c. 9.)—3. (Juv., vi., 332.)

*AQUILA. I. A Roman military standard. (Vid. SIGNA MILITARIA.) II. The Eagle. The ancient naturalists have described several species. Aristotle divided the *Falconidae* into 'Aerol' (Eagles), 'Ieraptes' (Hawks), and 'Iktivoi' (Kites), with many subdivisions. M. Vigors is of opinion, that the division 'Ieraptes' (Hierax) of Aristotle comprises all the *Falconidae* of Vigors which belong to the stirpes or sub-families of *Hawks*, *Falcons*, and *Buzzards*. Pliny separates the group into *Aquila* (Eagles) and *Accipitres*, a general term comprising, as used by him the rest of the *Falconidae*. The subdivisions of both Aristotle and Pliny do not differ much from those of some of the modern zoologists.—We will now proceed to particulars. 1. The *μόρφνος*, called also *πλάγγος* or *νητοφόνος* by Aristotle,¹ would appear to be that species of *Falco* which bears the English names of *Bald Buzzard* and *Osprey*, namely, the *Falco Haliaetus*, L., or *Pandion Haliaetus*, Savigny.² It would seem to be the *περκνός* of Homer.³ 2. The *περκνόπτερος*, said by Aristotle to resemble the Vulture, was most probably that species of *Vulture* which gets the name of *Vulturine Eagle*. Its French name, according to Belon, is *Boudrée*. It is called also *γρηναίετος* and *δρεπέλαρος* by Aristotle. 3. The *άλιαίετος* of Aristotle would appear to be the Osprey.⁴ This bird is the "Nisus" of Virgil and Ovid. Naturalists have recently adopted the opinion that the Osprey is the same as the Sea-eagle. Its scientific name is *Pandion Haliaetus*, Savigny. 4. The *μελαναίετος* of Aristotle, called also *λαγυφόμος* by him, is referred by Hardouin⁵ to the small Black Eagle, which the late authorities on Ornithology hold to be only a variety of the Golden Eagle, or *Aquila Chrysaetos*. It is deserving of remark, however, that the learned Gesner seems disposed to refer the *μελαναίετος* to the Erne, or *Aquila Albicilla* of late ornithologists. 5. The *φύνη* of Aristotle is undoubtedly the *Ossifraga* of Pliny, and the *φύνις* of Dioscorides.⁶ It is the *Falco Ossifragus*, L. 6. The *πύγαρος* is supposed by Hardouin to be the eagle called *Jean le blanc*. Turner suggests that it may have been the Erne, and Elliot the Ring-tail. All point to the same bird, namely, the *Haliaetus Albicilla*, Savigny; for the Ring-tail is now held to be merely a variety of the Erne. The term *πύγαρος* signifies "White-tailed." 7. The species called *γρηναίος* by Aristotle is confidently referred by Hardouin to the Golden Eagle, which, as Buffon remarks, is the noblest and largest of the genus. It is the *Aquila Chrysaetos*, Vigors.⁷

AQUILLIA LEX. (Vid. DAMNUM.)

ARA (Βωμός, θυστήριον), an altar.

Ara was a general term denoting any structure elevated above the ground, and used to receive upon it offerings made to the gods. *Allare*, probably contracted from *alta ara*, was properly restricted to the larger, higher, and more expensive structures. Hence Menalcas,⁸ proposing to erect four altars, viz., two to Daphnis, and two, which were to be high altars, to Apollo, says, "En quattuor aras: Ecce duas tibi, Daphni; duas, altaria, Phæbo." Servius, in his commentary on the passage, observes, that *altaria* were erected only in honour of the superior divinities, whereas *aræ* were consecrated not only to them, but also to the inferior, to heroes, and to demigods. On the other hand, sacrifices were offered to the infernal gods, not upon altars, but in cavities (*scrobes*, *scrobiculi*, βάθροι, λάκκοι) dug in the ground.⁹ Agreeably to this distinction, we find that in some cases an altar was erected upon an *ara*, or even several high altars upon one of inferior elevation.

1. (H. A., ix., 22.)—2. (Willoughby's Ornithology, lib. ii., art. 5.)—3. (Il., xxiv., 316.)—4. (Gesner, de Avibus.—Brooke's Nat. Hist., vol. ii., p. 4.)—5. (in Plin., H. N., x., 1.)—6. (Il., 58.)—7. (Adams, Append., s. v.—8. (Virg., Eclog., v. 65.)—9. (Festus, s. v. Altaria.)

the ancients almost every religious act was accompanied by sacrifice, it was often necessary to provide altars on the spur of the occasion, and they were then constructed of earth, rods, or stones, collected on the spot. Thus, "Erexit subitas congestu cespitis aras."¹ Also, when Æneas and Turnus are preparing to fight in single combat, wishing to bind themselves by a solemn oath, they erect *aras gramineas*.² Availing himself of this practice, Telamon adroitly warded off the effects of the jealousy of Hercules, whose rage he had excited by making the first breach in the walls of Ilium, and thus appearing to surpass his companion in glory. Pursued by Hercules, who had already drawn his sword, and seeing his danger, he set about collecting the scattered stones; and when Hercules, on coming up, asked what he was about, he answered that he was preparing an altar to Ἡρακλῆς Καλλινίκος, and thus saved his life.³

When the occasion was not sudden, and especially if the altars were required to be of a considerable size, they were built with regular courses of masonry or brickwork, as is clearly shown in several examples on the column of Trajan at Rome. See the left-hand figure in the woodcut annexed.

The first deviation from this absolute simplicity of form consisted in the addition of a base (βάσις, κρητὶς), and of a corresponding projection at the top, the latter (ἐσχάρις, βωμὸς ἐσχάρα⁴) being intended to hold the fire and the objects offered in sacrifice. These two parts are so common as to be almost uniform types of the form of an altar, and will be found in all the figures inserted underneath.

The altar on which the gods swore, when they leagued with Jupiter against the Titans, became a constellation consisting of four stars, two on the fireplace and two on the base.⁵

It appears, also, that a movable pan or brazier (ἐπιπυρον) was sometimes used to hold the fire.⁶

Altars were either square or round. The latter form, which was the less common of the two, is exemplified in the following figures:

That on the left hand is from a painting at Herculanæum. The altar is represented as dedicated to the genius of some spot on Mount Vesuvius. He appears in the form of a serpent,⁷ and is partaking of the figs and fir-cones which have been offered to him on the altar. The right-hand figure

represents an altar, which was found, with three others, at Antium.¹ It bears the inscription *ARAVENTORVM*. On it is sculptured the rostrum of a ship, and beneath this is a figure emblematic of the wind. He floats in free space, blows a shell, and wears a chlamys, which is uplifted by the breeze. In the second altar the *ἐσχάρις* is distinguished by being hollow. Indeed altars, such as that on the left hand, were rather designed for sacrifices of fruits, or other gifts which were offered without fire, and they were therefore called *ἄπυροι*.

When the altars were prepared for sacrifice, they were commonly decorated with garlands or festoons. The leaves, flowers, and fruits of which these were composed were of certain kinds, which were considered as consecrated to such uses, and were called *verbenæ*.²

Theocritus³ enumerates the three following, viz., the oak, the ivy, and the asphodel, as having been used on a particular occasion for this purpose.⁴

The altar represented in the next woodcut shows the manner in which the festoon of *verbenæ* was suspended. Other ancient sculptures prove that fillets were also used, partly because they were themselves ornamental, and partly for the purpose of attaching the festoons to the altar. Hence we read in Virgil,

"Effer aquam, et molli cinge hæc allaria valla,
Verbenasque adole pingues, et mascula tura."⁵

Altars erected to the manes were decked with dark blue fillets and branches of cypress.⁶ Many altars which are still preserved have fillets, festoons, and garlands sculptured upon the marble, being designed to imitate the recent and real decorations.

Besides the imitation of these ornaments, the art of the sculptor was also exercised in representing on the sides of altars the implements of sacrifice, the animals which were offered, or which were regarded as sacred to the respective deities, and the various attributes and emblems of those deities. We see, for example, on altars dedicated to Jupiter, the eagle and the thunderbolt; to Apollo, the stag, the raven, the laurel, the lyre or cithara; to Bacchus, the panther, the thyrus, the ivy, Silenus, bacchanals; to Venus, the dove, the myrtle; to Hercules, the poplar, the club, the labours of Hercules; to Sylvanus, the hog, the lamb, the cypress. Strabo says⁷ that the principal altar of the Temple of Diana at Ephesus was almost covered with the works of Praxiteles. Some of the altars which still remain are wrought with admirable taste and elegance. We give, as a specimen of the elaborate style, the outline of an Etruscan altar, in contrast with the unadorned altar in our first woodcut.

Besides symbolical and decorative sculptures in bas-relief, ancient altars frequently present inscriptions, mentioning the gods to whom, and the worshippers by whom, they were erected and dedicated. For example, an altar in Montfaucon,⁸ decorated with an eagle which grasps the thunderbolt, and with a club, encircled with a fillet, at each of the four corners, bears the following inscription, included within a wreath of leaves:

IOVI
OPT. MAX.
ET HERCVLI
INVICTO
C. TVTICANVS
ALLIAT.
EX VOTO

We select this example, because it illustrates the fact that the same altar was often erected in honour

1. (Lucan, ix., 988.)—2. (Virg., Æn., xii., 118.)—3. (Apollod., ii., vi., 4.—Vid. etiam Hor., Carm. i., xix., 13.)—4. (Euphr., Andr., 1115.)—5. (xiv., i., 23.)—8. (Ant. Expl., ii., pl. 96.)

of more than one divinity. It was, however, necessary that such divinities should have something in common, so that they might be properly associated; and deities having this relation to one another were called *Dii communes*, θεοὶ συνῳδοί, ὁμοῳδοί,¹ or κοινῳδοί.² At Olympia there were six altars, each sacred to two divinities, so as to make twelve gods in all.³

On the other hand, we find that it was not unusual to erect two or more altars to the same divinity, on the same spot and on the same occasion. We have already produced an example of this from Virgil's fifth eclogue; and the very same expression is in part repeated by him in the *Æneid*: "*En quatuor aras—Neptuno.*"⁴ In Theocritus,⁵ three bacchantes, having collected verbenæ, as we have before stated, erect twelve altars, viz., three to Semele and nine to Dionysus. But the most remarkable instances of this kind occurred when hecatombs were sacrificed; for it was then necessary that the number of altars should correspond to the multitude of the victims. A ceremony of this description, recorded by Julius Capitolinus, seems to have been designed in imitation of the practice of the heroic ages. He says that, when the head of the tyrant Maximin was brought to Rome, Balbinus, to express the general joy, built in one place 100 altars of turf (*aras cespitias*), on which were slain 100 hogs and 100 sheep. But a more distinct exhibition of the scene is given in the *Iliad*,⁶ when the Greeks assembled at Aulis present a hecatomb. A beautiful plane-tree is seen beside a clear fountain; the chieftains and the priests are assembled under its wide-spreading branches; the spot is encircled with altars (ἄμφω περὶ κρήνην), and the victims are slain along the altars (κατὰ βωμούς).⁷

Vitruvius⁸ directs that altars, though differing in elevation according to the rank of the divinities to whom they were erected, should always be lower than the statues (*simulacra*) before which they were placed. Of the application of this rule we have an example in a medallion on the arch of Constantine at Rome. See the annexed woodcut.

We see here Apollo with some of his attributes, viz., the stag, the tripod, the cithara, and plectrum.

The altar is about half as high as the pedestal of the statue, placed immediately in front of it, and adorned with a wreath of verbenæ. The statue stands in an ἄλσος, or grove of laurel. One of the sacrificers, probably the Emperor Trajan, appears to be taking an oath, which he expresses by lifting up his right hand and touching the altar with his spear. This sculpture also shows the appearance of the tripods, which were frequently used instead of altars, and which are explained under the article ΤΡΙΠΟΣ.

We have already had occasion to advert, in several instances, to the practice of building altars in the open air wherever the occasion might require, as on the side of a mountain, on the shore of the sea, or in a sacred grove. But those altars which were intended to be permanent, and which were, consequently, constructed with a greater expense of labour and of skill, belonged to temples; and they were erected either before the temple, as shown in the woodcut in the article ΑΝΤΕ, and beautifully exemplified in the remains of temples at Pompeii,¹ or within the cella of the temple, and principally before the statue of the divinity to whom it was dedicated. The altars in the area before the temple (βωμοὶ προναοί) were altars of burnt-offerings, at which animal sacrifices (*victimæ*, σφάγια, ιερεῖα) were presented: only incense was burned, or cakes and bloodless sacrifices (θυσίματα, θύα) offered on the altars within the building.

Altars were also placed before the doors of private houses. In the *Andria* of Terence,² a woman is asked to take the verbenæ from an altar so situated, in order to lay a child upon them before the door of the house. A large altar to Zeus the Protector stood in the open court before the door of Priam's palace in Ilium.³ Hither, according to the poets, Priam, Hecuba, and their daughters fled when the citadel was taken; and hence they were dragged with impious violence by Neoptolemus, the son of Achilles, and some of them put to death. All altars were places of refuge. The supplicants were considered as placing themselves under the protection of the deities to whom the altars were consecrated; and violence to the unfortunate, even to slaves and criminals, in such circumstances, was regarded as violence towards the deities themselves.

As in the instance already produced, in which the gods conspired against the Titans, men likewise were accustomed to make solemn treaties and covenants, by taking oaths at altars. Thus Virgil represents the kings entering into a league before the altar of Jupiter, by immolating a sow, while they hold the pateras for libation in their hands.⁴ The story of Hannibal's oath at the altar, when a boy, is well known.

Another practice, often alluded to, was that of touching altars in the act of prayer.⁵ Marriages also were solemnized at the altars; and, indeed, for the obvious reason, that religious acts were almost universally accompanied by sacrifice as an essential part of them, all engagements which could be made more binding by sacred considerations were often formed between the parties before an altar.

*ARABICA, called also *Arabicus lapis*, and *Arabica gemma*. It is spoken of by Dioscorides and Galen, and was probably a fine white marble.⁶

*ARACHNE (ἀράχνη or -ης), the Spider, or genus *Aranea*, L. Several species are mentioned by Aristotle,⁷ but so briefly that they cannot be satisfactorily ascertained. Dioscorides describes two species by the names of ὄλκος and λύκος.⁸ The former of these, according to Sprengel, is the *Aranea retiaris*, and the

1. (Thucyd., iii., 59.)—2. (Æschyl., Suppl., 225.)—3. (Scho-liast in Pind., Olymp., v., 10.)—4. (Æn., v., 639.)—5. (l. c.)—6. (ii., 305–307.)—7. (Compare Num., xxiii., 1, “seven al-tars.”)—8. (l. c.)

1. (Gell's Pompeiana, 1819, Plates 43, 62, 68.)—2. (Æschyl., Suppl., 497.)—3. (l. c.)—4. (Virg., Æn., ii., 500–525.—Heyne, Excurs., ad loc.)—5. (Æn., vii., 640.—Compare the last wood-cut, and Æn., xii., 201.)—6. (Zoon., Carm. III., xxiii., 17.)—7. (Dioscor., v., 149.—Plin., H. 16 xxxvi., 41.)—8. (H. A., ii., 26.)—9. (ii., 65.)

latter the *Aranea domestica*. Sprengel is farther of opinion that no ancient author has noticed the *Aranea Tarantula*. But *vid.* PHALANGION.¹

*ARACHID'NA (ἀράχιδνα), a species of Pea, the same, according to Stackhouse and Sprengel, with the *Lathyrus amphicarpos*. Stackhouse proposes to read ἀράχιδνα in the text of Theophrastus.²

*AR'ACUS (ἀράκος), a plant, which Sprengel, in the first edition of his R. H. H., marks as the *Lathyrus tuberosus*; but in his second, he inclines to the *Pisum arvense*. Stackhouse hesitates to acknowledging it as the *Vicia cracca*, or Tufted Vetch.³

*AR'ATNEA. (*Vid.* ARACHNE.)

ARAT'ETIA (ἀράτεια), two sacrifices offered every year at Sicyon in honour of Aratus, the great general of the Achæans, who, after his death, was honoured by his countrymen as a hero, in consequence of the command of an oracle.⁴ The full account of the two festive days is preserved in Plutarch's Life of Aratus.⁵ The Sicyonians, says he, offer to Aratus two sacrifices every year, the one on the day on which he delivered his native town from tyranny, which is the fifth of the month of Daisius, the same which the Athenians call Anthesterion; and this sacrifice they call *σάκρια*. The other they celebrate in the month in which they believe that he was born. On the first, the priest of Zeus offered the sacrifices; on the second, the priest of Aratus, wearing a white riband with purple spots in the centre, songs being sung to the guitar by the actors of the stage. The public teacher (γυμνασιάρχος) led his boys and youths in procession, probably to the heroum of Aratus, followed by the senators adorned with garlands, after whom came those citizens who wished to join the procession. The Sicyonians still observe, he adds, some parts of the solemnity, but the principal honours have been abolished by time and other circumstances.⁶

ARAT'RUM (ἀράτρον), a plough.

The Greeks appear to have had, from the earliest times, diversities in the fashion of their ploughs. Hesiod⁷ advises the farmer to have always two ploughs, so that if one broke, the other might be ready for use; and they were to be of two kinds, the one called *αὐτόγρονον*, because in it the plough-tail (γῆς, *buris*, *burra*) was of the same piece of timber with the share-beam (ἔλνυα, *dens*, *dentale*) and the pole (βόμος, *ιστροβόος*, *temo*); and the other called *πηκτόν*, i. e., compacted, because in it the three above-mentioned parts, which were, moreover, to be of three different kinds of timber, were adjusted to one another, and fastened together by means of nails (γύφοισιν⁸).

The method of forming a plough of the former kind was by taking a young tree with two branches proceeding from its trunk in opposite directions, so that while in ploughing the trunk was made to serve for the pole, one of the two branches stood upward and became the tail, and the other penetrated the ground, and, being covered sometimes with bronze or iron, fulfilled the purpose of a share. This form is exhibited in the uppermost figure of the annexed woodcut, taken from a medal. The next figure shows the plough still used in Mysia, as described and delineated by a late traveller in that country, Mr. C. Fellows. It is a little more complicated than the first plough, inasmuch as it consists of two pieces of timber instead of one, a handle (ἐχέρλη, *stiva*) being inserted into the larger piece at one side of it. Mr. Fellows⁹ observes that each portion of this instrument is still called by its ancient Greek name, and adds, that it seems suited only to the light soil prevailing where he observed it; that it is

held by one hand only; that the form of the share (*ἄντις*) varies; and that the plough is frequently used without any share. "It is drawn by two oxen, yoked from the pole, and guided by a long reed or thin stick (*κάρπυρος*), which has a spud or scraper at the end for cleaning the share." See the lowest figure in the woodcut.

Another recent traveller in Greece gives the following account of the plough which he saw in that country, a description approaching still nearer to the *πηκτόν ἀράτρον* of Homer and Hesiod. "It is composed," says he, "of two curved pieces of wood, one longer than the other. The long piece forms the pole, and one end of it being joined to the other piece about a foot from the bottom, divides it into a share, which is cased with iron, and a handle. The share is, besides, attached to the pole by a short crossbar of wood. Two oxen, with no other harness than yokes, are joined to the pole, and driven by the ploughman, who holds the handle in his left hand, and the goad in his right."¹ A beautiful view of the plain of Elis, representing this plough in use, is given by Mr. S. Stanhope in his *Olympia*.²

The yoke and pole used anciently in ploughing did not differ from those employed for draught in general. Consequently, they do not here require any farther description. (*Vid.* JUGUM.)

To the bottom of the pole, in the compacted plough, was attached the *plough-tail*, which, according to Hesiod, might be made of any piece of a tree (especially the *πρίνος*, i. e., the ilex, or holm-oak), the natural curvature of which fitted it to this use. But in the time and country of Virgil, pains were taken to force a tree into that form which was most exactly adapted to the purpose.

"*Continuo in silvis magna vi flexa domatur*

In burim, et curvi formam accipit ulmus aratri."³

The upper end of the *buris* being held by the ploughman, the lower part, below its junction with the pole, was used to hold the *share-beam*, which was either sheathed with metal, or driven bare into the ground, according to circumstances.

To these three continuous and most essential parts, the two following are added in the description of the plough by Virgil:

1. The *earth-boards* or *mould-boards*, rising on each side, bending outwardly in such a manner as to throw on either hand the soil which had been previously loosened and raised by the share, and adjusted to the share-beam, which was made double for the purpose of receiving them: "*Binæ aures, duplici aptantur dentalia dorso.*" According to Palladius,⁴ it was desirable to have ploughs both with *earth-boards* (*aurita*) and without them (*simplicia*).

2. The *handle*, which is seen in Mr. Fellows's woodcut, and likewise in the following representation of an ancient Italian plough. Virgil considers

1 (Adams, Append., s. v.)—2. (Theophrast., H. P., i., 6.—Adams, Append., s. v.)—3. (Theophrast., H. P., i., 6.)—4. (Paus., ii., 9, § 4.)—5. (c. 53.)—6. (Wachsmuth, Hellen. Alterthum., ii., 2, p. 105.)—7. (Op. et Dies, 432.)—8. (Compare Schol. in Apoll. Rhod., iii., 232.—Hom., II., x., 353: xiii., 703; and Schol. in loc.)—9. (Excursion in Asia Minor, 1838, p. 71.)

1. (Hobhouse, Journey through Albania, &c., vol. i., p. 140.)—2. (p. 42.)—3. (Georg., i., 169, 170.)—4. (i., 43.)

this part as used to turn the plough at the end of the furrow: "*Stivaque, quæ curvus a tergo torquet imos.*" Servius, however, in his note on this line, explains *stiva* to mean "the handle by which the plough is directed." It is probable that, as the *dentalia*, i. e., the two share-beams, which Virgil supposes, were in the form of the Greek letter Δ, which he describes by *duplex dorso*, the buris was fastened to the left share-beam, and the stiva to the right; so that, instead of the simple plough of the Greeks, that described by the Mantuan poet, and used, no doubt, in his country (see the following woodcut), was more like the modern Lancashire plough, which is commonly held behind with both hands. Sometimes, however, the stiva (ἐξέρλη¹) was used alone and instead of the tail, as in the Mysian plough above represented. To a plough so constructed, the language of Columella was especially applicable: "*Arator stivæ pæne rectus innititur*;"² and the expressions of Ovid, "*Stivæque invictus arator*"³ and "*Inde premens stivam designat mœnia sulco.*"⁴ In place of "*stiva*," Ovid also uses the less appropriate term "*capulus*:"⁵ "*Ipsæ manu capulum pressi moderatus aratri.*" When the plough was held either by the stiva alone, or by the buris alone, a piece of wood (*manicula*)⁶ was fixed across the summit, and on this the labourer pressed with both hands. Besides guiding the plough in a straight line, his duty was to force the share to a sufficient depth into the soil. Virgil alludes to this in the phrase "*Depresso aratro.*"⁷

The crossbar, which is seen in Mr. Fellows's drawing, and mentioned in Sir J. C. Hobhouse's description, and which passes from the pole to the share for the purpose of giving additional strength, was called *σπάθη*, in Latin *fulcrum*.

The coulter (*culler*⁸) was used by the Romans as it is with us. It was inserted into the pole so as to depend vertically before the share, cutting through the roots which came in its way, and thus preparing for the more complete loosening and overturning of the soil by the share.

About the time of Pliny, two small wheels (*rotæ, rotulæ*) were added to the plough in Rhætia; and Servius⁹ mentions the use of them in the country of Virgil. The annexed woodcut shows the form of a wheel-plough, as represented on a piece of engraved jasper, of Roman workmanship. It also shows distinctly the coulter, the share-beam, the plough-tail, and the handle or *stiva*.¹⁰ The plough corresponds in all essential particulars with that now used about Mantua and Venice, of which Martyn has given an engraving in his edition of Virgil's *Georgics*.

The Greeks and Romans usually ploughed their land three times for each crop. The first ploughing was called *proscindere*, or *novare* (νοεσθαι, νέεσθαι); the second, *offringere*, or *iterare*; and the third, *lirare*, or *tertiare*.¹¹ The field which under-

went the "*proscissio*" was called *vervactum* or *novale* (νεός), and in this process the coulter was employed, because the fresh surface was entangled with numberless roots, which required "to be divided before the soil could be turned up by the share." The term "*offringere*," from *ob* and *frangere*, was applied to the second ploughing, because the long parallel clods already turned up were broken and cut across, by drawing the plough through them at right angles to its former direction.² The field which underwent this process was called *ager iteratus*—δίπολος.³ After the second ploughing, the sower cast his seed. Also the clods were often, though not always, broken still farther by a wooden mallet, or by harrowing (*occatio*). The Roman ploughman then, for the first time, attached the earth-boards to his share (*tabula adnexa*).⁴ The effect of this adjustment was to divide the level surface of the "*ager iteratus*" into ridges. These were called *porcæ*, and also *liræ*, whence came the verb *lirare*, to make ridges, and also *delirare*, to decline from the straight line.⁵ The earth-boards, by throwing the earth to each side in the manner already explained, both covered the newly-scattered seed, and formed between the ridges furrows (*αὐλακες, sulci*) for carrying off the water. In this state the field was called *seges* and *τρίπολος*. The use of this last term by Homer and Hesiod proves that the triple ploughing was practised as early as their age.

When the ancients ploughed three times only, it was done in the spring, summer, and autumn of the same year. But, in order to obtain a still heavier crop, both the Greeks and the Romans ploughed four times, the *proscissio* being performed in the latter part of the preceding year, so that between one crop and another two whole years intervened.⁶ A field so managed was called *τετράπολος*.⁷

When the ploughman had finished his day's labour, he turned the instrument upside down, and the oxen went home dragging its tail and handle over the surface of the ground—a scene exhibited to us in the following lines:

"*Videre fessos vomerem inversum boves
Colla trahentes languido!*"⁸

The Greeks and Romans commonly employed oxen in ploughing; but they also used asses for light soils.⁹ The act of yoking together an ox and an ass, which was expressly forbidden by the law of Moses,¹⁰ is made the ground of a ludicrous comparison by Plautus.¹¹ Ulysses, when he feigned madness in order to avoid going on the Trojan expedition, ploughed with an ox and a horse together.¹²

A line has been already quoted from Ovid's *Fasti*, which mentions the use of the plough by Romulus for marking the site of Rome. On this occasion a white bull and a white cow were yoked together: "*Alba jugum niveo cum bove vacca tulit.*"¹³ Besides this ceremony at the foundation of cities or colonies, the plough was drawn over the walls when they were conquered by the Romans.¹⁴

ARBITER. (Vid. JUNEX.)

ARBITRARIA ACTIO. (Vid. Actio, p. 17.)

*ARBUTUM (μυρσικύλον or κόμαρον), the fruit of the Wild Strawberry-tree, or *Arbutus*. It has very much the appearance of our strawberry, except that it is larger, and has not the seeds on the outside of the pulp, like that fruit. The arbuté-tree grows plentifully in Italy, and the poets have supposed that the early race of men lived on acorns and the fruit of this tree before the discovery and

N., xviii., 48.)—9. (l. c.)—10. (Caylus, Rec. d'Ant., v., pl. 53, No. 6.)—11. (Arat., Diosc., 321.—Ovid, Met., vii., 119.—Varro, De Re Rust., i., 29.—Colum., De Re Rust., ii., 4.)

1. (Plin., H. N., xviii., 49.)—2. (Plin., l. c.—Virg., Georg., i., 97, 98.—Festus, s. v. Offringi.)—3. (Cic., De Orat., ii., 30.)—4. (Plin., l. c.)—5. (Col., l. c.)—6. (Theophrast., De Caus. Pl., iii., 5.—Virg., Georg., i., 47–49.)—7. (Theocr., xxv., 26.)—8. (Hor., Epod., ii., 63.)—9. (Varro, De Re Rust., ii., 6.—Plin., H. N., viii., 68.—Col., vii., 1.)—10. (Deut., xxii., 10.)—11. (Aul., ii., 2, 51–58.)—12. (Hygin., Fab., 95.)—13. (Compare Virg., En., v., 755.—Cic., Phil., ii., 40.)—14. (Hor., Od., i., 16, 20.—Propert., iii., 7, 41.)

cultivation of corn. The berries of the arbut, however, are hardly eatable: when taken in too great quantities, they are said to be narcotic; and Pliny informs us that the term *unedo* was familiarly applied to the fruit of this tree, because it was unsafe to eat more than one (*ἑνους*, "one," and *edo*, "to eat"). The same writer describes the fruit as indigestible and unwholesome, and yet, in the island of Corsica, an agreeable wine is said to be prepared from it. The term *unedo* was also given to the tree itself, and this is retained in the Linnean nomenclature, *Arbutus unedo*. The peculiar properties ascribed to the fruit of the arbut-tree exist in several other plants of the same order. Their general qualities are said to be astringent and diuretic. The *Ledum palustre* renders beer heavy when used in the manufacture of that beverage; *Rhododendron ponticum* and *maximum*, *Kalmia latifolia*, and some others, are well known to be venomous. The honey which poisoned some of the soldiers in the retreat of the ten thousand through Pontus, was gathered by bees from the flowers of the *Azalea pontica*. The shoots of *Andromeda ovalifolia* poison goats in Nipal.³ (*Vid. ARBUTUS*.)

*ARBÛTUS (κόμαρος), the Arbut or Wild Strawberry-tree, *Arbutus unedo*, L. Its fruit is called in Latin *arbutum*, in Greek κόμαρον and μυαίνων, and in English the wild strawberry, from the resemblance it bears to that well-known berry. (*Vid. ARBUTUM*.) Virgil, in speaking of the Arbut-tree, uses the epithet *horrida*,⁴ about the meaning of which commentators are not agreed.⁵ The best opinion, however, is that which refers the term in question to the ruggedness of the bark, which is the sense in which Servius also seems to take it.⁶ Fée, however, is for making the epithet apply to the rough, astringent taste of the arbut. In fact, the leaves, bark, and fruit afford a very strong astringent, and are used for this purpose in medicine.—There does not seem to be any notice of the *Fraxinea vesca*, or Wood Strawberry, in the Greek classics. It is described by Pliny, and had been previously mentioned by Ovid.⁷

ARCA (κιβωτός), a chest or coffer, is used in several significations, of which the principal are,

I. A chest, in which the Romans were accustomed to place their money; and the phrase *ex arca solvere* had the meaning of paying in ready money. When Cicero presses Atticus to send him some statues from Greece, he says, "*Ne dubitatis mittere et arca nostra confidite*."⁸ These chests were either made of or bound with iron or other metals.⁹ The term *arca* was usually applied to the chests in which the rich kept their money, and was opposed to the smaller *loculi*,¹⁰ *sacculus*,¹¹ and *crumena*.

II. The ARCA was frequently used in later times as equivalent to the *fiscus*, that is, the imperial treasury.¹²

III. The ARCA also signified the coffin in which persons were buried,¹³ or the bier on which the corpse was placed previously to burial.¹⁴

IV. The ARCA was also a strong cell made of oak, in which criminals and slaves were confined.¹⁵

*ARKEUTHOS. (*Vid. JUNIPERUS*.)

ARCERA was a covered carriage or litter, spread with cloths, which was used in ancient times in Rome to carry the aged and infirm. It is said to have obtained the name of *arcera* on account of its resemblance to an arca.¹⁶

ARCHAIRES/IAI (ἀρχαιρεσῖαι) were the assemblies of the people which were held for the election of those magistrates at Athens who were not chosen by lot. The principal public officers were chosen by lot (κληρωτοί), and the lots were drawn annually in the temple of Theseus by the thesmothetæ. Of those magistrates chosen by the general assembly of the people (χειροτονητοί), the most important were the strategi, taxiarchi, hipparchi, and phylarchi. The public treasurers (ταμίαι), and all the officers connected with the collection of the tribute, all ambassadors, commissioners of works, &c., were appointed in the same manner.

The people always met in the Pnyx for the election of these magistrates, even in later times, when it became usual to meet for other purposes in the Temple of Dionysus.¹ It is not certain at what time of the year they met for this purpose, nor who presided over the assembly, but most probably the archons. The candidates for these offices, especially for that of strategus, had recourse to bribery and corruption to a great extent, although the laws awarded capital punishment to that offence, which was called by the Athenians δεκαμῆς. The canvassing of the electors and the solicitation of their votes was called ἀρχαιρεσιάζειν. The magistrates who presided over the assembly mentioned the names of the candidates (προβάλλεσθαι), and the people declared their acceptance or rejection of each by a show of hands. They never appear to have voted by ballot on these occasions.

Those who were elected could decline the office, alleging upon oath some sufficient reason why they were unable to discharge its duties, such as labouring under a disease, &c.: the expression for this was ἐξομνησθαι τὴν ἀρχήν, or τὴν χειροτονίαν.² If, however, an individual accepted the office to which he was chosen, he could not enter upon the discharge of his duties till he had passed his examination (δοκιμασία) before the thesmothetæ. If he failed in passing his examination (ἀποδοκιμασθῆναι), he incurred a modified species of ἀτιμία.⁴ All public officers, however, were subject to the ἐπιχειροτονία, or confirmation of their appointment by each successive prytany at the commencement of its period of office, when any magistrate might be deprived of his office (ἀποχειροτονεῖσθαι). In the Attic orators, we not unfrequently read of individuals being thus deprived of their offices.⁶ (*Vid. ARCHON*, p. 83.)

*ARKEION. (*Vid. ARKTION*.)

ARCHEION (ἄρχειον) properly means any public place belonging to the magistrates, but is more particularly applied to the archive office, where the decrees of the people and other state documents were preserved. This office is sometimes called merely τὸ δημόσιον.⁸ At Athens the archives were kept in the temple of the mother of the gods (μήτηρ), and the charge of it was intrusted to the president (ἐπιστάτης) of the senate of the Five Hundred.⁷

ARCHIATER (ἄρχιατρος, compounded of ἀρχός or ἄρχων, a chief, and ἰατρός, a physician), a medical title under the Roman emperors, the exact signification of which has been the subject of much discussion; for while some persons interpret it "the chief of the physicians" (quasi ἄρχων τῶν ἱατρῶν), others explain it to mean "the physician to the prince" (quasi τοῦ ἄρχοντος ἱατρός). Upon the whole, it seems much more probable that the former is the true meaning of the word, and for these reasons: 1. From its etymology it cannot

possibly have any other sense, and of all the words similarly formed (*ἀρχιτέκτων, ἀρχιτριβήλων, ἀρχιεπίσκοπος*, &c.) there is not one that has any reference to "the prince." 2. We find the title applied to physicians who lived at Edessa, Alexandria, &c., where no king was at that time reigning. 3. Galen¹ speaks of Andromachus being appointed "to rule over" the physicians (*ἀρχεῖν*), i. e., in fact, to be "archiater." 4. Augustine² applies the word to Æsculapius, and St. Jerome (metaphorically, of course) to our Saviour,³ in both which cases it evidently means "the chief physician." 5. It is apparently synonymous with *protomedicus*, *supra medicos*, *dominus medicorum*, and *superpositus medicorum*, all which expressions occur in inscriptions, &c. 6. We find the names of several persons who were physicians to the emperor mentioned without the addition of the title *archiater*. 7. The *archiatri* were divided into *A. sancti palatii*, who attended on the emperor, and *A. populares*, who attended on the people; so that it is certain that all those who bore this title were not "physicians to the prince." The chief argument in favour of the contrary opinion seems to arise from the fact, that of all those who are known to have held the office of *A.*, the greater part certainly were physicians to the emperor as well; but this is only what might, *a priori*, be expected, viz., that those who had attained the highest rank in their profession would be chosen to attend upon the prince (just as in England the President of the College of Physicians is ex-officio physician to the sovereign).

The first person whom we find bearing this title is Andromachus, physician to Nero, and inventor of the Theriaca.⁴ (*Vid. THERIACA*.) But it is not known whether he had at the same time any sort of authority over the rest of the profession. In fact, the history of the title is as obscure as its meaning, and it is chiefly by means of the laws respecting the medical profession that we learn the rank and duties attached to it. In after times (as was stated above) the order appears to have been divided, and we find two distinct classes of *archiatri*, viz., those of the palace and those of the people.⁵ The *A. sancti palatii* were persons of high rank, who not only exercised their profession, but were judges on occasion of any disputes that might occur among the physicians of the place. They had certain privileges granted to them, e. g., they were exempted from all taxes, and their wives and children also; were not obliged to lodge soldiers or others in the provinces; could not be put in prison, &c.; for, though these privileges seem at first to have been common to all physicians,⁶ yet afterward they were confined to the *A.* of the palace and to those of Rome. When they obtained their dismissal from attendance on the emperor, either from old age or any other cause, they retained⁷ the title *ex-archiatri* or *ex-archiatris*.⁷ The *A. populares* were established for the relief of the poor, and each city was to be provided with five, seven, or ten, according to its size.⁸ Rome had fourteen, besides one for the vestal virgins, and one for the gymnasia.⁹ They were paid by the government, and were therefore obliged to attend their poor patients gratis, but were allowed to receive fees from the rich.¹⁰ The *A. populares* were not appointed by the governors of the provinces, but were elected by the people themselves.¹¹ The office appears to have been more lucrative than that of *A. s. pal.*, though less honourable. In later times, we find in Cassiodorus¹² the title "*comes archiatriorum*," "count of the

archiatri," together with an account of his duties, by which it appears that he was the arbiter and judge of all disputes and difficulties, and ranked among the officers of the Empire as a *vicarius* or *duz*.¹

ARCHIMIMUS. (*Vid. MIMUS*.)

ARCHITECTURA. (*Vid. AMPHITHEATRUM, AQUÆ DUCTUS, ARCUS, BASILICA, BATH, HOUSE, TEMPLE, &c.*)

ARCHITHEOROS. (*Vid. THEORIA*.)

ARCHON (*ἀρχων*). The government of Athens appears to have gone through the cycle of changes, which history records as the lot of many other states.² It began with monarchy; and, after passing through a dynasty and aristocracy, ended in democracy. (By dynasty is here meant that the supreme power, though not monarchical, was confined to one family.) Of the kings of Athens, considered as the capital of Attica, Theseus may be said to have been the first; for to him, whether as a real individual or a representative of a certain period, is attributed the union of the different and independent states of Attica under one head.³ The last was Codrus, in acknowledgment of whose patriotism in meeting death for his country, the Athenians are said to have determined that no one should succeed him with the title of *βασιλεύς*, or king. It seems, however, equally probable, that it was the nobles who availed themselves of this opportunity to serve their own interests, by abolishing the kingly power for another, the possessors of which they called *ἀρχοντες*, or rulers. These for some time continued to be, like the kings of the house of Codrus, appointed for life: still an important point was gained by the nobles, the office being made *ὑπεύθυνος*, or accountable,⁴ which, of course, implies that the nobility had some control over it; and perhaps, like the barons of the feudal ages, they exercised the power of deposition.

This state of things lasted for twelve reigns of archons. The next step was to limit the continuance of the office to ten years, still confining it to the Medontidæ, or house of Codrus, so as to establish what the Greeks called a dynasty, till the archonship of Eryxias, the last archon of that family elected as such. At the end of his ten years (B.C. 684), a much greater change took place: the archonship was made annual, and its various duties divided among a college of nine, chosen by suffrage (*χειροτονία*) from the Eupatridæ, or Patricians, and no longer elected from the Medontidæ exclusively. This arrangement continued till the timocracy established by Solon, who made the qualification for office depend not on birth, but property, still retaining the election by suffrage, and, according to Plutarch, so far impairing the authority of the archons and other magistrates as to legalize an appeal from them to the courts of justice instituted by himself.⁵ The election by lot is believed to have been introduced by Cleisthenes (B.C. 508);⁶ for we find this practice existing shortly after his time; and Aristotle expressly states that Solon made no alteration in the *αἵρεσις*, or mode of election, but only in the qualification for office. If, however, there be no interpolation in the oath of the Heliasts,⁷ we are forced to the conclusion that the election by lot was as old as the time of Solon; but the authority of Aristotle and other evidence strongly incline us to some such supposition, or, rather, leave no doubt of its necessity. The last change is supposed to have been made by Aristides,⁸ who, after the battle of Platæa (B.C. 479),

("Ὅσα τοῖς ἀρχαῖς ἐτάξε κληῖν βολὸς καὶ περὶ ἑκένων, εἰς τὸ δικαστήριον, ἐφέσιαι ἐῖκον Plutarch, Solon., 18.)—6. (Herod., vi., c. 100.)—7. (Demosth. Timocr., p. 747.)—8. (Γράφει ὑψίστημα κοινὴν εἶναι τὴν πόλιν, καὶ τοὺς ἀρχοντας ἐξ Ἀθηναίων πάντων αἰρεσθαι. Plutarch, Arist.)

abolished the property qualification, throwing open the archonship and other magistracies to all the citizens, that is, to the Thetes as well as the other classes, the former of whom were not allowed by Solon's laws to hold any magistracy at all; in conformity with which, we find that, even in the time of Aristides, the archons were chosen by lot from the wealthiest class of citizens (*οἱ πεντακαιομέθυοι*).¹

Still, after the removal of the old restrictions, some security was left to ensure respectability; for, previously to an archon entering on office, he underwent an examination, called the *ἀνάκρισις*,² as to his being a legitimate and a good citizen, a good son, and qualified in point of property: *εἰ ἔχει τὸ τίμημα*; was the question put. Now there are strong reasons for supposing that this form of examination continued even after the time of Aristides; and if so, it would follow that the right in question was not given to the Thetes promiscuously, but only to such as possessed a certain amount of property. But even if it were so, it is admitted that this latter limitation soon became obsolete; for we read in Lysias³ that a needy old man, so poor as to receive a state allowance, was not disqualified from being archon by his indigence, but only by bodily infirmity; freedom from all such defects being required for the office, as it was in some respects of a sacred character. Yet, even after passing a satisfactory *ἀνάκρισις*, each of the archons, in common with other magistrates, was liable to be deposed, on complaint of misconduct made before the people, at the first regular assembly in each prytany. On such an occasion, the *ἐπιχειροτονία*, as it was called, took place; and we read⁴ that, in one case, the whole college of archons was deprived of office (*ἐπιχειροτονήθη*) for the misbehaviour of one of their body: they were, however, reinstated, on promise of better conduct for the future. (*Vid. ARCHAÏRESIAI.*)

With respect to the later ages of Athenian history, we learn from Strabo⁵ that even in his day (*μέχρι νῦν*) the Romans allowed the freedom of Athens; and we may conclude that the Athenians would fondly cling to a name and office associated with some of their most cherished remembrances. That the archonship, however, though still in existence, was merely honorary, we might expect from the analogy of the consulate at Rome; and, indeed, we learn that it was sometimes filled by strangers, as Hadrian and Plutarch. Such, moreover, was the democratical tendency of the assembly and courts of justice established by Solon,⁶ that, even in earlier times, the archons had lost the great political power which they at one time possessed,⁷ and that, too, after the division of their functions among nine. They became, in fact, not, as of old, directors of the government, but merely municipal magistrates, exercising functions and bearing titles which we will proceed to describe.

It has been already stated that the duties of the single archon were shared by a college of nine. The first, or president of this body, was called *ἄρχων* by way of pre-eminence; or *ἄρχων ἐπώνυμος*, from the year being distinguished by and registered in his name. The second was styled *ἄρχων βασιλεύς*, or the king archon; the third, *πολεμάρχος*, or commander-in-chief; the remaining six, *θεσμοθέται*, or legislators. As regards the duties of the archons, it is sometimes difficult to distinguish what belonged to them individually and what collectively.⁸ It seems, however, that a considerable portion of the

judicial functions of the ancient kings devolved upon the *ἄρχων ἐπώνυμος*, who was also constituted a sort of state protector of those who were unable to defend themselves.¹ Thus he was to superintend orphans, heiresses, families losing their representatives (*οἰκοὶ οὐ ἐξεργαζόμεναι*), widows left pregnant, and to see that they were not wronged in any way. Should any one do so, he was empowered to inflict a fine of a certain amount, or to bring the parties to trial. Heiresses, indeed, seem to have been under his peculiar care; for we read² that he could compel the next of kin either to marry a poor heiress himself, even though she were of a lower class, or to portion her in marriage to another. Again, we find³ that, when a person claimed an inheritance or heiress adjudged to others, he summoned the party in possession before the archon eponymus, who brought the case into court, and made arrangements for trying the suit. We must, however, bear in mind that this authority was only exercised in cases where the parties were citizens, the polemarch having corresponding duties when the heiress was an alien. It must also be understood that, except in very few cases, the archons did not decide themselves, but merely brought the causes into court, and cast lots for the dicasts who were to try the issue.⁴ Another duty of the archons was to receive *ἐλογγγέλαι*, or informations against individuals who had wronged heiresses, children who had maltreated their parents, guardians who had neglected or defrauded their wards.⁵ Informations of another kind, the *ἐνδείξεις* and *ῥάσις*, were also laid before the eponymus, though Demosthenes assigned the former to the thesmothetæ. The last office of the archon which we shall mention was of a sacred character; we allude to his superintendence of the greater Dionysia and the Thargelia, the latter celebrated in honour of Apollo and Artemis.

The functions of the *ἄρχων βασιλεύς* were almost all connected with religion: his distinguishing title shows that he was considered a representative of the old kings in their capacity of high-priest, as the *Rex Sacrificalis* was at Rome. Thus he presided at the Lenæan, or older Dionysia; superintended the mysteries and the games called *λαμπροφορίαι*, and had to offer up sacrifices and prayers in the Eleusinium, both at Athens and Eleusis. Moreover, indictments for impiety, and controversies about the priesthood, were laid before him; and, in cases of murder, he brought the trial into the court of the areopagus, and voted with its members. His wife, also, who was called *βασιλίσσα*, had to offer certain sacrifices, and therefore it was required that she should be a citizen of pure blood, without stain or blemish. His court was held in what was called *ἡ τοῦ βασιλέως στοά*.⁶

The polemarch was originally, as his name denotes, the commander-in-chief;⁷ and we find him discharging military duties as late as the battle of Marathon, in conjunction with the ten *στρατηγοί*: he there took, like the kings of old, the command of the right wing of the army. This, however, seems to be the last occasion on record of this magistrate, appointed by lot, being invested with such important functions; and in after ages we find that his duties ceased to be military, having been in a great measure transferred to the protection and superintendence of the resident aliens, so that he resembled in many respects the prætor peregrinus at Rome. In fact, we learn from Aristotle, in his

1. (Plut., Arist., ad init.)—2. (Pollux, Onom., viii., 96.—Dinarch., c. Aristot., p. 107; τοὺς ἐνέτα ἄρχοντας ἀνακρίνετε εἰ γυναικὲς αὐ ποιοῦσιν. Demosth., Eubul., 1320.)—3. (Schömann, De Comit. "Constitution of Athens," that the polemarch stood in the same relation to foreigners as the archon to citizens.¹ Thus, all actions affecting aliens, the isoteles and proxeni, were brought before him previously to trial; as, for instance, the *δίκη ἀποστασιῶν* against a foreigner for living in Athens without a patron; so was also the *δίκη ἀποστασιῶν* against a slave who failed in his duty to the master who had freed him. Moreover, it was the polemarch's duty to offer the yearly sacrifice to Artemis, in commemoration of the vow made by Callimachus at Marathon, and to arrange the funeral games in honour of those who fell in war. These three archons, the *ἐκὼνυμος*, *βασιλεύς*, and *πολέμαρχος*, were each allowed two assessors to assist them in the discharge of their duties.

The thesmothetæ were extensively connected with the administration of justice, and appear to have been called legislators,² because, in the absence of a written code, they might be said to make laws, or *θεσμοί*, in the ancient language of Athens, though, in reality, they only declared and explained them. They were required to review, every year, the whole body of laws, that they might detect any inconsistencies or superfluities, and discover whether any laws which were abrogated were in the public records among the rest.³ Their report was submitted to the people, who referred the necessary alterations to a legislative committee chosen for the purpose, and called *νομοβέται*.

The chief part of the duties of the thesmothetæ consisted in receiving informations, and bringing cases to trial in the courts of law, of the days of sitting in which they gave public notice.⁴ They did not try them themselves, but seem to have constituted a sort of grand jury, or inquest. Thus they received *ἐνδείξεις* against parties who had not paid their fines, or owed any money to the state, and *ἐπαγγελίας* against orators guilty of actions which disqualified them from addressing the people; and in default of bringing the former parties to trial, they lost their right of going up to the areiopagus at the end of their year of office.⁵ Again, indictments for personal injuries (*ὀβριεὺς γραφαί*) were laid before them, as well as informations against olive growers, for rooting up more trees than was allowed to each proprietor by law.⁶ So, too, were the indictments for bribing the Heliaæ, or any of the courts of justice at Athens, or the senate, or forming clubs for the overthrow of the democracy, and against retained advocates (*συνήγοροι*) who took bribes either in public or private causes. Again, an information was laid before them if a foreigner cohabited with a citizen, or a man gave in marriage as his own daughter the child of another, or confined as an adulterer one who was not so. They also had to refer informations (*εἰσαγγελίας*) to the people; and where an information had been laid before the senate, and a condemnation ensued, it was their duty to bring the judgment into the courts of justice for confirmation or revision.

A different office of theirs was to draw up and ratify the *σύμβολα*, or agreements with foreign states, settling the terms on which their citizens should sue and be sued by the citizens of Athens.⁷ In their collective capacity, the archons are said to have had the power of death in case an exile returned to an interdicted place: they also superintended the *ἐπιχειροτονία* of the magistrates, held every prytany,⁸ and brought to trial those whom the

people deposed, if an action or indictment were the consequence of it. Moreover, they allotted the dicasts or jurymen, and probably presided at the annual election of the strategi and other military officers.

In concluding this enumeration of the duties of the archons, we may remark that it is necessary to be cautious in our interpretation of the words *ἀρχή* and *ἀρχοντες*: the fact is, that in the Attic orators they have a double meaning, sometimes referring to the archons peculiarly so called, and sometimes to any other magistracy. Thus, in Isæus,¹ we might, on a cursory perusal, infer, that when a testator left his property away from his heir-at-law, by what was technically called a *δόσις*,² the archon took the original will into custody, and was required to be present at the making of any addition or codicil to it. A more accurate observation proves that by *εἰς τῶν ἀρχόντων* is meant one of the *ἀστυνόμοι*, who formed a magistracy (*ἀρχή*) as well as the nine archons.

A few words will suffice for the privileges and honours of the archons.³ The greatest of the former was the exemption from the trierarchies; a boon not allowed even to the successors of Harmodius and Aristogeiton. As a mark of their office, they wore a chaplet or crown of myrtle; and if any one struck or abused one of the thesmothetæ or the archon, when wearing this badge of office, he became *ἀτιμος*, or infamous in the fullest extent, thereby losing his civic rights. The archons, at the close of their year of service, were admitted among the members of the areiopagus. (*Vid. AREIOPAGEIS.*) The principal authority on the subject of the archons and their duties is Julius Pollux, in a work called *Ὀνομαστικόν*: he was a professor of rhetoric at Athens in the time of the Emperor Commodus, A.D. 190, to whom he inscribed his work, and is generally believed to have borrowed his information from a lost treatise of Aristotle on the "Constitution of Athens." It is, however, necessary to consult the Attic orators, as will be seen from the references which are given in the course of this article. Among the modern writers, Böckh and Schömann are occasionally useful, though they give no regular account of the archonship.

ARCHONES (*ἀρχόνες*). The taxes at Athens were let out to contractors, and were frequently farmed by a company under the direction of an *ἀρχώνης*, or chief farmer, who was the person responsible to the state.⁴

ARCFINUS AGER. (*Vid. AGRIMENSORES.*)
*ARKTION and ARKETON (*ἀρκτιον* and *ἀρκειον*). There is great confusion of names and uncertainty in respect to these plants. Alston remarks that Dioscorides' description of the *ἀρκειον* agrees better with the character of the *Arctium Lappa*, or Burdock, than his description of the *ἀρκτιον*. Sprengel, accordingly, holds the former to be the *Arctium Lappa*, and suggests that the latter may be the *Verbascum ferrugineum*.⁵

*ARKTOS (*ἀρκτος*). I. The common Bear, or *Ursus Arctos*, L. The Greeks and Romans could scarcely be acquainted with the *U. maritimus*. The *ἀρκτος* of Aristotle is the ordinary Brown Bear, and the habits of the animal are well described by him: "The bear," observes this writer, "is an omnivorous animal, and, by the suppleness of its body, climbs trees, and eats the fruits, and also legumes. It also devours honey, having first broken up the hives; crabs, too, and ants it eats, and also preys upon flesh." Aristotle then describes how the animal attacks the stag, the boar, and even the bull.⁶

II. A crustaceous fish, described by Aristotle. Most probably the *Cancer Arcus*, or Broad Lobster of Pennant.¹

ARCUS (also *fornix*² and *καύρα*), an arch suspended over the head of an aperture, or carried from one side of a wall to another, and serving as the roof or ceiling to the space below. An arch is formed of a series of wedge-like stones or of bricks, supporting each other, and all bound firmly together by the pressure of the centre one upon them, which latter is therefore distinguished by the name of key-stone.

It would seem that the arch, as thus defined, and as used by the Romans, was not known to the Greeks in the early periods of their history, otherwise a language so copious as theirs, and of such ready application, would not have wanted a name properly Greek by which to distinguish it. The use of both arches and vaults appears, however, to have existed in Greece previously to the Roman conquest, though not to have been in general practice.³ But the constructive principle by which an arch is made to hold together, and to afford a solid resistance against the pressure upon its circumference, was known to them even previously to the Trojan war, and its use is exemplified in two of the earliest buildings now remaining: the chamber built at Orchomenus by Minyas, king of Bœotia, described by Pausanias,⁴ and the treasury of Atreus at Mycenæ.⁵ Both these works are constructed under ground, and each of them consists of a circular chamber formed by regular courses of stones laid horizontally over each other, each course projecting towards the interior, and beyond the one below it, till they meet in an apex over the centre, which was capped by a large stone, and thus resembled the inside of a dome. Each of the horizontal courses of stones formed a perfect circle, or two semicircular arches joined together, as the subjoined plan of one of these courses will render evident.

It will be observed that the innermost end of each stone is bevelled off into the shape of a wedge, the apex of which, if continued, would meet in the centre of the circle, as is done in forming an arch; while the outer ends against the earth are left rough, and their interstices filled up with small irregular-shaped stones, the immense size of the principal stones rendering it unnecessary to continue the sectional cutting throughout their whole length. Indeed, if these chambers had been constructed upon any other principle, it is clear that the pressure of earth all round them would have caused them to collapse. The method of construction here described was communicated to the writer of the present article by the late Sir William Gell. Thus it seems that the Greeks did understand the constructive principle upon which arches are formed,

even in the earliest times; although it did not occur to them to divide the circle by a diameter, and set the half of it upright to bear a superincumbent weight. But they made use of a contrivance, even before the Trojan war, by which they were enabled to gain all the advantages of our archway in making corridors, or hollow galleries, and which, in appearance, resembled the pointed arch, such as is now termed Gothic. This was effected by cutting away the superincumbent stones in the manner already described, at an angle of about 45° with the horizon. The mode of construction and appearance of the arches are represented in the annexed drawing of the walls of Tiryns, copied from Sir William Gell's Argolis. The gate of Signia (*Segni*) in Latium exhibits a similar example.

Of the different forms and curves of arches now in use, the only one adopted by the Romans was the semicircle; and the use of this constitutes one leading distinction between Greek and Roman architecture, for by its application the Romans were enabled to execute works of far bolder construction than those of the Greeks: to erect bridges and aqueducts, and the most durable and massive structures of brick. * (On the antiquity of the Arch among the Egyptians, Mr. Wilkinson has the following remarks: "There is reason to believe that some of the chambers in the pavilion of Remeses III., at Medeenet Haboo, were arched with stone, since the devices on the upper part of their walls show that the fallen roofs had this form. At Saggara, a stone arch still exists of the time of the second Psammiticus, and, consequently, erected 600 years before our era; nor can any one, who sees the style of its construction, for one moment doubt that the Egyptians had been long accustomed to the erection of stone vaults. It is highly probable that the small quantity of wood in Egypt, and the consequent expense of this kind of roofing, led to the invention of the arch. It was evidently used in their tombs as early as the commencement of the eighteenth dynasty, or about the year 1540 B.C.; and, judging from some of the drawings at Beni Hassan, it seems to have been known in the time of the first Osirtasen, whom I suppose to have been contemporary with Joseph."—*Manners and Customs of the Anc. Egyptians*, vol. ii., p. 116, 117, 1st series.)

ARCUS TRIUMPHALIS (a triumphal arch), an entire structure, forming a passage-way, and erected in honour of an individual, or in commemoration of a conquest. Triumphal arches were built across the principal streets of the city, and, according to the space of their respective localities, consisted of a single archway, or a central one for carriages, and two smaller ones on each side for

¹ (Aristot., H. A., v., 15; viii., 7.)—² (Virg., *Æn.*, vi., 631. —Cic. in Verr., i., 7.)—³ (Mitford, *Principles of Design in Architecture*.)—⁴ (ix., 38.)—⁵ (Paus., ii., 16.)

foot-passengers, which sometimes have side communications with the centre. Those actually made use of on the occasion of a triumphal entry and procession were merely temporary and hastily erected, and, having served their purpose, were taken down again, and sometimes replaced by others of more durable materials.

Sterinius is the first upon record who erected anything of the kind. He built an arch in the Forum Boarium, about B.C. 196, and another in the Circus Maximus, each of which was surmounted by gilt statues.¹ Six years afterward, Scipio Africanus built another on the Clivus Capitolinus, on which he placed seven gilt statues and two figures of horses;² and in B.C. 121, Fabius Maximus built a fourth in the Via Sacra, which is called by Cicero³ the *Forus Fabianus*. None of these remain, the Arch of Augustus at Rimini being one of the earliest among those still standing.

There are twenty-one arches recorded by different writers as having been erected in the city of Rome, five of which now remain: 1. *Arcus Drusi*, which was erected to the honour of Claudius Drusus on the Appian Way.* 2. *Arcus Titi*, at the foot of the Palatine, which was erected to the honour of Titus, after his conquest of Judæa, but does not appear to have been finished till after his death; since in the inscription upon it he is called *Divus*, and he is also represented as being carried up to heaven upon an eagle. The bas-reliefs of this arch represent the spoils from the Temple of Jerusalem carried in triumphal procession. This arch has only a single opening, with two columns of the Roman or Composite order on each side of it. 3. *Arcus Septimii Severi*, which was erected by the senate (A.D. 207) at the end of the Via Sacra, in honour of that emperor and his two sons, Caracalla and Geta, on account of his conquest of the Parthians and Arabians. 4. *Arcus Gallieni*, erected to the honour of Gallienus by a private individual, M. Aurelius Victor. 5. *Arcus Constantini*, which is larger and more profusely ornamented than the Arch of Titus. It has three arches in each front, with columns similarly disposed, and statues on the entablatures over them, which, with the other sculptured ornaments, originally decorated the Arch of Trajan.

ARCUS (*βίος, τόξον*), the bow used for shooting arrows. The bow is one of the most ancient of all weapons, and has been, from time immemorial, in general use over the globe, both among civilized and barbarous nations. Hence the Greeks and Romans ascribed to it a mythical origin, some saying that it was the invention of Apollo, who taught the use of it to the Cretans,⁴ and others attributing the discovery either to Scythes the son of Jupiter, or to Perses the son of Perseus.⁵ These several fables indicate nothing more than the very superior skill and celebrity of the Cretans, the Scythians, and the Persians in archery. The use of the bow is, however, characteristic of Asia rather than of Europe. In the Roman armies it was scarcely ever employed except by auxiliaries; and these auxiliaries, called *sagittarii*, were chiefly Cretans and Arabians.⁶

Likewise in the Grecian armies, archers acted only a subordinate though important part. Their position was in the rear; and, by taking advantage of the protection afforded by the heavy-armed soldiers, who occupied the front ranks, their skill was rendered very effective in the destruction of the enemy. Thus Homer⁷ gives a long list of names in the Trojan army of men slain by the arrows of Teucer, the son of Telamon, who accomplished

this object by sheltering himself under the ample shield of his brother Ajax.

Among the Scythians and Asiatics, archery was universally practised, and became the principal method of attack. In the description given by Herodotus¹ of the accoutrements of the numerous and vast nations which composed the army of Xerxes, we observe that not only Arabians, Medes, Parthians, Scythians, and Persians, but nearly all the other troops without exception, used the bow, although there were differences characteristic of the several countries in respect to its size, its form, and the materials of which it was made. Thus the Indians and some others had bows, as well as arrows, made of a cane (*κάλαμος*), which was perhaps the bamboo.

Herodotus also alludes to the peculiar form of the Scythian bow. Various authorities conspire to show that it corresponded with the upper of the two figures here exhibited, which is taken from one of Sir

W. Hamilton's fictile vases. It shows the Scythian or Parthian bow unstrung, and agrees with the form of that now used by the Tartars, the modern representatives of the ancient Scythæ. In conformity with this delineation, an unlettered rustic, who had seen the name of Theseus (ΘΗΣΕΥΣ), says that the third letter was like a Scythian bow.²

On the other hand, the *Grecian bow*, the usual form of which is shown in the lower of the preceding figures, has a double curvature, consisting of two circular portions united by the handle. The fabrication and use of bows of this kind are described by Homer³ in the following manner: Pandarus, the Lycian archer, having obtained the long horns of a species of wild goat, had them smoothed and polished by a bowman (*κεραϊδός τέκτων*), fitted to one another at the base, and fastened together by means of a ring of gold (*χρυσή κορώνη*). Preparing to shoot, he lowers his body (*ποτὶ γαίῃ ἀγκλίνας*. Compare the next woodcut). His companions cover him with their shields. Having fitted the arrow, he draws the string towards his breast (*νευρὴν μαζῶ πέλασεν*). The bow (*βίος*, as opposed to *νευρή*) twangs, the string resounds, and the arrow flies to reach its mark. We see this action exhibited in the following outline of a statue belonging to the

group of the *Egina marbles*, and perhaps nearly as

Compare Xen., Anab., i., 2, § 9: Κρήτες τόξοις.—Arrian, Exp. Al., i., 8, § 8: Ἐρυθρόαια, the Cretan, leader of the archers: Ἐρυθρόαια; * Κρής, ὁ τοξόχης.—8. (Il., vii., 266–315.)

1. (vii., 61–80.)—2. (Ap. Athen., x., p. 454, d.—Compare Theocrit., xiii., 56, and Schol. in loc.—Lycophr., 914.—Ann. Marcell., xxii., 8.—Diod. Sic., i. c.)—3. (Il., iv., 105–126.)

old as the age of Homer himself.¹ The bow, placed in the hands of this statue, was probably of bronze, and has been lost.

It is evident that a bow, made and handled in the manner here described, could not be longer than three or four feet, and must have been far less powerful than the Scythian bow. On account of the material, it is often called by the classical authors *a horn* (κέρας, ² cornu³).

This difference of size and form caused a difference also in the mode of drawing the bow. The Greek, with one knee on the ground, drew his right hand with the string towards his breast, as represented in the Æginetan statue, in Homer's account of Pandarus, and in Virgil's description⁴ of Camilla; the Scythian, on the contrary, advancing boldly towards the enemy, and often on horseback, obliged by the length of his bow, which he held vertically, to avoid stooping and to elevate his left hand, drew the other up to his right ear, as is practised by our archers in the present day.⁵ The Oriental arrow was long and heavy in proportion to the bow,⁶ and was sent, as Procopius observes, with such force that no shield or thorax could resist it.

The bow was sometimes adorned with gold (whence *auratus arcus*⁷). The golden ring, or handle, has been already mentioned. Apollo is called by Homer "the god of the silver bow" (ἀργυροτόξος).

The bowstring was twisted, and was made either of thongs of leather (νεύρα βόεα⁸), of horse-hair (ἵππεια τριχώσις⁹), or of the hide, or perhaps the intestines, of the horse (*nervus equinus*¹⁰).

When not used, the bow was put into a case (τοξόθηκη, γυνυτός, *Corytus*), which was made of leather (*scutum*¹¹), and sometimes ornamented (φαεινός¹²). The bowcase is often repeated and very conspicuous in the sculptured bas-reliefs of Persepolis. Thus encased, the bow was either hung upon a peg¹³ or carried on the shoulders.¹⁴

Among the Greek and Roman divinities, the use of the bow is attributed to Apollo, Diana, Cupid, and Hercules; and they are often represented armed with it in ancient works of art. (*Vid. SAGITTA.*)

ARDA'LION (ἀρδάλιον or ἀρδάνιον), also called *δορρακον* from the materials of which it was made, was a vessel of water, which stood before the door of a house in which there was a dead body, in order that those who had been with the corpse might purify themselves by sprinkling the water on their persons.¹⁵

*ARD'EA (ἄρδιός), the Heron. Aristotle¹⁶ describes three species: 1. The *ἄρδιος πέλλος*, the *Ardea cinerea cristata*, L., or common Heron. 2. The *λευκός*, the *Ardea alba*, or Great Egret. 3. The *αστερίας*, the *Ardea stellaris*, or European Bittern. This last is remarkable for flying very high, and hence its name (*αστερίας, stellaris*), as if it flew up to the very stars. Its attitude also, when at rest, is very singular, the beak being raised up to the heavens.¹⁷ Virgil's description of the soaring flight of this bird is admirably true to nature:

"*Notasque paludes*

Descriit, atque altam supra volat ardea nubem."¹⁸

There is a small species of heron which Gesner supposes may have been the *ελαφίς* of Oppian. Some late authors, however, would rather refer the *ελαφίς* to the Coot, or *Fulica atra*, L.¹⁹

A'REA (ἄλος or δλως), the threshing-floor, was a raised place in the field, open on all sides to the

wind. Great pains were taken to make this floor hard; it was sometimes paved with flint stones,¹ but more usually covered with clay and smoothed with a great roller.² It was also customary to cover it with lees of oil, which prevented insects injuring it, or grass growing upon it.³ The grains of the corn were beaten out by the hoofs of cattle treading upon it, or by flails (*fustes*⁴).

AREIOP'AGUS (ὁ Ἀρειὸς πάγος, or hill of Ares), at Athens, was a rocky eminence, lying to the west of, and not far from, the Acropolis. To account for the name, various stories were told. Thus, some said that it was so called from the Amazons, the daughters of Ares, having encamped there when they attacked Athens; others again, as Æschylus, from the sacrifices there offered to that god; while the more received opinion connected the name with the legend of Ares having been brought to trial there by Poseidon, for the murder of his son Halirrhochius.⁵ To none, however, of these legends did the place owe its fame, but rather to the council (Ἡ ἐν Ἀρειῷ πάγῳ βουλή) which held its sittings there, and was sometimes called Ἡ ἄνω βουλή, to distinguish it from the senate of Five Hundred, which sat in the Cerameicus within the city. That it was a body of very remote antiquity, acting as a criminal tribunal, was evidently believed by the Athenians themselves. In proof of this, we may refer to the express assertions of the orators, and the legend of Orestes having been tried before the council for the murder of his mother: a trial which took place before Athena, and which Æschylus represents as the origin of the court itself. Again, we find that, even before the first Messenian war (B.C. 740) began, the Messenian king offered to refer the points in dispute to the Argive Amphictiony, or the Athenian Areiopagus;⁶ a proof not only of the existence of the body, but also that it had already obtained considerable reputation for equity in its decisions; a reputation which it must have taken some time to establish.

There is sufficient proof, then, that the Areiopagus existed before the time of Solon, though he is admitted to have so far modified its constitution and sphere of duty that he might almost be called its founder. What that original constitution was must in some degree be left to conjecture, though there is every reason to suppose that it was aristocratical, the members being taken, like the Ephetæ, from the noble patrician families (*ἄριστοι δὴν*). We may remark that, after the time of Solon, the Ephetæ, fifty-one in number, sat collectively in four different courts, and were charged with the hearing of such cases of accidental or justifiable homicide as admitted of or required expiation before the accused could resume the civil and religious rights he had lost: a resumption impossible in cases of wilful murder, the capital punishment for which could only be escaped by banishment for life, so that no expiation was required or given.⁷ Now the Ephetæ formerly administered justice in five courts, and for this and other reasons it has been conjectured that they and the Areiopagus then formed one court, which decided in all cases of murder, whether wilful or accidental. In support of this view, it has been urged that the separation of functions was rendered necessary by that change of Solon which made the Areiopagus no longer an aristocratical body, while the Ephetæ remained so, and, as such, were competent to administer the rites of expiation, forming, as they did, a part of the sacred law of Athens, and therefore left in the hands of the old patricians, even after the loss of their political privileges. On this point we may remark, that the connexion insisted

on may to a great extent be true; but that there was not a complete identity of functions is proved by Plutarch (*Solon*), in a quotation from the laws of Solon, showing that even before that legislator the Areiopagites and Epheta were in some cases distinct.

It has been observed, in the article *ARCHON*, that the principal change introduced by Solon in the constitution of Athens was to make the qualification for office depend, not on birth, but property; also that, agreeably to his reforms, the nine archons, after an unexceptionable discharge of their duties, "went up" to the Areiopagus, and became members of it for life, unless expelled for misconduct.¹

The council then, after his time, ceased to be aristocratic in constitution; but, as we learn from Attic writers, continued so in spirit. In fact, Solon is said to have formed the two councils, the senate and the Areiopagus, to be a check upon the democracy; that, as he himself expressed it, "the state, riding upon them as anchors, might be less tossed by storms." Nay, even after the archons were no longer elected by suffrage, but by lot, and the office was thrown open by Aristides to all the Athenian citizens, the "upper council" still retained its former tone of feeling. We learn, indeed, from Isocrates,² that no one was so bad as to put off his old habits on becoming an Areiopagite; and, though this may refer to private rather than public conduct, we may not unreasonably suppose that the political principles of the younger would always be modified by the older and more numerous members: a modification which, though continually less in degree, would still be the same in direction, and make the Areiopagus what Pericles found it, a counteracting force to the democracy. Moreover, besides these changes in its constitution, Solon altered and extended its functions. Before his time it was only a criminal court, trying cases of "wilful murder and wounding, of arson and poisoning,"³ whereas he gave it extensive powers of a censorial and political nature. Thus we learn that he made the council an "overseer of everything, and the guardian of the laws," empowering it to inquire how any one got his living, and to punish the idle.⁴

We learn from other authorities that the Areiopagites were "superintendents of good order and decency," terms rather unlimited and undefined, as it is not improbable Solon wished to leave their authority. There are, however, recorded some particular instances of its exertion.⁵ Thus we find that they called persons to account for extravagant and dissolute living, and that, too, even in the later days of Athenian history. On the other hand, they occasionally rewarded remarkable cases of industry, and, in company with certain officers called *γυναικονόμοι* made domiciliary visits at private entertainments, to see that the number of guests was not too large, and also for other purposes. But their censorial and political authority was not confined to matters of this subordinate character. We learn from Aristotle,⁶ that, at the time of the Median invasion, when there was no money in the public treasury, the Areiopagus advanced eight drachmæ a man to each of the sailors: a statement which proves that they had a treasury of their own, rather than any control over the public finances, as some have inferred from it.⁷ Again we are told⁸ that, at the time of the battle of Chæroneia, they seized and put to death those who deserted their country, and that they were thought by some to have been the chief preservation of the city.

It is probable that public opinion supported them in acts of this kind, without the aid of which they must have been powerless for any such objects. In connexion with this point, we may add that, when heinous crimes had notoriously been committed, but the guilty parties were not known, or no accuser appeared, the Areiopagus inquired into the subject, and reported (*ἀποφαίνειν*) to the demus. The report or information was called *ἀπόφασις*. This was a duty which they sometimes undertook on their own responsibility, and in the exercise of an old-established right, and sometimes on the order of the demus.¹ Nay, to such an extent did they carry this power, that on one occasion they apprehended an individual (Antiphon) who had been acquitted by the general assembly, and again brought him to a trial, which ended in his condemnation and death.² Again we find them revoking an appointment whereby Æschines was made the advocate of Athens before the Amphictyonic council, and substituting Hyperides in his room. In these two cases, also, they were most probably supported by public opinion, or by a strong party in the state.³

They also had duties connected with religion, one of which was to superintend the sacred olives growing about Athens, and try those who were charged with destroying them.⁴ We read, too, that in the discharge of their duty as religious censors, they on one occasion examined whether the wife of the king archon was, as required by law, an Athenian; and finding she was not, imposed a fine upon her husband.⁵ We learn from the same passage that it was their office generally to punish the impious and irreligious. Again we are told, though rather in a rhetorical way, that they relieved the needy from the resources of the rich, controlled the studies and education of the young, and interfered with and punished public characters as such.⁶

Independent, then, of its jurisdiction as a criminal court in cases of wilful murder, which Solon continued to the Areiopagus, its influence must have been sufficiently great to have been a considerable obstacle to the aggrandizement of the democracy at the expense of the other parties in the state. In fact, Plutarch⁷ expressly states that Solon had this object in view in its reconstruction; and, accordingly, we find that Pericles, who never was an archon or Areiopagite, and who was opposed to the aristocracy for many reasons, resolved to diminish its power and circumscribe its sphere of action. His coadjutor in this work was Ephialtes, a statesman of inflexible integrity, and also a military commander.⁸ They experienced much opposition in their attempts, not only in the assembly, but also on the stage, where Æschylus produced his tragedy of the Eumenides, the object of which was to impress upon the Athenians the dignity, the sacredness, and constitutional worth of the institution which Pericles and Ephialtes wished to reform. He reminds the Athenians that it was a tribunal instituted by their patron goddess Athena, and puts into her mouth a popular harangue full of warnings against innovations, and admonishing them to leave the Areiopagus in possession of its old and well-grounded rights, that under its watchful guardianship they might sleep in security.⁹ Still the opposition failed: a decree was carried, by which, as Aristotle says, the Areiopagus was "mutilated," and many of its hereditary rights abolished.¹⁰ Cicero, who in one place speaks of the council as governing Athens, observes in another, that from that time all authority was vested in the ecclesia,

and the state robbed of its ornament and honour. Plutarch¹ tells us that the people deprived the Areiopagus of nearly all its judicial authority (*τὰς κρίσεις πλὴν ὀλίγων ἀπάσας*), establishing an unmixt democracy, and making themselves supreme in the courts of justice, as if there had formerly been a superior tribunal. But we infer from another passage that the council lost considerable authority in matters of state; for we learn that Athens then entered upon a career of conquest and aggrandizement to which she had previously been a stranger; that, "like a rampant horse, she would not obey the reins, but snapped at Eubœa, and leaped upon the neighbouring islands." These accounts in themselves, and as compared with others, are sufficiently vague and inconsistent to perplex and embarrass; accordingly, there has been much discussion as to the precise nature of the alterations which Pericles effected; some, among whom we may mention Müller,² are of opinion that he deprived the Areiopagus of their old jurisdiction in cases of wilful murder; and one of his chief arguments is, that it was evidently the design of Æschylus to support them in this prerogative, which therefore must have been assailed. For a sufficient answer to this, we would refer our readers to Mr. Thirlwall's remarks,³ merely stating, in addition, that Demosthenes⁴ expressly affirms, that neither tyrant nor democracy had ever dared to take away from them this jurisdiction. In addition to which, it may be remarked, that the consequences ascribed to the innovation do not seem to us to indicate that the Areiopagus lost its authority as a criminal tribunal, but rather that it was shorn of its power as superintending the morals and conduct of the citizens, both in civil and religious matters, and as exercising some control over their decisions. Now an authority of the former kind seems far removed from any political influence, and the popular belief as to its origin would have made it a dangerous object of attack, to say nothing of the general satisfaction the verdicts had always given. We may observe, too, that one of the chief features of a democracy is to make all the officers of the state responsible; and that it is not improbable that one of the changes introduced by Ephialtes was to make the Areiopagus, like other functionaries, accountable to the demus for their administration, as, indeed, we know they afterward were.⁵ This simple regulation would evidently have made them subservient, as they seem to have been, to public opinion; whereas no such subservience is recorded in criminal matters, their tribunal, on the contrary, being always spoken of as most just and holy; so much so, that Demosthenes says⁶ that not even the condemned whispered an insinuation against the righteousness of their verdicts. Indeed, the proceedings before the Areiopagus, in cases of murder, were, by their solemnity and fairness, well calculated to ensure just decisions. The process was as follows: The king archon⁷ brought the case into court, and sat as one of the judges, who were assembled in the open air, probably to guard against any contamination from the criminal.⁸ The accuser, who was said *εἰς Ἀρειὸν πύλον ἐπισκήπτειν*, first came forward to make a solemn oath (*διωμοσία*) that his accusation was true, standing over the slaughtered victims, and imprecating extirpation upon himself and his whole family were it not so. The accused then denied the charge with the same solemnity and form of oath. Each party then stated his case with

all possible plainness, keeping strictly to the subject, and not being allowed to appeal in any way to the feelings or passions of the judges.¹ After the first speech,² a criminal accused of murder might remove from Athens, and thus avoid the capital punishment fixed by Draco's *Θεσμοί*, which on this point were still in force. Except in cases of parricide, neither the accuser nor the court had power to prevent this; but the party who thus evaded the extreme punishment was not allowed to return home;³ and when any decree was passed at Athens to legalize the return of exiles, an exception was always made against those who had thus left their country.⁴

The reputation of the Areiopagus as a criminal court was of long continuance, as we may learn from an anecdote of Aulus Gellius, who tells us⁵ that C. Dolabella, proconsul of the Roman province of Asia, referred a case which perplexed himself and his council to the Areiopagus (*ut ad iudices graviores exercitatioresque*); they ingeniously settled the matter by ordering the parties to appear that day 100 years (*centesimo anno adesse*). They existed in name, indeed, till a very late period. Thus we find Cicero mentions the council in his letters;⁶ and under the Emperors Gratian and Theodosius (A.D. 380), *Ῥούφιος Φήστος* is called proconsul of Greece, and an Areiopagite.⁷

Of the respectability and moral worth of the council, and the respect that was paid to it, we have abundant proof in the writings of the orators, where, indeed, it would be difficult to find it mentioned except in terms of praise. Thus Lysias speaks of it as most righteous and venerable;⁸ and so great was the respect paid to its members, that it was considered rude in the demus laughing in their presence, while one of them was making an address to the assembly on a subject they had been deputed to investigate. This respect might, of course, facilitate the resumption of some of their lost power, more especially as they were sometimes intrusted with inquiries on behalf of the state, as on the occasion to which we have just alluded, when they were made a sort of commissioners to inquire into the state of the buildings about the Pnyx, and decide upon the adoption or rejection of some proposed alterations. Isocrates, indeed, even in his time, when the previous inquiry or *δοκιμασία* had fallen into disuse, speaks well of their moral influence; but, shortly after the age of Demetrius Phalereus, a change had taken place; they had lost much of their respectability, and were but ill fitted to enforce a conduct in others which they did not observe themselves.

The case of St. Paul is generally quoted as an instance of their authority in religious matters; but the words of the sacred historian do not necessarily imply that he was brought before the council. It may, however, be remarked, that they certainly took cognisance of the introduction of new and unauthorized forms of religious worship, called *ἐπιθερά τέρψις*, in contradistinction to the *πάτρια* or older rites of the state.⁹ There was also a tradition that Plato was deterred from mentioning the name of Moses as a teacher of the unity of the Godhead, by his fear of the Areiopagus.¹⁰

With respect to the number of the Areiopagus its original form, a point of no great moment, there are various accounts; but it is plain that there could have been no fixed number when the archons became members of this body at the expiration of

their year of office. Lysias, indeed, speaks of them¹ as forming a part of the Areiopagus even during that time; a statement which can only be reconciled with the general opinion on the subject, by supposing that they formed a part of the council during their year of office, but were not permanent members till the end of that time, and after passing a satisfactory examination.

ARE'NA. (*Vid.* AMPHITHEATRUM.)

ARETAL'OGI were persons whose occupation appears to have been to amuse the company at the Roman dinner-tables.² They seem to have been looked upon with some contempt, as Juvenal speaks of the *mendax aretalogus*.³ Casaubon thinks that they were poor philosophers, of the Cynic and Stoic schools, who, being unable to procure followers, delivered their discourses on virtue and vice at the dinners of the rich, and that they were the same as those whom Seneca⁴ calls *circulatores philosophos*.⁵ Ruperti says that they were persons who boasted of their own valour (*ἀρετή*), like the *Miles gloriosus* of Plautus.⁶ Turnebus takes the word to mean "sayers of pleasant things," from *ἀρετός*, pleasant.⁷

ARGE'I. We learn from Livy⁸ that Numa consecrated places for the celebration of religious services, which were called by the pontifices "*argei*." Varro calls them the chapels of the *argei*, and says they were twenty-seven in number, distributed in the different districts of the city. We know but little of the particular uses to which they were applied, and that little is unimportant. Thus we are told that they were solemnly visited on the Liberalia, or festival of Bacchus; and also, that whenever the flamen dialis went (*ivit*) to them, he was to adhere to certain observances. They seem also to have been the depositaries of the topographical records. Thus we read in Varro, "*In sacris Argeorum scriptum est sic: Oppius mons princeps*," &c., which is followed by a description of the neighbourhood. There was a tradition that these *argei* were named from the chieftains who came with Hercules, the Argive, to Rome, and occupied the Capitoline, or, as it was anciently called, Saturnian Hill. It is impossible to say what is the historical value or meaning of this legend; we may, however, notice its conformity with the statement that Rome was founded by the Pelasgians, with whom the name of Argos was connected.⁹

The name *argei* was also given to certain figures thrown into the Tiber from the Sublician bridge, on the Ides of May in every year. This was done by the pontifices, the vestals, the prætors, and other citizens, after the performance of the customary sacrifices. The images were thirty in number, made of bulrushes, and in the form of men (*εἰδωλα ἄνθρωπων*). Ovid makes various suppositions to account for the origin of this rite; we can only conjecture that it was a symbolical offering to propitiate the gods, and that the number was a representative either of the thirty patrician curiæ at Rome, or perhaps of the thirty Latin townships.¹⁰

*ARGEMONE (*ἀργεμώνη*), a species of plant, which Dodonæus is almost disposed to regard as identical with the *Glavicum*, or Horned Poppy. Sprengel sets it down for the *Papaver argemone*. The paragraph in Dioscorides, in which the second species is described, would seem to be spurious. Pliny calls this plant *Argemonia*, and assigns it various curative properties in affections of the nervous system, gout, angina, &c.¹¹

ARGENTA'RII, bankers or money-changers at Rome. The public bankers, or *mensarii*, are to be distinguished from the *argentarii*. The highest class of *mensarii*, the *mensarii quinqueviri* or *triumviri*, were a sort of extraordinary magistrates, the office being generally filled by persons of high rank; their business was to regulate the debts of the citizens, and to provide and distribute specie on emergencies.¹ There were other *mensarii*, who stood lower than these, and whose office approximated to that of the *argentarii*; and still lower stood the *nummularii*, though these were also public functionaries. The *argentarii*, on the contrary, were private bankers, who did all kinds of broking, commission, and agency business for their customers. They are called *argentarii*; *argenteæ mensæ exercitores*; *argenti distractores*; *negotiatores stipis argentaria*.² Their private character is clear, from what Ulpian says:³ "*Tabernæ (i. e., argentariæ) publicæ sunt, quarum usus ad privatos pertinet*." Almost all money transactions were carried on through their intervention, and they kept the account-books of their customers. Hence all terms respecting the relation between debtor and creditor were borrowed from banking business: thus, *rationem accepti scribere* ("to put down on the debtor's side in the banker's book") means "to borrow money;" *rescribere*, "to pay it back again;" *nomen* (an item in the account) is "a debt," or even "a debtor," as when Cicero says,⁴ "*Ego meis rebus gestis hoc sum assecutus ut bonum nomen existimer*." On these books of account, which have given rise to the modern Italian system of book-keeping by double entry, see Pliny, *Hist. Nat.*, ii., 7.

The functions of the *argentarii*, besides their original occupation of money-changing (*permutatio argenti*), were as follows: 1. Attending public sales as agents for purchasers, in which case they were called *interpretes*.⁵ 2. Assaying and proving money (*probatio nummorum*). 3. Receiving deposits, or keeping a bank in the modern sense of the word. If the deposit was not to bear interest, it was called *depositum*, or *vacua pecunia*; if it was to bear interest, it was called *credutum*.⁶ The *argentarii* were said not only *recipere*, but also *constituere*, so that an action *constituta pecunia* would lie against them.⁷

The shops of the bankers were in the cloisters round the forum: hence money borrowed from a banker is called *as circumforaneum*; and the phrases *foro cedere* or *abire*, *foro mergi*, &c., mean "to become bankrupt." The *argentarii* at Rome were divided into corporations (*societates*), and formed a *collegium* like the *mensarii* and *nummularii*. The *argentarius* was necessarily a freeman.

ARGENTUM (*ἀργυρος*), silver. According to Herodotus,¹⁰ the Lydians were the first people who put a stamp upon silver; but, according to the testimony of most ancient writers, silver money was first coined at Ægina, by order of Pheidon, about B.C. 869.¹¹ The silver coins of Greece may be divided into three kinds, which differ in appearance according to the age in which they were struck. The most ancient are very thick, and of rude workmanship; those of Ægina usually bear on the upper side the figure of a turtle or a tortoise, and on the under an indented mark, as if the coin at the time of striking the metal had been placed upon a punchcon, and had received a mark from the weight of the blow. The second kind, which appears to belong to the age of Pericles and Xenophon,

1. (Liv., xxiii., 21: "Propter penuriam argenti triumviri mensarii facti.")—*Vid.* etiam Budæus, De Asse, v., p. 173.—Salmasius, De Modo Usur., p. 509.)—2. (Orelli, Inscript., n. 4060.)—3. (Dig. 18, tit. 1, s. 32.)—4. (ad Fam., v., 6.)—5. (*Vid.* Bentley's note on Horace, Epist., ii., l. 105.)—6. (Plaut., Curcul., iii., l. 63, seq.)—7. (Plaut., Curcul., ii., 3, 66–69: iii., 66, iv., 3, 3)–8. (Suet., Octav., 39.)—9. (*Vid.* Salmasius, De Modo Usur., p. 722, 110. (i., 94.)—10. (Ephorus, ap. Strab., viii., p. 376.—*El.*, Var. Hist., xii., 10.—Pollux, Onom., ix., 63.—*Anth.* theon's Class. Dict., s. v. Pheidon.)

are also of a thick form, but not so clumsy in appearance. The third, which belong to a later period, are broad and thin. The Greek coins, and especially the Athenian, are usually of very fine silver. Some writers have supposed that they are quite free from baser metal; but the experiments which have been made show that the finest possess a small quantity of alloy. Mr. Hussey¹ found, upon trial, that the most ancient Athenian coins contained about $\frac{1}{10}$ of the weight alloy, the second kind about $\frac{1}{12}$, and the more modern about $\frac{1}{15}$; the last of which is nearly the same alloy as in our own silver coin.

It was the boast of the Athenians that their coinage was finer than all other money in Greece, and Xenophon says that they exchanged it with profit in any market;² but this remark should probably be limited to the coinage of his own time. * (Mr. Hussey made his experiments with three Attic drachmæ of different ages: the first was a thick one of the rudest and earliest style; the second, a little later, but still of a thick form, with the head of Minerva, resembling that of the oldest coins, but not quite so clumsy; the third, of the latest kind, broad and thin, with the owl standing on the diota, the helmet of Minerva's head surmounted by a high crest, and with other characteristics of the later coinage of Athens. After stating the results, as given above, Mr. Hussey goes on to remark as follows: "Now, of these three drachmæ, the first and third are less fine than other Greek money. Out of nine trials of Greek and one of Roman silver, the third of the three Attic coins in question is considerably the lowest of all; and the first of them is likewise inferior to all but two. The second, on the contrary, is of finer standard than all, and therefore this alone can belong to the coinage of which Xenophon speaks. And, as the other two must be of different ages, the first belongs to an age earlier than Xenophon, the second to a later. Thus it appears that the coins to which the second drachma belongs, that is, the middling class of Attic silver, between the thickest and rudest of all, and the broad, thin pieces, may be set down as contemporary with Aristophanes and Xenophon: the very clumsy and ill-executed pieces, from which the first was taken, belong to an inferior coinage of an earlier age; and the broad, thin coins to later times, when the money was, for Athens at least, considerably debased. The comparative value of these coins proves also that it was the practice among the Greeks to alloy their money, even where the currency had good credit and wide circulation; and, therefore, those writers are mistaken who have reckoned the worth of it as if it were all, without exception, fine silver. For, though it is conceivable that the alloy in the oldest coins is due to want of skill to refine the metal, yet, when the later coins are baser than the earlier, this can only be because they were intentionally alloyed."³)

It has been already remarked under Æs, that silver was originally the universal currency in Greece, and that copper appears to have been seldom coined till after the time of Alexander the Great. Mr. Knight, however, maintains⁴ that gold was coined first, because it was the more readily found and the more easily worked; but there are sufficient reasons for believing that, even as late as the commencement of the Peloponnesian war, the Athenians had no gold currency. (Vid. AURUM.) It may be remarked here, that all the words connected with money are derived from ἀργυρος, and not from χρυσός, as καταργυρός, "to bribe with money;" ἀργυροποιός, "a money-changer," &c.; and ἀργυρος is itself not unfrequently used to signify money in general,⁵ as *as* is in Latin.

Silver was not coined at Rome till B.C. 269, five years before the first Punic war;⁶ but the Roman coinage of silver never appears to have been so free from baser metal as the best Athenian coinage. Under the Emperor Gallienus, the coinage was so much debased that it contained $\frac{1}{3}$ silver and $\frac{2}{3}$ alloy. In the time of the Republic, the impression on silver coins was usually, on the obverse, the head of Rome with a helmet, the Dioscuri, or the head of Jupiter; and on the reverse, carriages drawn by two or four animals (*bigæ, quadrigæ*), whence they were called respectively *bigati* and *quadrigati*, *sc. nummi*. (Vid. BIGATUS.) The principal silver coins among the Greeks and Romans were respectively the drachma and denarius. (Vid. DRACHMA, DENARIUS.)

The Athenians obtained their silver from the silver mines at Laurion, which were generally regarded as the chief source of the wealth of Athens. We learn from Xenophon⁷ that these mines had been worked in remote antiquity; and Xenophon speaks of them as if he considered them inexhaustible. In the time of Demosthenes, however, the profit arising from them had greatly diminished; and in the second century of the Christian æra they were no longer worked.⁸ The ore from which the silver was obtained was called *silver earth* (ἀργυρίτις γῆ, or simply ἀργυρίτις). The same term (*terra*) was also applied to the ore by the Romans, who obtained most of their silver from Spain.⁹

The relative value of gold and silver differed considerably at different periods in Greek and Roman history. Herodotus mentions it⁶ as 1 to 13; Plato⁷ as 1 to 12; Menander⁸ as 1 to 10; and Livy⁹ as 1 to 10, about B.C. 189. According to Suetonius,¹⁰ Julius Cæsar, on one occasion, exchanged gold for silver in the proportion of 1 to 9; but the most usual proportion under the early Roman emperors was about 1 to 12; and from Constantine to Justinian about 1 to 14, or 1 to 15.¹¹

* ARGENTUM VIVUM, Quicksilver or Mercury. It is first spoken of by Aristotle and Theophrastus under the name of fluid silver (ἀργυρος ἑνός), and the mode of obtaining it is thus described by the latter: "This is procured when a portion of cinnabar is rubbed with vinegar in a brass mortar and with a brass pestle." All the modern processes, on the other hand, that are adopted for separating the mercury from the ore, depend upon the volatility of the metal, its conversion into vapour in distilling vessels or retorts, and its condensation by cold. The nature of this mineral, however, does not seem to have been much understood even four centuries later; for Pliny¹² distinguishes between quicksilver (*Argentum vivum*) and the liquid silver (*Hydrargyrum*) procured by processes which he describes from minium, or native cinnabar. This hydrargyrum he supposes to be a spurious imitation of quicksilver, and fraudulent substitute for it in various uses to which it was applied.¹³ Dioscorides, however, who is generally supposed to have written about the same time with Pliny, means, according to Hill, by ὑδράργυρος καθ' εαυτὸν the quicksilver that is sometimes found in a fluid state in the bowels of the earth. (Vid. CINNABARIS.)¹⁴

ΑΡΓΙΑΣ ΓΡΑΦΗ (*ἀργίας γραφή*), an action to which any Athenian citizen was liable, according to the old law, if he could not bring evidence that he had some lawful calling. The law was introduced by Draco, who made the penalty of conviction death; Solon re-enacted the law, substituting, however, for the capital punishment a fine of 100

drachmæ for the first conviction, and a loss of civic rights (*ἀρτία*) if the same person was convicted three times of indolence.¹ According to Julius Polux,² Draco did not impose a severer punishment than *ἀρτία*, and Solon did not punish it at all till the third offence.³

***ARGILLA**, Potters' Clay, included frequently by the Latin writers under the general name of *Creta*. Thus Palladius says, "*Creta, quam argillam dicimus*;" and Columella, "*Creta, qua utuntur figuli, quamque nonnulli argillam vocant*."⁴ These writers speak repeatedly of "*creta figularis*,"⁵ "*creta qua fiunt amphoræ*."⁶ Celsus, too, speaks of "*creta figularis*,"⁷ and Vitruvius of "*vas ex creta factum, non coctum*."⁸ By the term *Creta*, therefore, was generally meant some whitish clay, such as potters' clay, pipe-clay, or fullers' earth. (*Vid. CRETA*.)

***ARGITIS**, a species of wine, celebrated by Virgil⁹ for its extraordinary durability, and procured from a small grape abounding in juice. It is believed to have been a white wine. If this conjecture be well founded, we may discover some analogy between it and the best growths of the Rhine, which are obtained from a small white grape, and are remarkable for their permanency.¹⁰

ΑΡΤΥΡΙΟΥ ΔΙΚΗ (*ἀρτυρίου δίκη*) was a civil suit of the class *πρός τινα*, and within the jurisdiction of the thesmothetæ, to compel the defendant to pay moneys in his possession, or for which he was liable, to the plaintiff. This action is casually alluded to in two speeches of Demosthenes,¹¹ and is treated of at large in the speech against Callippus.

***ARGYRTIS** (*ἀργυρίς*), a name given to the ore from which silver was obtained. (*Vid. ARGENTUM*.)

ΑΡΓΥΡΟΚΟΠΕΙΟΝ (*ἀργυροκοπεῖον*), the place where money was coined, the mint. That at Athens appears to have been in or adjoining to the chapel (*ἱερὸν*) of a hero named Stephanephorus. In it were kept the standard weights for the coins.¹²

ΑΡΓΥΡΑΣ ΠΙΔΕΣ (*ἀργυράσπιδες*), a division of the Macedonian army, who were so called because they carried shields covered with silver plates. They were held in high honour by Alexander the Great, after whose death they went over to Antigonus.¹³ Livy mentions them as the royal cohort in the army of Antigonus.¹⁴ The Emperor Alexander Severus had in his army a body of men who were called *argyroaspides*.¹⁵

***ΑΡΙΑ** (*ῥία*), a species of plant. Bauhin held it to be a kind of pear-tree, and Miller makes it to be that kind which gets the English name of White Beam-tree, namely, the *Pyrus Aria* of Hooker. But Schneider, upon the authority of Sibthorp, holds it to be a variety of the *Quercus ilex*.¹⁶

ARIADNEIA (*Ἀριάδνεια*), festivals solemnized in the island of Naxos in honour of Ariadne, who, according to one tradition, had died here a natural death, and was honoured with sacrifices, accompanied by rejoicings and merriment.¹⁷ Another festival of the same name was celebrated in honour of Ariadne in Cyprus, which was said to have been instituted by Theseus in commemoration of her death in the month of Gorpæus. The Amathusians called the grove in which the grave of Ariadne was shown, that of Aphrodite-Ariadne. This is the account given by Plutarch¹⁸ from Pæon, an Amathusian writer.

ARTES (*κρίός*), the battering-ram, was used to shake, perforate, and batter down the walls of besieged cities. It consisted of a large beam, made of the trunk of a tree, especially of a fir or an ash. To one end was fastened a mass of bronze or iron (*κεφαλὴ, ἐμβολή, προτομή*), which resembled in its form the head of a ram; and it is evident that this shape of the extremity of the engine, as well as its name, was given to it on account of the resemblance of its mode of action to that of a ram butting with its forehead. The upper figure in the annexed woodcut is taken from the bas-reliefs on the column of Trajan at Rome. It shows the aries in its simplest state, and as it was borne and impelled by human hands, without other assistance. Even when the art of war was much advanced, the ram must have been frequently used in this manner, both whenever time was wanting for more complicated arrangements, and wherever the inequality of the ground rendered such arrangements impracticable. This sculpture shows the ram directed against the angle of a wall, which must have been more vulnerable than any other part. ("*Angularem turrin ictus foravit arietis violentior*."¹⁹)

In an improved form, the ram was surrounded with iron bands, to which rings were attached, for the purpose of suspending it by ropes or chains from a beam fixed transversely over it. See the lower figure in the woodcut. By this contrivance the soldiers were relieved from the necessity of supporting the weight of the ram, and they could with ease give it a rapid and forcible motion backward and forward, so as to put the opposite wall into a state of vibration, and thus to shatter it into fragments.

The use of this machine was farther aided by placing the frame in which it was suspended upon wheels, and also by constructing over it a wooden roof, so as to form a "*testudo*" (*χελώνη κριοφόρος*), which protected the besieging party from the defensive assaults of the besieged. Josephus informs us that there was no tower so strong, no wall so thick, as to resist the force of this machine, if its blows were continued long enough.⁴

The beam of the aries was often of great length, *c. g.*, 80, 100, or even 120 feet. The design of this was both to act across an intervening ditch, and to enable those who worked the machine to remain in a position of comparative security. A hundred men, or even a greater number, were sometimes employed to strike with the beam.

The besieged had recourse to various contrivances in order to defend their walls and towers from the attacks of the aries. 1. They attempted, by throwing burning materials upon it, to set it on fire; and, to prevent this from being effected, it was covered with sackcloth (*σάββη*, *cilicis*) or with hides

(*coriis bubulis*), which were sometimes moistened (*humectis taurinis exuvias*).² 2. They threw down great stones, so as to break off the iron head of the ram.³ 3. To accomplish the same purpose, they erected beams turning upon upright posts (*tollenones*); from the extremities of these beams they suspended masses of lead, trunks of trees, stones, or parts of columns. They then caused these ponderous bodies to fall repeatedly upon the head of the ram, while the opposite party attempted to defeat this effort by means similar to those mentioned under the article ANTENNA, viz., by the use of sickles fixed to the ends of long poles (*asseribus falcatis*), and employed to cut the ropes by which the stones and other weights were suspended. 4. They caught the head of the ram in a noose (*laqueo*,⁴ βρόχου⁵), and were thus enabled to draw it on one side and avert its blows, or even to overturn it and prevent its action altogether.⁷ 5. They seized the head with a large forceps armed with teeth, and called the wolf (*lupus*),⁸ and they thus baffled the efforts of the besiegers in the same way as by using the noose. 6. They filled sacks with chaff, or stuffed them with other soft materials, and suspended them by ropes wherever the ram was expected to strike, so as to divert its blows and break their force, the besiegers meanwhile employing the sickles, as already mentioned, to cut the ropes.⁹ This provision of sickles, in addition to the ram, belonged to the more complicated engine, called *testudo arietaria*.

The larger machines of this class were so constructed as to be taken to pieces in order to be conveyed from place to place, and were put together again when required for use.¹⁰

Virgil is certainly chargeable with an anachronism when he speaks of the aries as employed at the sieges of Ilium and of Laurentum.¹¹ Thucydides mentions the use of it by the Peloponnesians at the siege of Plataea.¹² But it first became an important military engine in the hands of the Macedonians and Carthaginians. (*Vid. FALX, HELEPOLIS, TESTUDO.*)

*ARIES (κρίος), the ordinary ram. (*Vid. Ovis.*)

*AR'ION (ἀρείων or ἄριον), a shellfish noticed by Ælian. It is now applied to a genus of the class *Mollusca*, but was formerly placed under the *Limacæ*.¹³

*ARIS'ARUM (ἀρίσαρον), a species of plant. Dodonæus makes out its alliance with the *Arum*, and, accordingly, modern botanists give it the name of *Arum arisarum*. Miller calls it Friar's Cowl in English.¹⁴

*ARISTOLOCHIA (ἀρίστολοχία), a species of plant, the modern Birthwort. There is some difficulty in recognising the three kinds described by the ancients. Adams thinks there is little reason for rejecting the στρογγύλη as being the *Aristolochia Rotunda*, and the μακρά as being the *Longa* of modern botanists; and yet Sprengel inclines to refer the one to the *A. pallida*, and the other to the *A. Cretica*, L. The κληματίτις is unquestionably the *Aristolochia clematitis*, or Climbing Birthwort.¹⁵ The Birthwort tribe possess in general tonic and stimulating properties. Pliny, among other complaints in which the aristolochia was found useful, notices severe dysenteries, difficulty of breathing, hip-gout, the sting of scorpions, &c.; and in Peru, at the present day, the *A. fragrantissima* (called in that country *Bejuca de la Estrella*, or Star-Reed) is highly esteemed as a remedy against dysenteries, malignant inflammatory fevers, colds, rheumatic pains, &c. The root is the part used.¹⁶

ARMA, ARMATU'RA (ἔντεα, τεύχεα, ἱστομ. δπλα), arms, armour.

There can be no doubt that, in the earliest times, the Greeks, as well as other nations, used stones and clubs for their weapons, and that they wore the skins of the wild beasts which they had slain, at once as proofs of their strength and prowess, and as a protection to their bodies. Hence Hercules was commonly represented clad in the spoils of the Nemean lion, as well as carrying a club.¹ The use of the goatskin for a similar purpose has been noticed under the article ÆGIS. Theocritus, in the following lines, describes the savage wrestler Amycus as wearing the skin of a lion, which was fastened over his breast by two of the paws, and depended from thence over his back:

Αὐτὰρ ὑπὲρ νότοιο καὶ ἀνέχοντο ἡρεῖτο

*Ακρῶν δέρμα λέοντος ἀφημένον ἐκ ποδῶνων.²

This mode of wearing the lion's skin is displayed in two small bronzes of very high antiquity, which have been published by Micali,³ and which are copied in the annexed woodcut.

In the Homeric battles, we have some traces of the use of hides for defensive armour, as in the third book of the Iliad,⁴ where Paris appears lightly armed with a bow and panther's skin upon his shoulders. In the Argonautic expedition, Anceus, the Arcadian, always wore for the same purpose the shaggy hide of a bear, and Argus that of a black bull.⁵ Even as late as the Messenian war, the mountaineers of Arcadia, serving under Aristodemus as light-armed soldiers, wore the skins both of sheep and goats, and also of bears, wolves, and other wild beasts.⁶

Nevertheless, the armour both of the Greek and Trojan armies, as represented by Homer, was complete and elaborate. In various passages he describes the entire suit of armour of some of his greatest warriors, viz., of Achilles, Patroclus, Agamemnon, Menelaus, and Paris;⁷ and we observe that it consisted of the same portions which were used by the Greek soldiers ever after. Moreover, the order of putting them on is always the same. The heavy-armed warrior, having already a tunic around his body, and preparing for combat, puts on, first, his greaves (*κνημιδες*, *ocrea*); secondly, his cuirass (*θώραξ*, *lorica*), to which belonged the *μίτρα* underneath, and the zone (*ζώνη*, *cingulum*) above; thirdly, his sword (*ἔριφος*, *ensis*, *gladius*), hung on the left side of his body by means of a belt which

Rhod., i., 324.—Schol. in loc.)—6. (Paus., iv., 11, § 1.)—7. (Id., iii., 328—339 iv., 132—138; xi., 15—45; xvi., 130—142; xix., 364—391.)

passed over the right shoulder; fourthly, the large round shield (*σάκος, ἄσπίς, clipeus, scutum*), supported in the same manner; fifthly, his helmet (*κόρυς, κυνέη, cassis galea*); sixthly and lastly, he took his spear (*ἔγχος, δόρυ, hasta*), or, in many cases, two spears (*δοῦρε δύο*). Virgil represents the outfit of a warrior as consisting of the same six portions, when he describes the armour made by Vulcan for Æneas, and brought to him by his mother.¹ The form and use of these portions are described in separate articles under their Latin names. The annexed woodcut exhibits them all in the form of a Greek warrior attired for battle, as shown in Hope's *Costume of the Ancients* (i., 70).

Those who were defended in the manner which has now been represented, are called by Homer *ἀσπιστοί*, from their great shield (*ἄσπίς*); also *ἀγχευόμενοι*, because they fought hand to hand with their adversaries; but much more commonly *πρόμαχοι*, because they occupied the front of the army: and it is to be observed that these terms, especially the last, were honourable titles, the expense of a complete suit of armour (*πανοπλιή*²) being of itself sufficient to prove the wealth and rank of the wearer, while his place on the field was no less indicative of strength and bravery.

In later times, the heavy-armed soldiers were called *ὀπλίται*, because the term *ὄπλα* more especially denoted the defensive armour, the shield and thorax. By wearing these they were distinguished from the light-armed, whom Herodotus,³ for the reason just mentioned, calls *ὑποπλοῖ*, and who are also denominated *ψιλοὶ* and *γυμνοί*, *γυμνήται* or *γυμνήτες*. Instead of being defended by the shield and thorax, their bodies had a much slighter covering, sometimes consisting of skins, as in the above-mentioned instance of the Arcadians, and sometimes of leather or cloth; and, instead of the sword and lance, they commonly fought with darts, stones, bows and arrows, or slings. Though greatly inferior in rank and prowess to the heavy-armed soldiery, it is probable that they often surpassed them in numbers; and by their agility, by their rapid movements from place to place, and by embracing every opportunity of assailing the enemy, coming towards the front under the protection of the heavy-

armed, and again retreating for safety into the rear, they rendered important service to their employers.

We are justified in using the term "employers," because the light-armed were commonly attached in a subordinate capacity to individuals of the heavy-armed soldiery. In this manner the Helots were compelled to serve in the Spartan army. At the battle of Plataea, each Spartan had an appointment of no less than seven Helots to carry his arms, to protect him in danger, to assist him in conquering his opponent, and also to perform every menial service.¹ On the same occasion, as we are informed by Herodotus,² the other divisions of the Greek army had only one light-armed to one heavy-armed soldier. In after times, also, the Athenian hoplite had usually one attendant, and received as wages for both himself and his servant two drachmæ per day.³

Besides the heavy and light armed soldiers, the *ὀπλίται* and *ψιλοὶ*, who, in general, bore towards one another the intimate relation now explained, another description of men, the *πείλαστοί*, also formed a part of the Greek army, though we do not hear of them in early times. Instead of the large round shield, they carried a smaller one called the *πέλιτη*, and in other respects their armour, though heavier and more effective than that of the *ψιλοὶ*, was much lighter than that of the hoplites. The weapon on which they principally depended was the spear.

The cities of Eubœa agreed to go to battle only as hoplites, discarding the use of light armour, depending on the sword and lance, and handling the latter as a pike.⁴ The Eubœans were probably induced to form this agreement in consequence of the richness of their island in the ores of copper and iron. On the other hand, those nations which had neither mines, nor any considerable wealth of other kinds, could scarcely send any but light-armed soldiers, who commonly served as mercenaries.

The Romans legions consisted, as the Greek infantry for the most part did, of heavy and light armed troops (*cravis et levis armatura*). But they were not formed upon the same system of attaching individuals to one another, in the relation of the master or employer and his servant. At all events, this system did not prevail among the Romans to any extent; and when Virgil, in the *Æneid*, mentions the armour-bearer or squire (*armiger*), we must understand him to allude to the Grecian or Oriental practice, or to attribute such attendance and state to kings and generals only.

When a legion was drawn up in order of battle, the heavy-armed were posted in front in three divisions, viz., the *principes*, the *hastati*, and the *triarii*, and behind them were placed the light-armed in two divisions, called the *rorarii*, and the *accensi* or *velites*, the weight and strength of the arms decreasing gradually in these five divisions, until the rear consisted only of archers, slingers, and other troops, who might leave their place whenever occasion required, and make swift excursions for the purpose of attacking and annoying the enemy. Especially in commencing an engagement, the light-armed troops advanced to the front, strove to put the enemy to flight, and, if successful, pursued them. If, on the other hand, they were worsted, they retreated again in a body behind the heavy troops, on whom, as the main stay of the army, depended the decision of the conflict. If the heavy-armed were victorious, the light-armed again rushed forward to aid in breaking the ranks of the enemy, and the pursuit was left to them and to the cavalry, while the *principes*, *hastati*, and *triarii* maintained their original position.⁵

1. (Herod., i., 10, 28-30.—Manso, Sparta, i., l. p. 136, 137.)

5. (Veget., De Re Milit., ii., 15-17.)

t (Æn., viii., 615-625.)—2. (Herod., i., 60.)—3. (ix., 62, 63.)

The annexed figure is taken from the arch of Septimius Severus at Rome. On comparing it with that of the Greek hoplite in the last woodcut, we perceive that, while the national character is displayed by a wide difference in the attitude and expression, the several parts of the armour correspond, excepting only that the Roman soldier wears a dagger (*μάχαρα, pugio*) on his right side instead of a sword on his left, and, instead of greaves upon his legs, has *femoralia* and *caligæ*. All the essential parts of the Roman heavy armour (*lorica, ensis, clipeus, galea, hasta*) are mentioned together in an epigram of Martial,¹ and all except the spear in a well-known passage of St. Paul,² whose enumeration exactly coincides with the figures on the arch of Severus, and who makes mention, not of greaves, but of shoes or sandals for the feet.

The soft or flexible parts of the heavy armour were made of cloth or leather. The metal principally used in their formation was that compound of copper and tin which we call bronze, or, more properly, bell-metal. (*Vid. Æs.*) Hence the names for this metal (*χαλκός, æs*) are often used to mean armour, and the light reflected from the arms of a warrior is called *αὐγή χαλκή* by Homer, and *lux ænea* by Virgil.³ Instead of copper, iron afterward came to be very extensively used in the manufacture of arms, although articles made of it are much more rarely discovered, because iron is, by exposure to air and moisture, exceedingly liable to corrosion and decay. Gold and silver, and tin unmixed with copper, were also used, more especially to enrich and adorn the armour. When the Cyclopes, under the direction of Vulcan, make the suit for Æneas, as already mentioned, they employ these various metals:

"*Fuit æs rivis, aurique metallum:
Vulnificusque chalybs vasta fornace liquescit.*"

It cannot be supposed that the Roman soldiers could have acquired their high renown as conquerors without being regularly instructed in the use of arms. Vegetius accordingly, in his first book, devotes several chapters to an account of the exercises devised for this purpose. The recruits were provided with shields, spears, and other weapons of unusual size and weight, and in other respects expressly adapted for the discipline of the drill. The

masters at arms were called *armidoctores* and *campidoctores* (*ὀπλοδιδασκαί, ὀπλοδιδασκαλοί*).

The armory or arsenal, in which arms of all kinds were kept, was called *armamentarium* (*ὀπλοθήκη, ὀπλοφυλάκιον*).¹ The marine arsenal at the Piræus, built by the architect Philo, was the glory of the Athenians.²

In rude states of society, when the spirit of violence rendered life and property insecure, both Grecians and the nations around, whom they called barbarians, constantly carried arms for their defence.³ In the time of Thucydides⁴ the Athenians had discontinued this practice, because the necessity for being always armed existed no longer; but they all bore spears and shields in the public processions.

ARMA'RIUM, originally a place for keeping arms, afterward a cupboard, in which were kept, not only arms, but also clothes, books, money, ornaments, images, pictures, and other articles of value. The armarium was generally placed in the atrium of the house.⁵ The divisions of a library were called *armaria*.⁶ We find *armarium distegum* mentioned as a kind of sepulchre in an inscription in Gruter.⁷

ARMAMENTARIUM. (*Vid. ARMA, p. 95.*)

*ARMENI'ACA MALA (*μῆλα Ἀρμενιάκα*), a fruit, which Dioscorides makes the same with the *præcocia* of the Romans. There seems little reason to doubt that it is identical with our *Apricot*.⁸

*ARMENTIUM ('Αρμένιον), a blue pigment called after the country whence it came. The kind which by Dioscorides is esteemed the best, appears to have been an earth; for he requires it to be smooth, friable, and free from stone. Adams makes it to have been an impure carbonate of copper, like the Lapis Lazuli. Hill, however, maintains that it was a yellow earth or ochre of copper. The *Armenium* must not be confounded with the *Lapis Armenius* (*ἄλλος Ἀρμενιάκος*), or Armenian stone, first noticed by Paulus Ægineta, and which is called *λίθος λαζούριος* by Myrepsus. Jameson says the Armenian stone of the ancients was a limestone impregnated with earthy azure copper, and in which copper and iron pyrites were sometimes disseminated.⁹

ARMILLA (*ψάλιον, ψέλιον, or ψέλλιον, χλιδών, ἀμφοίδεα*), a bracelet or armlet.

Among all the nations of antiquity, the Medes and Persians appear to have displayed the greatest taste for ornaments of this class. They wore not only armillæ on their wrists, and on the arm a little below the shoulder, but also earrings, collars or necklaces, and splendid turbans. These portions of their dress often consisted of strings of valuable pearls, or were enriched with jewels. They were intended to indicate the rank, power, and wealth of the wearer, and this use of them has continued through successive generations down to the present day.¹⁰

In Europe, golden armillæ were worn by the Gauls both on their arms and on their wrists.¹¹ The Sabines also wore ponderous golden armillæ on the left arm, about the time of the foundation of Rome;¹²

and at the same early period, the Samians wore richly-ornamented armlets at the solemn festivals in honour of Juno.¹

It does not appear that armillæ were subsequently worn among the Greeks by the male sex. But those ladies who aimed at elegance and fashion had both *armlets* (περικαίδια²) and *bracelets* (περικάρπια, περιχέρια, ἀκροχέρια), of various materials, shapes, and styles of ornament. In a comedy of Plautus, formed upon a Greek model,³ armillæ are mentioned as parts of female attire, and one kind is distinguished by the name of *spinter*. This term (σφιγγίτις) is manifestly derived from σφίγγω (to compress), and its application is explained from the circumstance that the bracelet so denominated kept its place by compressing the arm of the wearer. The armilla was, in fact, either a thin plate of metal, or a wire of considerable thickness; and, although sometimes a complete ring, it was much more frequently made without having its ends joined; it was then curved, so as to require, when put on, to be slightly expanded by having its ends drawn apart from one another;⁴ and, according to its length, it went once, twice, or thrice round the arm, or even a greater number of times. When it made several turns, it assumed the form so clearly defined by Homer in the expression γυαμπτὰς ἑλίκας, "twisted spirals;"⁵ a form illustrated by numerous armillæ of gold and bronze in our collections of antiques, and exhibited very frequently on the Greek painted vases. (See the annexed woodcut, from Sir William Hamilton's great work, vol. ii., pl. 35.)

These spiral wires were sometimes engraved so as to exhibit the form of a serpent, and bracelets of this description were called *snakes* by the Athenian ladies.⁶

As in regard to the frontal (*vid. AMPYX*), so also in respect of armillæ, the Greeks conceived the attire of a goddess to resemble that of a lady of superior state and beauty. Hence they attributed these decorations to Aphrodite,⁷ and traces of a metallic armlet are seen upon the celebrated marble statue of that divinity preserved at Florence. In the British Museum is an inscription,⁸ found among the ruins of the Parthenon at Athens, which makes distinct mention of the ἀμφοδαί upon both the arms of a golden Victory preserved in that temple.⁹

Among the Romans we most commonly read of armillæ as conferred upon soldiers for deeds of extraordinary merit.¹ (See the next woodcut.) An instance of this occurs in Livy,² where, after a victory, one of the consuls bestows golden crowns and bracelets upon two officers, four centurions, and a manipulus of hastati, and gives silver horns and bracelets to others, who were either foreigners, or younger and of inferior rank. Pliny says³ that crowns and bracelets of gold were given to citizens, and not to foreigners. These military honours are enumerated in the inscriptions upon various ancient monuments raised to the memory of Roman officers and soldiers, stating that the emperor had presented them *torquibus, armillis, phaleris, &c.*, and often recording the exact number of these several decorations.⁴ The following form of words used in conferring this is preserved by Valerius Maximus.⁵ "*Imperator te argenteis armillis donat.*"

The Roman females wore bracelets partly for use and partly for ornament. The use of them was to hold amulets. (*Vid. AMULETUM*.) Pliny gives a variety of directions respecting the remedies to be effected by inserting particular things in bracelets (*armillæ, brachialia*), and wearing them constantly upon the arm. On the same principle, the Emperor Nero, in compliance with the wishes of his mother, sometimes wore on his right arm the exuvie of a serpent, enclosed in a golden armilla.⁶

As ornaments, armillæ were worn at Rome chiefly by women of considerable rank. The metallic band was, for this purpose, frequently enriched with precious stones and other beautiful objects. The presents of amber, *succina grandia*, mentioned by Juvenal⁷ as sent to a lady on her birthday, were probably bracelets set with amber.⁸ In the following woodcut, the first figure represents a gold bracelet discovered at Rome, on the Palatine Mount.¹¹ The rosette in the middle is composed of distinct

and very delicate leaves. The two starlike flowers on each side have been repeated where the holes for securing them are still visible. The second figure represents a gold bracelet found in Britain, and preserved in the British Museum. It appears to be

made of two gold wires twisted together, and the mode of fastening it upon the arm by a clasp, is worthy of observation. It has evidently been a lady's ornament. Besides objects finely wrought in gold, and the most beautiful pearls and jewels, ladies' bracelets were also formed to display other exquisite works of art. Böttiger says¹ "it can scarcely be doubted that the most splendid gems, with figures cut in relief, were designed to be worn in bracelets by the empresses, and other women of high rank in Rome." The same author observes² "that the large bracelets, made with three or four coils, were intended as rewards for the soldiers," and that it would be ridiculous to suppose such massive ornaments to have been designed for women. A specimen of these ponderous and highly valuable armillæ is represented in the third of the preceding figures. The original, of pure gold, is more than twice the length of the figure, and was found in Cheshire.³

If bracelets were worn by a Caligula,⁴ it was regarded as a sign of extravagance and effeminacy, being quite opposed to Roman ideas and customs. In general, the epithet *armillatus* denoted a servile or degraded condition.⁵

The terms *armilla* and *ψέλιον* are used for ornaments of the same kind as those already explained, which were worn upon the ankles, very commonly by Africans and Asiatics, rarely by Europeans.⁶ A dog-collar is also called *armilla* (*armillatos canes*⁷), and an iron ring used by carpenters.⁸

ARMILUS TRIUM, a Roman festival for the purification of arms. It was celebrated every year on the 14th before the calends of November (Oct. 19), when the citizens assembled in arms, and offered sacrifices in the place called Armilustrum, or Vicus Armilustri, in the 13th region of the city.⁹

*ARMORA/CIA (ἄρμωρίς), Horseradish. (Vid. ΡΗΑΦΗΝΙΣ.)

ARMY (GREEK). In the petty states of Greece, down to a period long subsequent to their establishment, a traveller, when beyond the walls of a town, was in constant danger of being surprised by an enemy, and often the labours of husbandry were carried on by men with arms in their hands.¹⁰ This insecurity of liberty and life must have tended powerfully to have infused a martial spirit among the Greeks; and, though they may have borrowed the first principles of war from the nations of the East, it was among them that the organization of a military force, and the tactics of the field, were brought nearly to as high a degree of perfection as was consistent with the nature of the arms in use before the invention of gunpowder.

The attack on Thebes and the war of Troy are the earliest instances in the Grecian history of military actions performed on a considerable scale; and on the latter occasion (probably about B.C. 1184), an army of 100,000 men is supposed to have been assembled. It would seem that the troops of the different states engaged in this war were at first intermixed with each other; for, in the second book of the Iliad,¹¹ Nestor is represented as advising Agamemnon to divide the army into several bodies, according to the nations or tribes of which it was composed, and to place each division under its own prince. It is scarcely conceivable, however, that such a distribution did not always subsist when nations combined together for one object; and, as the ships of the several states appear to have been drawn up separately, probably the mixture of the troops was only an accidental circumstance, arising from the inactivity in which the army had for some

time previously remained. It may be imagined, therefore, that the advice of Nestor was only intended as a regular notice for re-forming the army preparatory to inspection, and previously to a return to active service: be that as it may, the practice was afterward general, as well in the East as in the Greek states of Europe.

In the fourth book of the Iliad,¹ the arrangement of the army previously to an engagement is distinctly described. A line of war-chariots, in which the chiefs fought, formed the front; the heavy-armed foot were in the rear; and the middle space was occupied by archers or light-armed men, on whom less reliance could be placed. The warriors were protected by cuirasses, greaves, and helmets, all of brooze; they carried strong bucklers, and their offensive arms were javelins or pikes, and swords. The battle began by darts being thrown from the chariots as the latter advanced to break the ranks of the enemy: the chariots probably then fell into the intervals between the divisions of the troops who fought on foot; for the latter are said to have moved up in close order and engaged, shield touching shield, and lance opposed to lance, while the light-armed troops, now in the rear of all, or behind the chariots, discharged their arrows and stones over the heads of the combatants in front. The precept of Nestor, that the warriors should keep their ranks in action, according to the manner of their ancestors, indicates that a certain degree of regularity had long before been observed in the march of armies, or in the collisions of hostile troops.

On contemplating the account given by Homer, it must appear evident that the practice of war in his age differed from that which was followed by the Asiatics, Egyptians, and Greeks of a much later period, chiefly in the absence of cavalry: a circumstance which seems to prove that the art of horsemanship, though not wholly unknown, since Diomed rides on one of the horses which had been taken from the car of Rhesus,² must have been then very imperfect. The dense array in which the Greeks are represented as formed, in the fourth and thirteenth books of the Iliad, corresponds to that of the body of troops subsequently denominated a phalanx; and these are the first occasions on which great bodies of men are said to have been so drawn up. But, at the same time, it must be remarked, that though the poet seems in some passages to consider the compact arrangement of troops as a matter of great importance; yet the issue of the battle is almost always decided by the personal prowess of individual chieftains, who are able to put to flight whole troops of ordinary soldiers.

From a passage in the last book of the Iliad,³ it appears that during the heroic ages, as they are called, every family in a state was obliged to furnish one man, or more, who were chosen by lot, when a chieftain intended to set out on a military expedition. While absent from home, the troops subsisted by supplies brought up from their own district, or raised in that of the enemy. In the manner last mentioned, and by the plunder obtained in piratical excursions to the neighbouring coasts, the Greek army supported itself during the ten years of the Trojan war.

When, after the return of the Heraclidæ, the states of Greece had acquired some stability, the great lawgivers of Sparta and Athens, while forming constitutions for their several people, are said to have made regulations for the military service. To the free citizens only was it thought proper to grant the honour of serving their country in complete armour; and we learn from Herodotus that slaves were made to act as light-armed troops. In the action at Platea against Mardonius, the right wing of the Grecian army was composed of 10,000 La-

(l. 362.)

cedæmonians, of whom half were Spartans, and each of these was accompanied by seven Helots; the remaining 5000, who were furnished by the other towns of Laconia, were each accompanied by one Helot.¹ The employment of slaves in the ancient armies was, however, always considered as a dangerous measure; and it was apprehended, with reason, that they might turn against their masters, or desert to the enemy.

The organization of the Lacedæmonian army was more perfect than that of any other in Greece. It was based upon a graduated system of subordination, which gave to almost every individual a degree of authority, rendering the whole military force a community of commanders,² so that the signal given by the king ran in an instant through the whole army.³ The foundation of this system is attributed to Lycurgus, who is said to have formed the Lacedæmonian forces into six divisions (*μόραι*). Each *μόρα* was commanded by a *πολέμαρχος*, under whom were four *λοχαγοί*, eight *πεντηκοστήρες*, and sixteen *ἐνομοτάρχαι*;⁴ consequently, two *ἐνομοτῆται* formed a *πεντηκοστής*, two of these a *λόχος*, and four *λόχοι* made a *μόρα*. The regular complement of the enomotia appears to have been twenty-four men besides its captain. The lochus, then, consisted ordinarily of 100, and the mora of 400 men. The front row of the enomotia appears to have consisted of three men, and the ordinary depth of the line of eight men. The number of men in each enomotia was, however, not unfrequently increased. Thus, at the battle of Mantinea, another file was added; so that the front row consisted of four men, and each enomotia consequently contained thirty-two men.⁵ At the battle of Leuctra, on the contrary, the usual number of files was retained, but the depth of its ranks was increased from eight to twelve men, so that each enomotia contained thirty-six men.⁶ In the time of Xenophon, the mora appears to have consisted usually of 600 men.⁷ The numbers seem, however, to have fluctuated considerably, according to the greater or less increase in the number of the enomotia. Ephorus makes the mora to consist of 500 men, and Polybius⁸ of 900.

At the battle of Mantinea there were seven lochi, and the strength of the lochus was doubled by being made to consist of four pentecostyes and eight enomoties.⁹ Upon this account Dr. Arnold remarks:¹⁰ "A question here arises why Thucydides makes no mention of the mora, which, according to Xenophon, was the largest division of the Lacedæmonian army, and consisted of four lochi; the whole Spartan people being divided into six moræ. The scholiast on Aristophanes¹¹ says that there were six lochi in Sparta, others say five, and Thucydides here speaks of seven; but I think he means to include the Brasidian soldiers and the neodamodes; and, supposing them to have formed together one lochus, the number of the regular Lacedæmonian lochi would thus be six. These lochi, containing each 512 men, are thus much larger than the regular mora, which contained only 400, and approach more nearly to the enlarged mora of 600 men, such as it usually was in active service in the time of Agesilaus. Was it that, among the many innovations introduced into Sparta after the triumphant close of the Peloponnesian war, the term lochus was henceforward used in the sense in which the other Greeks commonly used it, that is, as a mere military division, consisting properly of about 100 men; and that, to avoid confusion, the greater divisions, formerly called lochi, and whose number, as being connected

with old traditions and political divisions, was not variable, were for the future called by the less equivocal name of moræ?"

To each mora of heavy-armed infantry there belonged a body of cavalry bearing the same name,¹ consisting at the most of 100 men, and commanded by the hipparchost (*ἵππαρχος*).² The cavalry is said, by Plutarch, to have been divided in the time of Lycurgus into *οὐλαμί* (*οὐλαμοί*) of fifty men each;³ but this portion of the Lacedæmonian army was unimportant, and served only to cover the wings of the infantry. The three hundred knights forming the king's body-guard must not be confounded with the cavalry. They were the choicest of the Spartan youths, and fought either on horseback or on foot, as occasion required.

Solon divided the Athenian people into four classes, of which the first two comprehended those persons whose estates were respectively equivalent to the value of 500 and 300 of the Attic measures called medimni. These were not obliged to serve in the infantry or on board ship, except in some command; but they were bound to keep a horse for the public, and to serve in the cavalry at their own expense. The third class, whose estates were equivalent to 200 such measures, were obliged to serve in the heavy-armed foot, providing their own arms; and the people of the fourth class, if unable to provide themselves with complete armour, served either among the light-armed troops or in the navy. The ministers of religion, and persons who danced in the festival of Dionysus, were exempt from serving in the armies; the same privilege was also accorded to those who farmed the revenues of the state. There is no doubt that, among the Athenians, the divisions of the army differed from those which, as above stated, had been appointed by the Spartan legislator; but the nature of the divisions is unknown, and it can only be surmised that they were such as are hinted at in the Cyropædia. In that work, Xenophon, who, being an Athenian, may be supposed to have in view the military institutions of his own country, speaking of the advantages attending the subdivisions of large bodies of men, with respect to the power of re-forming those bodies when they happen to be dispersed, states⁴ that the *τάξις* consists of 100 men, and the *λόχος* of twenty-four men (exclusive of their officer); and in another passage he mentions the *δεκάς*, or section of ten, and the *πεμπάς*, or section of five men. The *τάξις* seems to have been the principal element in the division of troops in the Athenian army, and to have corresponded to the Peloponnesian *λόχος*. The infantry was commanded by ten strategi (*Ἰδ. STRATEGI*) and ten taxiarchs, and the cavalry by two hipparchs and ten phylarchs. These officers were chosen annually, and they appear to have appointed the subordinate officers of each *τάξις* or *λόχος*.

The mountainous character of Attica and the Peloponnesus is the reason that cavalry was never numerous in those countries. Previously to the Persian invasion of Greece, the number of horse-soldiers belonging to the Athenians was but ninety-six, each of the forty-eight naucrariæ (*ναυκραρίαι*), into which the state was divided, furnishing two persons; but soon afterward the body was augmented to 1200 *κατάφρακτοι*, or heavy-armed horsemen, and there was, besides, an equal number of *ἀκροβολισταί*, or archers, who fought on horseback. The horses belonging to the former class were covered with bronze or other metal, and they were ornamented with bells and embroidered clothing. Before being allowed to serve, both men and horses were subject to an examination before the hipparchs, and punishments were decreed against persons who should enter without the requisite qualifi-

cations. It was also the duty of the hipparchs to train the cavalry in time of peace.¹

Every free citizen of the Greek states was, according to Xenophon and Plutarch, enrolled for military service from the age of 18 or 20, to 58 or 60 years, and at Sparta, at least, the rule was common to the kings and the private people. The young men, previously to joining the ranks, were instructed in the military duties by the *τακτικοί* or public teachers, who were maintained by the state for the purpose; and no town in Greece was without its gymnasium or school. The times appointed for performing the exercises, as well in the gymnasium as in the camp, were early in the morning, and in the evening before going to rest. The first employment of the young soldiers was to guard the city; and in this duty they were associated with such veterans as, on account of their age, had been discharged from service in the field. At 20 years of age the Athenian recruit could be sent on foreign expeditions; but, among the Spartans, this was seldom done till the soldier was 30 years old. No man beyond the legal age could be compelled to serve out of his country, except in times of public danger; but mention is occasionally made of such persons being placed in the rear of the army during an action, and charged with the care of the baggage.² While the Athenians were engaged in an expedition against Ægina, the Peloponnesians sent a detachment of troops towards Megara, in expectation of surprising the place; but the young and the aged men who remained to guard Athens marched, under Myronides, against the enemy, and prevented the success of the enterprise.³

An attention to military duties, when the troops were encamped, was strictly enforced in all the Greek armies; but a considerable difference prevailed in those of the two principal states with respect to the recreations of the soldiers. The men of Athens were allowed to witness theatrical performances, and to have in the camp companies of singers and dancers. In the Lacedæmonian army, on the contrary, all these were forbidden; the constant practice of temperance, and the observance of a rigid discipline, being prescribed to the Spartan youth, in order that they might excel in war (which among them was considered as the proper occupation of freemen); and manly exercises alone were permitted in the intervals of duty. Yet, while encamped, the young men were encouraged to use perfumes, and to wear costly armour, though the adorning of their persons when at home would have subjected them to the reproach of effeminacy. On going into action, they crowned themselves with garlands, and marched with a regulated pace, a concert of flutes playing the hymn of Castor.⁴

The military service was not always voluntarily embraced by the Greek people, since it was found necessary to decree punishments against such as evaded the conscriptions. These consisted in a deprivation of the privileges of citizenship, or in being branded in the hand. Deserters from the army were punished with death; and at home, when a man absented himself from the ranks, he was made to sit three days in a public place in women's apparel. It was held to be highly disgraceful in a soldier if, after an action, he was without his buckler; probably because this implied that he, who ought to have maintained his post till the last moment, had made a precipitate retreat; a coward would throw away his buckler in order that he might run faster.

In the infancy of the Greek republics, while the theatre of war was almost at the gates of each city, the soldier served at his own expense in that class of troops which his fortune permitted him to join.

Both at Athens and Sparta the *ἵππεις*, or horsemen, consisted of persons possessing considerable estates and vigour of body; each man furnished and maintained his own horse, and he was, besides, bound to provide at least one foot-soldier as an attendant. In the time of Xenophon, however, the spirit of the original institution had greatly declined; not only was the citizen allowed to commute his personal services for those of a horseman hired in his stead, but the purchase and maintenance of the horses, which were imposed as a tax on the wealthy, were ill executed; the men, also, who were least able in body, and least desirous of distinguishing themselves, were admitted into the ranks of the cavalry.

The distress occasioned by the long continuance of the Peloponnesian war having put it out of the power of the poorer citizens of Athens to serve the country at their own expense, Pericles introduced the practice of giving constant pay to a class of the soldiers out of the public revenue; and this was subsequently adopted by the other states of Greece. The amount of the pay varied, according to circumstances, from two oboli to a drachma.¹ The commanders of the *λόχοι* received double, and the *στρατηγοί* four times, the pay of a private foot-soldier.² A truce having been made between the Athenians and Argives, it was appointed that, if one party assisted another, those who sent the assistance should furnish their troops with provisions for thirty days; and it was farther agreed, that if the succoured party wished to retain the troops beyond that time, they should pay, daily, one drachma (of Ægina) for each horseman, and three oboli for a foot-soldier, whether heavy-armed, light-armed, or archer.³ At Athens, by the laws of Solon, if a man lost a limb in war, one obolus was allowed him daily for the rest of his life at the public expense; the parents and children of such as fell in action were also provided for by the state. (*Vid. ADONATOI.*)

With the acquisition of wealth, the love of ease prevailed over that of glory; and the principal states of Greece, in order to supply the places of such citizens as claimed the privilege of exemption from military service, were obliged to take in pay bodies of troops which were raised among their poorer neighbours. The Arcadians, like the modern Swiss, were most generally retained as auxiliaries in the armies of the other Greek states. In earlier times, to engage as a mercenary in the service of a foreign power was considered dishonourable; and the name of the Carians, who are said to have been the first to do so, became on that account a term of reproach.

The strength of a Grecian army consisted chiefly in its foot-soldiers; and of these there were at first but two classes: the *ὀπλίται*, who wore heavy armour, carried large shields, and in action used swords and long spears; and the *ψιλοί*, who were light-armed, having frequently only helmets and small bucklers, with neither cuirasses nor greaves, and who were employed chiefly as skirmishers in discharging arrows, darts, or stones. An intermediate class of troops, called *πελτασταί*, or targeteers, was formed at Athens by Iphicrates, after the Peloponnesian war;⁴ they were armed nearly in the same manner as the *ὀπλίται*, but their cuirasses were of linen instead of bronze or iron; their spears were short, and they carried small round bucklers (*πέλται*). These troops, uniting in some measure the stability of the phalanx with the agility of the light-armed men, were found to be highly efficient; and from the time of their adoption, they were extensively employed in the Greek armies. A band of club-men is mentioned by Xenophon among the Theban troops at the battle of Leucira.

Scarlet or crimson appears to have been the general colour of the Greek uniform, at least in the

1. (*Vid. Xenophon's treatise entitled Ἱππάρχικός.*)—2. (*Thucyd., v., 72.*)—3. (*Thucyd., i., 105.*)—4. (*Plutarch, Lycurg.*)

1. (*Thucyd., iii., 17.*)—2. (*Xen., Anab., vii., 6, § 1.*)—3. (*Thucyd., v., 47.*)—4. (*Xen., Hellen., iv., 4, § 16-18.*)

days of Xenophon; for he observes¹ that the army of Agesilaus appeared all bronze and scarlet (*ἀπαντα μὲν χαλκόν, ἅπαντα δὲ φοίνικα φαίνεσθαι*).

The oldest existing works which treat expressly of the constitution and tactics of the Grecian armies are the treatises of Ælian and Arrian, which were written in the time of Hadrian, when the art of war had changed its character, and when many details relating to the ancient military organizations were forgotten. Yet the systems of these tacticians, speaking generally, appear to belong to the age of Philip or Alexander; and, consequently, they may be considered as having succeeded those which have been indicated above.

Ælian makes the lowest subdivision of the army to consist of a *λόχος*, *δεκάς*, or *ἐνωμοτία*, which he says were then supposed to have been respectively files of 16, 12, or 8 men; and he recommends the latter. The numbers in the superior divisions proceeded in a geometrical progression by doubles, and the principal bodies were formed and denominated as follow: Four *λόχοι* constituted a *τετραρχία* (=64 men), and two of these a *τάξις* (=128 men). The latter doubled, was called a *σύνταγμα* or *ἐνωμία* (=256 men), to which division it appears that five supernumeraries were attached; these were the crier, the ensign, the trumpeter, a servant, and an officer, called *οὐραγός*, who brought up the rear. Four of the last-mentioned divisions formed a *χιλιάρχία* (=1024 men), which, doubled, became a *τέλος*, and quadrupled, formed the body which was denominated a *φάλαγξ*. This corps would therefore appear to have consisted of 4096 men; but, in fact, divisions of very different strengths were at different times designated by that name. Xenophon, in the *Cyropædia*, applies the term *phalanxes* to the three great divisions of the army of Cræsus, and in the *Anabasis* to the bodies of Greek troops in the battle of Cunaxa, as well as upon many other occasions. It is evident, therefore, that before the time of Philip of Macedon, *phalanx* was a general expression for any large body of troops in the Grecian armies. That prince, however, united under this name 6000 of his most efficient heavy-armed men, whom he called his companions; he subjected them to judicious regulations, and improved their arms and discipline; and from that time the name of his country was constantly applied to bodies of troops which were similarly organized.

The numerical strength of the phalanx was probably the greatest in the days of Philip and Alexander; and, if the tactics of Ælian may be considered applicable to the age of those monarchs, it would appear that the corps, when complete, consisted of about 16,000 heavy-armed men. It was divided into four parts, each consisting of 4000 men, who were drawn up in files generally 16 men deep. The whole front, properly speaking, consisted of two grand divisions; but each of these was divided into two sections, and the two middle sections of the whole constituted the centre, or *ὀμφαλός*. The others were designated *κέρατα*, or wings; and in these the best troops seem to have been placed. The evolutions were performed upon the enomoty, or single file, whether it were required to extend or to deepen the line; and there was an interval between every two sections for the convenience of manœuvring.²

The smallest division of the *ψιλοί*, or light troops, according to the treatise of Ælian, was the *λόχος*, which in this class consisted of eight men only; and four of these are said to have formed a *σίστασις*. The sections afterward increased by doubling the numbers in the preceding divisions up to the *ἐπίταγμα*, which consisted of 8192 men; and this

was the whole number of the *ψιλοί* who were attached to a phalanx of heavy-armed troops.

The Greek cavalry, according to Ælian, was divided into bodies, of which the smallest was called *ἵλη*: it is said to have consisted of 64 men, though the term was used in earlier time; for a party of horse of any number.³ A troop called *ἐπιλαρχία* contained two *ἵλαι*; and a division subsequently called *ταραντιναρχία* (from Tarentum in Italy) was double the former. Each of the succeeding divisions was double that which preceded it; and one, consisting of 2048 men, was called *τέλος*: finally, the *ἐπίταγμα* was equal to two *τέλη*, and contained 4096 men. The troops of the division or class, called by Ælian Tarentines, are supposed to have been similar to those which also bore the names of *δμήχαι* and *ὑπασιπασταί*, and which corresponded to the present dragoons, since they engaged either on horseback or on foot, being attended by persons who took care of the horses when the riders fought dismounted. Their armour was heavier than that of the common horsemen, but lighter than that of the *ὀπλίται*; and their first establishment is ascribed to Alexander. It does not appear that war-chariots were used in Greece after the heroic ages; indeed, the mountainous nature of the country must have been unfavourable for their evolutions. In the East, however, the armies frequently coming to action in vast plains, not only did the use of chariots commence at a very early epoch, but they continued to be employed till the conquest of Syria and Egypt by the Romans. Numerous chariots formed the front of the Persian line when Alexander overthrew the empire of Darius. Divisions of chariots were placed at intervals before the army of Molon, when he was defeated by Antiochus the Great;⁴ and Justin relates⁵ that there were 600 in the army which Mithradates (Eupator) drew up against that of Ariarathes. In the engagements with Darius and Porus, the troops of Alexander were opposed to elephants; and subsequently to the reign of that prince, those animals were generally employed in the Greek armies in Asia. They were arranged in line in front of the troops, and carried on their backs wooden turrets, in which were placed from 10 to 30 men, for the purpose of annoying the enemy with darts and arrows. They were also trained to act against each other: rushing together, they intertwined their trunks, and the stronger, forcing his opponent to turn his flank, pierced him with his tusks; the men, in the mean time, fighting with their spears.⁶ Thus, at the battle of Rapheæ, between Antiochus and Ptolemy, one wing of the Egyptian army was defeated in consequence of the African elephants being inferior in strength to those of India. Elephants were also employed in the wars of the Greeks, Romans, and Carthaginians with each other.

The four chief officers of a phalanx were disposed in the following manner: The first with respect to merit was placed at the extremity of the right wing; the second, at the extremity of the left; the third was placed on the right of the left wing; and the fourth on the left of the right wing; and a like order was observed in placing the officers of the several subdivisions of the phalanx. The reason given by Ælian for this fanciful arrangement is, that thus the whole front of the line will be equally well commanded; since, as he observes, in every (arithmetical) progression, the sum of the extreme terms is equal to that of the mean terms: whatever may be the value of this reason, it must have been a difficult task to determine the relative merit of the officers with the precision necessary for assigning them their proper places in the series. Experienced soldiers were also placed in the rear of th-

1. (Agesil., ii., 7.)—2. (Polyb., xi., ex. 3.)

1. (Xen., Anab., i., 2, § 16 1-2. (Polyb., v., 5.)—3. (Xen., i., 1.)—4. (Polyb., v., 5.)

phalanx; and Xenophon, in the *Cyropædia*, compares a body of troops thus officered to a house having a good foundation and roof.

Each soldier in the phalanx was allowed, when in open order, a space equal to four cubits ($5\frac{1}{2}$ or 6 feet) each way; when a charge was to be made, the space was reduced to two cubits each way, and this order was called *πίτυσις*. On some occasions only one cubit was allowed, and then the order was called *συνασπισμός*, because the bucklers touched each other.

In making or receiving an attack, when each man occupied about three feet in depth, and the Macedonian spear, or *ἀσπίς*, which was 18 or 20 feet long, was held in a horizontal position, the point of that which was in the hands of a front-rank man might project about 14 feet from the line; the point of that which was in the hands of a second-rank man might project about 11 feet, and so on. Therefore, of the sixteen ranks, which was the ordinary depth of the phalanx, those in rear of the fifth could not evidently contribute by their pikes to the annoyance of the enemy: they consequently kept their pikes in an inclined position, resting on the shoulders of the men in their front; and thus they were enabled to arrest the enemy's missiles, which, after flying over the front ranks, might otherwise fall on those in the rear. The ranks beyond the fifth pressing with all their force against the men who were in their front, while they prevented them from falling back, increased the effect of the charge, or the resistance opposed to that of the enemy;¹ and from a disposition similar to that which is here supposed in the Spartan troops at the battle of Platæa, the Persian infantry, ill armed, and unskilled in close action, are said to have perished in vast numbers in the vain attempt to penetrate the dense masses of the Greeks.

In action, it was one duty of the officers to prevent the whole body of the men from inclining towards the right hand; to this there was always a great tendency, because every soldier endeavoured to press that way, in order that he might be covered as much as possible by the shield of his companion; and thus danger was incurred of having the army outflanked towards its left by that of the enemy. A derangement of this nature occurred to the army of Agis at the battle of Mantinea.² Previously to an action, some particular word or sentence, *ἀνθήμα*, was given out by the commanders to the soldiers, who were enabled, on demanding it, to distinguish each other from the enemy.³

The Greek tactics appear to have been simple, and the evolutions of the troops such as could be easily executed: the general figure of the phalanx was an oblong rectangle, and this could, when required, be thrown into the form of a solid or hollow square, a rhombus or lozenge, a triangle, or a portion of a circle. On a march it was capable of contracting its front, according to the breadth of the road or pass, along which it was to move. If the phalanx was drawn up so that its front exceeded its depth, it had the name of *πλυνθιον*; on the other hand, when it advanced in column, or on a front narrower than its depth, it was called *πύργος*. Usually, the opposing armies were drawn up in two parallel lines; but there was also an oblique order of battle, one wing being advanced near the enemy, and the other being kept retired; and this disposition was used when it was desired to induce an enemy to break his line. It is supposed to have been frequently adopted by the Thebans; and, at the battle of Delium, the Bœotians thus defeated the Athenians.⁴ At the Granicus, also, Alexander, following, it is said,⁵ the practice of Epaminondas,

did not attack at once the whole army of the enemy, but threw himself with condensed forces against the centre only of the Persian line.

Occasionally, the phalanx was formed in two divisions, each facing outward, for the purpose of engaging the enemy at once in front and rear, or on both flanks; these orders were called respectively *ἀμφίστομος* and *ἀντίστομος*. When the phalanx was in danger of being surrounded, it could be formed in four divisions, which faced in opposite directions. At the battle of Arbela, the two divisions of Alexander's army formed a phalanx with two fronts; and here the attack was directed against the right wing only of the Persians.

The manœuvres necessary for changing the front of the phalanx were generally performed by counter-marching the files, because it was of importance that the officers or file leaders should be in the front. When a phalanx was to be formed in two parallel lines, the leaders commonly placed themselves on the exterior front of each line, with the *οἰστροί*, or rear-rank men, who were almost always veteran soldiers, in the interior; the contrary disposition was, however, sometimes adopted.

The phalanx was made to take the form of a lozenge, or wedge, when it was intended to pierce the line of an enemy. At the battle of Leuctra, the Lacedæmonians, attempting to extend their line to the right in order to outflank the Thebans, Epaminondas, or, rather, Pelopidas, attacked them while they were disordered by that movement. On this occasion, the Bœotian troops were drawn up in the form of a hollow wedge, which was made by two divisions of a double phalanx being joined together at one end.¹

It may be said that, from the disposition of the troops in the Greek armies, the success of an action depended in general on a single effort, since there was no second line of troops to support the first in the event of any disaster. The dense order of the phalanx was only proper for a combat on a perfectly level plain; and even then the victory depended rather on the prowess of the soldier than on the skill of the commander, who was commonly distinguished from the men only by fighting at their head. But, when the field of battle was commanded by heights, and intersected by streams or defiles, the unwieldy mass became incapable of acting, while it was overwhelmed by the enemy's missiles: such was the state of the Lacedæmonian troops when besieged in the island of Sphacteria.² The cavalry attached to a phalanx, or line of battle, was placed on its wings, and the light troops were in the rear, or in the intervals between the divisions. An engagement sometimes consisted merely in the charges which the opposing cavalry made on each other, as in the battle between the Lacedæmonians and Olynthians.³

The simple battering-ram for demolishing the walls of fortresses is supposed to have been an invention of the earliest times: we learn from Thucydides⁴ that it was employed by the Peloponnesians at the siege of Platæa; and, according to Vitruvius,⁵ the ram, covered with a roof of hides or wood for the protection of the men, was invented by Ceiras of Chalcedon, who lived before the age of Philip and Alexander. (*Vid. ARIES.*) But we have little knowledge of what may be called the field-artillery of the Greeks at any period of their history. Diodorus Siculus mentions⁶ that the *καταπέλτης*, or machine for throwing arrows, was invented or improved at Syracuse in the time of Dionysius; but whether it was then used in the attack of towns, or against troops in the field, does not appear; and it is not till about a century after the death of Alexander that we have any distinct intimation of such

machines being in the train of a Grecian army. According to Polybius,¹ there were with the troops of Machanidas many carriages filled with catapultæ and weapons; those carriages appear to have come up in rear of the Spartan army; but, before the action commenced, they were disposed at intervals along the front of the line, in order, as Philopœmen is said to have perceived, to put the Achæan phalanx in disorder by discharges of stones and darts. Against such missiles, as well as those which came from the ordinary slings and bows, the troops, when not actually making a charge, covered themselves with their bucklers; the men in the first rank placing theirs vertically in front, and those behind, in stooping or kneeling postures, holding them over their heads so as to form what was called a *χελώνη* (tortoise), inclining down towards the rear.

ARMY (ROMAN). The organization of the Roman army in early times was based upon the constitution of Servius Tullius, which is explained under the article *COMITIA CENTURIATA*; in which an account is given of the Roman army in the time of the kings and in the early ages of the Republic. It is only necessary to observe here, that it appears plainly, from a variety of circumstances, that the tactics of the Roman infantry in early times were not those of the legion at a later period, and that the phalanx, which was the battle-array of the Greeks, was also the form in which the Roman armies were originally drawn up. (*Clipeis antea Romani usi sunt; deinde, postquam stipendiarii facti sunt, scuta pro clipeis fecere; et quod antea phalanges similes Macedonicis, hoc postea manipulatim structa acies cepit esse.*²) In Livy's description³ of the battle which was fought near Vesuvius, we have an account of the constitution of the Roman army in the year B.C. 337; but, as this description cannot be understood without explaining the ancient formation of the army, we shall proceed at once to describe the constitution of the army in later times.

In the time of Polybius, which was that of Fabius and Scipio, every legion was commanded by six military tribunes; and, in the event of four new legions being intended to be raised, 14 of the tribunes were chosen from among those citizens who had carried arms in five campaigns, and 10 from those who had served twice as long. The consuls, after they entered upon their office, appointed a day on which all those who were of the military age were required to attend. When the day for enrolling the troops arrived, the people assembled at the Capitol;⁴ and the consuls, with the assistance of the military tribunes, proceeded to hold the levy, unless prevented by the tribunes of the plebes.⁵ The military tribunes, having been divided into four bodies (which division corresponded to the general distribution of the army into four legions), drew out the tribes by lot, one by one; then, calling up that tribe upon which the lot first fell, they chose (*legerunt*, whence the name *legio*) four young men nearly equal in age and stature. From these the tribunes of the first legion chose one; those of the second chose a second, and so on: after this four other men were selected, and now the tribunes of the second legion made the first choice; then those of the other legions in order, and, last of all, the tribunes of the first legion made their choice. In like manner, from the next four men, the tribunes, beginning with those of the third legion and ending with those of the second, made their choice. Observing the same method of rotation to the end, it followed that all the legions were nearly alike with respect to the ages and stature of the men. Po-

lybius observes¹ that, anciently, the cavalry troops were chosen after the infantry, and that 200 horse were allowed to every 4000 foot; but he adds that it was then the custom to select the cavalry first, and to assign 300 of these to each legion. Every citizen was obliged to serve in the army, when required, between the ages of 17 and 46 years. Each foot-soldier was obliged to serve during twenty campaigns, and each horseman during ten. And, except when a legal cause of exemption (*vacatio*) existed, the service was compulsory: persons who refused to enlist could be punished by fine or imprisonment, and in some cases they might be sold as slaves.² The grounds of exemption were age,³ infirmity, and having served the appointed time. The magistrates and priests were also exempted, in general, from serving in the wars; and the same privilege was sometimes granted by the senate or the people to individuals who had rendered services to the state.⁴ In sudden emergencies, or when any particular danger was apprehended, as in the case of a war in Italy or against the Gauls, both of which were called *tumultus*,⁵ no exemption could be pleaded, but all were obliged to be enrolled. (*Senatus decrevit, ut delectus haberetur, vacationes ne valerent.*⁶) Persons who were rated by the censors below the value of 400 drachmæ, according to Polybius, were allowed to serve only in the navy; and these men formed what was called the *legio classica*.

In the first ages of the Republic, each consul had usually the command of two Roman legions and two legions of allies; and the latter were raised in the states of Italy nearly in the same manner as the others were raised in Rome. The infantry of an allied legion was usually equal in number to that of a Roman legion, but the cavalry attached to the former was twice as numerous as that which belonged to the latter.⁷ The regulation of the two allied legions was superintended by twelve officers called prefects (*præfecti*), who were selected for this purpose by the consuls.⁸ In the line of battle the two Roman legions formed the centre, and those of the allies were placed, one on the right, and the other on the left flank; the cavalry was posted at the two extremities of the line; that of the allies in each wing, being on the outward flank of the legionary horsemen, on which account they had the name of Alarii. (*Vid. ALARII*.) A body of the best soldiers, both infantry and cavalry, consisting either of volunteers or of veterans selected from the allies, guarded the consul in the camp, or served about his person in the field; and these were called *extraordinarii*. (*Vid. EXTRAORDINARII*.)

The number of men in a Roman legion varied much at different times. When Camillus raised ten legions for the war against the Gauls, each consisted of 4200 foot-soldiers and 300 horse-soldiers;⁹ but, previously to the battle of Cannæ, the senate decreed that the army should consist of eight legions, and that the strength of each should be 5000 foot-soldiers.¹⁰ According to Livy,¹¹ the legions which went to Africa with Scipio consisted each of 6200 foot-soldiers and 300 horse (though the best commentators suppose that 5200 foot-soldiers are meant); and during the second war in Macedonia, the consul Æmilius Paulus had two legions of 6000 foot each, besides the auxiliaries, for service in that country.¹² The strength of the

(Cic., ad Att., i., 19.—Phil., viii., 1.—Liv., vii., 11; viii., 20.)—7. (Liv., viii., 8; xlii., 36.)—8. (Polyb., vi., ex. 2.—Cass., Bell. Gall., i., 39; iii., 7.)—9. (Liv., vii., 25.)—10. (Polyb., iii., 12.)—11. (Liv., xlii., 12.)—12. (Liv., xlii., 21.)

legionary cavalry seems to have been always nearly the same.

The number of legions in the service of Rome went on increasing with the extent of its territory; and, after the Punic wars, when the state had acquired wealth by its conquests in the East, the military force became very considerable. Notwithstanding the loss sustained at the battle of Cannæ, we find that, immediately afterward, the Romans raised in the city four legions of infantry, with 1000 horsemen, besides arming 8000 slaves; the cities of Latium sent an equal force; and, supposing 10,000 men to have escaped from Cannæ, the whole would amount to above 50,000 men. In the second year after the battle, the Republic had on foot 18 legions;¹ and in the fourth year, 23 legions.² In the interview of Octavius with Antony and Lepidus, it was agreed that the two former should prosecute the war against Brutus and Cassius, each at the head of 20 legions, and that the other should be left with three legions to guard the city. At Philippi, Antony and Octavius had, in all, 19 legions, which are said to have been complete in number, and increased by supernumerary troops; and, therefore, their force must have amounted to at least 100,000 infantry. On the other hand, Brutus and Cassius had also an army of 19 legions to oppose them, with 20,000 cavalry from the eastern provinces. According to Appian, Octavius, after the death of Lepidus, found himself master of all the western provinces, and at the head of 45 legions, together with 25,000 horse and 37,000 light-armed troops; and there were, moreover, the legions serving under Antony. Under Tiberius there were 25 legions even in time of peace, besides the troops in Italy and the forces of the allies.³

Besides being designated by numbers, the legions bore particular names. In a letter from Galba to Cicero,⁴ mention is made of the *Martia legio* as being one of the veteran bodies engaged in an action between Antony and Pansa in the north of Italy.⁵ And while Cæsar was carrying on the war in Gaul, he gave the freedom of the city to a number of the natives of that country, whom he disciplined in the Roman manner, and imbedded in a legion which he designated *alauda*; because the men wore on their helmets a crest of feathers, like those on the heads of certain birds.⁶ The legions were also distinguished by the name of the place where they were raised or where they had served, as *Italica*, *Britannica*, *Parthica*, or by that of the emperor who raised them.

Tacitus, in the *Annals* and elsewhere, makes mention of bodies of troops called *vexillarii*; and, as no precise account is given of them, the place which they held in the Roman armies can only be known by conjecture. It appears, however, most probable, as Walch has observed in a note upon the *Agricola* of Tacitus,⁷ that the vexillarii were those veterans who, after the time of Augustus, were released from their military oath, but were retained, till their complete discharge, under a flag (*vexillum*) by themselves, free from all military duties, to render their assistance in the more severe battles, guard the frontiers of the empire, and keep in subjection provinces that had been recently conquered. (*Exauctorati, qui senadena fecissent, ac retineri sub vexillo, ceterorum immunes, nisi propulsandi hostis.*⁸) There were a certain number of vexillarii attached to each legion; and, from a passage in Tacitus,⁹ it would appear that they amounted to 500. They were sometimes detached from the legion, and

sometimes those belonging to several legions seem to have been united in one body (*tredecim vexillarium milia*).¹ (The *subsignani milites* in Tacitus may be looked upon as the same with the *vexillarii*.² In Livy the *triarii* are said to be *sub signis*,³ where we perceive a close analogy between the old *triarii* and the *vexillarii* or *subsignani* of the age of Tacitus, although we must not suppose that the *vexillarii* were the same as the *triarii*.)

After the selection of the men who were to compose the legion, the military oath was administered: on this occasion, one person was appointed to pronounce the words of the oath, and the rest of the legionaries, advancing one by one, swore to perform what the first had pronounced. The form of the oath differed at different times: during the Republic, it contained an engagement to be faithful to the Roman senate and people, and to execute all the orders that should be given by the commanders.⁴ Under the emperors, fidelity to the sovereign was introduced into the oath;⁵ and, after the establishment of Christianity, the engagement was made in the name of the Trinity and the majesty of the emperor.⁶ Livy says⁷ that this military oath was first legally exacted in the time of the second Punic war, B.C. 216, and that, previously to that time, each decuria of cavalry and centuria of foot had only been accustomed to swear, voluntarily among themselves, that they would act like good soldiers.

The whole infantry of the legion was drawn up in three lines, each consisting of a separate class of troops. In the first were the *hastati*, so called from the *hasta*, or long spear which each man carried, but which was afterward disused:⁸ these were the youngest of the soldiers. The second line was formed of the troops called *principes*; these were men of mature age, and from their name it would appear that anciently they were placed in the front line.⁹ In the third line were the *triarii*, so called from their position; and these were veteran soldiers, each of whom carried two pila, or strong javelins, whence they were sometimes called *pilani*, and the *hastati* and *principes*, who stood before them, *anteplani*.

When vacancies occurred on service, the men who had long been in the ranks of the first, or inferior of these three classes, were advanced to those of the second; whence again, after a time, they were received among the *triarii*, or veteran troops. In a legion consisting of 4000 men, the number of the *hastati* was 1200; that of the *principes* was the same; but the *triarii* amounted to 600 only: if the strength of the legion exceeded 4000 men, that of the several bodies was increased proportionally, the number of the last class alone remaining the same.

The usual depth of each of the three bodies, or lines of troops in a legion, was ten men; an interval, equal to the extent of the manipulus, was left between every two of these divisions in the first and second lines, and rather greater intervals between those in the third line. Every infantry soldier of the legion was allowed, besides the ground on which he stood, a space equal to three feet, both in length of front and in the depth of the files, between himself and the next man, in order that he might have room for shifting the position of his buckler according to the action of his opponent, for throwing his javelin, or for using his sword with advantage.¹⁰ The divisions of the second line were in general placed opposite the intervals of the first, and, in like manner, the divisions of the third were opposite the intervals in the second. At the battle

1. (Tac., Hist., ii., 83.)—2. (Hist., i., 70; iv., 33.)—3. (Liv., viii., 8.)—4. (Polyb., vi., ex. 2.)—5. (Tac., Hist., iv., 31.)—6. (Veget., De Re Milit., ii., 5.)—7. (xxii., 38.)—8. (Varro, De Ling. Lat., iv., 16.)—9. (Liv., viii., 6.)—10. (Polyb., xvii., ex. 3.)

at Zama, however, the divisions of troops in the several lines were exactly opposite each other; but this was a deviation from the usual disposition, in order that the elephants of the Carthaginians might pass quite through to the rear. In an action, if the hastati were overpowered, they retired slowly towards the principes; and, falling into the intervals before mentioned, the two classes in conjunction continued the combat. In the mean time, the triarii, keeping one knee on the ground, covered themselves with their bucklers from the darts of the enemy; and, in the event of the first and second lines falling back, they united with them in making a powerful effort to obtain the victory.

The light-armed troops, bearing the name of *velites* and *ferentarii* or *rorarii*, did not form a part of the legion, but fought in scattered parties, wherever they were required. They carried a strong circular buckler three feet in diameter; the staff of their javelin was two cubits long, and about the thickness of a finger; and the iron was formed with a fine point, in order that it might be bent on the first discharge, and, consequently, rendered useless to the enemy.

The cavalry of the legion was divided into ten *turmae*, each containing 30 men, and each *turma* into three *decuria*, or bodies of 10 men. Each horseman was allowed a space equal to five feet in length in the direction of the line. Each *turma* had three *decuriones*, or commanders of ten; but he who was first elected commanded the *turma*, and was probably called *dux turmae*.¹

In the time of the Republic, the six tribunes who were placed over a legion commanded by turns. (*VID. TRIBUNI MILITUM*.) To every 100 men were appointed two centurions, the first of whom was properly so called; and the other, called *optio*, *uragus*, or *subcenturio*, acted as a lieutenant, being chosen for the purpose of doing the duty in the event of the sickness or absence of the former.² The *optio* appears to have been originally chosen by the tribune, but afterward by the centurion. (*VID. CENTURIO*.) The centurio also chose the standard-bearer, or ensign of his century (*signifer* or *accillarius*).³ Each century was also divided into bodies of ten, each of which was commanded by a *decurio* or *decanus*. The first centurion of the triarii was called *primipilus*; he had charge of the eagle, and he commanded the whole legion under the tribunes.⁴ The light-armed troops were also formed into bands or centuries, each of which was commanded by a centurion.

To Marius or Cæsar is ascribed the practice of drawing up the Roman army in lines by cohorts, which gradually led to the abandonment of the ancient division of the legion into manipuli (*VID. MANIPULI*), and of the distinctions of hastati, principes, and triarii. Each legion was then divided into ten cohorts, each cohort into three maniples, and each manipulus into two centuries, so that there were thirty maniples and sixty centuries in a legion.⁵ (*Cohors* or *chors*, the Greek *χόρος*, originally signified an enclosure for sheep or poultry, and was afterward used to designate the number of men which could stand with in such an enclosure.) From a passage in Livy, it appears that very anciently the allies or auxiliaries of Rome were arranged by cohorts: a disposition which is again referred to in the 23d and 28th books of his history,⁷ and in other places, whence it may be concluded that among

those troops it was ordinarily adopted. But, in the Commentaries of Cæsar, the divisions of all the legions, whether Roman or allied, are alike designated cohorts, and the term is also applied to the body of men (*prætoria cohors*) which was particularly appointed to attend on the consul or commander; for Cæsar¹ tells his army, which had objected to march against Ariovistus, that if the other troops should refuse to follow him, he would advance with the tenth legion alone, and would make that legion his prætorian cohort.

It has been supposed that Marius, who, in order to recruit the forces of the Republic, was compelled to admit men of all classes indiscriminately into the ranks of the legions, diminished to two the three lines of troops in which the Roman armies had been previously drawn up for action; but, if such were the fact, the regulation could not have long remained in force, since Cæsar usually, as in the battle with the Helvetians,² formed his army in three lines; and at Pharsalia he appears to have had a reserve, which constituted a fourth, or additional line. It may be added, that the name of one, at least, of the three classes of legionary troops continued to be applied till near the end of the Republic; for, in the first book of the *Civil War*,³ Cæsar, mentioning the loss of Q. Fulginius in an action against Afranius, designates him the first centurion of the hastati in the 14th legion.

The allied troops were raised and officered nearly in the same manner as those of the Roman legions, but probably there was not among them a division of the heavy-armed infantry into three classes. They were commanded by prefects (see page 102), who received their orders from the Roman consuls or tribunes. The troops sent by foreign states for the service of Rome were designated auxiliaries; and they usually, but not invariably, received their pay and clothing from the Republic.

According to Livy, the Roman soldiers at first received no pay (*stipendium*) from the state. It was first granted to the foot A.U.C. 347, in the war with the Volsci,⁴ and, three years afterward, to the horse, during the siege of Veii. Niebuhr, however, brings forward sufficient reasons for believing that the troops received pay at a much earlier period, and that the ærarians (*vid. ÆRARI*) had always been obliged to give pensions to the infantry, as single women and minors did to the knights; and he supposes that the change alluded to by Livy consisted in this, that every soldier now became entitled to pay, whereas previously the number of pensions had been limited by that of the persons liable to be charged with them.⁵ Polybius⁶ states the daily pay of a legionary soldier to have been two oboli, which were equal to 3½ ases, and in thirty days would amount to 100 ases. A knight's yearly pay amounted to 2000 ases; and, since the Roman year originally consisted of only ten months, his monthly pay amounted to 200 ases, which was double the pay of a foot-soldier. Polybius⁷ informs us that a knight's pay was three times as much as that of a foot-soldier; but this was not introduced till A.U.C. 354, and was designed, as Niebuhr has remarked, as a compensation for those who served with their own horses, which were originally supplied by the state.⁸ (Compare *ÆS HORDEARIUM*.) A centurion received double the pay of a legionary.

The pay of the soldiers was doubled by Julius Cæsar.⁹ In the time of Augustus, the pay of a legionary was 10 ases a day,¹⁰ which was increased still more by Domitian (*addidit quantum stipendium*

1. (Sall., Jug., 38.)—2. (Festus, s. v.—Veget., De Re Milit., ii., 7.)—3. (Livy, viii., 8; xxv., 5.—Tacit., Ann., ii., 81.)—4. (Livy, xxv., 19.—Veget., ii., 8.—Cæsar., Bell. Gall., ii., 25.)—5. ("In legione sunt centurie sexaginta, manipuli triginta, cohortes decem." Cincius, ap. Aul. Gell., xiv., 4.)—6. (ii., 64.)—7. (xxiii., 14; xxviii., 45.)

*militi*¹). Besides pay, the soldiers received a monthly allowance of corn, and the centurions double, and the horse triple, that of a legionary.²

The infantry of the allies was supplied with corn equal in quantity to that of the Roman legionaries, but their cavalry had less than was distributed to the Roman cavalry. These regulations subsisted only during the time of the Republic, or before the troops of the Italian cities were incorporated with those of Rome; and to the same age must be referred the orders of march and encampment described by Polybius. An account of the marching order of a Roman army is given under the article *AGMEN*.

No one order of battle appears to have been exclusively adhered to by the Romans during the time of the Republic, though, in general, their armies were drawn up in three extended lines of heavy-armed troops (*triplex acies*); the cavalry being on the wings, and the light troops either in front or rear, according to circumstances. At the battle of Cannæ, however, the infantry is said to have been drawn up in one line, and in close order. On this occasion, the Gauls and Spaniards, who were in the centre of the Carthaginian army, at first drove back the Romans; and the latter, drawing troops from their wings to strengthen their centre, formed there a sort of phalanx, whose charge succeeded so well that the enemy's line was broken; but, pressing forward too far, the wings of the latter closed upon the disordered troops, and nearly surrounded them. In the engagement with Labienus, the army of Cæsar, being attacked both in front and rear, was formed into two lines, which were faced in opposite directions; and, in the action with the Parthians, Crassus drew up the Roman army in one square body, having twelve cohorts on each of the four sides, with a division of cavalry between every two cohorts in each face.

The word of command was at first given aloud at the head of the army; but Æmilius Paulus changed this custom, and caused the tribune of the nearest legion to give it in a low voice to his primipilus, who transmitted it to the next centurion, and so on. It appears also that, anciently, the men on guard were at their posts during the whole day, and that, in consequence, they sometimes fell asleep leaning on their shields. Æmilius Paulus, in order to diminish the fatigue of the men and the chance of their sleeping, appointed that they should be relieved every six hours, and that they should go on guard without their shields. (*Vid. CASTRA.*)

The legion, during the continuance of the ancient discipline, was found to be more than equal to the phalanx of the Greeks for general service, and Polybius³ has sufficiently accounted for the fact. This writer observes that, while the phalanx retained its form and power of action, no force was able to make any impression upon it, or support the violence of its attack; but he adds that the phalanx required that the field of battle should be a nearly level plain; even then the enemy might avoid it; and, by manœuvring on its flanks and rear, might cut off its supplies. On an action taking place, the commander of an army similar to that of the Romans had it in his power to lead on to the attack a portion only of its line, keeping the rest in reserve; in this case, whether the phalanx was broken by the legion, or the former broke through any part of the enemy's divisions, its peculiar advantages were lost; for there would always be left spaces into which the enemy might penetrate and disperse the troops, whose long spears were of no avail against men armed with javelins and strong swords. In this

manner, Æmilius obtained a victory over Perseus at Pydna,¹ and Philip was defeated by Flaminius at the battle of Cynocephalæ.²

The severity of the Roman discipline may be said to have been occasionally relaxed, at least in the provinces, even during the Republic; for Scipio Æmilianus, when he went to command the army in Spain, found that the legionary soldiers used carts to carry a portion of the burdens which formerly they had borne on their own shoulders.³ But, among the disorders which prevailed during the reigns of the successors of the Antonines, one of the greatest evils was the almost total neglect of warlike exercises among the troops which guarded the city of Rome. The legions on the frontiers alone, in those times, sustained their ancient reputation, and Severus, by their aid, ascended without difficulty the throne then occupied by the unworthy Julianus. The almost total abandonment of the ancient military institutions may be said to have taken place soon after the time of Constantine; for, according to Vegetius,⁴ who lived in the reign of Valentinian II., the soldiers of that age were allowed to dispense with the helmet and cuirass, as being too heavy to be worn; and he ascribes their frequent defeats by the Goths to the want of the ancient defensive armour.

Vegetius has given a description of the legion, which, though said to accord with that of the ancients, differs entirely from the legions of Livy and Polybius. He considers it as consisting of ten cohorts, and states that it was drawn up in three lines, of which the first contained five cohorts; the troops of this line were called principes, and were heavy-armed men, each carrying five arrows, loaded at one end with lead, in the hollow of the shield, besides a large and small javelin. The second line, consisting of the troops called hastati, is said to have been formed by the remaining five cohorts. Behind these were placed the ferentarii (a sort of light-armed troops, who performed the duty of a forlorn-hope); the target-men, who were armed with darts, arrows, and swords; and besides these there were slingers, archers, and crossbow-men. In rear of all came the triarii, who were armed like the principes and hastati.⁵ Now it was the general practice, during the Republic, to place the principes in the second line, in rear of the hastati; therefore, if the disposition given by Vegetius ever had a real existence, it can only be supposed to have been in an age preceding that to which the description given by Livy⁶ refers, or it was an arrangement adopted on the occasion of some temporary reform which may have taken place under the emperors. What follows may, perhaps, be readily admitted to appertain to the Empire under the greatest of its princes. The first of the cohorts, which bore the name of *cohors milliaria*, was superior to the others, both with respect to the number and quality of the soldiers; it had, also, the charge of the eagle and the standard of the emperor. Its strength was 1105 foot-soldiers, and 132 cuirassiers on horseback, and its post was on the right of the first line. The remaining four cohorts of the first line contained each 555 infantry and 66 cavalry, and the five cohorts of the second line contained each the same number of infantry and cavalry. Thus the whole legion was composed of 6100 foot-soldiers and 726 horse-men, not including either the triarii or the light troops.

After the establishment of the imperial authority, the sovereign appointed some person of consular dignity to command each legion in the provinces; and this officer, as the emperor's lieutenant, had

¹ (Suet., Dom., 7.) ² (Polyb., vi., ex. 2.)—³ (xvii., ex. 3.)

¹ (Liv., xlv., 41.)—² (Polyb., xvii., ex. 3.)—³ (Liv., Epit. 57.)—⁴ (i., 16.)—⁵ (Veget., ii., 6, 15.)—⁶ (viii., 8.)

the title of *præfectus*, or *legatus legionis*.¹ The first appointment of this kind appears to have taken place in the reign of Augustus, and Tacitus mentions the existence of the office in the reign of Tiberius. The authority of the *legatus* was superior to that of the tribunes, who before were responsible only to the consul. In speaking of the officers of a legion, Vegetius² mentions two tribunes (probably meaning two classes of tribunes), of which the first, called *tribunus major*, received his commission from the emperor; the other, called *tribunus minor*, rose to that rank by merit or length of service. Subordinate to the tribunes were, in each cohort, the several centurions, who bore the general name of *ordinarii*.³ To every hundred men there were probably, at one time, only the *centurio*, whose post was in front of the division, and the *optio*, who remained in the rear; but it appears that Augustus and Vespasian increased the number of officers of this class; for Vegetius observes that those whom these two emperors added to the *ordinarii* were called *Augustales* and *Flaviales*.⁴ The *decurions* or *decani* were, as formerly, the leaders of files. According to Dion Cassius, seven cohorts of troops were instituted by Augustus for the defence of the city, and these bore the name of *vigiles*. It appears, however, that in the time of Tacitus they ceased to be considered as soldiers; for that writer takes no notice of them when, in enumerating the guards of Rome, he mentions three urban and nine prætorian cohorts.⁵

In a fragment of Arrian (the author of the work on the Tactics of the Greeks) we have a brief notice of the constitution of a Roman army during the reign of Hadrian, and the description will probably serve for any age between that time and the dissolution of the Empire. It was so regulated that, when drawn up in order of battle, the legions should be in one line eight deep, and no mention is made of any division of the troops into *hastati*, *principes*, and *triarii*. The first four ranks were armed with the pium, and the others with slender pikes or javelins. The men in the front rank were to present their pila at the level of the enemy's horses' breasts, and those in the second, third, and fourth ranks were to stand ready to throw theirs. A ninth rank was to consist of archers, and behind all were the *catapultæ* for projecting darts and arrows, and *ballistæ* for throwing stones, over the heads of the men in front. The cavalry were directed to be in the rear of the legions, probably in the event of being obliged to quit their stations on the wings. On the enemy making a charge, the second and third ranks were to close up to the first, and all these were to present their pila; the men in the fourth rank were to throw their weapons directly forward, and those in the rear were to discharge theirs over the heads of the others. The march of the army was made in one column. First came the Roman artillery, in two ranks; these were followed by archers on horseback and by the allied cavalry; then came the Armenian archers on foot, and half of the allied infantry, which was flanked by the cavalry of Achaia. The *élite* of the Roman cavalry marched at the head of the central division; after them came the ordinary cavalry, then the *catapultæ* and the light troops attached to the legions, followed by the legions themselves, in cohorts four men deep. At the head of the legion marched the *præfect*, his *legate*, the tribunes, and the centurions of the first cohort. The rear-guard consisted of the other half of the allied infantry and the baggage; and the whole was closed by the cavalry of the Getae.

After the settlement of the Empire, Augustus united with the troops which, under the name of

the prætorian cohort, had attended him as his guard, two legions of infantry which had been raised in Italy, and placed the whole in garrison in the chief towns of that country, but never allowed more than three cohorts to be in one city.¹ Tiberius afterward assembled this body of men in a fortified camp at Rome,² but outside the walls of the city;³ and there, during 300 years, they were at times the guards and the masters of the sovereign. In the time of Tiberius there were nine prætorian cohorts,⁴ but their number was increased to sixteen under Vitellius, four of whom guarded the city.⁵ When Severus had got possession of the Empire, subsequently to the murder of Pertinax by these prætorians, he disarmed the latter, and banished them from Rome; but such an institution was too convenient to be neglected by the despotic monarch of a vast empire, and he immediately drew from the legions of the frontiers the men most remarkable for their strength and courage.⁶ With these he formed an army of 25,000 men, to whom he gave pay and privileges superior to those of the other troops; and their commander, the prætorian præfect, was made both the head of all the military force and the chief minister of the Empire. By the arrangements of Diocletian, a prætorian præfect was appointed, with both a military and a civil jurisdiction, in each of the four great provinces, Italy, Gaul, Illyria, and the East, into which the Empire was then divided; but a large body of guards, under the command of the præfect of Rome, continued to form the garrison of the city. Engaged in the cause of Maximian, these troops, almost alone, withstood for a time the shock of Constantine's Gallic army, and most of them are said to have covered with their dead bodies the ground which they occupied when in line;⁷ but, after the death of the former, the fortified camp of the prætorians was destroyed, and their institution was suppressed.⁸

The command of all the armies of the Empire was then committed by Constantine to two officers, who had the title of *magistri militum*; one of these was placed over the cavalry, and the other over the infantry, yet both commanded indifferently the troops of both classes in any one army.⁹ On the division of the Empire their number was doubled; and in the reign of Constantius it was increased to eight. According to Vegetius,¹⁰ the *magister militum* was a man of distinguished birth; but this writer observes that the troops were actually commanded by the *præfectus legionis*, who held an intermediate rank between the *magister militum* and the tribunes, who were placed over the cohorts.

The hope of preventing those acts of insubordination which had occurred among the legionary troops, appears to have induced Constantine, or his immediate successors, to diminish the strength of those bodies; and, from a computation founded on the number of the troops which garrisoned Amida when it was besieged by Sapor, it appears that a Roman legion could not then have consisted of more than 1500 men.¹¹ Of these comparatively small bodies there were about 132 in the whole Empire; they were, however, not only without the discipline which characterized the Roman line of battle in former times, but the progress of luxury had so far enervated the class of free citizens that a sufficient number could not be found to fill the ranks of the army. Slaves were admitted into every corps except the superior class of cavalry; and the boldest of the Franks and Goths were al-

lawed, for the sake of their services, to attain the highest military posts. In this age appear the first indications of the feudal tenures; for the lands bestowed on the veterans, as the reward of valour, were granted on condition that the sons of those men should, like their fathers, serve the state in the wars.¹

The reputation of the Roman arms was upheld for a time in the West by the troops under Aëtius, and in the East by the martial virtues of Belisarius; and the last notice we have of an engagement sustained in the spirit of the ancient battles, is that given by Procopius, in his account of the Persian war,² when, describing an action on the Euphrates between the troops of that nation and those of Justinian, he says the latter presented a front which opposed to the assaults of the enemy's cavalry an impenetrable line of pikes, while the bucklers of the men protected them from the flights of arrows with which they would have otherwise been overwhelmed. From this time a Roman army began to assimilate to that of an Asiatic people; its strength consisting in its cavalry, which was armed with cuirass, helmet, and greaves, and which had acquired dexterity in the use of the javelin and bow; while the infantry, formed of men taken from the lowest rank in society, ill-armed and disciplined, served chiefly as artificers or labourers, or attendants on the horsemen, and in action only engaged with an infantry like themselves.

*ARN'ABO (ἀρνάβω), a medicinal substance noticed by Aëtius³ and Paulus Ægineta.⁴ It would appear that it is not noticed by the other medical authors, whether Greek, Roman, or Arabic, unless we are to suppose, with the commentators on Mesue, that it is the second *Zerumbeth* of Serapion, and the *Zarnaum* of Avicenna. If so, it must have been *Zexuary*, for this is the *Zerumbeth* of Serapion.⁵

*ARNOGLOS'SOS (ἀρνόγλωσσος or -ον), the herb Plantain. Macer Floridus describes two species very distinctly, namely, the *Plantag. major* and *minor*. Adams sees no reason to doubt that these are the two species noticed by Dioscorides, although Sprengel hesitatingly refers them to the *P. Asiatica* and *maritima*; and Sibthorp marks the ἀρνόγλωσσον μικρόν as being the *P. lagopus*. Stackhouse recognises the *α.* of Theophrastus as being the *P. major*, or the *Greater Plantain*.⁶

*ARON (ἄρον), a plant about which great uncertainty prevails. Woodville holds it to be the *Arum maculatum*, L., or the Wake-robin; but Alston says "the Wake-robin is not the *aron*, but the *ἀρισ-αρων* *Discozoidis* in the opinion of many." "I cannot make out exactly," observes Adams, "what plant either Dodonæus or Matthioli points to. Sprengel mentions that Ghinius referred it to the *Colocasia*, and Anguillara to the *Arum vulgare*; he himself is somewhat undecided as to the difference between the common *Arum* and the *Arum Discozoidis*. Stackhouse, without attempting to account for the transposition of terms, decides that the *aron* of Theophrastus is the *Arum Dracunculoides*, or Little Dragon herb, and the *δρακόντιον* the *Arum maculatum*. I regret that, after consulting all the best authorities on this subject, I must leave it in so unsatisfactory a state."⁷

ARQUA'TUS, a person afflicted with the *arquatus morbus*,⁸ or jaundice.⁹ This disease (called also

ικτερος, *aurigo*, *regius morbus*) derives its name from the yellow tint diffused over the body, imitating in a manner the colours of the rainbow.¹ It is sometimes spelled *arcuatus*, but less correctly, as (according to Nonius²) *arcus* signifies any arch, but *arquus* only the iris, or rainbow; as Lucretius,³ "Tum color in nigris existit nubibus arqui."

ARRA, AR'ABO, or ARRAHA, AR'RHABO, is defined by Gaius⁴ to be the "proof of a contract of buying and selling;" but it also has a more general signification. That thing was called *arraha* which the contracting parties gave to one another, whether it was a sum of money or anything else, as an evidence of the contract being made: it was no essential part of the contract of buying and selling, but only evidence of agreement as to price.⁵ If the *arraha* was given as evidence of a contract absolutely made, it was called *arraha pacto perfecto data*; if it was given as evidence of a contract to be made at a future time, it was called *arraha pacto imperfecto data*. In the latter case, the party who refused to complete the contract lost the *arraha* which he had given; and when he had received an *arraha*, but given none, he was obliged to restore double the amount of the *arraha*. Yet the bare restoration of the *arraha* was sufficient, if both parties consented to put an end to the contract, or if performance of the contract was resisted by either party on sufficient grounds. In the former case, the *arraha* only served, if dispute arose, as evidence of the unalterable obligation of the contract, and a party to the contract could not rescind the contract even with the loss of the *arraha*, except by making out a proper case. Hence arose the division of the *arraha* into *confirmatoria* and *punitiva*. If, in the former case, the contract was not completely performed, the *arraha* was restored, and the party who was in fault lost the *arraha* which he had given. But when the contract was completely performed, in all cases where the *arraha* was money, it was restored, or taken as part of the price, unless special customs determined otherwise; when the *arraha* was a ring, or any other thing, not money, it was restored. The recovery of the *arraha* was in all cases by a personal action.

The *arraha* in some respects resembles the deposit of money which a purchaser of land in England generally pays, according to the conditions of sale, on contracting for his purchase.

The term *arraha*, in its general sense of an evidence of agreement, was also used on other occasions, as in the case of betrothment (*sponsalia*). (Vid. MARRIAGE.) Sometimes the word *arraha* is used as synonymous with *pignus*,⁶ but this is not the legal meaning of the term.⁷

ARRHEPHORIA (Ἀρρηφώρα), a festival which, according to the various ways in which the name is written (for we find *ερρηφώρα* or *ἐρρηφώρα*), is attributed to different deities. The first form is derived from *ἄρρητα*, and thus would indicate a festival at which mysterious things were carried about. The other name would point to Erse or Herse, who was believed to be a daughter of Cecrops, and whose worship was intimately connected with that of Athena. But, even admitting the latter, we still have sufficient ground for believing that the festival was solemnized, in a higher sense, in honour of Athena.⁸ It was held at Athens, in the month of

(Etymol. Mag., s. v. Ἀρρηφώρα.)

Skrophorion. Four girls, of between seven and eleven years,¹ were selected every year from the most distinguished families, two of whom superintended the weaving of the sacred peplos of Athena, which was begun on the last day of Pyanepsion;² the two others had to carry the mysterious and sacred vessels of the goddess. These latter remained a whole year on the Acropolis, either in the Parthenon or some adjoining building;³ and, when the festival commenced, the priestess of the goddess placed vessels upon their heads, the contents of which were neither known to them nor to the priestess. With these they descended to a natural grotto within the district of Aphrodite, in the gardens. Here they deposited the sacred vessels, and carried back something else, which was covered, and likewise unknown to them. After this the girls were dismissed, and others were chosen to supply their place in the Acropolis. The girls wore white robes adorned with gold, which were left for the goddess; and a peculiar kind of cakes was baked for them. To cover the expenses of the festival, a peculiar liturgy was established, called *ἀρρηγορία*. All other details concerning this festival are unknown.

ARROGATIO. (Vid. *ΑΝΘΡΩΠΟΝ*.)

***ARSEN'IKON** (*ἀρσενικόν*) "does not mean what is commonly called *arsenic*, but the *scsqui-sulphuret of arsenic*, or *orpiment*." Celsus clearly indicates what it was when he says "*Auripigmentum, quod ἀρσενικόν a Græcis nominatur*."⁴ In a word, it is yellow orpiment, and this latter name itself is merely a corruption from *auripigmentum*, or "paint of gold." "It was called," observes Dr. Moore, "*auripigmentum*, perhaps, not merely from its golden colour and the use to which it was applied, but because the ancients thought it really contained that metal. Pliny mentions, among other modes of obtaining gold, that of making it from orpiment; and says that Caligula ordered a great quantity of what substance to be reduced, and obtained excellent gold, but in such small proportion as to lose by an experiment which was not afterward repeated."⁵ Although no great reliance can be placed on this account, we are not, of necessity, to regard it as a fable; for the mass experimented on may have contained, as it is said this mineral sometimes does, a small portion of gold."⁶ The arsenic of the ancients, then, was considerably different from our oxide of arsenic, which is a factitious substance procured from cobalt by sublimation. The Arabian author Servitor, however, describes the process of subliming arsenic; and Avicenna makes mention of white arsenic, by which he no doubt meant sublimed arsenic, or the *Arsenicum album* of modern chymists. According to the analysis of Klaproth, yellow orpiment consists of 62 parts of arsenic and 38 of sulphur. The Greek name *ἀρσενικόν* (*masculine*) is said by some to have been given to it because of the potent qualities it was discovered to possess; qualities, however, which the arsenic of the shops exhibits in a more intense degree.⁷ "Galen⁸ says it was commonly called *ἀρσενικόν* in his time, but *ὅτι τῶν ἀπικίζεν τὰ πάντα βουλομένων*, 'by those who wished to make everything conform to the Attic dialect,' *ἀρσενικόν*." According to Pliny, orpiment was dug in Syria, for the use of painters, near the surface of the ground; Vitruvius⁹ mentions Pontus as a locality, and Dioscorides¹⁰ names Mysia as the country whence the best was brought; that of Pontus holding the second rank.

The red sulphuret of arsenic was called *Sandarach*, and the ancients appear to have been well acquainted with the kindred nature of both the yellow and red. (Vid. *SANDARACHA*.)

ARTABA (*ἀρτάβη*), a Persian measure of capacity, which contained, according to Herodotus,¹ 1 medimnus and 3 cheniæ (Attic) = 102 Roman sextarii = 12 gallons 5.092 pints; but, according to Suidas, Hesychius, Polyænus,² and Epiphanius, it contained 1 Attic medimnus = 96 sextarii = 11 gallons 7.1456 pints. There was an Egyptian measure of the same name, of which there were two sorts, the old and the new artaba.³ The old artaba contained 4½ Roman modii = 72 sextarii = 8 gallons 7.359 pints. It was about equal to the Attic metretres; and it was half of the Ptolemaic medimnus, which was to the Attic medimnus as 3 : 2. The later and more common Egyptian artaba contained 3½ modii = 53; sextarii = 6 gallons 4.8586 pints.⁴ It was equal to the Olympic cubic foot, and about half as large as the Persian artaba.⁵

ARTEMIS'IA (*Ἀρτεμισία*), a festival celebrated at Syracuse in honour of Artemis Potamia and Soiteira.⁶ It lasted three days, which were principally spent in feasting and amusements.⁷ Bread was offered to her under the name of *Ἀρξία*.⁸ Festivals of the same name, and in honour of the same goddess, were held in many places in Greece; but principally at Delphi, where, according to Hege-sander,⁹ they offered to the god a mullet on this occasion, because it appeared to hunt and kill the sea-hare, and thus bore some resemblance to Artemis, the goddess of hunting. The same name was given to the festivals of Artemis in Cyrene and Ephesus, though in the latter place the goddess was not the Grecian Artemis, but a deity of Eastern origin.

*II. The name of an herb, commonly called *Mugworth*, or *Motherwort*. Dioscorides describes three species, the *πολύκλωνος, μονόκλωνος*, and *λεπτιφύλλος*. The first, according to Sprengel, is the *Artemisia arborescens*; the second, the *Artemisia spicata*; and the third, the *Artemisia campestris*. Dierbach seems to entertain much the same ideas regarding the species of wormwood comprehended under the *ἀρτεμισία* of Hippocrates. The Wormwood holds a prominent part in all the Herbals of antiquity, from Dioscorides to Macer Floridus.¹⁰

ARTERIA (*ἀρτηρία*), a word commonly (but contrary to all analogy) derived *ἀπὸ τοῦ ἀέρα τηρεῖν, ab aère servando*; because the ancients, ignorant of the circulation of the blood, and finding the arteries always empty after death, supposed they were tubes containing air.¹ The word was applied to the trachea by Hippocrates² and his contemporaries, by whom the vessels now called *arteries* were distinguished from the *veins* by the addition of the word *σφύζω*. By later writers it is used to signify sometimes the *trachea*,³ and in this sense the epithet *τρηχέα, aspera*, is occasionally added;⁴ sometimes an *artery*;⁵ in which sense the epithet *λεία, lavis*, is sometimes added, to distinguish it from the *trachea*; and sometimes, in the plural number, the *bronchia*.⁶

Notwithstanding the opinion of many of the ancients, that the arteries contained only air, it is certain that the more intelligent among them knew perfectly well, 1. That they contain blood,¹ and even that this is of a different nature from that which is in the veins.² Galen, from whom the last idea is obtained, calls the pulmonary artery *φλέψ ἀρτηρώδης*, because it conveys venous blood, although it has the form and structure of an artery. 2. That the section of an artery is much more dangerous and more difficult to heal than that of a vein.³ 3. That there is a pulsation in the arteries which does not exist in the veins, and of which the variations are of great value, both as assisting to form a correct diagnosis, and also as an indication of treatment.⁴

ARTOP'TA. (Vid. PISTOR.)

ARUR'A (ἀρoura), a Greek measure of surface, which, according to Suidas, was the fourth part of the *πλεθρον*. The *πλεθρον*, as a measure of length, contained 100 Greek feet; its square, therefore, =10,000 feet, and therefore the arura =2500 Greek square feet.

Herodotus⁵ mentions a measure of the same name, but apparently of a different size. He says that it is a hundred Egyptian cubits in every direction. Now the Egyptian cubit contained nearly 17½ inches;⁶ therefore the square of 100×17½ inches, i. e., nearly 148 feet, gives the number of square feet (English) in the arura, viz., 21,904.⁷

ARUS'PEX (Vid. HARUSPEX.)

ARVALES FRATRES. The fratres arvales formed a college or company of twelve in number, and were so called, according to Varro,⁸ from offering public sacrifices for the fertility of the fields (*sacra publica faciunt propterea, ut fruges ferant arva*). That they were of extreme antiquity is proved by the legend which refers their institution to Romulus, of whom it is said, that when his nurse Acca Laurentia lost one of her twelve sons, he allowed himself to be adopted by her in his place, and called himself and the remaining eleven "Fratres Arvales."⁹ We also find a college called the *Sodales Titii*, and as the latter were confessedly of Sabine origin, and instituted for the purpose of keeping up the Sabine religious rites,¹⁰ there is some reason for the supposition of Niebuhr,¹¹ that these colleges corresponded one to the other: the Fratres Arvales being connected with the Latin, and the Sodales Titii with the Sabine, element of the Roman state, just as there were two colleges of the *Luperci*, namely, the *Fabii* and the *Quinctilii*, the former of whom seem to have belonged to the Sabines.

The office of the fratres arvales was for life, and was not taken away even from an exile or captive. They wore, as a badge of office, a chaplet of ears of corn (*spicea corona*) fastened on their heads with a white band.¹² The number given by inscriptions varies, but it is never more than nine; though, according to the legend and general belief, it amounted to twelve. One of their annual duties was to celebrate a three days' festival in honour of Dea Dia, supposed to be Ceres, sometimes held on the xvi., xiv., and xiii., sometimes on the vi., iv., and iii. Kal. Jun., i. e., on the 17th, 19th, and 20th, or the 27th, 29th, and 30th of May. Of this the master of the college, appointed annually, gave public notice (*indicebat*) from the Temple of Concord on the Capitol. On the first and last of these days,

the college met at the house of their president, to make offerings to the Dea Dia; on the second they assembled in the grove of the same goddess, about five miles south of Rome, and there offered sacrifices for the fertility of the earth. An account of the different ceremonies of this festival is preserved in an inscription, which was written in the first year of the Emperor Elagabalus (A.D. 218), who was elected a member of the college under the name of M. Aurelius Antoninus Pius Felix.¹ The same inscription contains the following song or hymn, which appears to have been sung at this festival from the most ancient times:

"E nos, Lases, iuvate.

Neve luerre, Marmor, sins incurrere in pleoris :

Satur furere, Mars, limen sali, sta berber :

Semunis alternei advocapit conctos.

E nos, Marmor, iuvato :

Triumpe, triumpe, triumpe, triumpe, triumpe."

Klausen, in his work on this subject,² gives the following translation of the above :

"Age nos, Lares, juvate.

Neve tuem, Mars, sinas incurrere in plures :

Satur furere, Mars, pde pulsa limen, sta verbere

Semones alternei advocabite cunctos.

Age nos, Mars, juvato :

Triumpe," &c.

But, besides this festival of the Dea Dia, the fratres arvales were required, on various occasions under the emperors, to make vows and offer up thanksgivings, an enumeration of which is given in *Fabiolati*.³ Strabo, indeed,⁴ informs us that, in the reign of Tiberius, these priests (*επομνημονες*) performed sacrifices called the *ambarvalia* at various places on the borders of the ager Romanus, or original territory of Rome;⁵ and among others, at Festi, a place between five and six miles from the city, in the direction of Alba. There is no boldness in supposing that this was a custom handed down from time immemorial, and, moreover, that it was a duty of this priesthood to invoke a blessing on the whole territory of Rome. It is proved by inscriptions that this college existed till the reign of the Emperor Gordian, or A.D. 325, and it is probable that it was not abolished till A.D. 400, together with the other colleges of the pagan priesthoods.

The private *ambarvalia* were certainly of a different nature from those mentioned by Strabo, and were so called from the victim (*hostia ambarvalis*), that was slain on the occasion, being led three times round the cornfields before the sickle was put to the corn. This victim was accompanied by a crowd of merry-makers (*chorus et socii*), the reapers and farm-servants dancing and singing, as they marched along, the praises of Ceres, and praying for her favour and presence, while they offered her the libations of milk, honey, and wine.⁶ This ceremony was also called a *lustratio*,⁷ or purification: and for a beautiful description of the holiday, and the prayers and vows made on the occasion, the reader is referred to Tibullus, lib. ii., eleg. i. It is, perhaps, worth while to remark that Polybius⁸ uses language almost applicable to the Roman *ambarvalia* in speaking of the Mantineans, who, he says (specifying the occasion), made a purification, and carried victims round the city, and all the country: his words are, *Οἱ Μαντιναὶ καθαρίων ἐποιήσαντο, καὶ σφάγια περιήνεγκαν τῆς τε πόλεως κύκλῳ καὶ τῆς χώρας πᾶσης*.

There is, however, a still greater resemblance to

the rites we have been describing, in the ceremonies of the rogation or gang week of the Latin Church. These consisted of processions through the fields, accompanied with prayers (*rogationes*) for a blessing on the fruits of the earth, and were continued during three days in Whitsun-week. The custom was abolished at the Reformation in consequence of its abuse, and the perambulation of the parish boundaries substituted in its place.¹

*ARUNDO. (Vid. KAAAMOΣ.)

AS, or *Libra*, a pound, the unit of weight among the Romans. (Vid. LIBRA.)

AS, the unit of value in the Roman and old Italian coinages, was made of copper, or of the mixed metal called *Æs*. The origin of this coin has been already noticed under *Æs*. It was originally of the weight of a pound of twelve ounces, whence it was called *as libralis* and *as grave*. The oldest form of it is that which bears the figure of an animal (a bull, ram, hoar, or sow). The next and most common form is that described by Pliny,² as having the two-faced head of Janus on one side, and the prow of a ship on the other (whence the expression used by Roman boys in tossing up, *capita aut navim*³). The annexed specimen, from the British Museum, weighs 4000 grains: the length of the diameter in this and the two following cuts is half that of the original coins.

Pliny⁴ informs us that, in the time of the first Punic war (B.C. 264-241), in order to meet the expenses of the state, this weight of a pound was diminished, and ases were struck of the same weight as the sextans (that is, two ounces, or one sixth of the ancient weight); and that thus the Republic paid off its debts, gaining five parts in six: that afterward, in the second Punic war, in the dictatorship of Q. Fabius Maximus (about B.C. 217), ases of one ounce were made, and the denarius was decreed to be equal to sixteen ases, the Republic thus gaining one half; but that, in military pay, the denarius was always given for ten ases: and that, soon after, by the Papirian law (about B.C. 191), ases of half an ounce were made. Festus, also,⁵ mentions the reduction of the as to two ounces at the time of the first Punic war. There seem to have been other reductions besides those mentioned by Pliny, for there exist ases, and parts of ases, which show that this coin was made of 11, 10, 9, 8, 3, 1½, 1½ ounces; and there are copper coins of the Tercintan family

which show that it was depressed to $\frac{1}{3}$ and even $\frac{1}{5}$ of its original weight. Several modern writers have contended, chiefly from the fact of ases being found of so many different weights, that Pliny's account of the reductions of the coin is incorrect, and that these reductions took place gradually, in the lapse of successive centuries. But Böckh has shown¹ that there is no trace in early times of a distinction between the *as grave* and lighter money; that the Twelve Tables know of no such distinction; that, even after the introduction of lighter money, fines and rewards were reckoned in *as grave*; and that the style of the true Roman coins which still remain by no means proves that the heavier pieces are much older than those of two ounces, but rather the contrary. His conclusion is, that all the reductions of the weight of the as, from a pound down to two ounces, took place during the first Punic war. Indeed, if the reduction had been very gradual, it is impossible that the Republic could have made by it that gain which Pliny states to have been the motive for the step.

The value of the as, of course, varied with its weight. Some writers, indeed, suppose that a rise took place in the value of copper, which compensated for the reduction in the weight of the as; so that, in fact, the *as libralis* of Servius Tullius was not of much greater value than the lighter money of later times. But this supposition is directly contradicted by Pliny's account of the reduction in the weight of the as; and it would appear that the value of copper had rather fallen than risen at the time when the reduction took place.² Before the reduction to two ounces, ten ases were equal to the denarius—about 8½ pence English. (Vid. DENARIUS.) Therefore the as = 34 farthings. By the reduction the denarius was made equal to 16 ases; therefore the as = 2½ farthings.

The as was divided into parts, which were named according to the number of ounces they contained. They were the *unonz*, *dextans*, *dodrans*, *bes*, *septunz*, *semis*, *quincunz*, *triens*, *quadrans* or *teruncius*, *sextans*, *sestuncz* or *sestuncia*, and *uncia*, consisting respectively of 11, 10, 9, 8, 7, 6, 5, 4, 3, 2, 1½, and 1 ounces. Of these divisions the following were represented by coins; namely, the *semis*, *quincunz*, *triens*, *quadrans*, *sextans*, and *uncia*. There is a solitary instance of the existence of the *dodrans*, in a coin of the Cassian family, bearing an S and three balls. We have no precise information as to the time when these divisions were first introduced, but it was probably nearly as early as the first coinage of copper money.³

The *semis*, *semissis*, or *semi-as*, half the as, or six ounces, is always marked with an S to represent its value, and very commonly with heads of Jupiter, Juno, and Pallas, accompanied by strigils.

The *quincunz*, or piece of five ounces, is very rare. There is no specimen of it in the British Museum. It is distinguished by five small balls to represent its value.

The *triens*, the third part of the as, or piece of four ounces, is marked with four balls. In the an-

nexted specimen from the British Museum, the balls

1. (Hooker, Eccl. Pol., v., 61, 62.—Wheatley, Com. Pray., v., 20.)—2. (H. N., xxxiii., 3.)—3. (Macrob., Sat., i., 7.)—4. (H. N., xxviii., 13.)—5. (S. v. Sextant 4 ases)

1. (Metrolog. Untersuch., § 28.)—2. (Böckh, Metrolog. Untersuch., p. 346, 347.)

appear on both sides, with a thunderbolt on one side, and a dolphin, with a strigil above it, on the other. Its weight is 1571 grains.

The *quadrans* or *teruncius*, the fourth part of the as, or piece of three ounces, has three balls to denote its value. An open hand, a strigil, a dolphin, grains of corn, a star, heads of Hercules, Ceres, &c., are common devices on this coin. Pliny¹ says that both the triens and quadrans bore the image of a ship.

The *sextans*, the sixth part of the as, or piece of two ounces, bears two balls. In the annexed specimen from the British Museum, there is a caduceus and strigil on one side, and a cockle-shell on the other. Its weight is 779 grains.

The *uncia*, one ounce piece, or twelfth of the as, is marked by a single ball. There appear on this coin heads of Pallas, of Roma, and of Diana, ships, frogs, and ears of barley.

After the reduction in the weight of the as, coins were struck of the value of 2, 3, 4, and even 10 ases, which were called, respectively, *dussis* or *dupondius*, *tressis*, *quadrussis*, and *decussis*. Other multiples of the as were denoted by words of similar formation, up to *centussis*, 100 ases; but most of them do not exist as coins.

In certain forms of expression, in which *as* is used for money without specifying the denomination, we must understand the as. Thus *deni aris*, *mille aris*, *decies aris*, mean, respectively, 10, 1000, 1,000,000 ases.

The word *as* was used also for any whole which was to be divided into equal parts; and those parts were called *uncie*. Thus these words were applied not only to weight and money, but to measures of length, surface, and capacity, to inheritances, interest, houses, farms, and many other things. Hence the phrases *hæres hæres ex asse*, the heir to a whole estate; *hæres ex dodrante*, the heir to the ninth part, &c.² Pliny even uses the phrases *semissem Africa*,³ and *dodrantes et semiuncias horum*.⁴

The as was also called, in ancient times, *assarius* (sc. *nummus*), and in Greek τὸ ἀσάριον. According to Polybius,⁵ the assarius was equal to half the obolus. On the coins of Chios we find ἀσάριον, ἀσάριον ἡμισ, ἀσάρια δύο, ἀσάρια τρία.

*AS'ARUM (ἀσάρον), a plant. There can be no doubt, observes Adams, that it is the *Asarum Europæum*, or common Asarabacca. Dodonæus mentions that it had got the trivial name of *Baccar* in French, and hence supposes *Asarabacca* was a compound of the two terms. He denies, however, that it is the real *Baccharis* of the ancients. But Sprengel advocates this opinion, and mentions in confirmation of it, upon the authority of the *Flora Veronensis*, that the Asarabacca is called *bacchera* and *baccara* by the inhabitants of the district around Verona.⁶ According to Sibthorp, it still grows in what was once the Laconian territory, and in the country around Constantinople.

ASBESTOS or AMIAN'TUS (ἀσβεστος, ἀμιάντος). This mineral, which is generally white, and has sometimes a greenish hue, and which consists of soft flexible fibres, was obtained by the ancients

from India, from the vicinity of Carpasus in Cyprus, and from Carystus in Eubœa. In consequence of being found in the two latter localities, it was some times called "the flax of Carpasus" (λίνον Καρπασίον¹), and also "the Carystian stone" (λίθος Καρύστιος²). It was well adapted for making the wicks of lamps, because it is indestructible by fire; and hence the Greeks, who used it for this purpose, gave it the name "asbestos," which means inextinguishable. Pausanias³ mentions that the golden lamp which burned day and night in the temple of Athena Polias, at Athens, had a wick of this substance.

It was also spun and woven into cloth. Thus manufactured, it was used for napkins (χειρουργεῖα,⁴ χειρόμακτρα⁵), which were never washed, but cleansed in a much more effective manner, whenever they required it, by being thrown into the fire.

Another use to which asbestine cloth was applied, was to preserve the remains of dead bodies burned in the funeral pile. The corpse, having been wrapped in a cloth of this substance, was consumed with the exception of the bones, which were thus kept together and preserved from being mingled with the ashes of the wood. But the expense of this kind of cloth was so great, that it could only be used at the obsequies of persons of the most exalted rank. The testimony of Pliny, who alone has transmitted to us the knowledge of this species of posthumous luxury, has been corroborated by the discovery of pieces of the cloth in ancient Roman or Italian sepulchres. The most remarkable specimen of this kind was found at Rome, A.D. 1702, in a marble sarcophagus. The skull and bones of the deceased were wrapped up in it. Its dimensions were about five feet by six and a half. Since its discovery, it has been carefully preserved in the Vatican Library; and Sir J. E. Smith, who saw it there, describes its appearance in the following terms: "It is coarsely spun, but as soft and pliant as silk. Our guide set fire to one corner of it, and the very same part burned repeatedly with great rapidity and brightness without being at all injured."

Although asbestos is still found naturally associated with rocks of serpentine in Cornwall, and in many foreign countries, it is now scarcely used except for some philosophical purposes, and, if made into cloth, it is only in very small quantities, and as a matter of curiosity.—*II. The Greek medical writers use the term ἀσβεστος in a very different sense from the preceding. With them it indicates *Calx viva*, or Quicklime (ρίανος being understood). By Dioscorides it is more specially applied to the lime of sea-shells. "I am not aware," observes Adams, "that any Greek author uses the term ἀσβεστος in the sense in which it is employed by the Latin writers and by modern naturalists."⁷

*ASCALABOTES (ἀσκαλαβώτης), a species of Lizard. Its Greek names are ἀσκαλαβώτης, ἀσκαλαβός, γαλεώτης, and καλώτης, all of which appellations are given to one and the same animal, namely, the Spotted Lizard, the *Stellio* of the Latin writers, and the *Lacerta gecko* of Linnæus. The *Stellio* lived in walls, and was accustomed to run along these and on the roofs of houses.⁸ It was considered the enemy of man, venomous and cunning. Hence the term *stellionatus*, denoting all kinds of fraud in bargaining, and the old English word *stellionate*, or *Fraud in the contract*. The *Stellio* is the *Tarentole*, or *Gecko tuberculæus* of the south of Europe. It must not be confounded with the *Lacerta stellio*, L.,

1. (H. N., xxxiii., 13.)—2. (Vid. Cic., pro Cœcina, c. 6.)—3. (H. N., xvii., 6.)—4. (H. N., ii., 14.)—5. (ii., 15.)—6. (Dioscor., i., 2.—Galen.—De Simplic. vi.—Adams, Append., s. v.—Bilberbeck, Flora Classica, p. 116.)

or the Stellio of the Levant. This misapplication of the term was first made by Belon. The *Lacerta stellio* is of an olive colour, shaded with black, and is very common throughout the Levant, and particularly in Egypt. The *L. gecko*, on the other hand, is a spotted lizard, and some of the species, the *Platydictyl* for instance, are painted with the most lively colours. The melancholy and heavy air of the Gecko, superadded to a certain resemblance which it bears to the salamander and the toad, have rendered it an object of hatred, and caused it to be considered as venomous, but of this there is no real proof.¹

*ASC'ARIS (ἄσκαρις), the small intestinal worm formed in children and in adults afflicted with certain diseases. It is the *Ascaris vermicularis*, L.²

ASCIA, dim. ASCIOLA (σκεπάριον, σκεπάριον), an adze.

Murato: i³ has published numerous representations of the adze, as it is exhibited on ancient monuments. We select the three following, two of which show the instrument itself, with a slight variety of form, while the third represents a ship-builder holding it in his right hand, and using it to shape the rib of a vessel. The blade of the adze was frequently curved, as we see it in all these figures, in order that it might be employed to hollow out pieces of wood, so as to construct vessels either for holding water or for floating upon it. Calypso, in the *Odyssey*,⁴ furnishes Ulysses both with an axe (πέλεκυς) and with "a well-polished adze," as the most necessary instruments for cutting down trees and constructing a ship.

In other cases the curvature of the blade was much less considerable, the adze being used merely to cut off all inequalities, so as to make a rough piece of timber smooth (*asciare, dolare*), and, as far as possible, to polish it (*polire*). Cicero⁵ quotes from the Twelve Tables the following law, designed to restrain the expenses of funerals: *Rogum ascia ne i lito*.

In using the adze, the shipwright or carpenter was always in danger of inflicting severe blows upon his own feet if he made a false stroke. Hence arose a proverb applied to those who were their own enemies, or did themselves injury: *Ipse mihi asciam in crus implegi*.⁶ Another proverbial expression, derived from the use of the same tool, occurs in Plautus.⁷ The phrase *Jam hoc opus est exasciatum* means, "This work is now begun," because the rough-hewing of the timber by means of the ascia, the formation of balks or planks out of the natural trunk or branches of a tree, was the first step towards the construction of an edifice. On the other hand, we read in Sophocles of a seat not even thus rough-hewn.⁸ The expression used is equivalent

to ἄξεστον πέτρων,¹ and denoted a rock in its natural state.

Both the substantive *ascia*, and the verb *asciare* derived from it, retain the same signification in modern Italian which they had in Latin, as above explained.

Vitruvius and Palladius² give directions for using the ascia in chopping lime and mixing it so as to make mortar or plaster. For this purpose we must suppose it to have had a blunt, unpolished blade, and a long handle. In fact, it would then resemble the modern hoe, as used either by masons and plasterers for the use just specified, or by gardeners or agriculturists for breaking the surface of the ground and eradicating weeds. Accordingly, Palladius,³ in his enumeration of the implements necessary for tilling the ground, mentions hoes with rakes fixed to them at the back, *ascias in aversa parte referentes rastros*.

Together with the three representations of the ascia, we have introduced into the preceding woodcut the figure of another instrument, taken from a coin of the Valerian family.⁴ This instrument was called *Acisculus*. It was chiefly used by masons, whence, in the ancient glossaries, *Aciscularius* is translated λατόμος, a stone-cutter. The acisculus, or pick, as shown in the above figure, was a little curved, and it terminated in a point in one direction, and was shaped like a hammer in the other. Its helve was inserted so that it might be used with the same kind of action as the adze. Also, as the substantive *ascia* gave origin to the verb *exasciare*, meaning to hew a smooth piece of wood out of a rough piece by means of the adze, so *acisculus* gave origin to *exacisculare*, meaning to hew anything out of stone by the use of the pick. Various monumental inscriptions, published by Muratori,⁵ warn persons against opening or destroying tombs by this process.

*ASKION (ἄσκιον), a species or variety of *Truffe*, mentioned by Theophrastus.⁶

*ASCLEPIAS (ἄσκληπιός), a plant, which Alston, Woodville, Billerbeck, and Sprengel agree in identifying with the *Asclepias rinetoxicum*, L., or official Swallow-wort. Stackhouse, however, prefers the *Thapsia Asclepinon*. It was used in cases of dropsy,⁷ and took its name from Asclepiades, who first recommended its use.

ASCLEPIEIA (Ἀσκληπεία) is the name of festivals which were probably celebrated in all places where temples of Asclepius (Æsculapius) existed. The most celebrated, however, was that of Epidaurus, which took place every five years, and was solemnized with contests of rhapsodists and musicians, and with solemn processions and games. *Ἀσκληπεία* are also mentioned at Athens,⁸ which were, probably, like those of Epidaurus, solemnized with musical contests. They took place on the eighth day of the month of Elaphebolion.

*ASCYRON (ἄσκυρον), a plant. Dioscorides puts it beyond a doubt, that the ἄσκυρον is a species of *Hypericum*, or St. John's-wort; but which species it is cannot be satisfactorily determined. Sprengel, in the first edition of his R. H. H., prefers the *Hypericum Androsæmum*, or Tutsan; but in his edition of Dioscorides he hesitates between the *H. perforatum* and the *H. montanum*. Dodonæus is for the former, and Matthioli for the latter. Adams thinks that the description of Dioscorides is more applicable to the *androsæmum* than to the *perforatum*.

(Billerbeck, Flora Classica, p. 200.—Dioscor., iii., 102.—Adams, Append., s. v.)

The name *androsæmon* (ἀνδρόσαιμον) was given to this plant, because the bud, when indented with the nail, exudes a blood-red colour (ἀνδρὸς αἷμα, "human blood"). A species of balsamic oil was extracted from this plant. According to Sibthorp, the Ascyron is called at the present day Βάλλασμον by the monks of Mount Athos; λειχηνόχορον in Zante, where it grows in the hedges; and σκουδρίζα in Laconia.

ASCO'LIA (ἀσκόλια) (the leaping upon the leather bag) was one of the many kinds of amusements in which the Athenians indulged during the Anthesteria and other festivals in honour of Dionysus. The Athenians sacrificed a he-goat to the god, made a bag out of the skin, smeared it with oil, and then tried to dance upon it. The various accidents accompanying this attempt afforded great amusement to the spectators. He who succeeded was victor, and received the skin as a reward.¹ The scholiast, however, erroneously calls the ascolia a festival; for, in reality, it only formed a part of one.²

ΑΣΕΒΕΙΑΣ ΓΡΑΦΗ (ἀσεβείας γραφή) was one of the many forms prescribed by the Attic laws for the impeachment of impiety. From the various tenour of the accusations still extant, it may be gathered that this crime was as ill-defined at Athens, and, therefore, as liable to be made the pretext for persecution, as it has been in all other countries in which the civil power has attempted to reach offences so much beyond the natural limits of its jurisdiction. The occasions, however, upon which the Athenian accuser professed to come forward, may be classed as, first, breaches of the ceremonial law of public worship; and, secondly, indications of that, which in analogous cases of modern times would be called heterodoxy or heresy. The former comprehended encroachment upon consecrated grounds, the plunder or other injury of temples, the violation of asylums, the interruption of sacrifices and festivals, the mutilation of statues of the gods, the introduction of deities not acknowledged by the state, and various other transgressions peculiarly defined by the laws of the Attic sacra, such as a private celebration of the Eleusinian mysteries and their divulgence to the uninitiated, injury to the sacred olive-trees, or placing a suppliant bough (ἑκτεπρία) on a particular altar at an improper time.³ The heretical delinquencies may be exemplified by the expulsion of Protagoras⁴ for writing that "he could not learn whether the gods existed or not," in the persecution of Anaxagoras,⁵ like that of Galileo in after times, for impugning the received opinions about the sun, and the condemnation of Socrates for not holding the objects of the public worship to be gods.⁶ The variety of these examples will have shown that it is impossible to enumerate all the cases to which this sweeping accusation might be extended; and, as it is not upon record that religious Athens⁷ was scandalized at the profane jests of Aristophanes, or that it forced Epicurus to deny that the gods were indifferent to human actions, it is difficult to ascertain the limits at which jests and skepticism ended, and penal impiety began.

With respect to the trial, any citizen that pleased ὁ βουλόμενος—which, however, in this, as in all other public actions, must be understood of those only who did not labour under an incapacitating disfranchisement (ἀτιμία)—seems to have been a competent accuser; but, as the nine archons and the areopagites were the proper guardians of the sacred

olives (μορλαί, σκηλί¹), it is not impossible that they had also a power of official prosecution upon casually discovering any injury done to their charge.

The cases of Socrates, Aspasia, and Protagoras may be adduced to show that citizens, resident aliens, and strangers were equally liable to this accusation. And if a minor, as represented in the declamation of Antiphon, could be prosecuted for murder (φόνου), a crime considered by the early Greeks more in reference to its ceremonial pollution than in respect of the injury inflicted upon society, it can hardly be concluded that persons under age were incapable of committing or suffering for this offence.²

The magistrate who conducted the previous examination (ἀνάκρισις) was, according to Meier,³ in variably the king archon, but whether the court into which he brought the causes were the areiopagus or the common heliastic court, of both of which there are several instances, is supposed⁴ to have been determined by the form of action adopted by the prosecutor, or the degree of competency to which the areiopagus rose or fell at the different periods of Athenian history. From the *Apology of Socrates* we learn that the forms of the trial upon this occasion were those usual in all public actions (*vid.* GRAPHAI), and that, generally, the amount of the penalty formed a separate question for the dicasts after the conviction of the defendant. For some kinds of impiety, however, the punishment was fixed by special laws, as in the case of persons injuring the sacred olive-trees, and in that mentioned by Andocides.⁵

If the accuser failed to obtain a fifth of the votes of the dicasts, he forfeited a thousand drachmæ, and incurred a modified ἀτιμία. The other forms of prosecution for this offence were the ἀπαγωγή,⁶ ἐφήγησις,⁷ ἐνδείξις,⁸ προβολή,⁹ and, in extraordinary cases, εἰσαγγελία;¹⁰ besides these, Demosthenes mentions¹¹ two other courses that an accuser might adopt, δικάζεσθαι πρὸς Εὐμολπίδας, and φράζειν πρὸς τὸν βασιλέα, of which it is difficult to give a satisfactory explanation.

ASIARCHÆ (δοσιάρχαι) were, in the Roman provinces of western Asia, the chief presidents of the religious rites, whose office it was to exhibit games and theatrical amusements every year, in honour of the gods and the Roman emperor, at their own expense, like the Roman ædiles. As the exhibition of these games was attended with great expense, wealthy persons were always chosen to fill this office; for which reason Strabo says that some of the inhabitants of Tralles, which was one of the most wealthy cities in Asia Minor, were always chosen asiarchs. They were ten in number, selected by the different towns of Asia Minor, and approved of by the Roman præconsul; of these, one was the chief asiarch, and frequently, but not always, resided at Ephesus. Their office only lasted for a year; but they appear to have enjoyed the title as a mark of courtesy for the rest of their lives.¹² This title also occurs in a Greek inscription at Assos in Mysia, copied by Mr. Fellows.¹³ In the letter written by the Church of Smyrna respecting the martyrdom of Polycarp,¹⁴ we read that Philip the asiarch was requested by the infuriated people to let loose a lion against Polycarp, which he said it was not lawful for him to do, as the exhibition of wild beasts (κυνηγέσια) had been finished. this epistle.¹ Philip is called high-priest (*αρχιερεύς*), which appears to show that he must have been chief asiarh of the province.

ASILLA (*ἀσίλλα*) was a wooden pole or yoke, held by a man either on his two shoulders, or more commonly on one shoulder only, and used for carrying burdens.

The paintings in the ancient tombs of Egypt prove the general use of this implement in that country, especially for carrying bricks, water-pails to irrigate the gardens, and baskets with all kinds of provisions for the market. Mr. Burton found at Thebes a wooden yoke of this kind, with one of the leather straps belonging to it. The yoke (which is now in the British Museum) is about 3½ feet long, and the strap about 16 inches.²

We also find this instrument displayed in works of Grecian art. A small bronze lamp found at Stabiae (see the annexed woodcut) represents a boy carrying two baskets suspended from a pole which rests upon his right shoulder. The two other representations here introduced, though of a fanciful or ludicrous character, show by that very circumstance how familiar the ancients must have been with the use of this piece of furniture. The first is from a beautiful sardonix in the Florentine museum: it represents a grasshopper carrying two baskets, suspended each by three cords from the extremity of the yoke, and skillfully imitates the action of a man who is proceeding on a journey. The other is from a Greek painted vase,³ and, under the disguise of a satyr, shows the mode in which lambs

and other viands were sometimes carried in preparing for a sacrifice to Bacchus. In the collection of antique gems at Berlin there are no less than four representations of men carrying burdens in this manner.⁴

Aristotle⁵ has preserved an epigram of Simonides, which was probably inscribed upon the base of a statue erected at Olympia to the individual whom it celebrates. It begins thus:

Πρόσθε μὲν ἄμφ' ὁμοῖσιν ἔχων τρηχέϊαν ἄσιλλαν,
Ἰχθύς ἐξ Ἀργούς εἰς Τεγέαν ἐφερον.

This poor man, who had formerly obtained his living by bearing "a rough yoke" upon his shoulders, to carry fish all the way from Argos to Tega, at length immortalized himself by a victory at the Olympic games.⁶

Aristophanes calls this implement *ἀνάφορον*: he introduces upon the stage a slave carrying a heavy load by means of it; and he describes the act of transferring it from one shoulder to another by the phrase *μεταβαλλόμενος τὴν ἀνάφορον*.¹

*ASILLUS, a species of Gadfly or Horsefly, accustomed to sting cattle. Virgil² makes it the same with the *οἰστρος* of the Greeks, and Varro³ gives to it the name of *Tabanus*. Pliny,⁴ on the other hand informs us that it was called both *tabanus* and *asilus*. As in Latin, so in Greek there are two names, *οἰστρος* and *μύσση*. Bochart⁵ and Aldrovandi⁶ have proved very satisfactorily, that by the Greek poets and writers on Belles Lettres these two terms were used indiscriminately, but that Aristotle and other writers on matters of science apply the former (*οἰστρος*) to a species of gadfly, meaning, very probably, the *Cestrus bovis* or Breeze, and the latter to a species of horsefly, the *Tabanus bovinus*. This Adams considers the most satisfactory account of the matter; he deems it right, however, to mention, that Schneider, treating of the *μύσση* of Elian, professes himself unable to determine whether it was a species of *Cestrus*, *Tabanus*, or *Hippobosca*; and in another place he offers it as a conjecture, that the *οἰστρος* of Aristotle was a species of *Culex*, or gnat. It seems agreed that the Asilus of Virgil was the Breeze.⁷ Martyn⁸ gives a description of the *Asillo*, which he takes to be the same with the Asilus, from an Italian author. He represents it as "in shape somewhat resembling a wasp or wild bee. It has two membranaceous wings, with which it makes a loud whizzing. The belly is terminated by three long rings, one less than the other, from the last of which proceeds a formidable sting. This sting is composed of a tube, through which the egg is emitted, and of two augers, which make way for the tube to penetrate into the skin of the cattle. These augers are armed with little knives, which prick with their points and cut with their edges, causing intolerable pain to the animal that is wounded by them. But this pain is not all; for at the end of the sting, as at the end of a viper's tooth, and of the sting of wasps, bees, and hornets, issues forth a venomous liquor, which irritates and inflames the fibres of the wounded nerves, and causes the wound to become fistulous. This fistula seems to be kept open by the egg, after the manner of an issue. The egg is hatched within the fistula, and the worm continues there till it is ready to turn to a chrysalis, receiving its nourishment from the juice which flows from the wounded fibres. These worms remain for nine or ten months under the skin, and then, being arrived almost to perfection, they come out of their own accord, and creep into some hole or under some stone, and there enter into the state of a chrysalis, in which condition they lie quiet for some time, and at last come forth in the form of the parent fly."

*ASINUS. (*Id. Onos.*)

*ASPAL'ATHUS (*ἀσπάλαθος*), a species of thorny shrub, bearing a flower which some call the Rose of Jerusalem, or Lady's Rose. Much uncertainty, however, exists on this point. "The Aspalathus," says Charraz,⁹ "is the wood of a thorn-tree or bush, in virtues, taste, smell, and figure much resembling *Lignum aloes*." Matthioli¹⁰ is at great pains to prove that it is not the *Santalum rubrum*. Sprengel, in the first edition of his R. H. H.; holds it to be the *Genista aspalathoides*, but in his edition of Dioscorides he inclines to the *Cytisus laniger*,

land. In the works of the Arabian writers on Husbandry, it is said that the Aspalathus has a purple flower and an acid taste, and has no fruit. According to Mæris Atticista, the Attics used ἀσπάλθοι for ἀκανθαί (cf the other Greeks. We may conclude, then, that it was often applied loosely to all kinds of thorns.¹ The rind of the root of the Aspalathus yielded an aromatic oil.

*ASP'ALAX (ἀσπάλᾱξ), a species of Mole, called ἀσπάλᾱξ by Aristotle,² σπάλωψ by Aristophanes,³ and σπινεύς by Lycophron.⁴ It is generally set down as being the *Talpa Europea*, L., or common Mole; but it is deserving of remark, that Olivier, in his Travels, has described a species or variety of mole found in Asia Minor, which, Dr. Trail of Edinburgh thinks, answers better to Aristotle's description than the common mole. Aristotle was aware that the Mole is not blind, although it has very small eyes.⁵

*ASPAR'AGUS (ἀσπάρᾱγος or ἀσφάραγος), the Asparagus, a well-known vegetable. Theophrastus⁶ remarks that Asparagus has thorns in place of leaves, so that it is easy to perceive he means the *Asparagus arphyllus*, L. The wild Asparagus, called ὠνάκανθος by the Greeks, and *corruia* by the Romans, was more used in medicine. The Greeks also applied the term ἀσπάρᾱγος to all tender stalks or stems shooting up for the production of fruit or seed.⁷—The Attics wrote ἀσφάραγος with the aspirated letter, as the grammarians and also Galen inform us.⁸ The common name at present in Greece is σπαράγγι or σπαραγγία.

*ASPHALT'US. (Vid. BITUMEN.)

*ASPHODELUS (ἀσφόδελος), a plant, called by Apuleius "*Hastula regia*," and hence its English name, "King's Spear." According to Sprengel, the ἀσφόδελος of Galen is the *Ornithogalum Stachyoides*; but that of Theophrastus and Dioscorides the *Asphodelus ramosus*, L. This is the famous herb which Homer represents as growing in the meads of Elysium. Eustathius⁹ mentions that it was frequently planted in the neighbourhood of sepulchres. The common name of the *Ornithogalum* is the Star of Bethlehem.—The Asphodelus was used as a pot-herb in the time of Hesiod.¹⁰ According to Sibthorp, the common name for this plant at the present day is ἀσφόδελω. In Laconia it is termed σπουρδάκυλα, in Attica καρבוύκι.

*ASPIS (ἀσπίς), I. the Asp, a species of noxious serpent often mentioned by both Greek and Roman writers; and from the discrepancies which are observable in the accounts given by different authors, it would seem that several different species of poisonous serpents were known to the ancients under this common name. Galen, in fact, and the other medical authorities, describe three varieties of the Asp, namely, the Ptyas, Chersæa, and Chelidonia.¹¹ Elian, however, affirms that the Egyptians distinguished sixteen varieties of it.¹² "From various circumstances, and particularly from the description of Pliny,¹³ it is evident that the most common and celebrated of the Asp species was that to which the modern Arabs give the name of *El Haje*, or *Haje Nascher*. This animal measures from three to five feet in length: it is of a dark green colour, marked obliquely with bands of brown; the scales of the neck, back, and upper surface of the tail are slightly carinated, and the tail is about one fourth part the length of the whole body. The *haje* is closely allied to the *cobra capello*, or spectacled

snake of India, the chief apparent difference being its want of the singular yellow mark on the back of the neck, from which the latter species derives its name. In other respects these two serpents are nearly of the same size; they are equally venomous, and both have the power of swelling out the neck when irritated, and raising themselves upright upon their tails, to dart by a single bound upon their enemies. The poison of the Asp is of the most deadly nature. The habit which this serpent has of erecting itself when approached, made the ancient Egyptians imagine that it guarded the places which it inhabited. They made it the emblem of the divinity whom they supposed to protect the world; and, accordingly, they have represented it on their temples, sculptured on each side of a globe."¹⁴—II. (Vid. CLYPEUS)

*ASPLE'NIUM (ἀσπλήνιον), a plant, which Sprengel follows Tragus in referring to the *Asplenium ceterach*, or, as he proposes to call it, *Gymnogramma ceterach*, our Spleenwort or Milkwaste. He admits that he could not ascertain the origin of the term *ceterach*. Miller, however, says "the word *ceterach* is Arabic."¹⁵ The Asplenium took its name from its supposed utility in disorders of the spleen.

ASSA'RIOUS NUMMUS. (Vid. AS.)

ASSERES LECTICAR'II. (Vid. LECTICA.)

ASSERTOR or ADSECTOR contains the same root as the verb *adserere*, which, when coupled with the word *manu*, signifies to lay hold of a thing, to draw it towards one. Hence the phrase *adserere in libertatem*, or *liberali adserere manu*, applies to him who lays his hand on a person reputed to be a slave, and asserts or maintains his freedom. The person who thus maintained the freedom of a reputed slave was called *assertor*,¹ and by the laws of the Twelve Tables, it was enacted in favour of liberty, that such *assertor* should not be called on to give security in the sacramental actio to more than the amount of L. asses. The person whose freedom was thus claimed was said to be *adsertus*. The expressions *liberalis causa* and *liberalis manus*, which occur in classical authors in connexion with the verb *adserere*, will easily be understood from what has been said.² Sometimes the word *adserere* alone was used as equivalent to *adserere in libertatem*.³

The expression *asserere in servitutem*, to claim a person as a slave, occurs in Livy.⁴

ASSESSOR or ADESSOR, literally one who sits by the side of another. The duties of an assessor, as described by Paulus,⁵ related to "cognitiones, postulationes, libelli, edicta, decreta, epistolæ;" from which it appears that they were employed in and about the administration of law. The consuls, prætors, governors of provinces, and the judges, were often imperfectly acquainted with the law and the forms of procedure, and it was necessary that they should have the aid of those who had made the law their study. The præfectus prætorio and præfectus urbi, and other civil and military functionaries, had their assessors. An instance is mentioned by Tacitus⁶ of the Emperor Tiberius assisting at the judicia (*judiciis adsidebat*), and taking his seat at the corner of the tribunal; but this passage cannot be interpreted to mean, as some persons interpret it, that the emperor sat there in the character of an assessor, properly so called: the remark of Tacitus shows that, though the emperor might have taken his seat under the name of assessor, he could be considered in no other light than as the head of the state.

(Ana. i., 75)

The Emperor Alexander Severus gave the assessores a regular salary.¹ Freedmen might be assessores. In the later writers the assessores are mentioned under the various names of *conciliarii*, *juris studiosi*, *comites*, &c. The *studiosi juris*, mentioned by Gellius² as assistant to the judges (*quos adhibere in consilium judicaturi solent*), were the assessores. Sabinus, as it appears from Ulpian,³ wrote a book on the duties of assessors. The assessors sat on the tribunal with the magistrate. Their advice or aid was given during the proceedings as well as at other times, but they never pronounced a judicial sentence. As the old forms of procedure gradually declined, the assessores, according to the conjecture of Savigny,⁴ took the place of the judges.

*ASSIUS LAPIS (Ἀσσιος λίθος), a kind of stone, deriving its name from Assos, a city in the Troad. Such, at least, is the account of Pliny.⁵ Dioscorides,⁶ however, calls it Ἀσσιος λίθος, and Celsus⁷ *Lapis Asiæ*, the Asian Stone; the last-mentioned author appearing to derive its name from Asia generally. All these writers agree in classing it with the stones which, from their consuming the bodies of the dead enclosed within them, were called *sarcophagi* (σαρκοφάγοι). The Assian stone was characterized by a laminated structure, a saline efflorescence of a sharp taste, and its styptic properties.⁸ Galen, in describing this stone, says that it is of a spongy substance, light and friable; that it is covered with a farinaceous kind of powder, called the Flower of the Assian stone; that the molecules of this flower are very penetrating; that they consume flesh; and that the stone has a similar property, but in a less degree. This efflorescence had, moreover, a saline taste. Galen adds, that it was of a yellow or whitish colour, and that, when mixed with resin of turpentine or with tar, it removed tubercles. Pliny repeats almost the same account.⁹

*ASTACUS (ἄστακος), a sea animal, described by Aristotle, Galen, Oppian, Ælian, and others. It belongs to the class *Crustacea*, and is called *Grammaro* by the Italians, *Homar* by the French, and *Craw-fish* by the English. It is the *Astacus fluviatilis*. L. Cuvier has shown that it is the Elephantus of Pliny.¹⁰

*ASTER (ἄστηρ). I. A species of bird, most probably the *Fringilla rubra*, or Smaller Redpole.—II. The genus *Stella*, or Star-fish. It has been variously classed under Zoophyta, Mollusca, and Crustacea, by both ancient and modern naturalists.—III. One of the varieties of the Samian earth was also called by this name. (Vid. SAMIA TERRA.)

*ASTER ATTICUS (Ἀστήρ Ἀττικός), a plant. According to Apuleius, the *Asterion*, *Asteriscion*, *Aster Atticus*, and *Inguinalis*, are synonymous. Stackhouse and Schneider farther identify the ἄσπερ-ίσκος of Theophrastus with it. Martyn is at great pains to prove that the "*Amellus*" of Virgil is the Aster Atticus. Botanists accordingly give to the Italian blue Starwort the name of *Aster amellus*. The flower of the Aster has its leaves radiated like a star, whence its name (ἄστηρ, "a star"). This plant was employed in swellings of the groin, whence the names of *Inguinalis* and *Bubonium* that were sometimes applied to it. Another ancient appellation, *Amellus*, was derived from that of the river (the *Mela*, in Cisalpine Gaul) on the banks of which this plant grew very abundantly. The root of the Aster, cooked in old Aminean wine, is mentioned by Columella as a good remedy for sickness

among bees. The Aster grows in the valleys and on the hills of Italy and Sicily, frequently in a wild state. Sibthorp found it also near Athens.¹ It used to grow abundantly in Attica.

*ASTERIA, a gem, mentioned by Pliny, which came from India and from Carmania. It derived its name from its starlike lustre when exposed to the rays of the sun. Mineralogists make it to have been that variety of opal which is called *girasole*, from its reflecting a reddish light when turned towards the sun. Pliny describes it as difficult to engrave; "the difficulty," observes Dr. Moore, "arising probably, not from its hardness, but from the numerous minute fissures which traverse opal in all directions, and to which it is supposed to owe the playful variation of its colours."²

*ASTRIOS, a gem mentioned by Pliny, and which occurred in India and on the shores of Palestine, but of the best quality in Carmania. The Roman writer describes it as shining "from a point within it like a star, with the brightness of the full moon." Dr. Moore considers Werner's opinion the most probable, that it is the same with the moon-stone of Ceylon.³

ASTRAGALUS, an astragal, one of the mouldings in architecture, more especially characteristic of the Ionic order.

The astragal is always found as the lowest member of the Ionic capital, forming the division between it and the fluted shaft of the column. Of this we have a beautiful example in the remains of the Temple of Bacchus at Teos, which, as we are informed by Vitruvius,⁴ was built by Hermogenes of Alabanda, one of the most celebrated of the ancient architects, and of which he wrote a full description. One of the capitals of this temple is shown in the annexed woodcut. Above the astragal we see the echinus, and on each side of it the volute, to which is added an ornament in imitation of the aplustre of a ship. (Vid. APLUSTRE.)

The astragal was used with a beautiful effect not only in Ionic, but also in Corinthian buildings, to border or divide the three faces of the architrave; and it was admitted under an echinus to enrich the cornice. The lower figure in the woodcut shows a small portion of the astragal forming the upper edge of an architrave, which is now in the British Museum, and which was part of the Temple of Erechtheus at Athens. It is drawn of the same size as the marble itself. The term *astragalus*, employed by Vitruvius,⁵ was no doubt borrowed from Hermo-

genes and other Greek writers on architecture. It denoted a bone in the foot of certain quadrupeds, the form and use of which are explained under the corresponding Latin term TALUS. A number of

these bones, placed in a row, would present a succession of oval figures alternating with angular projections, which was probably imitated in this moulding by the inventors of the Ionic order. The moulding afterward retained the same name, notwithstanding great alterations in its appearance. Vitruvius speaks of the "astragali" in the base of the Ionic column. These were plain semicircular mouldings, each of which resembled the torus, except in being very much smaller. (*Vid.* SPIRA.)

ΑΣΤΡΑΤΕΙΑΣ ΓΡΑΦΗ (*ἀστρατείας γραφή*) was the accusation instituted against persons who failed to appear among the troops after they had been enrolled for the campaign by the generals.¹ Any Athenian citizen of the military age seems to have been liable to be called upon for this service, with the exception of Choreutæ, who appear to have been excused when the concurrence of a festival and a campaign rendered the performance of both duties impossible,² and magistrates during their year of office, and farmers of the revenue, though the case cited in Demosthenes³ suggests some doubts as to how far this last excuse was considered a sufficient plea. We may presume that the accuser in this, as in the similar action for leaving the ranks (*λειποταξίον*), was any citizen that chose to come forward (*ὁ βουλόμενος, οἷς ἐξεστὶ*), and that the court was composed of soldiers who had served in the campaign. The presidency of the court, according to Meier, belonged to the generals.⁴ The defendant, if convicted, incurred disfranchisement—*ἀτμία*,⁵ both in his own person and that of his descendants; and there were very stringent laws to punish them if they appeared at the public sacra, to which even women and slaves were admitted.⁶

*ASTUR, the *Falco Pulumbarius*, or Goshawk. (*Vid.* HERAX.)

*ASTURCO, a jennet, or Spanish horse. (*Vid.* EQUUS.)

ASTYN'OMI (*ἀστυνόμοι*), or street police of Athens, were ten in number, five for the city, and as many for the Peiræus. Aristotle (as quoted by Harpocrat., s. v.) says that they had to attend to the female musicians, to the scavengers, and such like. In general, they had to take care of public decorum: thus they could punish a man for being indecently clad.⁷ It would seem, from what Aristotle says,⁸ and from the functions which Plato assigns to his *astynomi*,⁹ that they had also the charge of the fountains, roads, and public buildings; and it is supposed that Plutarch's words,¹⁰ *ὅτε τῶν Ἀθηναίων νότων ἐπιστάτης ἦν*, mean "when he was *astynomus*." The *astynomi* and *agoranomi* divided between them most of the functions of the Roman ædiles. The *astynomi* at Thebes were called *τελέαρχοι*.¹¹ (*Vid.* AGORANOMI.)

ASY'LUM (*ἄσυλον*). In the Greek states, the temples, altars, sacred groves, and statues of the gods generally possessed the privilege of protecting slaves, debtors, and criminals, who fled to them for refuge. The laws, however, do not appear to have recognised the right of all such sacred places to afford the protection which was claimed, but to have confined it to a certain number of temples or altars, which were considered in a more especial manner to have the *ἀσύλεια*, or *jus asyli*.¹² There were several places in Athens which possessed this privilege, of which the best known was the Theseum, or Temple of Theseus, in the city, near the

gymnasium, which was chiefly intended for the protection of the ill-treated slaves, who could take refuge in this place, and compel their masters to sell them to some other person.¹ The other places in Athens which possessed the *jus asyli* were, the altar of pity, *ἐλεῖν βαμὸς*,² which was situated in the agora, and was supposed to have been built by Hercules;³ the altar of Zeus *Ἀγοραῖος*; the altars of the twelve gods; the altar of the Eumenides on the Areiopagus; the Theseum in the Piræus; and the altar of Artemis in Munychia.⁴ Among the most celebrated places of asylum in other parts of Greece, we may mention the Temple of Poseidon in Laconia, on Mount Tænarus;⁵ the Temple of Poseidon in Calauria;⁶ and the Temple of Athena Alea in Tegea.⁷

It would appear, however, that all sacred places were supposed to protect an individual to a certain extent, even if their right to do so was not recognised by the laws of the state in which they were situated. In such cases, however, as the law gave no protection, it seems to have been considered lawful to use any means in order to compel the individuals who had taken refuge to leave the sanctuary, except dragging them out by personal violence. Thus it was not uncommon to force a person from an altar or a statue of a god by the application of fire. We read in the *Andromache* of Euripides,⁸ that Hermione says to Andromache, who had taken refuge at the statue of Thetis, *πῦρ σοὶ προσοίω*: on which passage the scholiast remarks, "that it was the custom to apply fire to those who fled to an altar."⁹ In the same manner, in the *Mostellaria* of Plautus,¹⁰ Theuropides says to the slave Tranius, who had fled to an altar, "*Jam jubebo ignem et samenta, carnifex, circumdari*."

In the time of Tiberius, the number of places possessing the *jus asyli* in the Greek cities in Greece and Asia Minor became so numerous as seriously to impede the administration of justice. In consequence of this, the senate, by the command of the emperor, limited the *jus asyli* to a few cities, but did not entirely abolish it, as Suetonius¹¹ has erroneously stated.¹²

The asylum which Romulus is said to have opened at Rome to increase the population of the city,¹³ was a place of refuge for the inhabitants of other states rather than a sanctuary for those who had violated the laws of the city. In the republican and early imperial times, a right of asylum, such as existed in the Greek states, does not appear to have been recognised by the Roman law. Livy seems to speak of the right¹⁴ as peculiar to the Greeks: "*Templum est Apollinis Delium—eo jure sancto quo sunt templa quæ asyla Græci appellant*." By a constitutio of Antoninus Pius, it was decreed that, if a slave in a province fled to the temples of the gods or the statues of the emperors to avoid the ill-usage of his master, the præses could compel the master to sell the slave;¹⁵ and the slave was not regarded by the law as a runaway—*fugitivus*.¹⁶ This constitutio of Antoninus is quoted in Justinian's Institutes,¹⁷ with a slight alteration; the words *ad ædem sacram* are substituted for *ad fana deorum*, since the *jus asyli* was in his time extended to churches. Those slaves who took refuge at the statue of an

emperor were considered to inflict disgrace on their master, as it was reasonably supposed that no slave would take such a step unless he had received very bad usage from his master. If it could be proved that any individual had instigated the slave of another to flee to the statue of an emperor, he was liable to an action *corrupti servi*.¹ The right of asylum seems to have been generally, but not entirely, confined to slaves.²

The term *ἀσυλία* was also applied to the security from plunder (*ἀσυλία καὶ κατὰ γῆν καὶ κατὰ θάλασσαν*) which was sometimes granted by one state to another, or even to single individuals.³

ATELEI'Α (*ἀτέλεια*), immunity from public burdens, was enjoyed at Athens by the archons for the time being; by the descendants of certain persons, on whom it had been conferred as a reward for great services, as in the case of Harmodius and Aristogeiton; and by the inhabitants of certain foreign states. It was of several kinds: it might be a general immunity (*ἀτέλεια πάντων*), or a more special exemption, as from custom-duties, from the liturgies, or from providing sacrifices (*ἀτέλεια ἑορῶν*).⁴ The exemption from military service was also called *ἀτέλεια*.⁵

ATELLANÆ FABULÆ. The Atellane plays were a species of farce or comedy, so called from Atella, a town of the Osci, in Campania. From this circumstance, and from being written in the Oscan dialect, they were also called *Ludi Osci*. Judging from the modern Italian character and other circumstances, it is not unreasonable to suppose that they were at first, and in their native country, rude improvisatory farces, without dramatic connexion, but full of raillery and wit, suggested by the contemporary events of the neighbourhood. However this may be, the "Atellane fables" at Rome had a peculiar and dramatic character. Thus Macrobius⁶ distinguishes between them and the less elegant mimes of the Romans: the latter, he says, were acted in the Roman language, not the Oscan; they consisted of only one act, whereas the Atellane and other plays had five, with laughable exodia or interludes; lastly, as he thought, they had not the accompaniment of the flute-player, nor of singing, nor gesticulation (*motus corporis*). One characteristic of these plays was that, instead of the satyrs and similar characters of the Greek satyric drama, which they in some respects resembled, they had Oscan characters drawn from real life, speaking their language, and personating some peculiar class of people in a particular locality. Such, indeed, are the Harlequin and Pulcinello of the modern Italian stage, called *maschere* or masks, and supposed to be descended from the old Oscan characters of the Atellane. Thus, even now, zanni is one of the Harlequin's names, as sannio in the Latin farces was the name of a buffoon, who had his head shorn, and wore a dress of gay patchwork; and the very figure of Pulcinello is said to have been found in the stucco painting of Pompeii, in the old country of the Atellane.⁷ On this subject Lady Morgan⁸ speaks as follows: "The Pulcinello of Italy is not like the Polichinel of Paris, or the Punch of England; but a particular character of low comedy peculiar to Naples, as Pantalone of Venice, Il Dottore of Bologna. Their name of *Maschere* comes from their wearing masks on the upper part of their faces. They are the remains of the Greek and Latin theatres, and are devoted to the depicting of national, or, rather, provincial ab-

surdities and peculiarities." Again, at Cologne or Köln, famous for its connexion with the Romans, there still exists a puppet theatre (*Puppen Theater*), where droll farces are performed by dolls, and the dialogue, spoken in the patois or dialect of the country, and full of satirical local allusions, is carried on by persons concealed.¹

These Atellane plays were not *prætextata*, i. e., comedies in which magistrates and persons of rank were introduced; nor *tabernaria*, the characters in which were taken from low life: "they rather seem to have been a union of high comedy and its parody." They were also distinguished from the mimes by the absence of low buffoonery and ribaldry, being remarkable for a refined humour, such as could be understood and appreciated by educated people. Thus Cicero² reproaches one of his correspondents for a coarseness in his joking, more like the ribaldry of the mimes than the humour of the Atellane fables, which in former times were the afterpiece in dramatic representations (*secundum Enomaxum Atticum, non ut olim solebat Atellanum, sed ut nunc fimum introduxisti*). This statement of Cicero agrees with a remark of Valerius Maximus,³ that these plays were tempered with an Italian severity of taste; and Donatus also⁴ says of them, that they were remarkable for their antique elegance, i. e., not of language, but of style and character. This suggests an explanation of the fact that Atellane were not performed by regular actors (*histriones*), but by Roman citizens of noble birth, who were not on that account subjected to any degradation, but retained their rights as citizens, and might serve in the army.⁵ This was not the case with other actors, so that the profession was confined to foreigners or freedmen. Niebuhr, however, is of opinion, that all the three kinds of the Roman national drama, and not the Atellane only, might be represented by well-born Romans, without the risking of their franchise.⁶

The Oscan or Opican language, in which these plays were written, was spread over all the south of Italy; and as some inscriptions in it are intelligible to us, we cannot wonder that plays written in Oscan were understood by the more educated Romans. One peculiarity of it was the use of *p* for *qu*: thus, *pid* for *quid*.⁷

However, in one part of these plays, called the *canticum*,⁸ the Latin language, and sometimes the Greek,⁹ was used. Thus we are told¹⁰ that one of these *cantica* opened with the words *Venit Io simius a villa*, "The baboon is come from his country-house;" and as Galba was entering Rome at the time, the audience caught up the burden of the song, joining in chorus. It might be thought that this is true only of the time of the emperors; but we find that, even before then, the Latin language was used, as in the instances given below, and that, too, in other parts besides the *canticum*. In connexion with this, it may be remarked, that, like everything else at Rome, the Atellane degenerated under the emperors, so as to become more like the mimes, till they were at last acted by common players.

They were written in verse, chiefly iambic, with many trisyllabic feet. Lucius Sulla, the dictator, is believed to have written plays of this sort from a statement in Athenæus,¹¹ that he wrote satirical comedies in his native, i. e., the Campanian dialect.¹² Quintus Novius, who flourished about fifty years af-

ter Sulla's abdication, is said to have written about fifty Atellane plays; the names of some of these have come down to us, as *Macchus Exul*, or "Macchus in Exile;" *Gallinaria*, or the "Poulterer;" *Vindemiatores*, "the Vintagers;" *Surdus*, the "Deaf-man;" *Parcus*, the "Thrifty-man;" from this play has been preserved the line, "*Quod magnopere quæsierunt id frunisci non queunt, Qui non parsit, apud se frunitus est.*" Fruniscor is the same as fruor.¹

Lucius Pomponius, of Bononia, who lived about B.C. 90, wrote *Macchus Miles*, the *Pseudo-Agamenon*, the *Bucco Adoptatus*, the *Æditumus* or *Sacristan*, &c. In the last the following verse occurred: "*Qui postquam tibi appareo, atque æditumor in templo tuo.*" Appareo here means "to attend upon." The Macchus was a common character in these plays, probably a sort of clown; the Bucco or Babler was another.² These plays subsequently fell into neglect, but were revived by a certain Mummius, mentioned by Macrobius, who does not, however, state the time of the revival.

Subjoined is a specimen of Oscan, part of an inscription found at Bantia, in Lucania, with the Latin interpretation written underneath:

"In svæ piæ ionc fortis meddis moltaum herest
Et si quis eum fortis magistratus multare volet,
Ampert mistreis alteis eitnas moltas moltaum licitud

Una cum magistris altis ærarii multæ multare licito."

Herest is supposed to be connected with *χαρήσει*, meddis with *μέδων*, *ampert* with *ἀμπερερί*.

For additional specimens of Oscan, the reader is referred to Grottefend's *Rudimenta Lingue Oscæ*, from which is taken the example given above, and also the interpretation of it. The fragments of Pomponius have been collected and edited by Munk.

ATHENÆUM, a school (*ludus*) founded by the Emperor Hadrian at Rome, for the promotion of literary and scientific studies (*ingenuarum artium*), and called Athenæum from the town of Athens, which was still regarded as the seat of intellectual refinement.⁴ The Athenæum appears to have been situated in the Capitol.⁵ It was a kind of university; and a staff of professors, for the various branches of study, was regularly engaged. Under Theodosius II., for example, there were three orators, ten grammarians, five sophists, one philosopher, two lawyers or jurisconsults.⁶ Besides the instruction given by these magistri, poets, orators, and critics were accustomed to recite their compositions there, and these prelections were sometimes honoured with the presence of the emperors themselves.⁷ There were other places where such recitations were made, as the Library of Trajan (*vid. Βιβλιοθήκη*); sometimes, also, a room was hired, and made into an auditorium, seats erected, &c. (*vid. Auditorium*.) The Athenæum seems to have continued in high repute till the fifth century. Little is known of the details of study or discipline in the Athenæum, but in a constitution of the year 370,⁸ there are some regulations respecting students in Rome, from which it would appear that it must have been a very extensive and important institution. And this is confirmed by other statements contained in some of the Fathers and other ancient authors, from which we learn that young men from all parts, after finishing their usual school and college studies in their own town or province, used to resort to Rome, as a sort of higher university, for the purpose of completing their education.

*ATHERINA (*ἀθερίνα*), a species of small fish, supposed to be the *Atherina Hepsetus*, L., but uncer-

tain. Pennant says it is common on the coast of Southampton, where it is called a smelt. It is about four inches long. The Atherina is mentioned by Aristotle and Oppian.¹

ATHLETÆ (*ἀθληταί, ἀθλητῆρες*) were persons who contended in the public games of the Greeks and Romans for the prizes (*ἀθλα*, whence the name of *ἀθληταί*), which were given to those who conquered in contests of agility and strength. This name was, in the later period of Grecian history and among the Romans, properly confined to those persons who entirely devoted themselves to a course of training which might fit them to excel in such contests, and who, in fact, made athletic exercises their profession. The *athletæ* differed, therefore, from the *agonistæ* (*ἀγωνισταί*), who only pursued gymnastic exercises for the sake of improving their health and bodily strength, and who, though they sometimes contended for the prizes in the public games, did not devote their whole lives, like the *athletæ*, to preparing for these contests. In early times there does not appear to have been any distinction between the *athletæ* and *agonistæ*; since we find that many individuals, who obtained prizes at the great national games of the Greeks, were persons of considerable political importance, who were never considered to pursue athletic exercises as a profession. Thus we read that Phayllus of Crotona, who had thrice conquered in the Pythian games, commanded a vessel at the battle of Salamis;² and that Doriens of Rhodes, who had obtained the prize in all of the four great festivals, was celebrated in Greece for his opposition to the Athenians.³ But as the individuals who obtained the prizes in these games received great honours and rewards, not only from their fellow-citizens, but also from foreign states, those persons who intended to contend for the prizes made extraordinary efforts to prepare themselves for the contest; and it was soon found that, unless they subjected themselves to a severer course of training than was afforded by the ordinary exercises of the gymnasia, they would not have any chance of gaining the victory. Thus arose a class of individuals, to whom the term *athletæ* was appropriated, and who became, in course of time, the only persons who contended in the public games.

Athletæ were first introduced at Rome B.C. 186, in the games exhibited by Marcus Fulvius, on the conclusion of the Ætolian war.⁴ Paullus Æmilius, after the conquest of Perseus, B.C. 167, is said to have exhibited games at Amphipolis, in which *athletæ* contended.⁵ A *certainem athletarum*⁶ was also exhibited by Scaurus in B.C. 59; and among the various games with which Julius Cæsar gratified the people, we read of a contest of *athletæ* which lasted for three days, and which was exhibited in a temporary stadium in the Campus Martius.⁷ Under the Roman emperors, and especially under Nero, who was passionately fond of the Grecian games,⁸ the number of *athletæ* increased greatly in Italy, Greece, and Asia Minor; and many inscriptions respecting them have come down to us, which show that professional *athletæ* were very numerous, and that they enjoyed several privileges. They formed at Rome a kind of corporation, and possessed a *tabularium* and a common hall—*curia athletarum*,⁹ in which they were accustomed to deliberate on all matters which had a reference to the interests of the body. We find that they were called *Herculanei*, and also *zystici*, because they were ac-

customed to exercise, in winter, in a covered place called *xystus*;¹ and that they had a president, who was called *zystarchus*, and also *ἀρχιερεύς*.

Those athleteæ who conquered in any of the great national festivals of the Greeks were called *hieronikai* (*ἐπὶ νικῆται*), and received, as has been already remarked, the greatest honours and rewards. Such a conqueror was considered to confer honour upon the state to which he belonged; he entered his native city in triumph, through a breach made in the walls for his reception, to intimate, says Plutarch, that the state which possessed such a citizen had no occasion for walls.² He usually passed through the walls in a chariot drawn by four white horses, and went along the principal street of the city to the temple of the guardian deity of the state, where hymns of victory were sung. Those games, which gave the conquerors the right of such an entrance into the city, were called *is elastici* (from *εἰσέλαινειν*). This term was originally confined to the four great Grecian festivals, the Olympian, Isthmian, Nemean, and Pythian; but was afterward applied to other public games, as, for instance, to those instituted in Asia Minor.³ In the Greek states, the victors in these games not only obtained the greatest glory and respect, but also substantial rewards. They were generally relieved from the payment of taxes, and also enjoyed the first seat (*προεδρία*) in all public games and spectacles. Their statues were frequently erected at the cost of the state, in the most frequented part of the city, as the market-place, the gymnasium, and the neighbourhood of the temples.⁴ At Athens, according to a law of Solon, the conquerors in the Olympic games were rewarded with a prize of 500 drachmæ; and the conquerors in the Pythian, Nemean, and Isthmian, with one of 100 drachmæ;⁵ and at Sparta they had the privilege of fighting near the person of the king.⁶ The privileges of the athleteæ were preserved and increased by Augustus;⁷ and the following emperors appear to have always treated them with considerable favour. Those who conquered in the games called *is elastici* received, in the time of Trajan, a sum from the state, termed *opsonia*.⁸ By a rescript of Diocletian and Maximian, those athleteæ who had obtained in the sacred games (*sacri certaminis*, by which is probably meant the *is elastici ludi*) not less than three crowns, and had not bribed their antagonists to give them the victory, enjoyed immunity from all taxes.⁹

The term athleteæ, though sometimes applied metaphorically to other combatants, was properly limited to those who contended for the prize in the five following contests: 1. *Running* (*δρόμος*, *cursus*), which was divided into four different contests, namely, the *stadiondromos*, in which the race was the length of the stadium; the *diaulodromos*, in which the stadium was traversed twice; the *dolichodromos*, which consisted of several lengths of the stadium, but the number of which is uncertain; and the *hoplitodromos*, in which the runners wore armour. 2. *Wrestling* (*πάλη*, *lucta*). 3. *Boxing* (*πυγμή*, *pugilatus*). 4. The *pentathlum* (*πένταθλον*), or, as the Romans called it, *quinq̄uertium*. 5. The *pancratium* (*παγκράτιον*). Of all these an account is given in separate articles. These contests were divided into two kinds: the *severe* (*βαρεία*, *βαρότερα*) and the *light* (*κοῦρα*, *κουφότερα*). Under the former were included wrestling, boxing, and the exercises of the *pancratium*, which consisted of wrestling and boxing combined, and was also called *pammachion*.¹⁰

Great attention was paid to the training of the athleteæ. They were generally trained in the *παλαίστραι*, which, in the Grecian states, were distinct places from the gymnasium, though they have been frequently confounded by modern writers. Thus Pausanias informs us,¹ that near the gymnasium at Olympia there were *palaestrae* for the athleteæ; and Plutarch expressly says² that the place in which the athleteæ exercise is called a *palaestra*.³ Their exercises were superintended by the *gymnasiarch* (*γυμνασιάρχης*), and their diet was regulated by the *alipites* (*ἀλείπτης*). (*Vid. ALIPTEÆ*.) According to Pausanias,⁴ the athleteæ did not anciently eat meat, but principally lived upon fresh cheese;⁵ and Diogenes Laertius⁶ informs us that their original diet consisted of dried figs,⁷ moist or new cheese,⁸ and wheat.⁹ The eating of meat by the athleteæ is said, according to some writers,¹⁰ to have been first introduced by Dromeus of Stymphalus, in Arcadia; and, according to others, by the philosopher Pythagoras, or by an alipite of that name.¹¹ According to Galen,¹² the athleteæ, who practised the severe exercises,¹³ ate pork and a particular kind of bread; and from a remark of Diogenes the Cynic,¹⁴ it would appear that in his time beef and pork formed the ordinary diet of the athleteæ. Beef is also mentioned by Plato¹⁵ as the food of the athleteæ; and a writer quoted by Athenæus¹⁶ relates, that a Theban who lived upon goats' flesh became so strong that he was enabled to overcome all the athleteæ of his time. At the end of the exercises of each day, the athleteæ were obliged to take a certain quantity of food, which was usually called *ἀνακοφάγια* and *ἀνακοτροφία*, or *βίαιος τροφή*;¹⁷ after which, they were accustomed to take a long sleep. The quantity of animal food which some celebrated athleteæ, such as Milo, Theagenes, and Asitydamas, are said to have eaten, appears to us quite incredible.¹⁸ The food which they ate was usually dry, and is called by Juvenal¹⁹ *coliphia*, on the meaning of which word see Ruperti, *ad loc.*

The athleteæ were anointed with oil by the *alipiteæ* previously to entering the *palaestra* and contending in the public games, and were accustomed to contend naked. In the description of the games given in the twenty-third book of the *Iliad*,²⁰ the combatants are said to have worn a girdle about their loins; and the same practice, as we learn from Thucydides,²¹ anciently prevailed at the Olympic games, but was discontinued afterward.

For farther information on the athleteæ, the reader is referred to the articles ISTHMIAN, NEMEAN, OLYMPIAN, and PYTHIAN GAMES; and to Krause's *Theagenes, oder wissenschaft. Darstellung der Gymnastik, Agonistik, und Festspiele der Hellenen* (Halle, 1835); and *Olympia, oder Darstellung der grossen Olympischen Spiele* (Vienna, 1838).

ATHLOTHETÆ. (*Vid. AGONOTHETÆ, HELLANODICÆ.*)

ATILIA LEX. (*Vid. TUTOR.*)

ATIMIA (*ἀτιμία*), or the forfeiture of a man's civil rights. It was either total or partial. A man was totally deprived of his rights, both for himself and for his descendants,²² when he was convicted of murder, theft, false witness, partiality as arbiter, violence offered to a magistrate, and so forth. This highest degree of *ἀτιμία* excluded the person affected from the forum, and from all public assem-

bles; from the public sacrifices, and from the law courts; or rendered him liable to immediate imprisonment if he was found in any of these places. It was either temporary or perpetual; and either accompanied or not with confiscation of property. Partial *ἀτιμία* only involved the forfeiture of some few rights, as, for instance, the right of pleading in court. Public debtors were suspended from their civic functions till they discharged their debt to the state. People who had once become altogether *ἀτιμοί* were very seldom restored to their lost privileges. There is a *locus classicus* on the subject of *ἀτιμία* in Andocides.¹ The converse term to *ἀτιμία* was *ἐπιτιμία*.

ATINIA LEX. (Vid. USUCAPIO.)

ATLAN'TES (*ἀτλαντες*), also called *Telamones*. Both these words are used, in a general sense, to signify anything which supports a burden, whether a man, an animal, or an inanimate object; but in architectural language they were specifically applied to designate those muscular figures which are sometimes fancifully used instead of modillions to support the *corona*, or upper member of a cornice: "*Nostri Telamones, Græci vero hos Atlantes vocant,*" says Vitruvius.² The fable of Atlas, who bore the globe upon his shoulders, and of whom Homer says,

Ἔχει δὲ τε κίονας αὐτὸς

μακρὸς, αἱ γαῖαν τε καὶ οὐρανὸν ἄμφω ἔχουσι,³

supplied an historical derivation for the name. They were distinguished from Caryatides, which are always represented as female figures in an erect position.

They were also applied as ornaments to the sides of a vessel, having the appearance of supporting the oars; as in the ship of Hiero, described by Athenæus,⁴ in which instance he represents them as being six cubits in height, and sustaining the triglyphs and cornice.

Hence, too, the term came to be used in irony (*κατ' ἀντίφασιν*), to ridicule a person of very diminutive or deformed stature.

"*Nanum cujusdam Atlanta vocamus: Æthiopem cynnum; pravam extortantque puellam Europen,*" &c.⁵

A representation of these figures is given in the preceding woodcut, copied from the *tepidarium* in the baths at Pompeii. They are placed round the sides of the chamber, and support a cornice, upon which the vaulting of the roof rests, thus dividing the whole extent of the walls into a number of small compartments, the uses of which are explained in the description of *tepidarium* in the article BATHS.

*ATRAC TYLIS (*ἀτρακτύλις*), a species of thistle, called by some the Distaff-Thistle, from its resem-

blance to a distaff (*ἀτρακτός*), for which its stalk was often employed. It is not improbable, as Adams thinks, that it was applied to several sorts of thistles, a tribe still very difficult to classify and distinguish. Ruellius and Hermolaus make it out to be the *Cnicus sylvestris*, but this opinion is rejected by Matthioli; and that of Fuchsius, who held it to be the *Carduus Benedictus*, does not seem less objectionable. Sprengel, in the first edition of his R. H. H., inclines to the *Carlthamus Canatus*, and in the second to the *C. Creticus*; but in his edition of Dioscorides he proposes the *Carlina lanata*, L. Stackhouse hesitates about the *Attractylis gummifera*. The modern name in use among the Greeks is *ἀτράκτυλις σταυράγκαθι*. Sibthorp found it in Southern Greece.¹

ATRAMEN'TUM, a term applicable to any black colouring substance, for whatever purpose it may be used,² like the *μέλαν* of the Greeks.³ There were, however, three principal kinds of atramentum: one called *librarium* or *scriptorium* (in Græc, *γραφικὸν μέλαν*), another called *sutorium*, the third *tectorium*. *Atramentum librarium* was what we call writing-ink.⁴ *Atramentum sutorium* was used by shoemakers for dyeing leather.⁵ This atramentum sutorium contained some poisonous ingredient, such as oil of vitriol; whence a person is said to die of atramentum sutorium, that is, of poison, as in Cicero.⁶ *Atramentum tectorium* or *pictorium* was used by painters for some purposes, apparently⁷ as a sort of varnish. The scholiast on Aristophanes⁸ says that the courts of justice, or *δικαστήρια*, in Athens were called each after some letter of the alphabet: one alpha, another beta, a third gamma, and so on, and that against the doors of each *δικαστήριον*, the letter which belonged to it was written *πύρρον βάμματι*, in "red ink." This "red ink," or "red dye," could not, of course, be called atramentum. Of the ink of the Greeks, however, nothing certain is known, except what may be gathered from the passage of Demosthenes above referred to, which will be noticed again below. The ink of the Egyptians was evidently of a very superior kind, since its colour and brightness remain to this day in some specimens of papyri.⁹ The initial characters of the pages are often written in red ink.¹⁰ Ink among the Romans is first found mentioned in the passages of Cicero and Plautus above referred to. Pliny informs us how it was made. He says, "It was made of soot in various ways, with burned resio or pitch: and for this purpose," he adds, "they have built furnaces, which do not allow the smoke to escape. The kind most commended is made in this way from pine-wood: It is mixed with soot from the furnaces or baths (that is, the hypocausts of the baths: *vid. BATH*); and this they use *ad volumina scribenda*. Some also make a kind of ink by boiling and straining the lees of wine," &c. With this account the statements of Vitruvius¹¹ in the main agree. The black matter emitted by the cuttlefish (*sepia*), and hence itself called *sepia*, was also used for atramentum.¹² Aristotle, however, in treating of the cuttlefish,¹³ does not refer to the use of the matter (*σολός*) which it emits, as ink.¹⁴ Pliny observes¹⁵ that an infusion of wormwood with ink preserves a manuscript from mice.¹⁶

1. (De Myst., c. 73, 76, p. 35.)—2. (Vitruv., vi., 10.)—3. (Od., i., 53.)—4. (v., 42.)—5. (Juv., Sat., viii., 32.)

On the whole, perhaps, it may be said that the inks of the ancients were more durable than our own; that they were thicker and more unctuous, in substance and durability more resembling the ink now used by printers. An inkstand was discovered at Herculaneum, containing ink as thick as oil, and still usable for writing.¹

It would appear, also, that this gummy character of the ink, preventing it from running to the point of the pen, was as much complained of by the ancient Romans as it is by ourselves. Persius² represents a foppish writer sitting down to compose; but, as the ideas do not run freely,

"*Tunc queritur, crassus calamo quod pendeat humor;
Nigra quod infusa vaneſcat ſerpi lymphæ.*"

They also added water, as we do sometimes, to thin it. Mr. Lane³ remarks that the ink of the modern Egyptians "is very thick and gummy."

From a phrase used by Demosthenes, it would appear as if the colouring ingredient was obtained by rubbing from some solid substance, perhaps much as we rub Indian ink. Demosthenes⁴ is reproaching Æschines with his low origin, and says that, "when a youth, he was in a state of great want, assisted his father in his school, rubbed the ink (prepared the ink by rubbing, *τὸ μέλαν τρίβων*), washed down the forms, and swept the schoolroom," &c. It is probable that there were many ways of colouring ink, especially of different colours. Red ink (made of *minium*, vermilion) was used for writing the titles and beginnings of books,⁵ so also was ink made of *rubrica*, "red ochre,"⁶ and because the headings of *laws* were written with *rubrica*, the word *rubric* came to be used for the civil law.⁷ So *album*, a white or whited table, on which the prætors' edicts were written, was used in a similar way. A person devoting himself to *album* and *rubrica* was a person devoting himself to the law. (*VID. ALBUM*.) There was also a very expensive red-coloured ink, with which the emperor used to write his signature, but which any one else was by an edict⁸ forbidden to use, excepting the sons or near relatives of the emperor, to whom the privilege was expressly granted. But if the emperor was under age, his guardian used a green ink for writing his signature.⁹ On the banners of Crassus there were purple letters, *ποινικὰ γράμματα*.¹⁰ On pillars and monuments, letters of gold and silver, or letters covered with gilt and silver, were sometimes used, as appears from Cicero¹¹ and Suetonius.¹² In writing, also, this was done at a later period. Suetonius¹³ says, that of the poems which Nero recited at Rome, one part was written in gold (or gilt) letters (*aureis litteris*), and consecrated to Jupiter Capitolinus.¹⁴ This kind of illuminated writing was more practised afterward in religious compositions, which were considered as worthy to be written in letters of gold (as we say even now), and, therefore, were actually written so. Something like what we call sympathetic ink, which is invisible till heat, or some preparation be applied, appears to have been not uncommon. So Ovid¹⁵ advises writing love-letters with fresh milk, which would be unreadable until the letters were sprinkled with coal-dust: "*Tuta quoque est, fallitque oculos e lacte recenti Littera: carbonis pulvere tange; leges.*" Ausonius¹⁶ gives the same direction ("*Lacte incide notas; arescens charta tenebit Semper inadspicias; pro-*

dentur scripta favillis"). Pliny suggests that the milky sap contained in some plants might be used in the same way.²

An inkstand (*atramentarium*, used only by later writers; in Greek, *μελανόδοχος*²) was either single or double. The double inkstands were probably in-

tended to contain both black and red ink, much in the modern fashion. They were also of various shapes, as, for example, round or hexagonal. They had covers to keep the dust from the ink. The preceding cuts represent inkstands found at Pompeii.

ATRIUM, called *αὐλή* by the Greeks and by Virgil,⁴ and also *μεσαύλιον*, *περίστυλον*, *περίστρον*.

Two derivations of this word are given by the ancient writers. Festus and Varro refer it to the same origin: *Ab Atriæ populis, a quibus atrium exemplum desumpta fuerunt*;⁵ but Servius, on the contrary,⁶ derives the term *ab atro*, *propter fumum qui esse solebat in atris*; a remark which explains the allusion of Juvenal,⁷ *Fumosos equitum cum dictatore magistros*, since it was customary among the Romans to preserve the statues of their ancestors in the atrium, which were blackened by the smoke of the fires kept there for the use of the household.

Atrium is used in a distinctive as well as collective sense, to designate a particular part in the private houses of the Romans (*vid. HOUSE*), and also a class of public buildings, so called from their general resemblance in construction to the atrium of a private house. There is likewise a distinction between atrium and area; the former being an open area surrounded by a colonnade, while the latter had no such ornament attached to it. The atrium, moreover, was sometimes a building by itself, resembling, in some respects, the open basilica (*vid. BASILICA*), but consisting of three sides. Such was the Atrium Publicum in the Capitol, which Livy informs us was struck with lightning B.C. 216.⁸ It was at other times attached to some temple or other edifice, and in such case consisted of an open area and surrounding portico in front of the structure, like that before the Church of St. Peter in the Vatican.

Several of these buildings are mentioned by the ancient historians, two of which were dedicated to the same goddess, *Libertas*; and hence a difficulty is sometimes felt in deciding which of the two is meant when the atrium *Libertatis* is spoken of. The most celebrated, as well as the most ancient, was situated upon the Aventine Mount. Of this there is no doubt; for it is enumerated by Victor, in his catalogue of the buildings contained in the xiii. Regio, which comprises the Mons Aventinus, on which there was an *ades Libertatis* built and dedicated by the father of Gracchus,⁹ to which the atrium was attached either at the same time or shortly afterward; for Livy also states¹⁰ that the hostages from Tarentum were confined in *atrio Libertatis*, which must refer to the atrium on the Aven-

tine, since their escape was effected by the corruption of the keepers of the temple (*corruptis adiutoribus*). In this atrium there was a tabularium, where the legal tablets (*tabulae*) relating to the censors were preserved.¹ The *Germanici milites* were also stationed at the same spot in the time of Galba,² as is apparent from a passage in Suetonius,³ in which he says that they arrived too late to prevent the murder, which was perpetrated in the Forum, in consequence of their having missed their way and gone round about. This could not have happened had they come from the other atrium Libertatis, which was close to the Forum Romanum.

The examination of slaves, when accompanied by the torture, also took place, by a strange anomaly, in *atrio Libertatis*,⁴ which must also be referred, for several reasons, to the atrium on the Aventine. Indeed, when the atrium Libertatis is mentioned without any epithet to distinguish it, it may safely be considered that the more celebrated one upon the Aventine is meant. It was repaired, or, more probably, rebuilt, by Asinius Pollio,⁵ who also added to a magnificent library (*bibliotheca*), which explains the allusion of Ovid.⁷

*"Nec me, quæ doctis patuerunt prima libellis,
Atria Libertas tangere passa sua est."*

The other atrium Libertatis is noticed by Cicero,⁸ in which place the mention of the *Basilica Paulli* in conjunction with the word *forum* (*ut forum laxaremus et usque ad atrium Libertatis explicaremus*), has perplexed the commentators, and induced the learned Nardini to pronounce the passage inexplicable.⁹ He affirms that this instance is the only one to be found, among all the writers of antiquity, in which mention is made of an atrium Libertatis distinct from that on the Aventine; and hence he is inclined to think that there was no other, and to alter the reading into *atrium Minervæ*, which is mentioned by P. Victor as being in this (the eighth) region. But in this he was mistaken, as is made evident by the subjoined fragment from a plan of Rome, discovered since the time of Nardini, which was executed upon a marble pavement during the reigns of Septimius Severus and Caracalla, and is now preserved in the museum of the Capitol at Rome, and termed *la Pianta Capitolina*. As the name is inscribed upon each of the buildings, no doubt can be felt as to their identity; and the forum to which Cicero alludes must be the Forum Cæsaris¹⁰ for neither the writers of the *Regiones*, nor any of the ancient authors, ever mention a building of this kind in the Forum Romanum. The Forum of Cæsar was situated in the rear of the edifices on

the east side of the Roman Forum;¹¹ so that the atrium Libertatis would be exactly as represented upon the plan, behind the *Basilica Emilia*, an elevation of which is given in the article *BASILICA*; and,

although the name of its founder is broken off, yet the open peristyles, without any surrounding wall, demonstrate what basilica was intended. Thus the passage of Cicero will be satisfactorily explained. In order to lay open the magnificent Basilica of Paullus to the Forum of Cæsar, he proposed to buy and pull down some buildings which obstructed the view, which would extend the small forum of Cæsar *usque ad Libertatis atrium*, by doing which he no doubt intended to court the favour of Cæsar, upon whose good-will he prides himself so much in the epistle.

The dotted lines represent a crack in the marble

The senate was held in early times in *atrio Paulli*.¹

*ATT'AGEN (*ἀτταγῆν* or *ἀττάγας*), the name of a bird mentioned by Aristotle, Aristophanes, Horace, and Martial. There have been various conjectures respecting it, some supposing it a pheasant, some a partridge, and others a woodcock. This last opinion is probably the most correct, although Adams inclines to agree with Pennant, that the Attagen was the same with the Godwit, or *Scolopax agrocephala*. Walpole,² on the other hand, thinks it was the *Tetrao Francolinus*. A writer, quoted by Athenæus,³ describes the Attagen as being a little larger than a partridge, having its back marked with numerous spots of a reddish colour. Hence the name of this bird is humorously applied by Aristophanes⁴ to the back of a runaway slave, scored by the lash. The same writer also informs us that the Attagen was highly esteemed by epicures.⁵

*ATTELEBUS (*ἀττελέβος*), generally taken for a species of Gnat, but referred by Stackhouse to the genus *Attelebus*, L., a class of insects that attack the leaves and most tender parts of plants.⁶

ATTHIS (*ἄτθις*), a name given to any composition which treated of the history of Attica.⁷ This name seems to have been used because Attica was also called 'Ατθίς.⁸ Pausanias⁹ calls his first book 'Ατθίς *συγγραφή*, because it treats chiefly of Attica and Athens. The Atthides appear to have been not strictly historical; but also geographical, topographical, mythological, and archæological. By preserving the local history, legends, traditions, and antiquities, and thus drawing attention to the ancient standing and renown of the country, and connecting the present with the past, they tended to foster a strong national feeling. From what Dionysius says,¹⁰ it would appear that other districts had their local histories as well as Attica.¹¹ The nature of the 'Ατθίδες we know only from a few fragments and incidental notices. The most ancient writer of these compositions would appear, according to Pausanias,¹² to have been Clitodemus—Κλειτόδημος or Κλειδήμος (ὅσοι τὰ Ἀθηναίων ἐπὶ χώρῳ ἔγραψαν, οὐ ἀρχαιοτάτος). His 'Ατθίς was published about B.C. 378.¹³ Probably Pausanias means that Clitodemus was the first native Athenian who wrote an 'Ατθίς, as Clinton observes, and not the first person; for Hellanicus, a native of Lesbos, had written one before him. Another writer of this class was Andron ('Ανδρων), a native of Halicarnassus, as appears from Plutarch;¹⁴ also Androtion—Ἀνδροτίων,¹⁵ and Philochorus, who held the office of *ἱεροσκόπος* at Athens, B.C. 306.¹⁶ His 'Ατθίς is quoted by the scholiast on Aristophanes¹⁷ and Euripides.¹⁸ Phanodemus, Demon, and Ister

were also writers of *'Arθίδες*. Their date is uncertain; but it appears that Demon was nearly contemporary with Philochorus, and that Ister flourished B.C. 246-221, in the reign of Ptolemæus Evergetes, and was, as Suidas asserts, a pupil of Callimachus. The fragments of Philochorus and Androtion have been edited by C. G. Siebelis (Leipsig, 1811); and those of Phanodemus, Demon, Clitodemus, and Ister also (Leipsig, 1812).

ATTICURGES (*τὸ Ἀττικουργγές*), in the Attic style. Vitruvius,¹ when treating of the different constructions of doorways to sacred edifices, enumerates three, the Doric, Ionic, and Attic (*Atticurgēs*). He first gives an account of the Doric, then the Ionic, and, lastly, states that the Attic follows generally the same rules as the Doric; and then, having instanced the points of difference between these two orders, he concludes by saying that he has laid down all the rules necessary for the construction of the Doric, Ionic, and Corinthian orders (*Doricis, Ionicis, Corinthisque operibus*), which would certainly seem to identify the Attic with the Corinthian. Pliny, however,² designates as Attic columns (*columnas Atticas*) those which have four angles and equal sides, i. e., a square plaster, such as the order of columns in the upper story of the Coliseum, which have Corinthian capitals; but the projection of their sides is not equal to the fronts. There is much difficulty involved in this consideration; for if the people of Attica had an order of their own, distinct from the Doric, which they commonly adopted, as the Tuscan, Ionians, and Corinthians had, it is singular that we should not have any account of its distinctive properties, and that Vitruvius himself should not have described it as exactly as he has the other three. The only way to solve the difficulty is to adopt the explanation of Pliny, and to conclude that the Athenians had no distinct order of their own, with a peculiar character in all its component parts; but that they adopted a column expressly Attic, i. e., a square one, with a Corinthian capital and an Attic base, to the other parts and proportions of the Doric order. Thus Vitruvius may be reconciled with himself; for he only speaks of the Atticurgēs as used in doorways, where the square or Attic columns of Pliny would be admirably fitted for the upright jambs, which might be ornamented with a Corinthian capital and an Attic base, the proportions and component parts of which are enumerated by Vitruvius.³ The lowest he terms *plinthus*; the one above that, *torus inferior*; the next three divisions, *scotia cum suis quadris*; and the highest, the *torus superior*.

AUC'TIO signifies generally "an increasing, an enhancement," and hence the name is applied to a public sale of goods, at which persons bid against one another. The term *auctio* is general, and comprehends the species *bonorum emptio* and *sectio*. As a species, *auctio* signifies a public sale of goods by the owner or his agent, or a sale of goods of a deceased person for the purpose of dividing the money among those entitled to it, which was called *auctio hereditaria*.⁴ The sale was sometimes conducted

by an *argentarius*, or by a *magister auctionis*; and the time, place, and conditions of sale were announced either by a public notice (*tabula, album, &c.*) or by a crier (*præco*).

The usual phrases to express the giving notice of a sale are *auctionem proscribere, prædicare*; and to determine on a sale, *auctionem constituere*. The purchasers (*emptores*), when assembled, were sometimes said *ad tabulam adesse*. The phrases signifying to bid are *liceri, licitari*, which was done either by word of mouth, or by such significant hints as are known to all people who have attended an auction. The property was said to be knocked down (*addici*) to the purchaser, who either entered into an engagement to pay the money to the *argentarius* or *magister*, or it was sometimes a condition of sale that there should be no delivery of the thing before payment.¹ (*Vid. Actio*.) An entry was made in the books of the *argentarius* of the sale and the money due, and credit was given in the same books to the purchaser when he paid the money (*expensa pecunia lata, accepta relata*). Thus the book of the *argentarius* might be used as evidence for the purchaser, both of his having made a purchase, and having paid for the thing purchased. If the money was not paid according to the conditions of sale, the *argentarius* could sue for it.

The *præco* or crier seems to have acted the part of the modern auctioneer, so far as calling out the biddings² and amusing the company. Slaves, when sold by auction, were placed on a stone or other elevated thing, and hence the phrase *homo de lapide emtus*: It was usual to put up a spear, *hasta*, in auctions, a symbol derived, it is said, from the ancient practice of selling under a spear the booty acquired in war. By the *auctio*, the Quiritarian ownership in the thing sold was transferred to the purchaser. (*Vid. Bonorum Emptio, Sectio*.)

AUCTOR, a word which contains the same element as *aug-co*, and signifies generally one who enlarges, confirms, or gives to a thing its completeness and efficient form. The numerous technical significations of the word are derived from this general notion. As he who gives to a thing that which is necessary for its completeness, may in this sense be viewed as the chief actor or doer, the word *auctor* is also used in the sense of one who originates or proposes a thing; but this cannot be viewed as its primary meaning. Accordingly, the word *auctor*, when used in connexion with *lex* or *senatus consultum*, often means him who originates and proposes, as appears from numerous passages.³ When a measure was approved by the senate before it was confirmed by the votes of the people, the senate were said *auctores fieri*, and this preliminary approval was called *senatus auctoritas*.⁴ In the passage of Livy,⁵ there is an ambiguity in the use of the word, arising from the statement of the practice in Livy's time, and the circumstances of the peculiar case of the election of a king. The effect of what Livy states as to the election of Numa was a reservation of a veto: "Si dignum crearit, patres auctores fient." The meaning, however, of the whole passage is clearly this: the patres gave permission to elect, and if the person elected should be approved by them, that was to be considered equivalent to their nomination.

In the imperial time, *auctor* is often said of the emperor (*princeps*) who recommended anything to the senate, and on which recommendation that body passed a *senatus consultum*.⁶

When the word *auctor* is applied to him who recommends, but does not originate a legislative

1. (iii., 3.)—2. (H. N., xxxvii., 23.)—3. (iii., 3.)—4. (Cic., pro Cæcin., 5.)

1. (Gaius, iv., 126.)—2. (Cic., de Off., ii., 23.)—3. (Liv., vi., 36.—Cic., pro Dom., c. 30.)—4. (Cic., Brut., c. 14.)—5. (i., 17.)—6. (Gaius, i., 30, 80.—Sucton. Vesp., 11.)

measure, it is equivalent to *suasor*.¹ Sometimes both auctor and suasor are used in the same sentence, and the meaning of each is kept distinct.²

With reference to dealings between individuals, auctor has the sense of owner,³ and is defined thus: *Auctor meus a quo ius in me transit*. In this sense auctor is the seller (*venditor*), as opposed to the buyer (*emtor*): the person who joined the seller in a warranty, or as security, was called *auctor secundus*, as opposed to the seller, or *auctor primus*.⁴ The phrase *a malo auctore emere*,⁵ *auctorem laudare*⁶ will thus be intelligible. The testator, with respect to his heir, might be called auctor.⁷

Consistently with the meanings of auctor as already explained, the notion of consenting, approving, and giving validity to a measure affecting a person's status clearly appears in the following passage.⁸

Auctor is also used generally to express any person under whose authority any legal act is done. In this sense, it means a tutor who is appointed to aid or advise a woman on account of the infirmity of her sex:⁹ it is also applied to a tutor whose business it is to do or approve of certain acts on behalf of a ward (*pupillus*).

The term *auctores juris* is equivalent to jurisperiti,¹⁰ and the law writers, or leaders of particular schools of law, were called *scholæ auctores*. It is unnecessary to trace the other significations of this word.

AUCTORITAS. The technical meanings of this word correlate with those of auctor.

The auctoritas senatus was not a senatus consultum; it was a measure, incomplete in itself, which received its completion by some other authority.

Auctoritas, as applied to property, is equivalent to legal ownership, being a correlation of auctor.¹² It was a provision of the laws of the Twelve Tables, that there could be no usucapion of a stolen thing,¹³ which is thus expressed by Gellius in speaking of the Atinian law:¹⁴ "*Quod subreptum erit ejus rei æterna auctoritas esto*;" the ownership of the thing stolen was still in the original owner.¹⁵

Auctoritas sometimes signifies a warranty or collateral security, and thus correlated to auctor secundus. Auctoritatis actio means the action of eviction.¹⁶ The instrumenta auctoritatis are the proofs or evidences of title.

The auctoritas of the prætor is sometimes used to signify the judicial sanction of the prætor, or his order, by which a person, a tutor for instance, might be compelled to do some legal act,¹⁷ or, in other words, "auctor fieri." The tutor, with respect to his wards, both male and female (*pupilli, pupillæ*), was said *negotium gerere*, and *auctoritatem interponere*: the former phrase is applicable where the tutor does the act himself; the latter, where he gives his approbation and confirmation to the act of his ward. Though an infant had not a capacity to do any act which was prejudicial to him, he had a capacity to receive or assent to anything which was for his benefit, and in such case the *auctoritas* of the tutor was not necessary.

The authority of decided cases was called *similiter judicatorum auctoritas*. The other meanings of auctoritas may be easily derived from the primary

meaning of the word, and from the explanations here given.

AUDITORIUM, a place where poets, orators, and critics were heard recite their compositions. There were places used expressly for this purpose, as the Athenæum. (*Vid. ATHENÆUM*.) Sometimes, also, a room was hired and converted to this object, by the erection of seats, and by other arrangements.¹ The term auditorium was also applied to a court, in which trials were heard.² Auditorium principis was the emperor's audience-chamber.³

*AVELLA'NA NUX, the Filbert, the fruit of the *Corylus Avellana*, or Hazelnut-tree. It is the *κάρυον Ποντικόν* or *λεπτοκάρυον* of Dioscorides.⁴ According to Pliny,⁵ the earlier form of the Latin name was *Abellina nux*, an appellation coming very probably from the Samnian city of Abellinum, where this species of nut is said to have abounded, or else from the Campanian city of Abella. Servius is in favour of the latter.⁶ Pliny says the filbert came first from Pontus into Lower Asia and Greece, and hence one of its Greek names, as given above, *κάρυον Ποντικόν*.⁷ Macrobius styles it also *nux Prænestina*,⁸ but Pliny distinguishes between the *nuxes Avellana* and *Prænestina*.⁹ Theophrastus¹⁰ speaks of two varieties of this kind of nut, the one round, the other oblong; the latter is referred by Sprengel to the *Corylus tubulosa*, Willd.¹¹

*AUGI'TES (*αὐγίτης*), a species of gem deriving its name from its brilliancy (*αὐγή*). Pliny says it was thought by many to be different from the Calais, and hence the inference has been drawn that it was generally the same with the latter, which was probably turquoise.¹²

AUGUR meant a diviner by birds, but was sometimes applied in a more extended sense. The word seems to be connected with *augeo*, *auguro*, in the same manner as *fulgur* with *fulgeo* and *fulguro*. *Augeo* bears many traces of a religious meaning, to which it may have been at first restricted.¹³ The idea of a second derivation from *avis*, confirmed by the analogy of *auspex* (*avis pex*), may perhaps have limited the signification of augur. It is not improbable that this last etymology may be the true one; but if so, it is impossible to explain the second element of the word. "*Augur, quod ab avium garritu derivari grammatici garrunt*," says Salmassius.

The institution of augurs is lost in the origin of the Roman state. According to that view of the constitution which makes it come entire from the hands of the first king, a college of three was appointed by Romulus, answering to the number of the three early tribes. Numa was said to have added two,¹⁴ yet, at the passing of the Ogulnian law (B.C. 300), the augurs were but four in number: whether, as Livy¹⁵ supposes, the deficiency was accidental, is uncertain. Niebuhr supposes that there were four augurs at the passing of the Ogulnian law, two apiece for the Rhamnes and Tities. But it seems incredible that the third tribe should have been excluded at so late a period; nor does it appear how it ever obtained the privilege, as the additional augurs were elected from the plebs. By the law just mentioned, their number became nine, five of whom were chosen from the plebs. The dictator Sulla farther increased them to fifteen,¹⁶ a multiple of their original number, which probably had a reference to the early tribes. This continued until the time of Augustus, who, among

other extraordinary powers, had the right conferred on him of electing augurs at his pleasure, whether there was a vacancy or not, B.C. 29,¹ so that from this time the number of the college was unlimited.

According to Dionysius,² the augurs, like the other priests, were originally elected by the comitia curiata, or assembly of the patricians, in their curiæ. As no election was complete without the sanction of augury, the college virtually possessed a veto on the election of all its members. They very soon obtained the privilege of self-election (*jus co-optationis*), which, with one interruption, viz., at the election of the first plebeian augurs, they retained until B.C. 103, the year of the Domitian law. By this law it was enacted that vacancies in the priestly colleges should be filled up by the votes of a minority of the tribes, *i. e.*, seventeen out of thirty-five, chosen by lot. The Domitian law was repealed by Sulla, but again restored B.C. 63, during the consulship of Cicero, by the tribune T. Annius Labienus, with the support of Cæsar. It was a second time abrogated by Antony; whether again restored by Hirtius and Pansa, in their general annulment of the acts of Antony, seems uncertain. The emperors, as mentioned above, possessed the right of electing augurs at pleasure.

The augurship is described by Cicero, himself an augur, as the highest dignity in the state,³ having an authority which could prevent the comitia from voting, or annul resolutions already passed, if the auspices had not been duly performed. The words *alio die* from a single augur might put a stop to all business, and a decree of the college had several times rescinded laws. Such exorbitant powers, as Cicero must have seen, depended for their continuance on the moderation of those who exercised them.

The augurs were elected for life, and, even if capitally convicted, never lost their sacred character.⁴ They were to be free from any taint of disease while performing their sacred functions, which Plutarch⁵ thought was designed to show that purity of mind was required in the service of the gods. When a vacancy occurred, the candidate was nominated by two of the elder members of the college,⁶ the electors were sworn,⁷ and the new member took an oath of secrecy before his inauguration. The only distinction among them was one of age, the eldest augur being styled *magister collegii*.⁸ Among other privileges, they enjoyed that of wearing the purple *prætecta*, or, according to some, the *trabea*. On ancient coins they are represented wearing a long robe, which veiled the head and reached down to the feet, thrown back over the left shoulder. They hold in the right hand a *lituus* or curved wand, hooked at the end like a crosier, and sometimes have the *capis*,⁹ or earthen water vessel, by their side.¹⁰ On solemn occasions they appear to have worn a garland on the head.¹¹ Although many of the augurs were senators, their office gave them no place in the senate.¹² The manner of taking the auspices is described under AUSPICUM.

The chief duties of the augurs were to observe and report supernatural signs. They were also the repositories of the ceremonial law, and had to advise on the expiation of prodigies, and other matters of religious observance. The sources of their art were threefold: first, the formulas and traditions of the college, which in ancient times met on the nones of every month; secondly, the *augurales libri*, which were extant even in Seneca's time;¹³ thirdly, the

commentarii augurum, such as those of Messala and of Appius Clodius Pulcher, which seem to have been distinguished from the former as the treatises of learned men from received sacred writings. Other duties of the augurs were to assist magistrates and generals in taking the auspices. At the passing of a *lex curiata*, three were required to be present, a number probably designed to represent the three ancient tribes.

One of the difficulties connected with this subject is to distinguish between the religious duties of the augurs and of the higher magistrates. Under the latter were included consul, prætor, and censor; the quæstor, as appears from Varro,¹ being obliged to apply for the auspices to his superior. A single magistrate had the power of proroguing the comitia by the formula *se de calo serrare*. (*Vid. AUSPICUM*.) The law obliged him to give notice beforehand,² so that it can only have been a religious way of exercising a constitutional right. The *spectio*, as it was termed, was a voluntary duty on the part of the magistrate, and no actual observation was required. On the other hand, the augurs were employed by virtue of their office: they declared the auspices from immediate observation, without giving any previous notice: they had the right of *nuntiatio*, not of *spectio*, at least in the comitia; in other words, they were to report prodigies where they did, not to invent them where they did not, exist.

The college of augurs possessed far greater power in the earlier than in the later period of Roman history. The old legends delighted to tell of the triumphs of religion: its first kings were augurs,³ and Romulus was believed to have founded the empire by a direct intimation from heaven. It seems natural that augury should have sprung up amid the simple habits of a rustic people, and hence we should be inclined to refer it to a Sabine rather than an Etruscan origin. That a learned system should be ingrafted on a more simple one, such as that of the ancient Sabines, seems surely far more probable than the reverse. Yet the prevalence of Etruscan influence, during the second and third centuries of Roman history, must have greatly modified the primitive belief. It might almost appear that the conflict between the old and new religion was hinted at in the story of Attus Nævius, especially when we remember that Tarquinius, whether of Latin or Etruscan origin, is undoubtedly the representative of an Etruscan period. The Romans themselves, as Müller admits, distinguished between their own rites of augury and Etruscan divination. The separate origin of the Roman religion is implied in the tradition that Numa was of Sabine birth, not to mention that many of the names used by the augurs (such as Sanguis avis, from the Sabine god Sancus, Titius aves, Sabinus cultus) bear traces of a Sabine origin. Such a view is not inconsistent with the incorporation of many parts of the Etruscan system, as the constitution of the college of augurs, or the divisions of the heavens.

Augury was one of the many safeguards which the wisdom of an oligarchy opposed to the freedom of the plebs.⁴ Of the three comitia—curiata, centuriata, and tributa—the two former were subject to the auspices. As the favourable signs were known to the augurs alone, their scruples were a pretext for the government to put off an inconvenient assembly. Yet in early times the augurs were not the mere tools of the government, but formed by themselves, as is the case in almost all oligarchies, an important portion of the Roman state. The terrors of religion, which the senate and patricians used against the plebs, must often

1. (Dion., xli., 20.)—2. (ii., 22.)—3. (De Leg., ii., 12.)—4. (Plin., Ep., iv., 8.)—5. (Quest. Rom., 72.)—6. (Cic., Phil., ii., 2.)—7. (Cic., Brut., i.)—8. (Cic., De Senect., 13.)—9. (Liv., x., 7.)—10. (Goltzi, Icones.)—11. (Plut., Cæs., p. 730.)—12. (Cic., ad Att., iv., 2.)—13. (Ep., 107.)

have been turned against themselves, especially during the period when the college enjoyed an absolute control over the election of its own members. Under the kings, the story of Attus Navius seems to testify the independence of the augurs. During many centuries their power was supported by the voice of public opinion. Livy tells us that the first military tribunes abdicated in consequence of a decree of the augurs; and, on another occasion, the college boldly declared the plebeian dictator, M. C. Marcellus, to be irregularly created.¹ It was urged by the patricians, and half believed by the plebeians themselves, that the auspices would be profaned by the admission of the plebs to the rights of intermarriage or the higher magistracies. With the consulship the plebeians must have obtained the higher auspices; yet, as the magistrates were, in a great measure, dependant on the augurs, the plebs would not be, in this respect, on a level with the patricians until the passing of the Ogulnian law. During the civil wars, the augurs were employed by both parties as political tools. Cicero² laments the neglect and decline of the art in his day. The college of augurs was finally abolished by the Emperor Theodosius;³ but so deeply was the superstition rooted, that, even in the fourteenth century, a Christian bishop found it necessary to issue an edict against it.⁴

For a view of the Roman augurs, which derives them from Etruria, see Müller's *Etrusker*, iii. 5.

I. AUGUSTALES (sc. *ludi*, also called *Augustalia*, sc. *certamina, ludicra*, and by the Greek writers and in Greek inscriptions, *Σεβαστα, Σεβάστωμα, Αὐγουστᾶλεια*) were games celebrated in honour of Augustus at Rome and in other parts of the Roman Empire. After the battle of Actium, a quinquennial festival (*πενήνυρις πεντετήρις*) was instituted; and the birthday (*γενέθλια*) of Augustus, as well as that on which the victory was announced at Rome, were regarded as festival days.⁵ In the provinces, also, in addition to temples and altars, quinquennial games were instituted in almost every town.⁶ On his return from Rome to Greece, in B.C. 19, after being absent from Italy for two years, the day on which he returned was made a festival, and called Augustalia.⁷ The Roman equites were accustomed, of their own accord, to celebrate the birthday of Augustus in every alternate year,⁸ and the prætors, before any decree had been passed for the purpose, were also in the habit of exhibiting games every year in honour of Augustus. According to Dion Cassius,⁹ it was not till B.C. 11 that the augustalia were established by a decree of the senate; by which augustalia he appears, from the connexion of the passage, to mean the festival celebrated on the birthday of Augustus. This account seems, however, to be at variance with the statement of Tacitus, who speaks of the augustales as first commenced in the reign of Tiberius (*Judos Augustales tunc primum captos turbavit discordia*¹⁰), to reconcile which passage with the one quoted from Dion Cassius, Lipsius, without MS. authority, changed *captos* into *capta*; but Tacitus apparently uses this expression on account of the formal recognition of the games, which was made at the beginning of the reign of Tiberius,¹¹ and thus speaks of them as first established at that time. They were exhibited annually in the circus, at first by the tribunes of the plebes, at the commencement of the reign of Tiberius, but afterward by the prætor peregrinus.¹² These games continued to be exhibited in the time of Dion Cassius, that is, about A.D. 230.¹³

The augustales or augustalia at Neapolis (Naples) were celebrated with great splendour. They were instituted in the lifetime of Augustus,¹ and were celebrated every five years. According to Strabo,² who speaks of these games without mentioning their name, they rivalled the most magnificent of the Grecian festivals. They consisted of gymnastic and musical contests, and lasted for several days.³ At these games the Emperor Claudius brought forward a Greek comedy, and received the prize.⁴

Augustalia (*Σεβαστα*) were also celebrated at Alexandria, as appears from an inscription in Gruter;⁵ and in this city there was a magnificent temple to Augustus (*Σεβαστεῖον, Augustale*). We find mention of Augustalia in numerous other places, as Pergamus, Nicomedia, &c.

II. AUGUSTALES were an order of priests in the municipia, who were appointed by Augustus, and selected from the libertini, whose duty it was to attend to the religious rites connected with the worship of the Lares and Penates, which Augustus put in places where two or more ways met (*in compitis*⁶). The name of this order of priests occurs frequently in inscriptions, from which we learn that the Augustales formed, in most municipia, a kind of corporation, of which the first six in importance had the title of *seviri*, and the remainder that of *compitales Larum Aug.*⁷ It has been maintained by some modern writers that these augustales⁸ were civil magistrates; but there is good reason for believing that their duties were entirely of a religious nature. The office, which was called *Augustalitas*, was looked upon as honourable, and was much sought after by the more wealthy libertini; and it appears that the decuriones in the municipia were accustomed to sell the dignity, since we find it recorded in an inscription that the office had been conferred gratuitously upon an individual on account of the benefits which he had conferred upon the town (*ordo decurionum ob merita ejus honorem Augustalitalis gratulium decrevit*⁹). The number of augustales in each municipium does not appear to have had any limitation; and it seems that, in course of time, almost all the respectable libertini in every municipium belonged to the order, which thus formed a middle class between the decuriones and plebs, like the equestrian order at Rome. We find in the inscriptions of many municipia that the decuriones, seviri or augustales, and plebs, are mentioned together, as if they were the three principal classes into which the community was divided.⁹

The augustales of whom we have been speaking should be carefully distinguished from the *sodales Augustales*, who were an order of priests instituted by Tiberius to attend to the worship of Augustus.¹⁰ They were chosen by lot from among the principal persons of Rome, and were twenty-one in number, to which were added Tiberius, Drusus, Claudius, and Germanicus.¹¹ They were also called *sacerdotes Augustales*;¹² and sometimes simply *Augustales*.¹³ It appears that similar priests were appointed to attend to the worship of other emperors after their deification; and we accordingly find, in inscriptions, mention made of the *sodales Flavii, Hadrianales, Æliani, Antonini*, &c.¹⁴

It appears that the *flamines Augustales* ought to be distinguished from the *sodales Augustales*. We find that flamines and sacerdotes were appointed

1. (Liv. viii. 23.)—2. (De Div. ii. 31, 34.)—3. (Zosim. lib. iv.)—4. (Montfaucon, Suppl. vol. i. 113.)—5. (Dion. li. 19.)—6. (Suet., Octav. 59.)—7. (Dion. li. 10.)—8. (Suet., Octav. 57.)—9. (Orelli, Inscrp., 3959.—Compare Petron., Sat., c. 30.)—8. (Orelli, 3213.)—9. (Orelli, 3939.)—10. (Tacit., Ann., i. 54.—Compare Orelli, Inscrp., 2366, 2367, &c.)—11. (Tacit., l. c.)—12. (Tacit., Ann., ii. 83.)—13. (Tacit., Hist., ii. 95.)—14. (Orelli, Inscrp., 2371, &c.)

in the lifetime of Augustus to attend to his worship; but we have the express statements of Suetonius and Dion Cassius that this worship was confined to the provinces, and was not practised in Rome, or in any part of Italy, during the lifetime of Augustus.¹ Women even were appointed priestesses of Augustus, as appears from an inscription in Gruter:² this practice probably took its origin from the appointment of Livia, by a decree of the senate, to be priestess to her deceased husband.³ It seems probable that the sodales Augustales were intrusted with the management of the worship, but that the flamines Augustales were the persons who actually offered the sacrifices and performed the other sacred rites. A member of the sodales Augustales was sometimes a flamen also (*Neroni Cæsari, flamine Augustali, sodali Augustali*); and it is not improbable that the flamines were appointed by the sodales.

AUGUSTUS. (*Vid.* CALENDAR, ROMAN.)

AULEUM. (*Vid.* SIPARIUM, TAPES, VELUM.)

*AULOPIAS (*αὐλωπίας*), a large fish, of which Ælian gives an interesting account. Rondelet refers it to the genus *Labrus*, or *Wrasse*, but Adams thinks it much more probable that it was a species of *Squalus*, or *Shark*.

AULOS (*αὐλός*), a wind instrument played with the fingers. It consisted of several parts: *γλωττις* or *γλωττα*, the mouthpiece, which was taken off when not used, and kept in a case (*γλωττοκομειον*); *ὑπόγλωττις*, the under part of the mouthpiece, often put for the mouthpiece itself; *δλμοι*, pieces of wood or bone inserted in the *τροπήματα* or openings, and pushed aside, or up and down, so as to narrow or extend the compass of the scale at pleasure; *ὑπόγλωττιον*, similar to *δλμος*, but inserted in the mouthpiece so as to lessen the power of the instrument when required: it is often confounded with *δλμος* and *γλωττα*. *Βόμβυξ* appears to have been the same with *δλμος*: according to Hesychius, it was also a kind of *αὐλός*. *Φορβεία* was not a part of the *αὐλός*, but a strap fastened at the back of the head, with a hole in front fitting to the mouthpiece. (*Vid.* PHORBEIA.) For an account of the different sorts of *αὐλοί*, see *Τίβια*; and for the character of flute music, and its adaptation to the different modes, see *Musica*.

AUREUS. (*Vid.* AURUM.)

AURIGA. (*Vid.* CIRCUS.)

*AURIPIGMENTUM. (*Vid.* ARSENICUM.)

AURUM (*χρυσός*), Gold. It is stated under ARGENTUM, that as late as the commencement of the Peloponnesian war, the Athenians had no gold coinage. It would appear from a passage in the *Antigone*,⁶ that in the time of Sophocles gold was rare at Athens. Indeed, throughout the whole of Greece, though gold was by no means unknown, it appears to have been obtained chiefly through the Greek cities of Asia Minor and the adjacent islands, which possessed it in abundance. The Homeric poems speak constantly of gold being laid up in treasures, and used in large quantities for the purpose of ornament; but this is sufficiently accounted for by the fact that Homer was an Asiatic Greek. The chief places from which the Greeks procured their gold were India, Arabia, Armenia, Colchis, and Troas. It was found mixed with the sands of the Pactolus and other rivers.

GREEK GOLD MONEY.—The time when gold was first coined at Athens is very uncertain. Aristophanes speaks in the *Frogs* (406 B.C.) of τὸ καινὸν χρυσίον, "the new gold money," which he immediately afterward calls *πενήρα χαλκία*.⁹ The scho-

liast on this passage states that in the preceding year the golden statues of Victory had been coined into money, and he quotes Hellenicus and Philochorus as authorities for this statement. It would appear from the language both of Aristophanes and the scholiast, and it is probable, from the circumstances of Athens at the time (it was the year before the battle of Ægospotami), that this was a greatly debased gold coinage, struck to meet a particular exigency. This matter is distinct from the general question respecting the Athenian gold coinage, for the Attic money was proverbial for its purity, and the grammarians, who state that Athens had a gold coinage at an early period, speak of it as very pure. There are other passages in Aristophanes in which gold money is spoken of, but in them he is referring to Persian money, which is known to have been imported into Athens before the Athenians had any gold coinage of their own; and even this seems to have been a rarity.¹ Demosthenes always uses *ἀργύριον* for money, except when he is speaking of foreign gold. In the speech against Phormio, where he repeatedly uses the word *χρυσίον*, we are expressly told what was the money he referred to, namely, 120 staters of Cyzicus.² Isocrates, who uses the word in the same way, speaks in one passage of *buying* gold money (*χρυσωσμεν*) in exchange for silver.³ In many passages of the orators, gold money is expressly said to have been imported from Persia and Macedonia. If we look at the Athenian history, we find that the silver mines at Laurion were regarded as one of the greatest treasures possessed by the state; but no such mention is made of gold. Thucydides,⁴ in enumerating the money in the Athenian treasury at the beginning of the Peloponnesian war, does not mention gold; and Xenophon speaks of the money of Athens in a manner which would lead us to suppose that it had no gold coinage in his time.⁵ The mines of Scapehyale, in Thrace, were indeed worked some years before this period,⁶ but the gold procured from them does not appear to have been coined, but to have been laid up in the treasury in the form of counters (*φθοιδες*). Foreign gold coin was often brought into the treasury, as some of the allies paid their tribute in money of Cyzicus. The gold money thus introduced may have been allowed to circulate, while silver remained the current money of the state.

The character of the Attic gold coins now in existence, and their small number (about a dozen), is a strong proof against the existence of a gold currency at Athens at an early period. There are three Attic staters in the British Museum, and one in the Hunterian Museum at Glasgow, which there is good reason to believe are genuine; their weights agree exactly with the Attic standard. In the character of the impression, they bear a striking resemblance to the old Attic silver; but they differ from it by the absence of the thick, bulky form, and the high relief of the impression which is seen in the old silver of Athens, and in the old gold coins of other states. In thickness, volume, and the depth of the die from which they were struck, they closely resemble the Macedonian coinage. Now, as upon the rise of the Macedonian empire, gold became plentiful in Greece, and was coined in large quantities by the Macedonian kings, it is not improbable that Athens, like other Grecian states, may have followed their example, and issued a gold coinage in imitation of her ancient silver. On the whole, it appears most probable that gold money

1. (*Vid.* Aristoph. *Acharn.*, v., 102, 108.—*Equit.*, v., 470—*Av.*, v., 575.)—2. (p. 914.)—Compare his speech, *πρὸς Λακρίν*, p. 934.)—3. (*Trucepit.*, p. 367.)—4. (ii., 13.)—5. (*Vegetal.*, iv., 10.)—6. (*Taucyd.*, iv., 105.)—7. (*Bœckh*, *1e scrip.*, vol. i., p. 145, 146.)

1. (Tacit., Ann., i., 10.—Suet., Octav., 52.—Dion., li., 20.)—2. (320, 10.)—3. (Dion., lvi., 46.)—4. (Orelli, *Inscrip.*, 2366, 2368.)—5. (Iseych. in vocibus.—Pollux, Onom., i., 67.—Salm., Plin. Exor., p. 120, a. 6.—Bartholini, *De Tibis*, p. 62.)—6. (v., 1038.)—7. (v., 719.)—8. (v., 724.)

was not coined at Athens in the period between Pericles and Alexander the Great, if we except the solitary issue of debased gold in the year 407.

A question similar to that just discussed arises with respect to other Greek states, which we know to have had a silver currency, but of which a few gold coins are found. This is the case with Ægina, Thebes, Argos, Carystus in Eubœa, Acarnania, and Ætolia. But of these coins, all except two bear evident marks, in their weight or workmanship, of belonging to a period not earlier than Alexander the Great. There is great reason, therefore, to believe that no gold coinage existed in Greece Proper before the time of that monarch.

But from a very early period the Asiatic nations, and the Greek cities of Asia Minor and the adjacent islands, as well as Sicily and Cyrene, possessed a gold coinage, which was more or less current in Greece. Herodotus¹ says that the Lydians were the first who coined gold, and the stater of Croesus appears to have been the earliest gold coin known to the Greeks. The Daric was a Persian coin. Staters of Cyzicus and Phocœa had a considerable currency in Greece. There was a gold coinage in Samos as early as the time of Polycrates.² The islands of Siphnus and Thasos, which possessed gold mines, appear to have had a gold coinage at an early period. In most of the coins of the Greek cities of Asia Minor the metal is very base. The Macedonian gold coinage came into circulation in Greece in the time of Philip, and continued in use till the subjection of Greece to the Romans. (*Vid. DARICUS, STATER.*)

ROMAN GOLD MONEY.—The standard gold coin of Rome was the *aureus nummus*, or *denarius aureus*, which, according to Pliny,³ was first coined 62 years after the first silver coinage (*vid. ARGENTUM*), that is, in the year 207 B.C. The lowest denomination was the *scrupulum*, which was made equal to 20 sestertii. The weight of the scrupulum, as determined by Mr. Hussey,⁴ was 18·06 grs. In the British Museum there are gold coins of one, two, three, and four scrupula, the weights of which are 17·2, 34·5, 51·8, and 68·9 grains respectively. They bear a head of Mars on one side, and on the other an eagle standing on a thunderbolt, and beneath the inscription "ROMA." The first has the mark xx (20 sestertii); the second, xxxx (40 sestertii); the third, x (60 sestertii). Of the last we subjoin an engraving:

Pliny adds, that afterward aurei were coined of 40 to the pound, which weight was diminished, till, under Nero (the reading of this word is doubtful), they were 45 to the pound. This change is supposed, from an examination of extant specimens, to have been made in the time of Julius Cæsar. The estimated full weight of the aurei of 40 to the pound is 130·1 grains; of those of 45 to the pound, 115·64 grains. No specimens exist which come up to the 130·1 grains; the heaviest known is one of Pompey, which weighs 128·2 grains. The average of the gold coins of Julius Cæsar is fixed by Letroune at 125·66 grains, those of Nero, 115·39 grains. Though the weight of the aureus was diminished, its proportion to the weight of the denarius remained about the same, namely, as 2 : 1 (or rather, perhaps, as 2·1 : 1). Therefore, since the standard weight of the denarius, under the

early emperors, was 60 grains, that of the aureus should be 120. The average weight of the aurei of Augustus, in the British Museum, is 121·26 grains: and as the weight was afterward diminished, we may take the average at 120 grains.

There seems to have been no intentional alloy in the Roman gold coins, but they generally contained a small portion of native silver. The average alloy is $\frac{1}{10}$.

The aureus of the Roman emperors, therefore, contained $\frac{120}{300} = \frac{2}{5}$ of a grain of alloy, and, therefore, 119·6 grains of pure gold. Now a sovereign contains 113·12 grains of pure gold. Therefore the value of the aureus in terms of the sovereign is $\frac{119\cdot6}{113\cdot12} = 1\cdot0564 = 1\text{ l. } 1\text{ s. } 1\text{ d.}$ and a little more than a halfpenny. This is its value according to the present worth of gold; but its current value in Rome was different from this, on account of the difference in the worth of the metal. The aureus passed for 25 denarii; therefore, the denarius being 8*d.*, it was worth 17*s.* 8*d.* The ratio of the value of gold to that of silver is given in the article ARGENTUM.

The following cut represents an aureus of Augustus in the British Museum, which weighs 121 grains:

Alexander Severus coined pieces of one half and one third of the aureus, called *semissis* and *tremis*,¹ after which time the aureus was called *solidus*.

Constantine the Great coined aurei of 72 to the pound, at which standard the coin remained to the end of the Empire.²

AURUM CORONARIUM. When a general in a Roman province had obtained a victory, it was the custom for the cities in his own provinces, and for those from the neighbouring states, to send golden crowns to him, which were carried before him in his triumph at Rome.³ This practice appears to have been borrowed from the Greeks; for Chares relates, in his history of Alexander,⁴ that after the conquest of Persia, crowns were sent to Alexander which amounted to the weight of 10,500 talents. The number of crowns which were sent to a Roman general was sometimes very great. Cn. Manlius had 200 crowns carried before him in the triumph which he obtained on account of his conquest of the Gauls in Asia.⁵ In the time of Cicero, it appears to have been usual for the cities of the provinces, instead of sending crowns on occasion of a victory, to pay money, which was called *aureum coronarium*.⁶ This offering, which was at first voluntary, came to be regarded as a regular tribute, and seems to have been sometimes exacted by the governors of the provinces even when no victory had been gained. By a law of Julius Cæsar,⁷ it was provided that the *aureum coronarium* should not be given unless a triumph was decreed; but under the emperors it was exacted on many other occasions, as, for instance, on the adoption of Antoninus Pius.⁸ It continued to be collected, apparently as a part of the revenue, in the time of Valentinian and Theodosius.⁹

1. (Lamprid., Alex. Sev., c. 39.)—2. (Cod. x., tit. 70, s. 5.—Hussey on Ancient Weights and Money.—Wurm, De Pond., &c.)—3. (Liv., xxxviii., 37; xxxix., 7.—Festus, s. v. Triumphales Coronæ.)—4. (ap. Athen., xii., p. 539, A.)—5. (Liv., xxxix., 7.)—6. (Cic., Leg. Agr., ii., 22.—Aul. Gell., v., 6.—Monum. Ancyrl.)—7. (Cic. in Pis., c. 37.)—8. (Capitolin., Anton Pius, c. 4.)—9. (Cod. x., tit. 74.)

1. (i., 94.)—2. (Herod., iii., 56.)—3. (H. N., xxxiii., 13.)—4. (Ancient Weights and Money.)

Servius says¹ that aurum coronarium was a sum of money exacted from conquered nations, in consideration of the lives of the citizens being spared; but this statement does not appear to be correct.

AURUM LUSTRALE was a tax imposed by Constantine, according to Zosimus,² upon all merchants and traders, which was payable at every lustrum, or every four years, and not at every five, as might have been expected from the original length of the lustrum. This tax was also called *auri et argenti collatio* or *præstatio*, and thus, in Greek, *ἡ συντέλεια ἢ τοῦ χρυσαργύρου*.³ It appears from an inscription in Gruter⁴ that there was a distinct officer appointed to collect this tax (*auri lustralis coactor*).

AUSPICIUM originally meant a sign from birds. The word is derived from *avis*, and the root *spec*. As the Roman religion was gradually extended by additions from Greece and Etruria, the meaning of the word was widened, so as to include any supernatural sign. The chief difference between *auspicium* and *augurium* seems to have been, that the latter term is never applied to the *specio* of the magistrate. (*Vid. Aevv.*)

Whoever has thought on this part of the Roman religion cannot but feel astonished at its exceeding simplicity. The rudest observations on the instinct of birds, such as the country people make in all ages, were the foundation of the Roman belief. The system outlived the age for which it was adapted and in which it arose. Its duration may be attributed to its convenience as a political instrument: at length, as learning and civilization increased, it ceased to be regarded in any other light.

Yet, simple as the system appears, of its innumerable details only a faint outline can be given.⁵ Birds were divided into two classes, *oscines* and *præpetes*; the former gave omens by singing, the latter by their flight and the motion of their wings. Every motion of every bird had a different meaning, according to the different circumstances or times of the year when it was observed. Many signs were supposed to be so obvious, that any, not blinded by fate, might understand them; and much was not reducible to any rule, the meaning of which could only be detected by the discrimination of augurs.

Another division of birds was into *dextra* and *sinistra*, about the meaning of which some difficulty has arisen, from a confusion of Greek and Roman notions in the writings of the classics. The Greeks and Romans were generally agreed that auspicious signs came from the east; but as the Greek priest turned his face to the north, the east was on his right hand; the Roman augur, with his face to the south, had the east on his left. The confusion was farther increased by the euphemisms common to both nations; and the rule itself was not universal, at least with the Romans: the jay when it appeared on the left, the crow on the right, being thought to give sure omens.⁶

The auspices were taken before a marriage,⁷ before entering on an expedition,⁸ before the passing of laws or election of magistrates, or any other important occasion, whether public or private. Candidates for public offices used to sleep without the walls on the night before the election, that they might take the auspices before daylight. In early times, such was the importance attached to them, that a soldier was released from the military oath if the auspices had not been duly performed.

The commander-in-chief of an army received the auspices, together with the *imperium*, and a war was therefore said to be carried on *ductu et auspicio imperatoris*, even if he were absent from the army; and thus, if the legatus gained a victory in the absence of his commander, the latter, and not his deputy, was honoured by a triumph.

The ordinary manner of taking the auspices was as follows: The augur went out before the dawn of day, and, sitting in an open place, with his head veiled, marked out with a wand (*lituus*) the divisions of the heavens. Next he declared, in a solemn form of words, the limits assigned, making shrubs or trees, called *tesquæ*,¹ his boundary on earth correspondent to that in the sky. The *templum augurale*, which appears to have included both, was divided into four parts: those to the east and west were termed *sinistra* and *dextra*; to the north and south, *antica* and *postica*. (*Vid. AGRIMENSORES*) If a breath of air disturbed the calmness of the heavens (*si silentium non esset*), the auspices could not be taken, and, according to Plutarch,² it was for this reason the augurs carried lanterns open to the wind. After sacrificing, the augur offered a prayer for the desired signs to appear, repeating, after an inferior minister, a set form: unless the first appearances were confirmed by subsequent ones, they were insufficient. If, in returning home, the augur came to a running stream, he again repeated a prayer, and purified himself in its waters; otherwise the auspices were held to be null.

Another method of taking the auspices, more usual on military expeditions, was from the feeding of birds confined in a cage, and committed to the care of the *pullarius*. An ancient decree of the college of augurs allowed the auspices to be taken from any bird.⁴ When all around seemed favourable (*silentio facto, h. e. quod omni vitio caret*), either at dawn⁵ or in the evening, the *pullarius* opened the cage, and threw to the chickens pulse, or a kind of soft cake. If they refused to come out,⁶ or to eat, or uttered a cry (*occinerent*), or beat their wings, or flew away, the signs were considered unfavourable, and the engagement was delayed. On the contrary, if they ate greedily, so that something fell and struck the earth (*tripudium solistimum*,⁷ *tripudium quasi terripavium, solistimum*, from *solum*, the latter part of the word probably from the root of *stimulo*), it was held a favourable sign. Two other kinds of *tripudia* are mentioned by Festus, the *tripudium oscinum*, from the cry of birds, and *sonivium*, from the sound of the pulse falling to the ground.⁸

The place where the auspices were taken, called *auguraculum*, *augurale*, or *auguratorium*, was open to the heavens: one of the most ancient of these was on the Palatine Hill, the regular station for the observations of augurs. Sometimes the auspices were taken in the Capitol, or in the pomerium. In the camp, a place was set apart to the right of the general's tent.⁹ On other occasions, when the auspices were taken without the walls, the augur pitched a tent after a solemn form: if he repassed the pomerium without taking the auspices, it was necessary that the tent should be taken down and dedicated anew.¹⁰

The *lex Ælia* and *Fufia* provided that no assemblies of the people should be held, *nisi prius de calo servatum esset*.¹¹ It appears to have confirmed to the magistrates the power of *obnuntiatio*, or of interposing a veto. (*Vid. AUGUR.*)

Auspicia were said to be *clivia*, prohibitory, *impe-*

trativa or *impetrita*, obtained by prayer, opposed to *blativa*, spontaneous; *majora* those of the higher, *minora* of the inferior magistrates; *coacta*, when the chickens were starved by the pullarius into giving favourable signs; ¹ *ex acuminibus*, from the brightness or sharpness of weapons, an art which Cicero² laments as lost in his own day; *juge auspicium*, from birds reappearing in pairs; *pedestre*, from animals; *caeleste* (*διοσημία*), from lightning, &c.; *prætermine*, before passing the borders (*διαβαρτρία*); *perenne*, before crossing a river; *viale* (*εὐδιδόν*), an omen in the way.³

Augurium salutis was taken once during the year, and only in time of peace,⁴ to inquire of the gods concerning the well-being of the state.

The *avis sangualis* (a kind of eagle, probably the osprey) was so called from the Sabine god Saneus, as were the *Titiae aves*, according to Varro,⁵ from the *sodales Titii*. Both were in high esteem with the augurs. The owl, the swallow, the jay, the woodpecker, were almost always inauspicious: the eagle, the bird of Jupiter, on the other hand, was generally a messenger of good, as also the heron. The crow, before a marriage, was considered an omen of matrimonial happiness.

The curious in such matters may find a vast number of similar particulars in Buleugre,⁶ which is printed in the fifth volume of the *Thesaurus* of Grævius.

*AUSTERA'LIS, a plant mentioned by Apuleius, and the same with the *Sisymbrium*. (*Vid. SISYMBRIUM*.)

*AUTACHATES (*αὐταχάτης*), a species of Agate, which diffused, when burned, according to Pliny, a fragrance resembling that of myrrh. Salmasius conjectures *stactachates*, in the text of Pliny, for *autachates*: "*Stactachates sic dictus, quod stactæ odorem, id est myrrhæ, haberet ustus*." He has no MS. authority, however, in his favour.⁷

AUTHENTICA. (*Vid. NOVELLÆ*.)

AUTHEPSA (*αὐθῆψα*), which literally means "self-boiling" or "self-cooking" was the name of a vessel, which is supposed by Böttiger to have been used for heating water, or for keeping it hot. Its form is not known for certain; but Böttiger⁸ conjectures that a vessel, which is engraved in Caylus, is a specimen of an authepsa.⁹

Cicero¹⁰ speaks of authepsæ among other costly Corinthian and Delian vessels. In later times they were made of silver.¹¹ Voss, in his commentary on Catullus,¹² compares this vessel with the Greek *τροχέτης*, which occurs in Lucian¹³ and Athenæus.¹⁴

ΑΥΤΟΜΟΛΙΑΣ ΓΡΑΦΗ (*αὐτομολίας γραφή*) was the accusation of persons charged with having deserted and gone over to the enemy during war. There are no speeches extant upon this subject. Petitus, however, collects¹⁵ from the words of a commentator upon Demosthenes (Ulpian), that the punishment of this crime was death. Meier¹⁶ awards the presidency of the court in which it was tried to the generals; but the circumstance of persons who left the city in times of danger, without any intention of going over to the enemy, being tried by the Areiopagus as traitors (*προδοῦναι*¹⁷), will make us pause before we conclude that persons not enlisted as soldiers could be indicted of this offence before a military tribunal.

AUTONOMOI (*αὐτονόμοι*) was the name given by

the Greeks to those states which were governed by their own laws, and were not subject to any foreign power.¹ This name was also given to those cities subject to the Romans, which were permitted to enjoy their own laws, and elect their own magistrates (*Omnes, suis legibus at judicis usæ ἀὐτονομίαν ἀδεύει, reviviscunt*²). This permission was regarded as a great privilege and mark of honour; and we accordingly find it recorded on coins and medals, as, for instance, on those of Antioch, ΑΝΤΙΟΧΕΩΝ ΜΗΤΡΟΠΟΛΙ ΑΥΤΟΝΟΜΟΥ; on those of Halicarnassus, ΑΛΙΚΑΡΝΑΚΕΩΝ ΑΥΤΟΝΟΜΩΝ, and on those of many other cities.³

ΑΥΤΟΤΕΛΗΣ ΔΙΚΗ. (*Vid. ΔΙΚΗ*.)

AUXILIA'RES. (*Vid. SOCIJ*.)

AXAMEN'TA. (*Vid. SALII*.)

AXINE (*ἄξινη*). (*Vid. SECURIS*.)

AX'ONES (*ἄξονες*) were wooden tablets of a square or pyramidal form, made to turn on an axis, on which were written the laws of Solon. They were at first preserved in the Acropolis, but were afterward placed, through the advice of Ephialtes, in the Agora, in order that all persons might be able to read them.⁴ According to Aristotle,⁵ they were the same as the *κύβρεες*. A small portion of them was preserved in the time of Plutarch (*l. c.*) in the Prytaneum.⁶

B.

BABYLO'NICUM, a Babylonian shawl. The splendid productions of the Babylonian looms, which appear, even as early as the days of Joshua, to have excited universal admiration,⁷ were, like the shawls of modern Persia, adorned both with gold and with variously coloured figures. Hence Publius Syrus⁸ compares a peacock's train to a figured Babylonium, enriched with gold (*plumato aureo Babylonico*). Lucretius⁹ and Martial¹⁰ celebrate the magnificence of these textures, and Pliny¹¹ mentions the enormous prices of some which were intended to serve as furniture for triclinia (*tricliniaria Babylonica*). Nevertheless, Plutarch informs us, in his life of the elder Cato, that when one of these precious shawls (*ἐπίβλημα τῶν ποικίλων Βαβυλωνίων*) was bequeathed to him, he immediately gave it away. (*Vid. PALLIUM, PERISTROMA, STRAGULUM*.)

BACCA. (*Vid. INAURIS, MONILE*.)

*BACCAR or BACC'ARIS (*βάκχαρις*), a plant. "Even in ancient times," remarks Adams, "it was a matter of dispute what this was. Galen says that the term had been applied both to an herb and a Lydian ointment. Of modern authorities, some have supposed it to be *Clary*, some *Fox-glove*, and some *Avens*, or *Bennet*; but all these opinions are utterly at variance with its characters as given by Dioscorides.¹² Dr. Martyn remarks that many hold it to be spikenard, but he is rather inclined to identify it with the *Conyza* of the ancients.¹³ Matthioli, in like manner, and Bauhin, point to the *Conyza squarrosa*, L.; which I think the most probable conjecture that has been formed respecting it, though it does not satisfy Sprengel. Dierbach, however, contends for its being the *Gnaphalium sanguineum*, or Bloody Cudweed. Sprengel makes the 'Baccar' of Virgil¹⁴ to have been the *Valeriana Celtica*, Celtic Valerian."¹⁵ A species of aromatic oil or unguent was made out of the root of the *Baccar*, called *βακχαρίμουν μύρον*.

BACCHANA'LIA. (Vid. DIONYSIA.)

BAC'ULUS, *dim.* BACILLUS, BACILLUM (βάκρον, σκήπτρον), a staff, a walking-stick.

The aid afforded by the βάκρον to the steps of the aged is recognised in the celebrated enigma of the Sphinx, which was solved by Œdipus.¹ In his old age, Œdipus himself is represented asking his daughter for the same support: Βάκτρα πρόσφερ', ὦ τέκνον.² When, in Ovid's Metamorphoses, certain of the gods (viz., Minerva³ and Vertumnus⁴) assume the garb of old women, they take the baculus to lean upon. On the other hand, an old man in Juvenal,⁵ describing himself as still hale and vigorous, says that he walked without a stick (*nullo dextram subeunte bacillo*).

If the loss of sight was added to infirmity, the staff was requisite for direction as well as for support. To the blind seer Tiresias one was given, which served him instead of eyes (μέγα βάκρον, σκήπτρον).⁶ Homer represents him as carrying it even in Erebus.⁷

A dutiful and affectionate daughter is figuratively called the staff of her aged parents. Thus Hecuba describes Polyxena (βάκρον⁸), and the same beautiful metaphor is applied to Antigone and Ismene, the daughters of Œdipus (σκήπτρα⁹).

The staff and wallet were frequently borne by philosophers, and were more especially characteristic of the Cynics. (Vid. PERA.)

The shepherds also used a straight staff as well as a crook. The annexed woodcut, taken from a gem in the Florentine cabinet, shows the attire of a Roman shepherd in the character of Faustulus, who is contemplating the she-wolf with Romulus and Remus. It illustrates what Ovid¹¹ says of himself in his exile:

“*Œsee velim baculo pascere nixus oves.*”

Among the gods, Æsculapius,¹² Janus,¹³ and occasionally Somnus,¹⁴ were represented as old men leaning on a staff.

It appears that the kings of Sparta carried a truncheon (βακτηρία) as the ensign of their authority.¹⁵ On the occasion of one of them lifting it up in a threatening attitude, Themistocles returned the celebrated answer, “Strike, but hear.” In reference to this custom, the truncheon (*baculus*) was carried in the hand by actors on the Roman stage.¹⁶ The dicasts at Athens received, at the time of their appointment, a βακτηρία and συμβόλον as a mark of their authority.¹⁷

Crooked sticks were carried by men of fashion at Athens (βακτηρία τῶν σοφῶν ἐκ Λακεδαιμονος¹⁸).

As *baculus* was a general term, its application in various specific senses is farther explained under LITVUS, PEDUM, SCEPTUM, VIRGA.

BAKTERIA (βακτηρία). (Vid. BACULUS.)

BÆBIA ÆMILIA LEX. (Vid. AMBITUS.)

*BALÆNA (φάλαινα), the Whale. After the conquest of Britain by the Romans, it is not improbable that they may have acquired some knowledge of the *Balœna mysticetus*, or Great Greenland Whale, and that it may be the *Balœna* of Britain to which Juvenal¹ alludes. The ancients were also acquainted with the *Balœna Physalus*, the Gibbar or fin-fish. (Vid. PHYSALUS.) There can be no doubt, however, that the φάλαινα of Aristotle and Ælian, as well as of Xenocrates and Galen, was the *Physeter microps*, L., the Cachalot or Spermaceti whale.²

*BAL'ANUS (βάλανος). I. A crustaceous fish described by Aristotle and Xenocrates, and which, according to Coray, is the *Lepas Balanus*, L., called in English the Barnacle.³

II. (Βάλανος μυρεψική), the Nut-Ben, from which a perfume was obtained by the ancients.⁴ Dioscorides says, “It is the fruit of a tree resembling the Myrica, like what is called the Póntic bean, the inner part of which, when pressed, like bitter almonds, emits a liquid that is used for preparing many ointments.” Moses Charras says of it, “The Nut-Ben, called by the Greeks *Balanus Myrepsica*, by the Romans *Glans Unguentaria*, affords its oil by pressing in the same manner as other fruits.” The tree which furnishes the Nut-Ben has got the name of *Hyperanthera moringa*, Vahl, in English, the Smooth Bonduc-tree. “It is worthy of remark, that the Nut-Ben is called also *Myrobalanum* by the Greeks and Romans, a term which it is important that the reader should not confound with the Myrobalanus of the Arabians and of the moderns. These are all stone-fruits got from the East. The only Greek authors who make mention of the latter are Acturius, Zosimus Panopolita, and Myrepsus.”⁵

BAL'ATRO, a professional jester, buffoon, or parasite.⁶ In Horace,⁷ Balatro is used as a proper name—Servilius Balatro. An old scholiast, in commenting on this word, derives the common word from the proper names; buffoons being called balatrones, because Servilius Balatro was a buffoon: but this is opposed to the natural inference from the former passage, and was said to get rid of a difficulty. Festus derives the word from *batea*, and supposes buffoons to have been called balatrones, because they were dirty fellows, and were covered with spots of mud (*batea*), with which they got spattered in walking; but this is opposed to sound etymology and common sense. Another writer has derived it from *barathrum*, and supposes buffoons to have been called balatrones, because they, so to speak, carried their jesting to market, even into the very depth (*barathrum*) of the shambles (*barathrum macelli*).⁸ According to some readings, Lucretius⁹ has *barathro* in a similar sense to *balatro*. Perhaps *balatro* may be connected with *bala-re* (to bleat like a sheep, and hence) to speak sillily. It is probably connected with *blatero*, a busy-body.¹⁰ Balatrones were paid for their jests, and the tables of the wealthy were generally open to them for the sake of the amusement they afforded the company.

*BAL'ERUS (βάλερος), a fish of the Carp species. Artdi supposes it a species of *Cyprinus*, called in French *Bordelière*, and in German *Blick*.¹¹

BALIS'TA, BALLIS'TA. (Vid. TORMENTUM.)

*BALLOTE (βαλλωτή), a plant. Pliny¹ calls it “*porrum nigritum*,” confounding, apparently, *πάροςον* with *πράσιον*. In another place² he describes it as

1. (Sat., x., 14.)—2. (Aristot., H. A., i., 5; viii., 2.—Ælian, N. A., ii., 52; v., 48; ix., 50.—Adams, Append., s. v.)—3. (Adams, Append., s. v.)—4. (Hor., Od., iii., 29, 4.)—5. (Dioscor., iv., 157.—Paul. Ægin., vii.—Phleg., H. N., xii., 21.—Adams, Append., s. v.)—6. (Hor., Sat., i., ii., 2.)—7. (Sat., ii., viii., 21.)—8. (Hor., Ep., i., xv., 31.)—9. (iii., 966.)—10. (Aul. Gell., i., 15.)—11. (Aristot., H. A., viii., 20.—Adams, Append., s. v.)—12. (H. N., xxvii., 30.)—13. (H. N., xx., 89.)

a species of Horehound, under the name of "*Marrubium nigrum*," which, as Hardouin remarks, is evidently the *Ballote*.¹ Bauhin accordingly marks his sixth species of Marrubium, namely, his *Marrubium nigrum fetidum*, as the *Ballote Dioscor.* Sprengel refers it to the *Ballote nigra*, L., to which Miller gives the English name of "stinking Black Horehound." Sibthorp, however, prefers a species of Dead Nettle, namely, the *Lamium Striatum*.²

BALNEUM. (Vid. ΒΑΝΗ.)

*BALSAMUM (βάλσαμον), the Balsam-tree, and also the Balsam itself exuded from it. The latter, however, is more correctly called *Opobalsamum*. "Writers describe Opobalsamum," says Moses Charas, "as a thick, transparent juice or liquor, in smell resembling turpentine, but much more pleasing. It ought to distil, after incision made in the dog-days, from the branches of a shrub called *Balsamum*." Sprengel gives an interesting account of the Balsamum. He comes to the conclusion that the *Opobalsamum* is the product of two different species of shrub, namely, the *Amyrus Gileadensis* and the *A. Opobalsamum*, which, however, are referred to the same species by Belon. The most celebrated balsam among the Romans was the one to which we are now referring, and which is known at the present day by the names of Balsam of Judæa, Mecca, Egypt, and Syria. "There are different kinds of this that now form objects of commerce; but the one which the Romans prized most, namely, that obtained from the *Amyrus Opobalsamum*, rarely reaches Europe, being nearly all consumed in the East. What is sold in the shops is an inferior kind of Balsam, obtained by decoction. The Arabs at the present day call the *Amyrus Opobalsamum* by the name of *bachâm*, which we may recognise as the *A. Gileadensis* in the description given of their *balsâm* or *balasân* by Avicenna and Abdoul-Latif."³

BALTEUS (τελαμών), a belt, a shoulder-belt, a baldric.

This part of the ancient armour was used to suspend the sword; and, as the sword commonly hung beside the left hip, its belt was supported by the right shoulder, and passed obliquely over the breast, as is seen in the beautiful cameo here introduced from the Florentine Museum. This figure, executed by Quintus, the son of Alexander, is supposed to represent Achilles, and may be compared with that of the Greek warrior in p. 94, which shows the sword-belt descending obliquely over the back.

The figure of the Roman in page 95, on the other hand, shows a belt passing over the left shoulder, as when it was used to support a dagger or other weapon hanging on the right side.

In the Homeric times the Greeks also used a belt to support the shield, which, as well as the sword, was worn by them on the left side; and this second belt lay over the other, and was larger and broader than it (τελαμών ὀσπίδος;¹ πλατέος τελαμώνος;² ὡς πῖς σὺν τελαμώνι;³ Vid. *Ægis*, p. 26). The two belts upon the breast of Ajax, the son of Telamon, who carried a remarkably heavy shield, are mentioned in the *Iliad*.⁴ But, although he was saved by this double covering from being wounded by Hector's spear, yet the language of Homer clearly implies that the practice alluded to was on the field of battle productive of great heat and annoyance; and this circumstance probably led to the disuse of the oppressive shield-belt, and to the invention of the Carian ὄχανον by which it was superseded. (Vid. *CLYPEUS*.) The ancient practice must also have occasioned some inconvenience in putting on the armour. The circumstance to which some of the Alexandrine critics objected, that Homer makes his heroes assume the shield before the helmet, may be explained from the impossibility of throwing the shield-belt over the lofty crest of the helmet, supposing the helmet to have been put on first; and yet a warrior, already encumbered with his large and ponderous shield, might have had some difficulty in putting on his helmet. The very early disuse of the shield-belt accounts for the fact, that, except in the case of the *Ægis*, which was retained on account of its mythological importance, this part of the ancient armour is never exhibited in paintings or sculptures. Even the author of the *Shield of Hercules*⁵ supposes it to be omitted.

A third use of the baltens was to suspend the quiver, and sometimes, together with it, the bow. Hence Nemesianus, describing the dress of Diana, when she attires herself for the chase, says,

"Corrugasque sinus gemmatus balticus ardet."⁶

And a similar expression (*baltens* et *revocat volucres in pectore sinus*) is used by Livius Andronicus;⁷ because the belt, besides fulfilling the purpose for which it was intended, of supporting the quiver, also confined the garments, and prevented them from being blown about by the wind. This belt passed over the right shoulder and under the left arm, in the same manner with the others.

According to Theocritus, Amphitryon used a sword-belt made of cloth, linen being probably intended (νεοκλώσω τελαμώνος⁸). More commonly the belt, whether employed to support the sword, the shield, or the quiver, was made of leather (τελαμώνι σκυτίνοισι⁹). It was ornamented (φαεινός,¹⁰ *Insignis balticus auro*¹¹). That which Agamemnon wore with his shield was plated with silver, and on it was also displayed a serpent (δράκων¹²) wrought in blue steel. The three heads of the serpent (κεφαλαί τρεῖς ἀμφιστρέφες) were turned back, so as to form hooks for fastening the two ends of the belt together. When, in the shades below, Ulysses meets Hercules armed with his bow and arrows (*vid. Arcus*), he wears on his breast a golden belt for suspending his quiver (δορὴν χρύσεος τελαμών¹³), on which are embossed both the animals of the chase and exhibitions of the slaughter of men. In a passage already quoted, Diana's belt is described as enriched with jewels. In like manner, Æneas gives as a prize in the games at his father's tomb a quiver full of arrows, with the belt belonging to it, which was covered with gold, and had a buckle, or rath-

er, perhaps, a button (*fibula*), enriched with a gem.¹ We may presume that, in the sword-belt described by Valerius Flaccus,²

"Qua cæruleus ambit
Balteus, et gemini committunt ora dracones,"

the fastening was made by the tasteful joining of the two dragons' heads. The annexed woodcut shows a bronze clasp, with three dragons' heads, which is in the collection of ancient armour at Goodrich Court, in Herefordshire, and which seems to have belonged to a Roman balteus.

A sword-belt enriched with gold, on which a celebrated sculptor had produced a representation of the Danaids murdering their husbands on the bridal night, gives occasion to the concluding incident of the Æneid.

That taste for richly-decorated sword-belts, the prevalence of which, in the Augustan age, may be inferred from the mention of them in the Æneid, did not decline under the succeeding emperors. It is, indeed, mentioned as an instance of the self-denial and moderation of Hadrian, that he had no gold on his belt.³ But Pliny⁴ records the common practice, in his time, of covering this part of the soldier's dress with *laminae* of the precious metals; and of the great intrinsic value and elaborate ornament of those which were worn by persons attached to the court, we may form some judgment from the circumstance that the *baltearius*, or master of the belts, was a distinct officer in the imperial household. Spon, who has published an inscription from the family tomb of one of these officers,⁵ remarks, that their business must have been to provide, prepare, and preserve all the belts in the *armamentarium*. This office will appear still more considerable from the fact that belts (*balteoli*) were occasionally given as military rewards, together with *torques* and *armille*.⁶

In a general sense, "balteus" was applied not only to the simple belt, or the more splendid baldric which passed over the shoulder, but also to the girdle (*cingulum*) which encompassed the waist (*Coxa munimen utraque*⁷). Hence the girdle of Orion, called *ζώνη* by Aratus, is rather incorrectly denominated balteus in the translations of that author by Germanicus and Avienus. The oblique arrangement of the balteus, in the proper sense of that term, is alluded to by Quintilian in his advice respecting the mode of wearing the toga: *oblique ducitur, velut balteus*.⁸

Vitruvius applies the term "baltei" to the bands surrounding the volute on each side of an Ionic capital.⁹ Other writers apply it to the large steps, presenting the appearance of parallel walls, by which an amphitheatre was divided into stories for the accommodation of different classes of spectators.¹⁰

Vitruvius calls these divisions *præcinctiōes*.¹ (*Via, Amphitheatrum*.) In the amphitheatre at Verona, the baltei are found by measurement to be 2½ feet high, the steps which they enclose being one foot two inches high.

*BAMBAK'ION (Βαμβάκιον), a term which occurs only in the works of Myrepsus, the last of the Greek physicians. It appears to be the seed of the *Gossypium*, or Cotton-plant.

BANISHMENT (GREEK), *φύγη*. Banishment among the Greek states seldom, if ever, appears as a punishment appointed by law for particular offences. We might, indeed, expect this; for the division of Greece into a number of independent states would neither admit of the establishment of penal colonies, as among us, nor of the various kinds of exile which we read of under the Roman emperors. The general term *φύγη* (flight) was, for the most part, applied in the case of those who, in order to avoid some punishment or danger, removed from their own country to another. Proof of this is found in the records of the heroic ages, and chiefly where homicide had been committed, whether with or without malice aforethought. Thus² Patroclus appears as a fugitive for life, in consequence of manslaughter (*ἀνδροκτασίη*) committed by him when a boy, and in anger. In the same manner,³ Theoclymenus is represented as a fugitive and wanderer over the earth, and even in foreign lands haunted by the fear of vengeance from the numerous kinsmen of the man whom he had slain. The duty of taking vengeance was in cases of this kind considered sacred, though the penalty of exile was sometimes remitted, and the homicide allowed to remain in his country on payment of a *ποινή*, the price of blood, or wergeld of the Germans,⁴ which was made to the relatives or nearest connexions of the slain.⁵ We even read of princes in the heroic ages being compelled to leave their country after the commission of homicide on any of their subjects;⁶ and even though there were no relatives to succour the slain man, still deference to public opinion imposed on the homicide a temporary absence,⁷ until he had obtained expiation at the hands of another, who seems to have been called the *ἀγνίστης*, or purifier. For an illustration of this, the reader is referred to the story of Adrastus and Cressus.⁸

In the later times of Athenian history, *φύγη*, or banishment, partook of the same nature, and was practised nearly in the same cases as in the heroic ages, with this difference, that the laws more strictly defined its limits, its legal consequences, and duration. Thus an action for wilful murder was brought before the Areiopagus, and for manslaughter before the court of the Ephetæ. The accused might, in either case, withdraw himself (*φύγειν*) before sentence was passed; but when a criminal evaded the punishment to which an act of murder would have exposed him had he remained in his own land, he was then banished forever (*φύγειν ἀειφύγιον*), and not allowed to return home even when other exiles were restored upon a general amnesty, since, on such occasions, a special exception was made against criminals banished by the Areiopagus (*οἱ ἐξ Ἀρείου πάγου φεύγοντες*). A convicted murderer, if found within the limits of the state, might be seized and put to death,⁹ and whoever harboured or entertained (*ὑπεδέξατο*) any one who had fled from his country (*τῶν φευγόντων τινα*) to avoid a capital punishment, was liable to the same penalties as the fugitive himself.¹⁰

1. (Æn., v., 311-313.)—2. (iii., 190.)—3. (Spartian., Hadr., 10.)—4. (H. N., xxxiii., 54.)—5. (Miscellan. Erud. Ant., p. 253.)—6. (Jul. Capitol., Maximin., 2.)—7. (Sil. (Calpurn., Eclog., vii., 47.—Tertullian, De Spectac., 3.)

1. (De Arch., v., 3, 8.)—2. (Pl., xxiii., 88.)—3. (Hom., Od., xv., 275.)—4. (Tacit., Germ., 21.)—5. (H., ix., 630.)—6. (Pausan., v., 376-381, ed. Schubart.)—7. (Od., xiii., 119.—Schœn. in loc.)—8. (Herod., i., 35.)—9. (Demosth., c. Arist., 629.)—10. (Demosth., c. Polycl., 1222, 2.)

Demosthenes¹ says that the word *φεύγειν* was properly applied to the exile of those who committed murder with malice aforethought, whereas the term *μερίσασθαι* was used where the act was not intentional. The property, also, was confiscated in the former case, but not in the latter.

When a verdict of manslaughter was returned, it was usual for the convicted party to leave (*ἐξῆλθε*) his country by a certain road, and to remain in exile till he induced some one of the relatives of the slain man to take compassion on him (*ὥς ἂν αἰδέσθαι τινα τῶν ἐν γένει τοῦ πεπονηθότος*). During his absence, his possessions were *ἐπίτιμα*, that is, not confiscated; but if he remained at home, or returned before the requirements of the law were satisfied, he was liable to be driven or carried out of the country by force.² It sometimes happened that a fugitive for manslaughter was charged with murder; in that case he pleaded on board ship, before a court which sat at Phreatto, in the Peiræus.³

We are not informed what were the consequences if the relatives of the slain man refused to make a reconciliation; supposing that there was no compulsion, it is reasonable to conclude that the exile was allowed to return after a fixed time. In cases of manslaughter, but not of murder, this seems to have been usual in other parts of Greece as well as at Athens.⁴ Plato,⁵ who is believed to have copied many of his laws from the constitution of Athens, fixes the period of banishment for manslaughter at one year, and the word *ἀπειναντισμός*, explained to mean a year's exile for the commission of homicide (*τοῖς φόνον δράσασιν*), seems to imply that the custom was pretty general. We have, indeed, the authority of Xenophon⁶ to prove that at Sparta banishment was the consequence of involuntary homicide, though he does not tell us its duration.

Moreover, not only was an actual murder punished with banishment and confiscation, but also a *πράγμα ἐκ προνοίας*, or wounding with intent to kill, though death might not ensue.⁷ The same punishment was inflicted on persons who rooted up the sacred olives at Athens,⁸ and by the laws of Solon every one was liable to it who remained neuter during political contentions.⁹

Under *φυγή*, or banishment, as a general term, is comprehended ostracism: the difference between the two is correctly stated by Suidas, and the scholiast on Aristophanes,¹⁰ if we are to understand by the former *δεφυγία*, or banishment for life. "*Φυγή* (say they) differs from ostracism, inasmuch as those who are banished lose their property by confiscation, whereas the ostracized do not; the former, also, have no fixed place of abode, no time of return assigned, but the latter have." This ostracism is supposed by some¹¹ to have been instituted by Cleisthenes after the expulsion of the Peisistratidæ; its nature and object are thus explained by Aristotle:¹² "Democratical states (he observes) used to ostracize, and remove from the city for a definite time, those who appeared to be pre-eminent above their fellow-citizens, by reason of their wealth, the number of their friends, or any other means of influence." It is well known, and implied in the quotation just given, that ostracism was not a punishment for any crime, but rather a precautionary removal of those who possessed sufficient power in the state to excite either envy or fear. Thus Plu-

tarch¹ says it was a good-natured way of allaying envy (*φθόνον παραμυθία φιλάνθρωπος*) by the humiliation of superior dignity and power. The manner of effecting it was as follows: A space in the *ἀγορά* was enclosed by barriers, with ten entrances for the ten tribes. By these the tribesmen entered, each with his *δορακον*, or piece of tile, on which was written the name of the individual whom he wished to be ostracized. The nine archons and the senate, *i. e.*, the presidents of that body, superintended the proceedings, and the party who had the greatest number of votes against him, supposing that this number amounted to 6000, was obliged to withdraw (*μεταστῆναι*) from the city within ten days; if the number of votes did not amount to 6000, nothing was done.² Plutarch³ differs from other authorities in stating that, for an expulsion of this sort, it was not necessary that the votes given against any individual should amount to 6000, but only that the sum total should not be less than that number. All, however, agree, that the party thus expelled (*ὁ ἐκκληρυχθείς*) was not deprived of his property. The ostracism was also called the *κεραμική μίστις*, or earthenware scourge, from the material of the *δορακον* on which the names were written.

Some of the most distinguished men at Athens were removed by ostracism, but recalled when the city found their services indispensable. Among these were Themistocles, Aristides, Cimon, and Alcibiades; of the first of whom Thucydides⁴ states that his residence during ostracism was at Argos, though he was not confined to that city, but visited other parts of Peloponnesus. The last person against whom it was used at Athens was Hyperbolus, a demagogue of low birth and character; but the Athenians thought their own dignity compromised, and ostracism degraded by such an application of it, and accordingly discontinued the practice.⁵

Ostracism prevailed in other democratical states as well as Athens; namely, Argos, Miletus, and Megara: it was by some, indeed, considered to be a necessary, or, at any rate, a useful precaution for ensuring equality among the citizens of a state. But it soon became mischievous; for, as Aristotle⁶ remarks, "Men did not look to the interests of the community, but used ostracisms for party purposes" (*στασιαστικῶς*).

From the ostracism of Athens was copied the petalism (*πεταλισμός*) of the Syracusans, so called from the *πέταλα*, or leaves of the olive, on which was written the name of the person whom they wished to remove from the city. The removal, however, was only for five years; a sufficient time, as they thought, to humble the pride and hopes of the exile. But petalism did not last long; for the fear of this "humbling" deterred the best qualified among the citizens from taking any part in public affairs, and the degeneracy and bad government which followed soon led to a repeal of the law, B.C. 452.⁷

In connexion with petalism, it may be remarked, that if any one were falsely registered in a *demus* or ward at Athens, his expulsion was called *ἐκφυλλοφορία*, from the votes being given by leaves.⁸

The reader of Greek history will remember that, besides those exiled by law, or ostracized, there was frequently a great number of political exiles in Greece; men who, having distinguished themselves as the leaders of one party, were expelled, or obli-

ged to remove from their native city when the opposite faction became predominant. They are spoken of as *οι φεύγοντες* or *οι εκπεσόντες*, and as *οι κατελθόντες* after their return (*ή κάθοδος*), the word *κατάγειν* being applied to those who were instrumental in effecting it.¹

BANISHMENT (ROMAN). In the later imperial period, *exsilium* was a general term used to express a punishment, of which there were several species. Paulus,² when speaking of those *judicia publica*, which are *capitalia*, defines them by the consequent punishment, which is death, or *exsilium*; and *exsilium* he defines to be *aqua et ignis interdictio*, by which the *caput* or citizenship of the criminal was taken away. Other kinds of *exsilium*, he says, were properly called *relegatio*, and the *relegatus* retained his citizenship. The distinction between *relegatio* and *exsilium* existed under the Republic.³ Ovid also⁴ describes himself, not as *exsul*, which he considers a term of reproach, but as *relegatus*. Speaking of the emperor, he says,

"*Nec vitam, nec opes, nec jus mihi civis ademit*;"

and a little farther on,

"*Nil nisi me patriis jussit abire focis*."⁵

Marcianus⁶ makes three divisions of *exsilium*: it was either an interdiction from certain places named, and was then called *lata fuga* (a term equivalent to the *libera fuga* or *liberum exsilium* of some writers); or it was an interdiction of all places except some place named; or it was the *constraint* of an island (as opposed to *lata fuga*). Noodt⁷ corrects the extract from Marcian thus: "*Exsilium duplex est: aut certorum locorum interdictio, ut lata fuga; aut omnium locorum præter certum locum, ut insula vinculum*," &c. The passage is evidently corrupt in some editions of the Digest, and the correction of Noodt is supported by good reasons. It seems that Marcian is here speaking of the two kinds of *relegatio*,⁸ and he does not include the *exsilium*, which was accompanied with the loss of the *civitas*; for, if his definition includes all the kinds of *exsilium*, it is manifestly incomplete; and if it includes only *relegatio*, as it must do from the terms of it, the definition is wrong, inasmuch as there are only two kinds of *relegatio*. The conclusion is, that the text of Marcian is either corrupt, or has been altered by the compiler of the Digest.

Of *relegatio* there were two kinds: a person might be forbidden to live in a particular province, or in Rome, and either for an indefinite or a definite time; or an island might be assigned to the *relegatus* for his residence. *Relegatio* was not followed by loss of citizenship or property, except so far as the sentence of *relegatio* might extend to part of the person's property. The *relegatus* retained his citizenship, the ownership of his property, and the *patria potestas*, whether the *relegatio* was for a definite or an indefinite time. The *relegatio*, in fact, merely confined the person within, or excluded him from, particular places, which is according to the definition of Ælius Gallus,⁹ who says that the punishment was imposed by a *lex*, *senatus consultum*, or the *edictum* of a *magistratus*. The words of Ovid express the legal effect of *relegatio* in a manner literally and technically correct.¹⁰ The term *relegatio*

is applied by Cicero¹ to the case of Titus Manlius, who had been compelled by his father to live in solitude in the country.

Deportatio in insulam, or *deportatio* simply, was introduced under the emperors in place of the *aqua et ignis interdictio*.² The governor of a province (*præses*) had not the power of pronouncing the sentence of *deportatio*; but this power was given to the *præfectus urbi* by a rescript of the Emperor Severus. The consequence of *deportatio* was loss of property and citizenship, but not of freedom. Though the *deportatus* ceased to be a Roman citizen, he had the capacity to buy and sell, and do other acts which might be done according to the *jus gentium*. *Deportatio* differed from *relegatio*, as already shown, and also in being always for an indefinite time. The *relegatus* went into banishment; the *deportatus* was conducted to his place of banishment, sometimes in chains.

As the *exsilium* in the special sense, and the *deportatio* took away a person's *civitas*, it follows that, if he was a father, his children ceased to be in his power; and if he was a son, he ceased to be in his father's power; for the relationship expressed by the terms *patria potestas* could not exist when either party had ceased to be a Roman citizen.³ *Relegatio* of a father or of a son, of course, had not this effect. But the interdiction and the *deportatio* did not dissolve marriage.⁴

When a person, either parent or child, was condemned to the mines or to fight with wild beasts, the relation of the *patria potestas* was dissolved. This, though not reckoned a species of *exsilium*, resembled *deportatio* in its consequences.

It remains to examine the meaning of the term *exsilium* in the republican period, and to ascend, so far as we can, to its origin. Cicero⁵ affirms that no Roman was ever deprived of his *civitas* or his freedom by a *lex*. In the oration *Pro Domo*⁶ he makes the same assertion, but in a qualified way; he says that no special *lex*, that is, no *privilegium*, could be passed against the *caput* of a Roman citizen unless he was first condemned in a *judicium*. It was, according to Cicero, a fundamental principle of Roman law,⁷ that no Roman citizen could lose his freedom or his citizenship without his consent. He adds, that Roman citizens who went out as Latin colonists could not become Latin unless they went voluntarily and registered their names: those who were condemned of capital crimes did not lose their citizenship till they were admitted as citizens of another state; and this was effected, not by depriving them of their *civitas* (*ademptio civitatis*), but by the *interdictio tecti, aquæ et ignis*. The same thing is stated in the oration *Pro Cæcina*,⁸ with the addition, that a Roman citizen, when he was received into another state, lost his citizenship at Rome, because by the Roman law a man could not be a citizen of two states. This reason, however, would be equally good for showing that a Roman citizen could not become a citizen of another community. In the oration *Pro Balbo*,⁹ the proposition is put rather in this form: that a Roman who became a citizen of another state *thereby* ceased to be a Roman citizen. It must not be forgotten, that in the oration *Pro Cæcina*, it is one of Cicero's objects to prove that his client had the rights of a Roman citizen; and in the oration *Pro Domo*, to prove that he himself had not been an *exsul*, though he was interdicted from fire and water within 400 miles of Rome.¹⁰ Now,

1. (Meursius, Att. Lect., v., 18.—Wachsmuth, Hcl. Alterth., i., § 65; ii., § 95 and 98.—Meier and Schömann, Att. Process, p. 741.—Schömann, De Comit. Athen., p. 264, transl.—Timæus, Lex. Platon.—Bjækh, ii., 129, transl.)—2. (Dig. 48, tit. 1, s. 2.)—3. (Liv., iii., 10; iv., 4.—Cic., pro P. Sext., 12.)—4. (Trist., v., 11.)—5. (Compare Trist., ii., 127.)—6. (Dig. 48, tit. 22, s. 5.)—7. (Instances of *relegatio* occur in the following passages: Suet., Octav., 16.—Tib., 50.—Tacit., Ann., iii., 17, 68.—Suet., Claud., c. 23, which last, as the historian remarks, was a new kind of *relegatio*.)

1. (Off., iii., 31.)—2. (Ulpian, Dig. 48, tit. 13, s. 3; tit. 19, s. 2.)—3. (Gaius, i., 128.)—4. (Cod. 5, tit. 26, s. 24; tit. 17, s. 1.—Compare Gaius, i., 128, with the Institutes, i., tit. 12, in which the *deportatio* stands in the place of the *aqua et ignis interdictio* of Gaius.)—5. (Pro Cæcin., c. 34.)—6. (c. 16, 17.)—7. (Pro Domo, c. 29.)—8. (c. 34.)—9. (c. 11.)—10. (Cic., ad Attic., iii., 4.)

as Cicero had been interdicted from fire and water, and as he evaded the penalty, to use his own words,¹ by going beyond the limits, he could only escape the consequences, namely, *exsilium*, either by relying on the fact of his not being received as a citizen into another state, or by alleging the illegality of the proceedings against him. But the latter is the ground on which he seems to maintain his case in the *Pro Domo*: he alleges that he was made the subject of a *privilegium*, without having been first condemned in a *judicium*.²

In the earlier republican period, a Roman citizen might have a right to go into *exsilium* to another state, or a citizen of another state might have a right to go into *exsilium* at Rome, by virtue of certain isopolitical relations existing between such state and Rome. (*Vid. MUNICIPIUM*.) This right was called *jus exulandi* with reference to the state to which the person came; with respect to his own state, which he left, he was *exsul*, and his condition was *exsilium*: with respect to the state which he entered, he was *inquilinus*; and at Rome he might attach himself (*applicare se*) to a quasi-patronus, a relationship which gave rise to questions involving the *jus applicationis*. The word *inquilinus* appears, by its termination *inus*, to denote a person who was one of a class, like the word *libertinus*. The prefix *in* appears to be the correlative of *ex* in *exsul*, and the remaining part *quil* is probably related to *col*, in *incola* and *colonus*.

The sentence of *aquæ et ignis*, to which Cicero adds³ *tecti interdictio*, was equivalent to the deprivation of the chief necessities of life, and its effect was to incapacitate a person from exercising the rights of a citizen within the limits which the sentence comprised. Supposing it to be true, that no Roman citizen could, in direct terms, be deprived of his *civitas*, it requires but little knowledge of the history of Roman jurisprudence to perceive that a way would readily be discovered of doing that indirectly which could not be done directly; and such, in fact, was the *aquæ et ignis interdictio*. The meaning of the sentence of *aquæ et ignis interdictio* is clear when we consider the symbolical meaning of the *aqua et ignis*. The bride, on the day of her marriage, was received by her husband with fire and water,⁴ which were symbolical of his taking her under his protection and sustentation. Varro⁵ gives a different explanation of the symbolical meaning of *aqua et ignis* in the marriage ceremony: *Aqua et ignis* (according to the expression of Festus) *sunt duo elementa quæ humanam vitam maxime continent*. The sentence of interdict was either pronounced in a *judicium*, or it was the subject of a *lex*. The punishment was inflicted for various crimes, as *vis publica*, *peculatus*, *veneficium*, &c. The *Lex Julia de vi publica et privata* applied, among other cases, to any person *qui receperit, celaverit, tenuerit*, the interdicted person;⁶ and there was a clause to this effect in the *lex* of Clodius, by which Cicero was banished.

The sentence of the interdict, which in the time of the Antonines was accompanied with the loss of citizenship, could hardly have had any other effect in the time of Cicero. It may be true that *exsilium*, that is, the change of *solum* or ground, was not in direct terms included in the sentence of *aquæ et ignis interdictio*: the person might stay if he liked, and submit to the penalty of being an outcast, and being incapacitated from doing any legal act. Indeed, it is not easy to conceive that banishment can exist in any state, except such state has distant possessions of its own to which the offender can be

sent. Thus banishment, as a penalty, did not exist in the old English law. When isopolitical relations existed between Rome and another state, *exsilium* might be the privilege of an offender. Cicero might then truly say that *exsilium* was not a punishment, but a mode of evading punishment;¹ and this is quite consistent with the interdict being a punishment, and having for its object the *exsilium*.

According to Niebuhr, the interdict was intended to prevent a person who had become an *exsul* from returning to Rome and resuming his citizenship; and the interdict was taken off when an *exsul* was recalled: an opinion in direct contradiction to all the testimony of antiquity. Farther, Niebuhr asserts that they who settled in an unprivileged place (one that was not in an isopolitical connexion with Rome) needed a decree of the people, declaring that their settlement should operate as a legal *exsilium*. And this assertion is supported by a single passage in Livy,² from which it appears that it was declared by a plebiscitum, that C. Fabius, by going into exile (*exulatum*) to Tarquinii, which was a *municipium*,³ was legally in exile.

Niebuhr asserts that Cicero had not lost his franchise by the interdict, but Cicero says that the consequence of such an interdict was the loss of *caput*. And the ground on which he mainly attempted to support his case was, that the *lex* by which he was interdicted was in fact no *lex*, but a proceeding altogether irregular. Farther, the interdict did pass against Cicero, but was not taken off when he was recalled. It is impossible to caution the reader too much against adopting implicitly anything that is stated in the orations *Pro Cæcina*, *Pro Balbo*, and *Pro Domo*; and indeed, anywhere else, when Cicero has a case to support.

BAPHIUM (*βαφίον, βαφιακόν*), an establishment for dyeing cloth, a dyehouse.

An apparatus for weaving cloth, and adapting it to all the purposes of life, being part of every Greek and Roman household, it was a matter of necessity that the Roman government should have its own institutions for similar uses; and the immense quantity of cloth required, both for the army and for all the officers of the court, made it indispensable that these institutions should be conducted on a large scale. They were erected in various parts of the empire, according to the previous habits of the people employed and the facilities for carrying on their operations. Tarentum, having been celebrated during many centuries for the fineness and beauty of its woollen manufactures, was selected as one of the most suitable places for an imperial baphium.⁴ Traces of this establishment are still apparent in a vast accumulation near Taranto, called "Monte Testaceo," and consisting of the shells of the *Murex*, the animal which afforded the purple dye.

A passage in *Ælius Lampridius*⁵ shows that these great dyehouses must have existed as early as the second century. It is stated that a certain kind of purple, commonly called "Probiana," because Probus, the superintendent of the dyehouses (*baphiis præpositus*), had invented it, was afterward called "Alexandrina," on account of the preference given to it by the Emperor Alexander Severus. Besides the officer mentioned in this passage, who probably had the general oversight of all the imperial baphia, it appears that there were persons called procurators, who were intrusted with the direction of them in the several cities where they were established. Thus the *Notitia Dignitatum utriusque Imperii*, compiled about A.D. 426, mentions the

1. (*Pro Cæcina*.)—2. (xxvi., 3.)—3. (*Pro Cæcina*, c. 4.)—4. (Compare Horat., *Ep.*, II., ii., 207, with Servius in Virg., *Georg.* iv., 335.)—5. (*Alex. Sev.*, c. 40.)

"procurator" of the dyehouses of Narbonne and Toulon.

We learn from the Codex Theodosianus that the dyehouses of Phœnicie long retained their original superiority, and that dyers were sent to them from other places to be instructed in their art.

*BAPTĒS (βάπτης), a mineral mentioned by Pliny.¹ It is thought, from its description and its name, to have been amber, dyed or stained of some other than its natural colour.²

BAPTISTERIUM. (*Vid.* BATH.)

BAR'ATHRUM. (*Vid.* ORYGMA.)

BARBA (πάγων, γένειον, ὑπὸνῆς), the beard. The fashions which have prevailed at different times and in different countries with respect to the beard have been very various. The most refined modern nations regard the beard as an encumbrance, without beauty or meaning; but the ancients generally cultivated its growth and form with special attention; and that the Greeks were not behindhand in this, any more than in other arts, is sufficiently shown by the statues of their philosophers. The phrase *παγωνοτροφεῖν*, which is applied to letting the beard grow, implies a positive culture. Generally speaking, a thick beard, *πάγων βαθύς* or *δασύς*, was considered as a mark of manliness. The Greek philosophers were distinguished by their long beards as a sort of badge, and hence the term which Persius⁴ applies to Socrates, *magister barbatius*. The Homeric heroes were bearded men; as Agamemnon, Ajax, Menelaus, Ulysses.⁵ According to Chrysippus, cited by Athenæus,⁶ the Greeks wore the beard till the time of Alexander the Great, and he adds that the first man who was shaven was called ever after *κόρην*, "shaven" (from *κείρω*). Plutarch⁷ says that the reason for the shaving was that they might not be pulled by the beard in battle. The custom of shaving the beard continued among the Greeks till the time of Justinian, and during that period even the statues of the philosophers were without the beard. The philosophers, however, generally continued the old badge of their profession, and their ostentation in so doing gave rise to the saying that a long beard does not make a philosopher (*παγωνοτροφία φιλόσοφον οὐ ποιεῖ*), and a man whose wisdom stopped with his beard was called *ἐκ πάγωνος σοφός*. So Anulus Gellius⁸ says, "*Video barbam et pallium, philosophum nondum video.*" Horace⁹ speaks of "feeding the philosophic beard."¹⁰ The Romans, in early times, wore the beard uncut, as we learn from the insult offered by the Gaul to Marcus Papirius,¹¹ and from Cicero;¹² and, according to Varro¹³ and Pliny,¹⁴ the Roman beards were not shaved till B.C. 300, when P. Titinius Mena brought over a barber from Sicily; and Pliny adds, that the first Roman who was shaved (*rasus*) every day was Scipio Africanus. His custom, however, was soon followed, and shaving became a regular thing. The lower orders, then as now, were not always able to do the same, and hence the jeers of Martial.¹⁵ In the later times of the Republic, there were many who shaved the beard only partially, and trimmed it so as to give it an ornamental form; to them the terms *bene barbatus*¹⁶ and *barbatulus*¹⁷ are applied. When in mourning, all the higher as well as the lower orders let their beards grow.

In the general way in Rome at this time, a long beard (*barba promissa*¹⁸) was considered a mark of

slovenliness and *squalor*. The censors Lucius Veturius and P. Licinius compelled Marcus Livius, who had been banished, on his restoration to the city, to be shaved, and to lay aside his dirty appearance (*tonderi et squalorem deponere*), and then, but not till then, to come into the senate, &c.¹ The first time of shaving was regarded as the beginning of manhood, and the day on which this took place was celebrated as a festival.² There was no particular time fixed for this to be done. Usually, however, it was done when the young Roman assumed the toga virilis.³ Augustus did it in his 24th year, Caligula in his 20th. The hair cut off on such occasions was consecrated to some god. Thus Nero put his up in a gold box, set with pearls, and dedicated it to Jupiter Capitolinus.⁴ So Statius⁵ mentions a person who sent his hair as an offering to Æsculapius Pergamenus, and requested Statius to write some dedicatory verses on the occasion. He sent the hair with a box set with precious stones (*cum gemmata pyxide*) and a mirror.

With the Emperor Hadrian the beard began to revive.⁶ Plutarch says that the emperor wore it to hide some scars on his face. The practice afterward became common, and till the time of Constantine the Great the emperors appear in busts and coins with beards. The Romans let their beards grow in time of mourning; so Augustus did⁷ for the death of Julius Cæsar, and the time when he had it shaved off he made a season of festivity.⁸ The Greeks, on the other hand, on such occasions, shaved the beard close.⁹ Strabo¹⁰ says that the beards of the inhabitants of the Cassiterides were like those of goats. Tacitus¹¹ says that the Catti let their hair and beard grow, and would not have them cut till they had slain an enemy.

BARBERS. The Greek name for a barber was *κουρεύς*, and the Latin *tonsor*. The term employed in modern European languages is derived from the low Latin *barbatorius*, which is found in Petronius. The barber of the ancients was a far more important personage than his modern representative. Men had not often the necessary implements for the various operations of the toilet: combs, mirrors, perfumes, and tools for clipping, cutting, shaving, &c. Accordingly, the whole process had to be performed at the barber's, and hence the great concourse of people who daily gossiped at the *tonstrina*, or barber's shop. Besides the duties of a barber and hairdresser, strictly so called, the ancient *tonsor* discharged other offices. He was also a nail-parer. He was, in fact, much what the English barber was when he extracted teeth, as well as cut and dressed hair. People who kept the necessary instruments for all the different operations, generally had also slaves expressly for the purpose of performing them. The business of the barber was threefold. First, there was the cutting of hair: hence the barber's question, *πῶς σε κείρω*.¹² For this purpose, he used various knives of different sizes and shapes, and degrees of sharpness: hence Lucian,¹³ in enumerating the apparatus of a barber's shop, mentions *πλήθος μαχαيريῶν* (*μάχαιρα, μαχαρίς, κορυβίς* are used also, in Latin *cutter*) and scissors, *ψαλγίς, διπλῇ μάχαιρα*¹⁴ (in Latin *forfex, aricia*), were used too.¹⁵ *Μάχαιρα* was the usual word. (Böttiger, however, says that two knives were merely used, forming a kind of scissors. The

most elegant mode of cutting the hair was with the single knife, *μία μαχαίρα*.¹ Irregularity and unevenness of the hair was considered a great blemish, as appears generally, and from Horace;² and, accordingly, after the hair-cutting, the uneven hairs were pulled out by tweezers, an operation to which Pollux³ applies the term *παράλεγεσθαι*. So the hangers-on great men, who wished to look young, were accustomed to pull out the gray hairs for them.⁴ This was considered, however, a mark of effeminacy.⁵ The person who was to be operated on by the barber had a rough cloth (*ὠμβλινον*, *intolucere* in Plautus⁶) laid on his shoulders, as now, to keep the hairs off his dress, &c. The second part of the business was shaving (*radere, rasitare, ξυρεῖν*). This was done with a *ξύρον*, a *novacula*,⁷ a razor (as we, retaining the Latin root, call it), which he kept in a case, *θήκη, ξυροθήκη, ξυροδόκης*, "a razor-case."⁸ Some, who would not submit to the operation of the razor, used instead some powerful depilatory ointments or plasters, as *psilothron*,⁹ *acida Creta*,¹⁰ *Venetum lutum*,¹¹ *dropax*.¹² Stray hairs which escaped the razor were pulled out with small pincers or tweezers (*voisella, τριχολάβιον*). The third part of the barber's work was to pare the nails of the hands, an operation which the Greeks expressed by the words *ὀνυχίζεν* and *ἀπο-νυχίζεν*.¹³ The instruments used for this purpose were called *ὀνυχιστήρια*, *sc. μαχαίρια*.¹⁴ This practice of employing a man expressly to pare the nails explains Plautus's humorous description of the miserly Euclio:

"*Quin ipsi quidem tonsor unguis dempserat,
Collegit, omnia abstulit praesegnata.*"¹⁵

Even to the miser it did not occur to pare his nails himself, and save the money he would have to pay; but only to collect the parings, in hope of making something by them. So Martial, in rallying a fop, who had tried to dispense with the barber's services by using different kinds of plasters, &c., asks him,¹⁶ *Quid facient ungues?* What will your nails do? How will you get your nails pared? So Tibullus says,¹⁷ *quid (prodest) unguis artificis docta subsecuisse manu*; from which it appears that the person addressed was in the habit of employing one of the more fashionable tonsors. The instruments used are referred to by Martial.¹⁸

BARBITOS (*βάριτος* or *βάριτον*), a stringed instrument, called by Theocritus *παλάρχος*.¹⁹ The Æolic form *βάρματος*²⁰ led the grammarians to derive the word from *βαρίς* and *μίτος*, a thread or string; but according to Strabo,²¹ who, if the reading be correct, makes it the same with *σαμβύκη*, it was of foreign origin. Pindar, in a fragment quoted by Athenæus, refers the invention of it to Terpander,²² but in another place²³ it is ascribed to Anacreon. Dionysius²⁴ tells us that in his day it was not in use among the Greeks, but that the Romans, who derived it from them, still retained it at ancient sacrifices. It is impossible to determine its exact form with any certainty: later writers use the word as synonymous with *λύρα*. (*Vid. LYRA.*)

BARDOCUCULUS. (*Vid. CUCULLUS.*)

***BASALTES**, a species of marble, as Pliny²⁵

terms it, found in Æthiopia, of the colour and hardness of iron, whence its name, from an Oriental term *basalt*, signifying "iron." To what Eastern language this word belongs is not known; we may compare with it, however, the Hebrew *bazzel*. Pliny speaks of fine works of art in Egyptian basalt, and of these some have found their way to Rome, as the lions at the base of the ascent to the Capitol, and the Sphinx of the Villa Borghese.¹ Winckelmann distinguishes two kinds of this stone: the black, which is the more common sort, is the material of the figures just mentioned; the other variety has a greenish hue.² We must be careful not to confound the *basaltes* of the ancients with the modern *basalt*. The former was merely a species of syenite, commonly called basaltoid syenite, black Egyptian basalt, and "basalte aotique." The basalt of the moderns is a hard, dark-coloured rock, of igneous origin.³

BASANISTAI. (*Vid. BASANOS.*)

***BASANITES LAPIS** (*βασανίτης λίθος*), called also *Basanos* and *Lapis Lydius*, the Touchstone. Its Greek and English names both refer to its office of trying metals by the touch. The appellation of "Lydia Stone" was derived from the circumstance of Lydia having been one of its principal localities. It was also obtained in Egypt, and, besides the use just mentioned, was wrought into various ornaments, as it still is at the present day. Other names for the Touchstone were *Chrysites*, from its particular efficacy in the trial of gold, and *Coticula*, because generally formed, for convenience' sake, into the shape of a small whetstone.⁴ The Basanite or Touchstone differs but little from the common variety of siliceous slate. Its colour is grayish or bluish black, or even perfectly black. If a bar of gold be rubbed against the smooth surface of this stone, a metallic trace is left, by the colour of which an experienced eye can form some estimate of the purity of the gold. This was the ancient mode of proceeding. In modern times, however, the judgment is still farther determined by the changes produced in this metallic trace by the application of nitric acid (*aqua fortis*), which immediately dissolves those substances with which the gold may be alloyed. Basalt and some other varieties of argillite answer the same purpose. The touchstones employed by the jewellers of Paris are composed chiefly of hornblende. Brogniart calls it *Cornéenne Lydienne*.⁵

BASANOS (*βάσανος*), the general term among the Athenians for the application of torture. By a decree of Scamandrius, it was ordained that no free Athenian could be put to the torture;⁶ and this appears to have been the general practice, notwithstanding the assertion of Cicero⁷ to the contrary (*de institutis Atheniensium, Rhodiorum—apud quos liberi civesque torquentur*). The only two apparent exceptions to this practice are mentioned by Antiphon⁸ and Lysias.⁹ But, in the case mentioned by Antiphon, Böckh¹⁰ has shown that the torture was not applied at Athens, but in a foreign country; and in Lysias, as it is a Platean boy that is spoken of, we have no occasion to conclude that he was an Athenian citizen, since we learn from Demosthenes¹¹ that all Plateans were not necessarily Athenian citizens. It must, however, be observed, that the decree of Scamandrius does not appear to have interdicted the use of torture as a means of execution, since we find Demosthenes¹² reminding the

judges that they had put Antiphon to death by the rack (*σπρεβλῶσαντες*).¹

The evidence of slaves was, however, always taken with torture, and their testimony was not otherwise received.² From this circumstance their testimony appears to have been considered of more value than that of freemen. Thus Isæus³ says, "When slaves and freemen are at hand, you do not make use of the testimony of freemen; but, putting slaves to the torture, you thus endeavour to find out the truth of what has been done." Numerous passages of a similar nature might easily be produced from the orators.⁴ Any person might offer his own slave to be examined, by torture, or demand that of his adversary, and the offer or demand was equally called *πρόκλησις εἰς βάσανον*. If the opponent refused to give up his slave to be thus examined, such a refusal was looked upon as a strong presumption against him. The *πρόκλησις* appears to have been generally made in writing,⁵ and to have been delivered to the opponent in the presence of witnesses in the most frequented part of the Agora;⁶ and as there were several modes of torture, the particular one to be employed was usually specified.⁷ Sometimes, when a person offered his slave for torture, he gave his opponent the liberty of adopting any mode of torture which the latter pleased.⁸ The parties interested either superintended the torture themselves, or chose certain persons for this purpose, hence called *βασανισταί*, who took the evidence of the slaves.⁹ In some cases, however, we find a public slave attached to the court, who administered the torture;¹⁰ but this appears only to have taken place when the torture was administered in the court, in presence of the judges.¹¹ This public mode of administering the torture was, however, certainly contrary to the usual practice.¹² The general practice was to read at the trial the depositions of the slaves, which were called *βασαννοί*,¹³ and to confirm them by the testimony of those who were present at the administration of the torture.

BASCANIA. (*Vid.* FASCINUM.)

BASCAUDA, a British basket. This term, which remains with very little variation in the Welsh "basgawd" and the English "basket," was conveyed to Rome together with the articles denoted by it. We find it used by Juvenal¹⁴ and by Martial¹⁵ in connexions which imply that these articles were held in much esteem by the luxurious Romans. In no other manufacture did our British ancestors excel so as to obtain for their productions a similar distinction.¹⁶ In what consisted the curiosity and the value of these baskets, we are not informed; but they seem to be classed among vessels capable of holding water.

BASILEIA (*Βασιλεία*) was the name of a festival celebrated at Lebadeia, in Boeotia, in honour of Trophonius, who had the surname of *Βασιλεὺς*. This festival was also called Trophonia—*Τροφῶνια*;¹⁷ and was first observed under the latter name as a general festival of the Boeotians after the battle of Leuctra.¹⁸

BASILEUS (*βασιλεὺς*), ANAX (*ἄναξ*), titles originally given to any persons in authority, and ap-

plied in the first instance indiscriminately, without any accurate distinction. In the government of Phæacia, which was a mixed constitution, consisting of one supreme magistrate, twelve peers or councillors, and the assembly of the people, each of the twelve who shared, as well as the one who nominally possessed the supreme power, is designated by the word *βασιλεὺς*,¹ which title became afterward strictly appropriated in the sense of our term king; but *ἄναξ* continued long to have a much wider signification. In the *Œdipus Tyrannus*, the title *ἄναξ* is applied to Apollo,² to Tiresias,³ to Creon and *Œdipus*,⁴ and to the Chorus.⁵ Isocrates⁶ uses *βασιλεὺς* in the sense of king, and *ἄναξ* as exactly synonymous with prince, calling the king's sons *ἄνακτες*, and his daughters *ἄνασσαί*. The title of *basileus* was applied to magistrates in some republican states, who possessed no regal power, but who generally attended to whatever was connected with the religion of the state and public worship. Thus the second archon at Athens had the title of *basileus* (*vid.* *Archon*), and we find magistrates with the same title in the republican states of Delphi,⁷ Siphnos,⁸ Chalcidion, Cyzicus, &c.⁹

After the introduction of the republican form of government into the Grecian communities, another term (*τύραννος*, *tyrannus*) came into use, in contradistinction to the other two, and was used to designate any citizen who had acquired and retained for life the supreme authority in a state which had previously enjoyed the republican form of government. The term tyrant, therefore, among the Greeks, had a different signification from its usual acceptance in modern language; and when used reproachfully, it is only in a political, and not a moral sense; for many of the Greek tyrants conferred great benefits upon their country.

BASILICA (sc. *ædcs*, *aula*, *porticus*—*βασιλική*, also *regia*¹⁰), a building which served as a court of law and an exchange, or place of meeting for merchants and men of business. The term is derived, according to Philander,¹¹ from *βασιλεὺς*, a king, in reference to early times, when the chief magistrate administered the laws he made; but it is more immediately adopted from the Greeks of Athens, whose second archon was styled *ἄρχων βασιλεὺς*, and the tribunal where he adjudicated *στοὰ βασιλείως*,¹² the substantive *aula* or *porticus* in Latin being omitted for convenience, and the distinctive epithet converted into a substantive. The Greek writers, who speak of the Roman basilicæ, call them sometimes *στοαὶ βασιλικαί*, and sometimes merely *στοαί*.

The first edifice of this description was not erected until B. C. 182;¹³ for it is expressly stated by the historian that there were no basilicæ at the time of the fire, which destroyed so many buildings in the Forum, under the consulate of Marcellus and Lævinus, B. C. 212.¹⁴ It was situated in the Forum adjoining the Curia, and was denominated Basilica Porcia, in commemoration of its founder, M. Porcius Cato. Besides this, there were twenty others, erected at different periods, within the city of Rome,¹⁵ of which the following are the most frequently alluded to by the ancient authors: 1. *Basilica Sempronia*, constructed by Titus Sempronius, B. C. 171,¹⁶ and supposed, by Donati and Nardini, to have been between the vicus Tusculi and the Velabrum. 2. *Basilica Opimia*, which was above the Comitium. 3. *Basilica Pauli Æmilii*, or *Basilica*

ca *Æmilia*, called also *Regia Pauli* by Statius.¹ Cicero² mentions two basilicæ of this name, of which one was built, and the other only restored, by Paulus Æmilius. Both these edifices were in the Forum, and one was celebrated for its open peristyle of Phrygian columns,³ which Plutarch (*Cæs.*) states was erected by L. Æmilius Paulus during his consulship, at an expense of 1500 talents, sent to him by Cæsar from Gaul, as a bribe to gain him over from the aristocratical party. A representation of this is given below. 4. *Basilica Pompeii*, called also *regia*,⁴ near the theatre of Pompey. 5. *Basilica Julia*, erected by Julius Cæsar, in the Forum, and opposite to the Basilica Æmilia. It was from the roof of this building that Caligula scattered money among the people for several successive days.⁵ 6. *Basilica Cæii et Lucii*, the grandsons of Augustus, by whom it was founded.⁶ 7. *Basilica Ulpia* or *Traiani*, in the Forum of Trajan. 8. *Basilica Constantiniana*, erected by the Emperor Constantine, supposed to be the ruin now remaining on the Via Sacra, near the Temple of Rome and Venus, and commonly called the Temple of Peace. Of all these magnificent edifices, nothing now remains beyond the ground plan, and the bases and some portion of the columns and superstructure of the last two. The basilica at Pompeii is in better preservation; the external walls, ranges of columns, and tribunal of the judges being still tolerably perfect on the ground floor.

The Forum, or, where there was more than one, the one which was in the most frequented and central part of the city, was always selected for the site of a basilica; and hence it is that the classic writers not unfrequently use the terms *forum* and *basilica* synonymously, as in the passage of Claudian—*Desuetæque cingit Regius auratis fora fascibus Ulpia lictor*, where the Forum is not meant, but the basilica which was in it, and which was surrounded by the lictors who stood in the Forum.⁶

Vitruvius⁹ directs that the most sheltered part of the Forum should be selected for the site of a basilica, in order that the public might suffer as little as possible from exposure to bad weather, while going to, or returning from, their place of business; he might also have added, for their greater convenience while engaged within, since many of these edifices, and all of the more ancient ones, were entirely open to the external air, being surrounded and protected solely by an open peristyle of columns, as the annexed representation of the Basilica Æmilia, from a medal of Lepidus, with the inscription, clearly shows:

When, however, the Romans became wealthy and refined, and, consequently, more effeminate, a wall was substituted for the external peristyle, and the columns were confined to the interior; or, if used externally, it was only in decorating the πρόναος, or vestibule of entrance. This was the only change which took place in the form of these buildings from the time of their first institution until

they were converted into Christian churches. The ground plan of all of them is rectangular, and their width not more than half, nor less than one third of the length;¹ but if the area on which the edifice was to be raised was not proportionably long, small chambers (*chalcidica*) were cut off from one of the ends,² which served as conveniences for the judges or merchants. This area was divided into three naves, consisting of a centre (*media porticus*) and two side aisles, separated from the centre one each by a single row of columns: a mode of construction particularly adapted to buildings intended for the reception of a large concourse of people. At one end of the centre aisle was the tribunal of the judge, in form either rectangular or circular, and sometimes cut off from the length of the grand nave (as is seen in the annexed plan of the basilica at Pompeii, which also affords an example of the chambers of the judges or chalcidica above mentioned), or otherwise thrown out from the posterior

wall of the building, like the tribune of some of the most ancient churches in Rome, and then called the hemicycle: an instance of which is afforded in the Basilica Traiani, of which the plan is given below. It will be observed that this was a most sumptuous edifice, possessing a double tribune, and double row of columns on each side of the centre aisle, dividing the whole into five naves.

The internal tribune was probably the original construction, when the basilica was simply used as a court of justice; but when those spacious halls were erected for the convenience of traders as well as loungers, then the semicircular and external tribune was adopted, in order that the noise and

confusion in the basilica might not interrupt the proceedings of the magistrates.³ In the centre of this tribune was placed the curule chair of the prætor, and seats for judges, who sometimes amount-

1. (Vitruv., l. c.)—2. (Vitruv., l. c.)—3. (Vitruv., l. c.)

en to the number of 180,¹ and the advocates; and round the sides of the hemicycle, called the wings (*cornua*), were seats for persons of distinction, as well as the parties engaged in the proceedings. It was in the wing of the tribune that Tiberius sat to overawe the judgment at the trial of Granius Marcellus.² The two side aisles, as has been said, were separated from the centre one by a row of columns, behind each of which was placed a square pier or pilaster (*parastata*³), which supported the flooring of an upper portico, similar to the gallery of a modern church. The upper gallery was in like manner decorated with columns, of lower dimensions than those below; and these served to support the roof, and were connected with one another by a parapet wall or balustrade (*pluteus*⁴), which served as a defence against the danger of falling over, and screened the crowd of loiterers above (*subbasilicani*⁵) from the people of business in the area below.⁶ This gallery reached entirely round the inside of the building, and was frequented by women as well as men, the women on one side and the men on the other, who went to hear and see what was going on.⁷ The staircase which led to the upper portico was on the outside, as is seen in the plan of the Basilica of Pompeii. It is similarly situated in the Basilica of Constantine. The whole area of these magnificent structures was covered with three separate ceilings, of the kind called *testudinatum*, like a tortoise-shell; in technical language now denominated *coved*, an expression used to distinguish a ceiling which has the general appearance of a vault, the central part of which is, however, flat, while the margins incline by a cylindrical shell from each of the four sides of the central square to the side walls; in which form the ancients imagined a resemblance to the shell of a tortoise.

From the description which has been given, it will be evident how much these edifices were adapted, in their general form and construction, to the uses of a Christian church; to which purpose some of them were, in fact, converted, as may be inferred from a passage in Ausonius, addressed to the Emperor Gratianus: *Basilica olim negotiis plena, nunc votis pro tua salute susceptis*.⁸ Hence the later writers of the Empire apply the term *basilica* to all churches built after the model just described; and such were the earliest edifices dedicated to Christian worship, which, with their original designation, continue to this day, being still called at Rome *basiliche*. A Christian basilica consisted of four principal parts: 1. *Πρόναος*, the vestibule of entrance. 2. *Ναῦς*, *navis*, and sometimes *gremium*, the nave or centre aisle, which was divided from the two side ones by a row of columns on each of its sides. Here the people assembled for the purposes of worship. 3. *Ἀψίδας* (from *ἀναβαίνειν*, to ascend), *chorus* (the choir), and *suggestum*, a part of the lower extremity of the nave raised above the general level of the floor by a flight of steps. 4. *Ἱερατεῖον*, *ἱερὸν βῆμα*, *sanctuarium*, which answered to the tribune of the ancient basilica. In the centre of this sanctuary was placed the high altar, under a tabernacle or canopy, such as still remains in the Basilica of St. John of Lateran at Rome, at which the priest officiated with his face turned towards the people. Around this altar, and in the wings of the *sanctuarium*, were seats for the assistant clergy, with an elevated chair for the bishop at the bottom of the circle in the centre.⁹

BASILICA (*Βασιλικαὶ Διարάξεις*). About A.D. 876, the Greek emperor Basilus, the Macedonian, commenced this work, which was completed by his son Len, the philosopher. Before the reign of Basilus, there had been several Greek translations of the Pandect, the Code, and the Institutes; but there was no authorized Greek version of them. The numerous Constitutions of Justinian's successors, and the contradictory interpretations of the jurists, were a farther reason for publishing a revised Greek text under the imperial authority. This great work was called *Basilica*, or *Βασιλικαὶ Διարάξεις*: it was revised by the order of Constantinus Porphyrogeneta, about A.D. 945. The *Basilica* comprised the Institutes, Pandect, Code, the Novellæ, and the imperial Constitutions subsequent to the time of Justinian, in a Greek translation, in sixty books, which are subdivided into titles. The publication of this authorized body of law in the Greek language led to the gradual disuse of the original compilation of Justinian in the East.

The arrangement of the matter in the *Basilica* is as follows: All the matter relating to a given subject is selected from the *Corpus Juris*; the extracts from the Pandect are placed first under each title, then the constitutions of the Code, and next in order the provisions contained in the Institutes and the Novellæ, which confirm or complete the provisions of the Pandect. The *Basilica* does not contain all that the *Corpus Juris* contains; but it contains numerous fragments of the opinions of ancient jurists, and of imperial Constitutions, which are not in the *Corpus Juris*.

The *Basilica* was published, with a Latin version, by Fabrot, Paris, 1647, seven vols. fol. Fabrot published only thirty-six books complete, and six others incomplete: the other books were made up from an extract from the *Basilica* and the scholiasts. Four of the deficient books were afterward found in MS., and published by Gerhard Meerman, with a translation by M. Otto Reitz, in the fifth volume of his *Thesaurus Juris Civilis et Canonici*; and they were also published separately in London in 1765, folio, as a supplement to Fabrot's edition. A new critical edition, by the brothers Heimbach, was commenced in 1833, and is now in progress.

***BASILISCUS** (*Βασιλίσκος*), the Basilisk, sometimes called Cockatrice, from the vulgar belief in modern times, that it is produced from the egg of a cock. "Nicander describes it," observes Dr. Adams, "as having a small body, about three palms long, and of a shining colour. All the ancient authors speak with horror of the poison of the Basilisk, which they affirm to be of so deadly a nature as to prove fatal, not only when introduced into a wound, but also when transmitted through another object. Avicenna relates the case of a soldier, who, having transfixed a basilisk with a spear, its venom proved fatal to him, and also to his horse, whose lip was accidentally wounded by it. A somewhat similar story is alluded to by Lucan.¹ Linnæus, regarding, of course, all the stories about the Basilisk as utterly fabulous, refers this creature, as mentioned by the ancients, to the *Lacerta Iguana*. I cannot help thinking it very problematical, however, whether the *Iguana* be indeed the Basilisk of the ancients. Calmet supposes the Scriptural basilisk to be the same with the *Cobra di Capello*, but I am not aware of its being found in Africa. The serpent which is described under the name of *Buskiah* by Jackson, would answer very well in most respects to the ancient descriptions of the Basilisk."²

BASTERNA, a kind of litter (*lectica*) in which women were carried in the time of the Roman em-

1. (Plin., Ep., vi., 33.)—2. (Tacit., Ann., i., 75.)—3. (Vitruv., l. c.)—4. (Vitruv., l. c.)—5. (Plaut., Capt., IV, iii., 35.)—6. (Vitruv., l. c.)—7. (Plin., l. c.)—8. (Grat. perors. It appears to have resembled the lectica (*vid. LECTICA*) very closely; and the only difference apparently was, that the lectica was carried by slaves, and the basterna by two mules. Several etymologies of the word have been proposed. Salmassius supposes it to be derived from the Greek βαστράω.¹ A description of a basterna is given by a poet in the Latin Anthology.²

BATHS.—*Βαλανεῖον, Balnearium, Balneum, Balineum, Balnea, Balinea, and Thermae*. These words are all commonly translated by our general term bath or baths; but in the writings of the earlier and better authors they are used with a nice discrimination. *Balneum* or *balineum*, which is derived from the Greek βαλανεῖον,³ signifies, in its primary sense, a bath or bathing-vessel, such as most persons of any consequence among the Romans possessed in their own houses; in which sense it is used by Cicero,⁴ *balineum calefacti jubebo*, and from that it came to signify the chamber which contained the bath⁵ (*labrum si in balineo non est*), which is also the proper translation of the word *balnearium*. The diminutive *balneolum* is adopted by Seneca⁶ to designate the bath-room of Scipio, in the villa at Liternum, and is expressly used to characterize the unassuming modesty of republican manners, as compared with the luxury of his own times. But when the baths of private individuals became more sumptuous, and comprised many rooms instead of the one small chamber described by Seneca, the plural *balnea* or *balinea* was adopted, which still, in correct language, had reference only to the baths of private persons. Thus Cicero terms the baths at the villa of his brother Quintus⁷ *balnearia*. *Balnea* and *balinea*, which, according to Varro,⁸ have no singular number, were the public baths. (*Balnea* is, however, used in the singular, to designate a private bath, in an inscription quoted by Reinesius.⁹) Thus Cicero¹⁰ speaks of *balneas Senias, balneas publicas*, and in *vestibulo balnearum*,¹¹ and Aulus Gellius¹² of *balneas Sittias*. But this accuracy of diction is neglected by many of the subsequent writers, and particularly by the poets, among whom *balnea* is not uncommonly used in the plural number to signify the public baths, since the word *balnea* could not be introduced in an hexameter verse. Pliny also, in the same sentence, makes use of the neuter plural *balnea* for public, and of *balneum* for a private bath.¹³ *Thermae* (from θερμν, warmth) mean, properly, warm springs or baths of warm water, but came afterward to be applied to the structures in which the baths were placed, and which were both hot and cold. There was, however, a material distinction between the *balnea* and *thermae*, inasmuch as the former was the term used under the Republic, and referred to the public establishments of that age, which contained no appliances for luxury beyond the mere convenience of hot and cold baths, whereas the latter name was given to those magnificent edifices which grew up under the Empire, and which comprised within their range of buildings all the appurtenances belonging to the Greek gymnasia, as well as a regular establishment appropriated for bathing; which distinction is noticed by Juvenal:¹⁴

“*Dum petit aut thermas, aut Phæbi balnea.*”

Subsequent writers, however, use these terms without distinction. Thus the baths erected by Claudius Etruscus, the freedman of the Emperor Clau-

dian, are styled by Statius¹ *balnea*, and by Martial² *Etrusci thermulae*. In an epigram, also, by Martial,³ “*subice balneum thermis*,” the terms are not applied to the whole building, but to two different chambers in the same edifice.

Bathing was a practice familiar to the Greeks of both sexes from the earliest times, both in fresh water and salt, and in the natural warm springs as well as vessels artificially heated. Thus Nausicaæ, daughter of Alcinoüs, king of Phæacia, goes out with her attendants to wash her clothes, and, after the task is done, she bathes herself in the river.⁴ Ulysses, who is conducted to the same spot, strips and takes a bath, while she and her servants stand aside.⁵ Europa also bathes in the river Anaurus.⁶ And Helen and her companions in the Eurotas.⁷ Warm springs were also resorted to for the purpose of bathing. The *Ἡράκλεια λουτρά* shown by Vulcan or Minerva to Hercules are celebrated by the poets. Pindar speaks of the hot bath of the nymphs—*θερμὰ Νυμφῶν λουτρά*,⁸ and Homer⁹ celebrates one of the streams of the Scamander for its warm temperature. The artificial warm bath was taken in a vessel called ἀσάμινθος by Homer,¹⁰ because it diminished the uncleanness of the skin, and ἐμδάσις by Athenæus.¹¹ It would appear, from the description of the bath administered to Ulysses in the palace of Circe, that this vessel did not contain water itself, but was only used for the bather to sit in while the warm water was poured over him, which was heated in a large caldron or tripod, under which the fire was placed, and, when sufficiently warmed, was taken out in other vessels, and poured over the head and shoulders of the person who sat in the ἀσάμινθος.¹² Where cleanliness merely was the object sought, cold bathing was adopted, which was considered as most bracing to the nerves;¹³ but, after violent bodily fatigue or exertion, warm water was made use of, in order to refresh the body and relax the over-tension of the muscles.¹⁴ Thus the ἀσάμινθος is prepared for Peisistratus and Telemachus in the palace of Menelaüs,¹⁵ and is resorted to by Ulysses and Diomed, when they return with the captured horses of Rhesus.¹⁶

“*Ἐς β' ἀσάμινθους βάντες ἐνέχσας λούσαντο.*”

From which passage we also learn that the vessel was of polished marble, like the basins (*labra*) which have been discovered in the Roman baths. Andromache, in the 22d book of the *Iliad*, prepares a hot bath for Hector against his return from battle; and Nestor, in the 14th, orders Hecamede to make ready the warm bath (*θερμὰ λουτρά*); and the Phæacians are represented as being addicted to the vanities of dress, warm baths, and sexual indulgence.¹⁷

Εἰμαρὰ τ' ἐξημιόβη, λουτρά τε θερμὰ καὶ ἐνθαί.

It was also customary for the Greeks to take two baths in succession, first cold and afterward warm; thus, in the passage of the *Iliad* just referred to, Ulysses and Diomed both bathe in the sea, and afterward refresh themselves with a warm bath (ἀσάμινθος) upon returning to their tents. The custom of plunging into cold water after the warm bath mentioned by Aristides,¹⁸ who wrote in the second century, does not refer to the Greeks of this early age, but to those who lived after the subjugation of their country by the Romans, from whom the habit was most probably borrowed.

After bathing, both sexes anointed themselves,

the women¹ as well as men, in order that the skin might not be left harsh and rough, especially after warm water.² Oil (*έλαιον*) is the only ointment mentioned by Homer as used for this purpose, and Pliny³ says that the Greeks had no better ointment at the time of the Trojan war than oil perfumed with herbs. In all the passages quoted above, the bathers anoint themselves with clear pure oil (*λίον ἐλαίω*); but in the 23d book of the *Iliad*,⁴ Venus anoints the body of Hector with oil scented with roses (*ἐλαίω ῥοδόεντι*), and, in the 14th book of the same poem,⁵ Juno anoints herself with oil "ambrosial, sweet, and odoriferous" (*ἀμβροσίον, ἑδανόν, τεύχεον*): and elsewhere the oil is termed *ἑνώδες*, sweet-smelling, upon which epithet the commentators and Athenæus⁶ remark that Homer was acquainted with the use of more precious ointments, but calls them oil with an epithet to distinguish them from common oil. The ancient heroes, however, never used precious unguents (*μύρα*).

Among the Greeks as well as Romans, bathing was always a preliminary to the hour of meals. Indeed, the process of eating seems to have followed as a matter of course upon that of bathing; for even Nausicaæ and her companions, in the passage referred to above, immediately after they had bathed and anointed themselves, sat down to eat by the river's side while waiting for the clothes to dry.⁷

The Lacedæmonians, who considered warm water as enervating and effeminate, used two kinds of baths, namely, the cold daily bath in the Eurotas, which Agesilaus also used,⁸ and a dry sudorific bath in a chamber heated with warm air by means of a stove;⁹ and from them the chamber used by the Romans for a similar purpose was termed *Laconicum*.¹⁰

Thus it seems clear that the Greeks were familiar with the use of the bath, both as a source of health and pleasure, long before it came into general practice among the Romans, although they had no public establishments expressly devoted to the purpose of the same magnificence as the Romans had; in which sense the words of Artemidorus¹¹ may be understood, when he says, "They were unacquainted with the use of baths" (*βαλανεῖα οὐκ ᾔδεισαν*); for it appears that the Athenians, at least, had public baths (*λουτρήναι*) attached to the gymnasium, which were more used by the common people than by the great and wealthy, who had private baths in their own houses.¹²

The Romans, as well as Greeks, resorted to the rivers, in the earlier periods of their history, from motives of health or cleanliness, and not of luxury; for, as the use of linen was little known in those ages,¹³ health as well as comfort rendered frequent ablutions necessary. Thus we learn from Seneca¹⁴ that the ancient Romans washed their legs and arms daily, and bathed their whole body once a week.

It is not recorded at what precise period the use of the warm bath was first introduced among the Romans; but we learn from Seneca¹⁵ that Scipio had a warm bath in his villa at Liternum, which, however, was of the simplest kind, consisting of a simple chamber, just sufficient for the necessary purposes, and without any pretension to luxury. It was "small and dark," he says, "after the manner of the ancients." This was a bath of warm water; but the practice of heating an apartment with warm air by flues placed immediately under it,

so as to produce a vapour bath, is stated by Valerius Maximus¹⁶ and by Pliny¹⁷ to have been invented by Sergius Orata, who lived in the age of Crassus, before the Marston war. The expression used by Valerius Maximus is *balnea pensilia*, and by Pliny *balneas pensiles*, which is differently explained by different commentators; but a single glance at the plans inserted below will be sufficient in order to comprehend the manner in which the flooring of the chambers was suspended over the hollow cells of the hypocaust, called by Vitruvius *suspensura caldarium*,¹⁸ so as to leave no doubt as to the precise meaning of the invention, which is more fully exemplified in the following passage of Ausonius:¹⁹

"*Quid (memorem) quæ sulphurea substructa crepidine fumant*

Balnea, ferventi cum Mulciber haustus aperto,
Volvit anhelatas tectoria per cava flammæ,
Inclusum glomerans astu exspirante vaporem?"

By the time of Cicero, the use of baths, both public and private, of warm water and hot air, had obtained very generally, and with a considerable degree of luxury, if not of splendour, as may be collected from a letter to his brother,²⁰ in which he informs him that he had given directions for removing the vapour bath (*assa*) into the opposite angle of the undressing-room (*apodyterium*), on account of the flue being placed in an injudicious situation; and we learn from the same author that there were baths at Rome in his time—*balneas Senias*²¹—which were open to the public upon payment of a small fee.²²

In the earlier ages of Roman history, a much greater delicacy was observed with respect to promiscuous bathing, even among the men, than was usual among the Greeks; for, according to Valerius Maximus,²³ it was deemed indecent for a father to bathe in company with his own son after he had attained the age of puberty, or a son-in-law with his father-in-law: the same respectful reserve being shown to blood and affinity as was paid to the temples of the gods, towards whom it was considered as an act of irreligion even to appear naked in any of the places consecrated to their worship.²⁴ But virtue passed away as wealth increased; and, when the thermæ came into use, not only did the men bathe together in numbers, but even men and women stripped and bathed promiscuously in the same bath. It is true, however, that the public establishments often contained separate baths for both sexes adjoining to each other,²⁵ as will be seen to have been also the case at the Baths of Pompeii. Aulus Gellius²⁶ relates a story of a consul's wife who took a whim to bathe at Teanum (Teano), a small provincial town of Campania, in the men's baths (*balneis virilibus*); probably because, in a small town, the female department, like that at Pompeii, was more confined and less convenient than that assigned to the men; and an order was consequently given to the quaestor, M. Marius, to turn the men out. But whether the men and women were allowed to use each other's chambers indiscriminately, or that some of the public establishments had only one common set of baths for both, the custom prevailed under the Empire of men and women bathing indiscriminately together.²⁷ This custom was forbidden by Hadrian²⁸ and by M. Aurelius Antoninus,²⁹ and Alexander Severus prohibited any baths, common to both sexes (*balnea mixta*), from being opened in Rome.³⁰

When the public baths (*balneæ*) were first instituted, they were only for the lower orders, who alone bathed in public; the people of wealth, as well as those who formed the equestrian and senatorian orders, using private baths in their own houses. But this monopoly was not long enjoyed; for, as early even as the time of Julius Cæsar, we find no less a personage than the mother of Augustus making use of the public establishments,¹ which were probably, at that time, separated from the men's; and, in process of time, even the emperors themselves bathed in public with the meanest of the people. Thus Hadrian often bathed in public among the herd (*cum omnibus*);² and even the virtuous Alexander Severus took his bath among the populace in the thermæ he had himself erected, as well as in those of his predecessors, and returned to the palace in his bathing-dress;³ and the abandoned Gallienus amused himself by bathing in the midst of the young and old of both sexes—men, women, and children.⁴

The baths were opened at sunrise and closed at sunset; but, in the time of Alexander Severus, it would appear that they were kept open nearly all night; for he is stated⁵ to have furnished oil for his own thermæ, which previously were not opened before daybreak (*ante auroram*), and were shut before sunset (*ante vesperum*); and Juvenal⁶ includes in his catalogue of female immoralities, that of taking the bath at night (*balnea nocte subit*), which may, however, refer to private baths.

The price of a bath was a quadrans, the smallest piece of coined money from the age of Cicero downward,⁷ which was paid to the keeper of the bath (*balneator*); and hence it is termed by Cicero, in the oration just cited, *quadrantaria permutatio*, and by Seneca, *res quadrantaria*. Children below a certain age were admitted free.⁸

"Nec pueri credunt, nisi qui nondum ære lavantur."

Strangers also, and foreigners, were admitted to some of the baths, if not to all, without payment, as we learn from an inscription found at Rome, and quoted by Pitiscus.¹⁰

L. OCTAVIO. L. F. CAM.

RUF. TRIB. MIL.

QUI LAVATIONEM GRATUITAM MUNICIPIBUS,
INCOLIS

HOSPITIBUS ET ADVENTORIBUS.

The baths were closed when any misfortune happened to the Republic;¹¹ and Suetonius says that the Emperor Caligula made it a capital offence to indulge in the luxury of bathing upon any religious holiday.¹² They were originally placed under the superintendence of the ædiles, whose business it was to keep them also in repair, and to see that they were kept clean and of a proper temperature.¹³ In the provinces, the same duty seems to have devolved upon the quæstor, as may be inferred from the passage already quoted from Aulus Gellius.¹⁴

The time usually assigned by the Romans for taking the bath was the eighth hour, or shortly afterward.¹⁵

*"Octavam poteris servare; lavabimur una;
Seis, quam sint Stephani balnea juncta mihi."*

Before that time none but invalids were allowed to bathe in public.¹⁶ Vitruvius reckons the best hours adapted for bathing to be from midday until about sunset.¹⁷ Pliny took his bath at the ninth hour in summer, and at the eighth in winter;¹⁸ and Martia.

speaks of taking a bath, when fatigued and weary, at the tenth hour, and even later.¹

When the water was ready and the baths prepared, notice was given by the sound of a bell—*as thermarum*.² One of these bells, with the inscription *FIRMI BALNEATORIS*, was found in the thermæ Diocletianæ, in the year 1548, and came into the possession of the learned Fulvius Ursinus.³

While the bath was used for health merely or cleanliness, a single one was considered sufficient at a time, and that only when requisite. But the luxuries of the Empire knew no such bounds, and the daily bath was sometimes repeated as many as seven and eight times in succession—the number which the Emperor Commodus indulged himself with.⁴ Gordian bathed seven times a day in summer, and twice in winter; the Emperor Gallienus six or seven times in summer, and twice or thrice in winter.⁵ Commodus also took his meals in the bath;⁶ a custom which was not confined to a dissolute emperor alone, for Martial⁷ attacks a certain Æmilius for the same practice, which passage, however, is differently interpreted by some commentators.

It was the usual and constant habit of the Romans to take the bath after exercise, and previously to their principal meal (*cæna*); but the debauchees of the Empire bathed also after eating, as well as before, in order to promote digestion, so as to acquire a new appetite for fresh delicacies. Nero is related to have indulged in this practice,⁸ which is also alluded to by Juvenal.⁹

Upon quitting the bath, it was usual for the Romans, as well as Greeks, to be anointed with oil; to which custom both Pompey and Brutus are represented by Plutarch as adhering. But a particular habit of body, or tendency to certain complaints, sometimes required this order to be reversed; for which reason Augustus, who suffered from nervous disorders, was accustomed to anoint himself before bathing;¹⁰ and a similar practice was adopted by Alexander Severus.¹¹ The most usual practice, however, seems to have been to take some gentle exercise (*exercitatio*) in the first instance, and then, after bathing, to be anointed either in the sun, or in the tepid or thermal chamber, and finally to take their food.

The Romans did not content themselves with a single bath of hot or cold water, but they went through a course of baths in succession, in which the agency of air as well as water was applied. It is difficult to ascertain the precise order in which the course was usually taken, if, indeed, there was any general practice beyond the whim of the individual. Under medical treatment, of course the succession would be regulated by the nature of the disease for which a cure was sought, and would vary, also, according to the different practice of different physicians. It is certain, however, that it was a general practice to close the pores and brace the body after the excessive perspiration of the vapour bath, either by pouring cold water over the head, or by plunging at once into the *piscina*, or into a river, as the Russians still do,¹² and as the Romans sometimes did, as we learn from Ausonius.

*"Vidi ego defessos multo sudore lavacri
Fastidisse lacus, et frigora piscinarum,
Ut vivis fruerentur aquis; mox amne refotos
Plaudenti gelidum flumen pepulisse natatu."*¹³

Musa, the physician of Augustus, is said to have

introduced this practice,¹ which became quite the fashion, in consequence of the benefit which the emperor derived from it, though Dion² accuses him of having artfully caused the death of Marcellus by an improper application of the same treatment. In other cases it was considered conducive to health to pour warm water over the head before the vapour bath, and cold water immediately after it;³ and at other times a succession of warm, tepid, and cold water was resorted to.

The two physicians, Galen and Celsus, differ in some respects as to the order in which the baths should be taken; the former recommending first the hot air of the Laconicum (ἀέρι θερμῷ), next the bath of warm water (ὕδαρ θερμὸν καὶ λουτρον), afterward the cold, and, finally, to be well rubbed;⁴ while the latter recommends his patients first to sweat for a short time in the tepid chamber (tepidarium) without undressing; then to proceed into the thermal chamber (calidarium), and, after having gone through a regular course of perspiration there, not to descend into the warm bath (solium), but to pour a quantity of warm water over the head, then tepid, and finally cold; afterward to be scraped with the strigil (perfricari), and finally rubbed dry and anointed.⁵ Such, in all probability, was the usual habit of the Romans when the bath was resorted to as a daily source of pleasure, and not for any particular medical treatment; the more so, as it resembles, in many respects, the system of bathing still in practice among the Orientals, who, as Sir W. Gell remarks, "succeeded by conquest to the luxuries of the enervated Greeks and Romans."⁶

In the passage quoted above from Galen, it is plain that the word λουτρον is used for a warm bath, in which sense it also occurs in the same author. Vitruvius,⁷ on the contrary, says that the Greeks used the same word to signify a cold bath (frigida lavatio, quam Graeci λουτρον vocitant). The contradiction between the two authors is here pointed out, for the purpose of showing the impossibility, as well as impropriety, of attempting to fix one precise meaning to each of the different terms made use of by the ancient writers in reference to their bathing establishments.

Having thus detailed from classical authorities the general habits of the Romans in connexion with their system of bathing, it now remains to examine and explain the internal arrangements of the structures which contained their baths, which will serve as a practical commentary upon all that has been said. Indeed, there are more ample and better materials for acquiring a thorough insight into Roman

manners in this one particular, than for any other of the usages connected with their domestic habits. Lucian, in the treatise which is inscribed *Hippias*, has given a minute and interesting description of a set of baths erected by an architect of that name, which it is to be regretted is much too long for insertion in this place, but which is well worth perusal; and an excavation made at Pompeii between the years 1824, '25, laid open a complete set of public baths (balneæ), with many of the chambers, even to the ceilings, in good preservation, and constructed in all their important parts upon rules very similar to those laid down by Vitruvius.

In order to render the subjoined remarks more easily intelligible, the preceding woodcut is inserted, which is taken from a fresco painting upon the walls of the thermæ of Titus at Rome.

The woodcut on the following page represents the ground-plan of the baths of Pompeii, which are nearly surrounded on three sides by houses and shops, thus forming what the Romans termed an *insula*.

The whole building, which comprises a double set of baths, has six different entrances from the street, one of which, A, gives admission to the smaller set only, which were appropriated to the women, and five others to the male department; of which two, B and C, communicate directly with the furnaces, and the other three, D, E, F, with the bathing apartments, of which F, the nearest to the Forum, was the principal one; the other two, D and E, being on opposite sides of the building, served for the convenience of those who lived on the north and east sides of the city. To have a variety of entrances (ἐξόδους πολλαῖς τεθνημένον) is one of the qualities enumerated by Lucian necessary to a well-constructed set of baths.¹ Passing through the principal entrance F, which is removed from the street by a narrow footway surrounding the *insula* (the outer curb of which is marked upon the plan by the thin line drawn round it), and after descending three steps, the bather finds upon his left hand a small chamber (1), which contained a convenience (latrina²), and proceeds into a covered portico (2), which ran round three sides of an open court—atrium (3), and these together formed the vestibule of the baths—vestibulum balnearum,³ in which the servants belonging to the establishment, as well as such of the slaves and attendants of the great and wealthy whose services were not required in the interior, waited. There are seats for their accommodation placed underneath the portico (4, 4). This compartment answers exactly to the first, which is described by Lucian.⁴ Within this court

1. (Plin., H. N., xxv., 38.)—2. (Ilii., p. 517.)—3. (Plin., H. N., xxviii., 14.—Celsus, De Med., i., 3.)—4. (Galen, De Methodo Medendi, x., 10, p. 708, 709, ed. Kühn.)—5. (Cels., De Med., i., 4.)—6. (Gell's Pompeii, vol. 1, p. 86, ed. 1832.)—7. (v., 11.)

1. (Hippias, 8.)—2. (Latrina was also used, previously to the time of Varro, for the bathing-vessel, quasi lavatrina.—Varro, De Ling. Lat., ix., 68, ed. Müller.—Compare Lucil., ap. Non. c. 3, n. 131.)—3. (Cic., Pro Cael., 26.)—4. (l. c., 5.)

en in Sir W. Gell's *Pompeii*. There are no less than six doors to this chamber; one led to the entrance E, another to the entrance D, a third to the small room (11), a fourth to the furnaces, a fifth to the tepid apartment, and the sixth opened upon the cold bath (10), named indifferently by the ancient authors, *natio*, *natorium*, *piscina*, *baptisterium*, *puteus*, λούτρον. The word *baptisterium*¹ is not a bath sufficiently large to immerse the whole body, but a vessel or *labrum*, containing cold water for pouring over the head.² The bath, which is coated with white marble, is 12 feet 10 inches in diameter, and about three feet deep, and has two marble steps to facilitate the descent into it, and a seat surrounding it at the depth of 10 inches from the bottom, for the purpose of enabling the bathers to sit down and wash themselves. The ample size of this basin explains to us what Cicero meant when he wrote, "*Latiorem piscinam voluisssem, ubi jactata brachia non offenderentur.*" It is probable that many persons contented themselves with the cold bath only, instead of going through the severe course of perspiration in the warm apartments; and as the *frigidarium* alone could have had no effect in baths like these, where it merely served as an *apodyterium*, the *natio* must be referred to when it is said that at one period cold baths were in such request that scarcely any others were used.³ There is a platform or ambulatory (*schola*⁴) round the bath, also of marble, and four niches of the same material disposed at regular intervals round the walls, with pedestals, for statues probably, placed in them; according to Sir W. Gell,⁵ with seats, which he interprets *scholæ*, for the accommodation of persons waiting an opportunity to bathe; but a passage of Vitruvius,⁶ hereafter quoted, seems to contradict this use of the term: and seats were placed in the *frigidarium* adjoining, for the express purpose of accommodating those who were obliged to wait for their turn. The ceiling is vaulted, and the chamber lighted by a window in the centre. The annexed woodcut represents a *frigidarium*, with its

In the cold bath of Pompeii the water ran into the basin through a spout of bronze, and was carried off again through a conduit on the opposite side. It was also furnished with a waste-pipe under the margin to prevent it from running over. No. 11 is a small chamber on the side opposite to the *frigidarium*, which might have served for shaving (*tonstrina*), or for keeping unguents or *strigiles*; and from the centre of the side of the *frigidarium*, the bather, who intended to go through the process of warm bathing and sudation, entered into (12) the *tepidarium*.

This chamber did not contain water either at Pompeii or at the baths of Hippias, but was merely heated with warm air of an agreeable temperature, in order to prepare the body for the great heat of the vapour and warm baths; and, upon returning, to obviate the danger of a too sudden transition to the open air. In this respect it resembles exactly the tepid chamber described by Lucian,⁷ which he says was of a moderate and not oppressive heat, adjoining to which he places a room for anointing (ὄλκος ἀλειψασθαι προσήκως παρεχόμενος).

In the baths at Pompeii this chamber served likewise as an *apodyterium* for those who took the warm bath; for which purpose the fittings up are evidently adapted, the walls being divided into a number of separate compartments or recesses for receiving the garments when taken off, by a series of figures of the kind called *Atlantes* or *Telamones*, which project from the walls, and support a rich cornice above them. One of these divisions, with the *Telamones*, is represented in the article *ΑΤΛΑΝΤΕΣ*. Two bronze benches were also found in the room, which was heated as well by its contiguity to the hypocaust of the adjoining chamber, as by a brazier of bronze (*foculus*), in which the charcoal ashes were still remaining when the excavation was made. A representation of it is given in the annexed woodcut. Its whole length was seven feet, and its breadth two feet six inches.

In addition to this service, there can be little doubt that this apartment was used as a depository for unguents and a room for anointing (ἀλειπτήριον, *unctuarium*, *eleothesium*), the proper place for which is represented by Lucian⁸ as adjoining to the *tepidarium*, and by Pliny⁹ as adjoining to the hypocaust: and for which purpose some of the niches between the *Telamones* seem to be peculiarly adapted. In the larger establishments, a separate chamber was allotted to these purposes, as may be seen by referring to the drawing taken from the *Thermae* of Titus; but, as there is no other spot within the circuit of the Pompeian baths which could be applied in the same manner, we may safely conclude that the inhabitants of this city were anointed in the *tepidarium*, which service was performed by slaves called *unctores* and *aliptæ*. (*Vid.* ΑΛΙΠΤÆ.) For this purpose the common people used oil simply or sometimes scented; but the more wealthy classes indulged in the greatest extravagance with regard to their perfumes and unguents. These they either procured from the *eleothesium* of the baths, or brought with them in small glass bottles (*ampullæ oleariae*), hundreds of which have been discovered in different excavations made in various parts of

cold bath⁷ at one extremity, supposed to have formed a part of the Formian villa of Cicero, to whose age the style of construction, and the use of the simple Doric order, undoubtedly belong. The bath itself, into which the water still continues to flow from a neighbouring spring, is placed under the alcove, and the two doors on each side opened into small chambers, which probably served as *apodyteria*. It is still to be seen in the gardens of the Villa Caposeli, at Mola di Gaeta, the site of the ancient Formiæ.

Italy. (*Id.* AMPULLA.) The fifth book of Athenæus contains an ample treatise upon the numerous kinds of ointments used by the Romans; which subject is also fully treated by Pliny.¹

Caligula is mentioned by Suetonius² as having invented a new luxury in the use of the bath, by perfuming the water, whether hot or cold, by an infusion of precious odours, or, as Pliny relates the fact,³ by anointing the walls with valuable unguents; a practice, he adds, which was adopted by one of the slaves of Nero, that the luxury should not be confined to royalty (*ne principale videatur hoc bonum*).

From this apartment, a door, which closed by its own weight, to prevent the admission of cold air, opened into No. 13, the thermal chamber, or *concamerata sudatio* of Vitruvius;⁴ and which, in exact conformity with his directions, contains the warm bath—*balneum*, or *caldæ lavatio*,⁵ at one of its extremities, and the semicircular vapour, or *Laconicum*, at the other; while the centre space between the two ends, termed *sudatio* by Vitruvius,⁶ and *sudatorium* by Seneca, is exactly twice the length of its width, according to the directions of Vitruvius. The object in leaving so much space between the warm bath and the *Laconicum* was to give room for the gymnastic exercises of the persons within the chamber, who were accustomed to promote a full flow of perspiration by rapid movements of the arms and legs, or by lifting weights; which practice is alluded to by Juvenal:⁷

“Magno gaudet sudare tumultu,
Quum lassata gravi ceciderunt brachia massa.”

In larger establishments, the conveniences contained in this apartment occupied two separate cells, one of which was appropriated to the warm bath, which apartment was then termed *caldarium*, *cella caldaria*, or *balneum*, and the other which comprised the *Laconicum* and sudatory—*Laconicum sudationesque*,⁸ which part alone was then designated under the name of *concamerata sudatio*. This distribution is represented in the painting on the walls of the *Thermæ* of Titus; in which there is also another peculiarity to be observed, viz., the passage of communication (*intercapedo*) between the two chambers, the flooring of which is suspended over the hypocaust. Lucian informs us of the use for which this compartment was intended, where he mentions as one of the characteristic conveniences in the baths of Hippias, that the bathers need not retrace their steps through the whole suite of apartments by which they had entered, but might return from the thermal chamber by a shorter circuit through a room of gentle temperature (*δι' ἡσέτια θερμῶν οἰκήματων*), which communicated immediately with the *frigidarium*.

The warm-water bath, which is termed *caldæ lavatio* by Vitruvius,⁹ *balneum* by Cicero,¹¹ *piscina* or *caldæ piscina* by Pliny¹² and Suetonius,¹³ as well as *labrum*¹⁴ and *solum* by Cicero,¹⁵ appears to have been a capacious marble vase, sometimes standing upon the floor, like that in the picture from the *Thermæ* of Titus; and sometimes either partly elevated above the floor, as it was at Pompeii, or entirely sunk into it, as directed by Vitruvius.¹⁶ The term *labrum* is generally used of a bath containing warm water, and *piscina* of one which contains cold; but the real distinction seems to be that the latter was larger than the former, as in the words of Cicero already quoted, “*latiorem piscinam voluisti*.”

sem.” Pliny¹ uses the term *piscina* for a pond or tank in the open air (which was probably the accurate and genuine sense of the word); which, from being exposed to the heat of the sun, possessed a higher temperature than the cold bath, which last he distinguishes in the same sentence by the word *puteus*, “a well,” which probably was that represented in the drawing from the bath at Mola.² Mæcenas is said, by Dion,³ to have been the first person who made use of a *piscina* of warm water, called by Dion *κολυμβήθρα*.⁴—The words of Vitruvius,⁵ in speaking of the warm-water bath, are as follows: “The bath (*labrum*) should be placed underneath the window, in such a position that the persons who stand around may not cast their shadows upon it. The platform which surrounds the bath (*scholæ laborum*) must be sufficiently spacious to allow the surrounding observers, who are waiting for their turn, to stand there without crowding each other. The width of the passage or channel (*alveus*), which lies between the parapet (*pluteus*) and the wall, should not be less than six feet, so that the space occupied by the seat and its step below (*pulvinus et gradus inferior*) may take off just two feet from the whole width.” The subjoined plans, given by Marini, will explain his meaning.

A, *labrum*, or bath; B, *scholæ*, or platform; C, *pluteus*, or parapet; D, *alveus*, passage between the *pluteus* and wall; F, *pulvinus*, or seat; and E, the lower step (*gradus inferior*), which together take up two feet.

The warm bath at Pompeii is a square basin of marble, and is ascended from the outside by two steps raised from the floor, which answered to the parapet or *pluteus* of Vitruvius. Around ran a narrow platform (*scholæ*); but which, in consequence of the limited extent of the building, would not admit of a seat (*pulvinus*) all round it. On the interior, another step, dividing equally the whole length of the cistern, allowed the bathers to sit down and wash themselves. The annexed section will render this easily intelligible.

A, *labrum*; B, *scholæ*; C, *pluteus*; D, the step on the inside, probably called *solum*, which word is sometimes apparently used to express the bath itself; and Cicero⁶ certainly makes use of the term

1. (H. N., xiii.)—2. (Cal., 37.)—3. (l. c.)—4. (v., 11.)—5. (Vitruv., l. c.)—6. (l. c.)—7. (Sat., vi., 420.)—8. (Vitruv., l. c.)—9. (l. c., 7.)—10. (l. c.)—11. (ad Att., ii., 3.)—12. (Ep., ii., 17.)—13. (Nero, 27.)—14. (Cic., ad Fam., xiv., 16.)—15. (in Pison., 27.)—16. (v., 10.)

1. (Ep., v., 6.)—2. (“Si natare latius aut tepidius velis, in area *piscina* est, in proximo *puteus*, ex quo possis rursus adstringi si punietur teporis.”)—3. (lib. lv.)—4. (πρώτος τε κολυμβήθραν θερμῶν ὕδατος ἐν τῇ πόλει κατεσκεύασεν.)—5. (v., 10.)—6. (in Pison., 27.)

to express a vessel for containing liquids. But the explanation given above is much more satisfactory, and is also supported by a number of passages in which it is used. It is adopted by Fulv. Ursinus,¹ who represents the *solium*, in a drawing copied from Mercurialis,² as a portable bench or seat, placed sometimes within and sometimes by the side of the bath. Augustus is represented³ as making use of a wooden *solium* (quod ipse Hispanico verbo *duretam* vocabat); in which passage it is evident that a seat was meant, upon which he sat to have warm water poured over him. In the women's baths of the opulent and luxurious capital, the *solia* were sometimes made of silver.⁴

We now turn to the opposite extremity of the chamber which contains the *Laconicum* or vapour bath, so called because it was the custom of the Lacedæmonians to strip and anoint themselves without using warm water after the perspiration produced by their athletic exercises;⁵ to which origin of the term Martial also alludes:⁶

*"Ritus si placeant tibi Laconum,
Contentus potius arido vapore
Cruda Virgine Martiave mergi."*

By the terms *Virgine* and *Martia* the poet refers to the *Aqua Virgo* and the *Aqua Martia*, two streams brought to Rome by the aqueducts.) (*Vid. Aquæ-ductus*.)

It is termed *assa* by Cicero,⁷ from ἄζω, to dry; because it produced perspiration by means of a dry, hot atmosphere; which Celsus⁸ consequently terms *sudationes assas*, "dry sweating" which, he afterward adds,⁹ was produced by dry warmth (*calore sicco*). It was called by the Greeks *πυπιατήριον*,¹⁰ from the fire of the hypocaust, which was extended under it; and hence by Alexander Aphrodis., *ξηρὸν θολόν*, "a dry vaulted chamber."

Vitruvius says that its width should be equal to its height, reckoning from the flooring (*suspensura*) to the bottom of the thole (*ima curvatura hemisphærii*), over the centre of which an orifice is left, from which a bronze shield (*clipeus*) was suspended. This regulated the temperature of the apartment, being raised or lowered by means of chains to which it was attached. The form of the cell was required to be circular, in order that the warm air from the hypocaust might encircle it with greater facility.¹¹ In accordance with these rules is the *Laconicum* at Pompeii, a section of which is given below, the *clipeus* only being added in order to make the meaning more clear.

A, The suspended pavement, *suspensura*; B, the junction of the hemisphærium with the side walls, *ima curvatura hemisphærii*; C, the shield, *clipeus*; E and F, the chains by which it is raised and lowered; D, a *labrum*, or flat marble vase, like those called *tæze* by the Italians, into which a supply of water was introduced by a single pipe running through the stem. Its use is not exactly ascertained in this place, nor whether the water it contained was hot or cold.

It would not be proper to dismiss this account of the *Laconicum* without alluding to an opinion adopted by some writers, among whom are Galiano and

Cameron, that the *Laconicum* was merely a small cupola, with a metal shield over it, rising above the flooring (*suspensura*) of the chamber, in the manner represented by the drawing from the Thermæ of Titus, which drawing has, doubtless, given rise to the opinion. But it will be observed that the design in question is little more than a section, and that the artist may have resorted to the expedient in order to show the apparatus belonging to one end of the chamber, as is frequently done in similar plans, where any part which required to be represented upon a larger scale is inserted in full development within the general section; for in none of the numerous baths which have been discovered in Italy or elsewhere, even where the pavements were in a perfect state, has any such contrivance been observed. Besides which, it is manifest that the *clipeus* could not be raised or lowered in the design alluded to, seeing that the chains for that purpose could not be reached in the situation represented, or, if attained, could not be handled, as they must be red-hot from the heat of the hypocaust, into which they were inserted. In addition to which, the remains discovered tally exactly with the directions of Vitruvius, which this does not.

After having gone through the regular course of perspiration, the Romans made use of instruments called *strigiles* (or *strigles*) to scrape off the perspiration, much in the same way as we are accustomed to scrape the sweat off a horse with a piece of iron hoop after he has run a heat, or comes in from violent exercise. These instruments, some specimens of which are represented in the following woodcut, and many of which have been discovered

among the ruins of the various baths of antiquity, were made of bone, bronze, iron, and silver; all corresponding in form with the epithet of Mar-

1. (Append. in Ciaccon., De Triclin.)—2. (De Art. Gymn.)—3. (Suet., Octav., 82.)—4. (Plin., II. N., xxxiii., 54.)—5. (Dion., lvi., p. 216.)—6. (Epigr., VI., xlii., 16.)—7. (Ad Quint. Fratr., iii., l. 4.)—8. (iii., cap. ult.)—9. (xi., 17.)—10. (Voss., Lex. Etym., s. v.)—11. (Vitruv., v., 10.—See also Athenæus, xi., p. 104.)

tial, "*curvo distinguere ferro*."¹ The poorer classes were obliged to scrape themselves, but the more wealthy took their slaves to the baths for the purpose; a fact which is elucidated by a curious story related by Spartan.² The emperor, while bathing one day, observing an old soldier, whom he had formerly known among the legions, rubbing his back, as the cattle do, against the marble walls of the chamber, asked him why he converted the wall into a strigil; and learning that he was too poor to keep a slave, he gave him one, and money for his maintenance. On the following day, upon his return to the bath, he found a whole row of old men rubbing themselves in the same manner against the wall, in the hope of experiencing the same good fortune from the prince's liberality; but, instead of taking the hint, he had them all called up, and told them to scrub one another.

The strigil was by no means a blunt instrument; consequently, its edge was softened by the application of oil, which was dropped upon it from a small vessel called *guttus* (called also *ampulla*, *λῆκνθος*, *μυροθήκιον*, *ἐλαιοφόρον*? *Vid. AMPULLA*.) This had a narrow neck, so as to discharge its contents drop by drop, from whence the name is taken. A representation of a *guttus* is given in the preceding woodcut. Augustus is related to have suffered from an over-violent use of this instrument.⁴ Invalids and persons of a delicate habit made use of sponges, which Pliny says answered for towels as well as strigils. They were finally dried with towels (*lintea*), and anointed.⁵

The common people were supplied with these necessities in the baths, but the more wealthy carried their own with them, as we infer from Persius:⁶

"*I, puer, et strigiles Crispini ad balnea defer.*"

Lucian⁷ adds also soap and towels to the list.

After the operation of scraping and rubbing dry, they retired into, or remained in, the *tepidarium* until they thought it prudent to encounter the open air. But it does not appear to have been customary to bathe in the water, when there was any, which was not the case at Pompeii, nor in the baths of Hippias,⁸ either of the *tepidarium* or *frigidarium*; the temperature only of the atmosphere in these two chambers being of consequence to break the sudden change from the extreme of hot to cold.

Returning now back into the *frigidarium* (8), which, according to the directions of Vitruvius,⁹ has a passage (14) communicating with the mouth of the furnace (e), which is also seen in the next woodcut upon the boilers, called *præfurnium*, *propneigeum*,¹⁰ *προπνευγιεῖον* (from *πρό*, before, and *πνευγέω*, a furnace), and passing down that passage, we reach the chamber (15) into which the *præfurnium* projects, and which has also an entrance from the street at B. It was appropriated to the use of those who had charge of the fires (*fornacatores*). There are two staircases in it; one of which leads to the roof of the baths, and the other to the coppers which contained the water. Of these there were three: one of which contained the hot water—*caldarium* (sc. *vas* or *athanum*); the second the tepid—*tepidarium*; and the last the cold—*frigidarium*. The warm water was introduced into the warm bath by means of a conduit pipe, marked on the plan, and conducted through the wall. Underneath the *caldarium* was placed the furnace (*furnus*¹¹), which served to heat the water, and give out streams of warm air into the hollow cells of the *hypocaustum* (from

ὑπό, under, and *καίω*, to burn). It passed from the furnace under the first and last of the caldrons by two flues, which are marked upon the plan. These coppers were constructed in the same manner as is represented in the engraving from the *Thermæ* of Titus; the one containing hot water being placed immediately over the furnace; and, as the water was drawn out from thence, it was supplied from the next, the *tepidarium*, which was already considerably heated, from its contiguity to the furnace and the hypocaust below it, so that it supplied the deficiency of the former without materially diminishing its temperature; and the vacuum in this last was again filled up from the farthest removed, which contained the cold water received directly from the square reservoir seen behind them; a principle which has at length been introduced into the modern bathing establishments, where its efficacy, both in saving time and expense, is fully acknowledged. The boilers themselves no longer remain, but the impressions which they have left in the mortar in which they were imbedded are clearly visible, and enable us to ascertain their respective positions and dimensions, the first of which, the *caldarium*, is represented in the annexed cut.

Behind the coppers there is another corridor (16), leading into the court or atrium (17) appropriated to the servants of the bath, and which has also the convenience of an immediate communication with the street by the door at C.

We now proceed to the adjoining set of baths, which were assigned to the women. The entrance is by the door A, which conducts into a small vestibule (18), and thence into the *apodyterium* (19), which, like the one in the men's baths, has a seat (*pulvinius* et *gradus*) on either side built up against the wall. This opens upon a cold bath (20), answering to the *natalis* of the other set, but of much smaller dimension, and probably similar to the one denominated by Pliny¹ *puteus*. There are four steps on the inside to descend into it. Opposite to the door of entrance into the *apodyterium* is another doorway which leads to the *tepidarium* (21), which also communicates with the thermal chamber (22), on one side of which is a warm bath in a square recess, and at the farther extremity the *Laconicum* with its *labrum*. The floor of this chamber is suspended, and its walls perforated for flues, like the corresponding one in the men's baths.

The comparative smallness and inferiority of the fittings-up in this suite of baths has induced some Italian antiquaries to throw a doubt upon the fact of their being assigned to the women; and among these the Abbate Iorio² ingeniously suggests that they were an old set of baths, to which the larger ones were subsequently added when they became too small for the increasing wealth and population of the city. But the story, already quoted, of the

1. (Epigr., xiv., 51.)—2. (Hadrian, c. 17.)—3. (Ruperti in Juv., Sat., iii., 262.)—4. (Suet., Octav., 30.)—5. (Juv., Sat., iii., 262.)—Apuleius, Met., lib. ii.—Plin., H. N., xxxi., 47.)—6. (Sat., v., 126.)—7. (Lexiph., vol. ii., p. 320, ed. Reiz.)—8. (Lucian, i. c.)—9. (v., 11.)—10. (Plin., Ep., ii., 17.)—11. (Hor., Ep., i., 11, 12.)

consul's wife who turned the men out of their baths at Teanum for her convenience, seems sufficiently to negative such a supposition, and to prove that the inhabitants of ancient Italy, if not more selfish, were certainly less gallant than their successors. In addition to this, Vitruvius expressly enjoins that the baths of the men and women, though separate, should be contiguous to each other, in order that they might be supplied from the same boilers and hypocaust; directions which are here fulfilled to the letter, as a glance at the plan will demonstrate.

It does not enter within the scope of this article to investigate the source from whence, or the manner in which, the water was supplied to the baths of Pompeii. But it may be remarked that the suggestion of Mazois, who wrote just after the excavation was commenced, and which has been copied from him by the editor of the volumes on Pompeii published by the Society for the Diffusion of Useful Knowledge, was not confirmed by the excavation; and those who are interested in the matter may consult the fourth appendix to the *Plan de Pompeii*, by the Abbate Iorio.

Notwithstanding the ample account which has been given of the plans and usages respecting baths in general, something yet remains to be said about that particular class denominated *Thermæ*; of which establishments the baths, in fact, constituted the smallest part. The *thermæ*, properly speaking, were a Roman adaptation of the Greek gymnasium, or palaestra (*vid. PALÆSTRA*), as described by Vitruvius; both of which contained a system of baths in conjunction with conveniences for athletic games and youthful sports, *exedra* in which the rhetoricians declaimed, poets recited, and philosophers lectured, as well as porticoes and vestibules for the idle, and libraries for the learned. They were decorated with the finest objects of art, both in painting and sculpture, covered with precious marbles, and adorned with fountains and shaded walks and plantations, like the groves of the Academy. It may be said that they began and ended with the Empire, for it was not until the time of Augustus that these magnificent structures were commenced. M. Agrippa is the first who afforded these luxuries to his countrymen, by bequeathing to them the *thermæ* and gardens which he had erected in the Campus Martius.¹ The Pantheon, now existing at Rome, served originally as a vestibule to these baths; and, as it was considered too magnificent for the purpose, it is supposed that Agrippa added the portico and consecrated it as a temple, for which use it still serves. It appears from a passage in Sidonius Apollinaris,² that the whole of these buildings, together with the adjacent *Thermæ Neronianæ*, remained entire in the year A.D. 466. Little is now left beyond a few fragments of ruins, and the Pantheon. The example set by Agrippa was followed by Nero, and afterward by Titus; the ruins of whose *thermæ* are still visible, covering a vast extent, partly under ground and partly above the Esquiline Hill. *Thermæ* were also erected by Trajan, Caracalla, and Diocletian, of the last two of which ample remains still exist; and even as late as Constantine, besides several which were constructed by private individuals, P. Victor enumerates sixteen, and Panvinus³ has added four more.

Previously to the erection of these establishments for the use of the population, it was customary for those who sought the favour of the people to give them a day's bathing free of expense. Thus, according to Dion Cassius,⁴ Faustos, the son of Sulla, furnished warm baths and oil gratis to the

people for one day; and Augustus, on one occasion, furnished warm baths and barbers to the people for the same period free of expense,⁵ and at another time for a whole year to the women as well as men.⁶ From thence it is fair to infer that the quadrant paid for admission into the *balneæ* was not exacted at the *thermæ*, which, as being the works of the emperors, would naturally be opened with imperial generosity to all, and without any charge, otherwise the whole city would have thronged to the establishment bequeathed to them by Agrippa; and in confirmation of this opinion, it may be remarked, that the old establishments, which were probably erected by private enterprise,⁷ were termed *meritoria*.⁸ Most, if not all, of the other regulations previously detailed as relating to the economy of the baths, apply equally to the *thermæ*: but it is to these establishments especially that the dissolute conduct of the emperors, and other luxurious indulgences of the people in general, detailed in the compositions of the satirists and later writers, must be considered to refer.

Although considerable remains of the Roman *thermæ* are still visible, yet, from the very ruinous state in which they are found, we are far from being able to arrive at the same accurate knowledge of their component parts, and the usages to which they were applied, as has been done with respect to the *balneæ*; or, indeed, to discover a satisfactory mode of reconciling their constructive details with the description which Vitruvius has left of the baths appertaining to a Greek palaestra, or the description given by Lucian of the baths of Hippias. All, indeed, is doubt and guess-work; each of the learned men who have pretended to give an account of their contents differing in almost all the essential particulars from one another. And yet the great similarity in the ground-plan of the three which still remain cannot fail to strike even a superficial observer; so great, indeed, that it is impossible not to perceive at once that they were all constructed upon a similar plan. Not, however, to dismiss the subject without enabling our readers to form something like a general idea of these enormous edifices, which, from their extent and magnificence, have been likened to provinces (*in modum provinciarum exstructæ*), a ground-plan of the *Thermæ* of Caracalla is annexed, which are the best preserved among those remaining, and which were, perhaps, more splendid than all the rest. Those apartments, of which the use is ascertained with the appearance of probability, will be alone marked and explained. The dark parts represent the remains still visible, the open lines are restorations.

A, Portico fronting the street made by Caracalla when he constructed his *thermæ*. B, Separate bathing-rooms, either for the use of the common people, or, perhaps, for any persons who did not wish to bathe in public. C, Apodyteria attached to them. D, D, and E, E, the porticoes.⁹ F, F, *Exedra*, in which there were seats for the philosophers to hold their conversations.⁷ G, *Hypæthræ*, passages open to the air: *Hypæthræ ambulationes* quas Græci *περιπόρῳδας*, nostri *xystos* appellant.⁸ H, H, *Stadia* in the palaestra—*quadrata sive oblonga*.⁹ I, I, Possibly schools or academies where public lectures were delivered. J, J, and K, K, Rooms appropriated to the servants of the baths (*balneatores*). In the latter are staircases for ascending to the principal reservoir. L, Space occupied by walks and shrubberies—*ambulationes inter plataneas*.¹⁰ M, The arena or stadium in which the youth performed their ex-

1. (Id., liv., p. 755.)—2. (Id., xlix., p. 600.)—3. (Compare Plin., H. N., ix., 79.)—4. (Plin., Ep., ii., 17.)—5. (Amm. Marcell., xvi., 6.)—6. (Vitruv., v., 11.)—7. (Vitruv., i. c.—Cic., De Orat., ii., 5.)—8. (Vitruv., i. c.)—9. (Vitruv., i. c.)—10. (Vitruv., i. c.)

ercises, with seats for the spectators,¹ called the *theatridium*. N, N, Reservoirs, with upper stories, sectional elevations of which are given in the two subsequent woodcuts. O, Aquæduct which supplied the baths. P, The cistern or piscina. This external range of buildings occupies one mile in circuit.

We now come to the arrangement of the interior, for which it is very difficult to assign satisfactory destinations. Q represents the principal entrances, of which there were eight. R, the *natio, piscina*, or cold-water bath, to which the direct entrance from the portico is by a vestibule on either side marked S, and which is surrounded by a set of chambers which served most probably as rooms for undressing (*apodyteria*), anointing (*unctuaria*), and stations for the *capsarii*. Those nearest to the peristyle were, perhaps, the *conisteria*, where the powder was kept which the wrestlers used in order to obtain a firmer grasp upon their adversaries.

*"Ille cavis hausto spargit me pulvere palmis,
Inque vicem fulvæ tactu flavescit arena."*²

The inferior quality of the ornaments which these apartments have had, and the staircases in two of them, afford evidence that they were occupied by menials. T is considered to be the *tepidarium*, with four warm baths (v, v, v, v) taken out of its four angles, and two *labra* on its two flanks. There are steps for descending into the baths, in one of which traces of the conduit are still manifest. Thus it would appear that the centre part of this apartment served as a *tepidarium*, having a *balneum* or *caldæ lavatio* in four of its corners. The centre part,

like that also of the preceding apartment, is supported by eight immense columns.

The apartments beyond this, which are too much dilapidated to be restored with any degree of certainty, contained, of course, the laconicum and sudatories, for which the round chamber W, and its appurtenances seem to be adapted, and which are also contiguous to the reservoirs, Z, Z.¹

ε, ε probably comprised the *ephebia*, or places where the youth were taught their exercises, with the appurtenances belonging to them, such as the *sphæristerium* and *corycaum*. The first of these takes its name from the game at ball, so much in favour with the Romans, at which Martial's friend was playing when the bell sounded to announce that the water was ready.² The latter is derived from *κύρηνος*, a sack,³ which was filled with bran and olive husks for the young, and sand for the more robust, and then suspended at a certain height, and swung backward and forward by the players.⁴

The chambers also on the other side, which are not marked, probably served for the exercises of the palaestra in bad weather.⁵

These baths contained an upper story, of which nothing remains beyond what is just sufficient to indicate the fact. They have been mentioned and eulogized by several of the Latin authors.⁶

It will be observed that there is no part of the bathing department separated from the rest which could be assigned for the use of the women exclusively. From this it must be inferred either that both sexes always bathed together promiscuously

1. (Vitruv., v. c.)—2. (Ovid, Met., ix., 35.—Vid. etiam Salmas., ad Ter. all., Pall., p. 217.—Mercurial., De Arte Gymn., i., 8.)

in the thermæ, or that the women were excluded altogether from these establishments, and only admitted to the *balneæ*.

It remains to explain the manner in which the immense body of water required for the supply of a set of baths in the thermæ was heated, which has been performed very satisfactorily by Piranesi and Cameron, as may be seen by a reference to the two subjoined sections of the *castellum aquæductus* and *viscina* belonging to the Thermæ of Caracalla.

A, arches of the aquæduct which conveyed the water into the *piscina* B, from whence it flowed into the upper range of cells through the aperture at C, and thence again descended into the lower ones by the aperture at D, which were placed immediately over the hypocaust E, the præfurnium of which is seen in the transverse section at F, in the lower cut. There were thirty-two of these cells arranged in two rows over the hypocaust, sixteen on each side, and all communicating with each other; and over these a similar number similarly arranged, which communicated with those below by the aperture at D. The parting walls between these cells were likewise perforated with flues, which served to disseminate the heat all round the whole body of water. When the water was sufficiently warm, it was turned on to the baths through pipes conducted likewise through flues in order to prevent the loss of temperature during the passage, and the vacuum was supplied by tepid water from the range above, which was replenished from the *piscina*; exactly upon the principle represented in the drawing from the Thermæ of Titus, ingeniously applied upon a much larger scale.

BATILLUS (*ἄμνη*), a shovel. Pliny mentions the use of iron shovels, when heated, in testing silver and verdigris.¹ Horace ridicules the vain pomposity of a municipal officer in the small town of Fundi, who had a shovel of red-hot charcoal carried before him in public for the purpose of burning in it frankincense and other odours (*prunæ batillum*?). Varro points out the use of the shovel in the poultry-yard (*cum batillo circumire, ac stercore tollere*).² The same instrument was employed, together with the spade, for making roads and for various agricultural operations (*ἀματ*).³ "Hamæ" are also mentioned as utensils for extinguishing fires. These may have been wooden shovels, used for throwing water, as we now see them employed in some countries which abound in pools and canals.⁴

***BATIS** (*βαρίς*), a species of fish. It is the *Raia batis*, L.; called in French *Coliart*, in English the *Flair* or *Skate*.¹

***BATOS** (*βάτος*), a plant or shrub, the species of which, as described by Theophrastus,² are thus arranged by Stackhouse: The first, or *ὀρθοφύης*, is the *Rubus fruticosus*, or Common Bramble. The second, or *χαλαίβατος*, is the *R. Chamæmorus*, or Cloud-berry (called in Scotland the Avron). The third, or *κυνόβατος*, is the *R. idæus*, or Raspberry. Sprengel agrees with almost all the authorities, that the *βάτος*, properly speaking, of Dioscorides and Galen, is the *Rubus fruticosus*; and the *idaia*, the *Rubus idæus*. It may be proper to remark, that by the poets, *βάτος* is often applied to any thorny shrub. Thus, in the following epigram, it is applied to the stem of the rose:

"Τὸ ῥόδον ἀκμάζει βαῖον χρόνον, ἦν δὲ παρέλθῃ
Ζητῶν εὐρήσεις οὐ ῥόδον ἀλλὰ βάτον."³

***BATRACHTUM** (*βατράχιον*), a plant of which Apuleius says, "*Nascitur sæpe in Sardinia*." Hence Schulze, who is otherwise undecided respecting it, holds it to be identical with the "*Sardoa herba*" of Virgil and others, namely, a species of the *Ranunculus*, or Crow-foot. Sprengel refers the first species of Dioscorides to the *Ranunculus Asiaticus*; the second to the *R. lanuginosus*; the third to the *R. muricatus*; and the fourth to the *R. aquatilis*, upon the authority of Sibthorp.⁴

***BATRACHUS** (*βάτραχος*), I. The Frog, called in Latin *Rana*. The name was applied to several species of the genus *Rana*. "The common frogs of Greece," observes Dodwell, "have a note totally different from that of the frogs of the northern climates, and there cannot be a more perfect imitation of it than the *Brekekekex koax koax* of Aristophanes."—The *Rana arborea*, according to the same traveller, is of a most beautiful light-green colour, and in its form nearly resembles the common frog, but is of a smaller size; it has also longer claws, and a glutinous matter at its feet, with which it attaches itself with great facility to any substance that comes in its way. It lives chiefly on trees, and jumps with surprising agility from branch to branch. Its colour is so nearly identified with that of the leaves, that it is very difficult to distinguish the one from the other. Its eyes are of a most beautiful vivacity, and it is so extremely cold that, when held in the hand, it produces a chilly sensation like a piece of ice. Its song is surprisingly loud and shrill, and in hot days almost as incessant and tiresome as that of the tettix. These animals are more common in Leucadia than in other parts of Greece.⁵

II. A species of fish, called in English the Toad-fish, Frog-fish, and Sea-devil. It is the *Lophius piscatorius*, L.; in French, *Bandroie*; in Italian, *Martino pescatore*. Aristotle calls it the *βάτραχος ἄλιος*, Ælian the *β. ἄλιεύς*. By Ovid it is termed *Rana*; by Pliny, *Rana*, and also *Rana piscatrix*; and by Cicero, *Rana marina*. Schneider, in his commentary on Aristotle, states that the *βάτραχος* of Oppian would appear to be the *Lophius barbatus*, and that of Ælian the *L. vespertilio*.⁶

BAXA or **BAXEA**, a sandal made of vegetable leaves, twigs, or fibres. According to Isidore,⁷ this kind of sandal was worn on the stage by comic, while the cothurnus was appropriate to tragic actors. When, therefore, one of the characters in

A., ix., 24; xiv., 1.—Ovid, Hal., 126.—Plin., H. N., ix., 24; xiv., 10.—Cic., Nat. Deor., ii., 49.)—7. (Orig., xix., 33.)

Plantus¹ says, "*Qui extergentur baxeæ?*" we may suppose him to point to the sandals on his feet.

Philosophers also wore sandals of this description, at least in the time of Tertullian² and Apuleius,³ and probably for the sake of simplicity and cheapness.

Isidore adds that *baxeæ* were made of willow (*ex salice*), and that they were also called *calones*; and he thinks that the latter term was derived from the Greek *καλον*, wood. It is probable that in Spain they were made of Spanish broom (*spartum**). From numerous specimens of them discovered in the catacombs, we perceive that the Egyptians made them of palm-leaves and papyrus.⁵ They are sometimes observable on the feet of Egyptian statues. According to Herodotus, sandals of papyrus (*ὑποδήματα βύβλινα**) were a part of the required and characteristic dress of the Egyptian priests. We may presume that he intended his words to include not only sandals made, strictly speaking, of papyrus, but those also in which the leaves of the date-palm were an ingredient, and of which Apuleius makes distinct mention, when he describes a young priest covered with a linen sheet and wearing sandals of palm (*linteis amictus intectum, pedesque palmis bazeis indutum**). The accompanying woodcut shows two sandals exactly answering to this description, from the collection in the British Museum. The upper one was worn on the right foot. It has a loop on the right side for fastening the band which went across the instep. This band, together with the ligature connected with it, which was inserted between the great and the second toe, is made of the stem of the papyrus, undivided and unwrought. The lower figure shows a sandal in which the portions of the palm-leaf are interlaced with great neatness and regularity, the sewing and binding being effected by fibres of papyrus. The three holes may be observed for the passage of the band and ligature already mentioned.

It appears that these vegetable sandals were sometimes ornamented, so as to become expensive and fashionable; for Tertullian says, "*Soccus et baxa quotidie deaurantur*."⁸ The making of them, in all their variety, was the business of a class of men called *baxearii*; and these, with the *solearii*, who made other kinds of sandals, constituted a corporation or college at Rome.⁹

*BDELLA (βδέλλα), the common Leech, or *Hirudo domestica*. The application of leeches is often recommended by Galen and the medical authors subsequent to him. The poet Oppian alludes to the medicinal use of the leech, and describes very graphically the process by which it fills itself with blood.¹⁰

*BDELLIUM (βδέλλιον), commonly called a gum,

but in reality a gum-resin, the origin of which is a subject of doubt. It would appear that there are two, if not more, kinds of bdellium, the source of one of which seems to be ascertained; the others are matters of controversy. The *Bdellium* of the ancients came from India, Arabia, Babylonia, and Bactriana. The last was the best.¹ It still comes, though not exclusively, from Asia. Adanton states that he saw in Africa the substance exude from a thorny species of *Amyris*, called by the natives *Nioutout*. From its resemblance to myrrh, the analogy is in favour of its being obtained from an *Amyris* or *Balsamodendron*. The opinion of its being obtained from a palm, either the *Leontarus domestica* (Gærtn.) or the *Borassus flabelliformis*, is very improbable. The Sicilian bdellium is produced by the *Drucus Hispanicus* (Decand.), which grows on the islands and shores of the Mediterranean. The Egyptian bdellium is conjectured to be produced by the *Borassus flabelliformis* already alluded to. Dioscorides and Galen describe two kinds of bdellium, the second of which is *Benzoin*, according to Hardouin and Sprengel.

II. A substance mentioned in the second chapter of Genesis,² and which has given rise to a great diversity of opinion. The Hebrew name is *bedolah*, which the Septuagint renders by *ἀνθραξ*, "carbuncle;" the Syriac version, "beryll" (reading *berolah*); the Arabic, "pearls;" Aquila, Theodotion, and Symmachus, "Bdellium;" while some are in favour of "crystal," an opinion which Reland, among others, maintains.⁴ There is nothing, however, of so much value in bdellium as to warrant the mention of this in the account of a particular region; it is more than probable, on the contrary, that pearls are meant, as expressed by the Arabic version. This view of the subject was maintained by many of the Jewish rabbins, and, among others, by Benjamin of Tudela. Bochart also advocates it with great learning; and it derives great support from another passage in the Sacred Writings, where Manna is compared with *Bdellium*. As the Manna is said to have been white and round, these two characteristics give rise at once to a resemblance between it and pearls.⁵

BEBΑΙΩΣΕΙΣ ΔΙΚΗ (βεβαιώσεως δίκη), an action to compel the vendor to make a good title, was had recourse to when the right or possession of the purchaser was impugned or disturbed by a third person. A claimant under these circumstances, unless the present owner were inclined to fight the battle himself (*αὐτομαχεῖν*), was referred to the vendor as the proper defendant in the cause (*εἰς παράτηρα ἀνάγειν*). If the vendor were then unwilling to appear, the action in question was the legal remedy against him, and might be resorted to by the purchaser even when the earnest only had been paid.⁶ From the passages in the oration of Demosthenes against Pantætus that bear upon the subject, it is concluded by Heraldus⁷ that the liability to be so called upon was inherent in the character of a vendor, and, therefore, not the subject of specific warranty or covenants for title. The same critic also concludes, from the glosses of Hesychius and Suidas, that this action might in like manner be brought against a fraudulent mortgagor.⁸ If the claimant had established his right, and been, by the decision of the dicasts, put in legal possession of the property, whether movable or otherwise, as appears from the case in the speech against Pantætus, the ejected purchaser was entitled to sue for reim-

bursement from the vendor by the action in question.¹ The cause is classed by Meier² among the *δικαιὰ πρὸς τινα*, or civil actions that fell within the cognizance of the *thesmothetæ*.

*BEL'ONE (*βελόνη*), the Gar-fish or Horn-fish, the *Esox Belone*, L. It is called *Durio* in Athenæus; *βελόνη θαλασσίη* by *Ælian*; ³ *βαρξίς* by *Oppian*; ⁴ and *Acus sive Belone* by *Pliny*,⁵ who elsewhere says, "*Belone qui aculeati vocantur*."⁶ The *Belone* gets its name from its long and slender shape, like a "needle." The bones of this fish are remarkable for their colour, which is a beautiful green, not arising either from cooking or the spinal marrow, as some have believed. There is a long dissertation on this fish in the *Addenda* to *Schneider's* edition of *Ælian*, and in *Gesner, De Aquatilibus*.⁷

*BECHION. (*vid.* BHXION.)

*BEMA (*βῆμα*). (*vid.* ECCLESIA.)

BENDIDEIA (*βενδίδεια*), a Thracian festival in honour of the goddess *Βένδις*, who is said to be identical with the Grecian *Artemis*⁸ and with the Roman *Diana*. The festival was of a bacchanalian character.⁹ From Thrace it was brought to Athens, where it was celebrated in the *Peiræus*, according to the scholiast on *Plato*,¹⁰ on the nineteenth, or, according to *Aristotele* *Rhodus* and others, *οἱ ὑπομνηματισταί*, referred to by *Proclus*,¹¹ on the twentieth, of the month *Thargelion*, before the *Panathenæa Minora*.¹² *Herodotus*¹³ says that he knows that the Thracian and *Pæonian* women, when they sacrifice to the royal *Artemis*, never offer the victims without a wheat-stalk (*ἀνευ πυρῶν καλᾶμυς*). This was probably at the *Βενδίδεια*. The Temple of *Βένδις* was called *Βενδίδειον*.¹⁴

BENEFICIUM ABSTINENDI. (*vid.* HERES.)

BENEFICIUM, BENEFICIARIUS. The word *beneficium* is equivalent to *feudum* or *fief* in the writers on the feudal law, and is an interest in land, or things inseparable from the land, or things immovable.¹⁵ The *beneficiarius* is he who has a *beneficium*. The term *benefice* is also applied to an ecclesiastical preferment.¹⁶

The term *beneficium* is of frequent occurrence in the Roman law, in the sense of some special privilege or favour granted to a person in respect of age, sex, or condition. But the word was also used in other senses, and the meaning of the term, as it appears in the feudal law, is clearly derivable from the signification of the term among the Romans of the later republican and earlier imperial times. In the time of *Cicero*, it was usual for a general or a governor of a province to report to the treasury the names of those under his command who had done good service to the state: those who were included in such report were said *in beneficiis ad ærarium deferri*.¹⁷ *In beneficiis* in these passages may mean that the persons so reported were considered as persons who had deserved well of the state, and so the word *beneficium* may have reference to the services of the individuals; but as the object for which their services were reported was the benefit of the individuals, it seems that the term had reference also to the reward, immediate or remote, obtained for their services. The honours and offices of the Roman state, in the republican period, were called the *beneficia* of the *Populus Romanus*.

Beneficium also signified any promotion conferred on, or grant made to soldiers, who were thence

called *beneficarii*: this practice was common, as we see from inscriptions in *Gruter*,¹ in some of which the *beneficiarius* is represented by the two letters B. F. In this sense we must understand the passage of *Cæsar*² when he speaks of the *magna beneficia* and the *magna clientela* of *Pompey* in Citerior Spain. *Beneficiarius* is also used by *Cæsar*³ to express the person who had received a *beneficium*. It does not, however, appear from these passages what the *beneficium* actually was. It might be any kind of honour, or special exemption from service.⁴

Beneficiarius is opposed by *Festus*⁵ to *munifex*, in the sense of one who is released from military service, as opposed to one who is bound to do military service.

It appears that grants of land and other things made by the Roman emperors were called *beneficia*, and were entered in a book called *Liber Beneficiorum*.⁶ The secretary or clerk who kept this book was called a *commentarius beneficiorum*, as appears from an inscription in *Gruter*.⁷

*BER'BERI (*βέρβερι*), according to *Rondelet*, the *Concha margaritifera*, or Mother of Pearl, meaning, as *Adams* supposes, the *Avicula margaritifera* of later naturalists.⁸ *Eustathius* makes it an Indian name. It appears to be connected in some way with the commerce of the Eastern region, or seacoast, termed *Barbaria*.⁹

*BERRIKOK'KA (*βερικόκκα*), a synonyme of the *Malum Armeniacum*, or *Apricot*.

*BERYLLUS (*βήρυλλος*), the *Beryl*, a precious stone, forming a sub-species of *emerald*. The Romans would appear to have been in the habit of studding their cups with *beryls*, and hence *Juvenal* says, "*et inæquales beryllo Vitro tenet phialas*."¹⁰ The affinity between the *beryl* and the *emerald* was not unknown to the ancients, and hence *Pliny* remarks, "*Beryls appear to many to have the same, or, at least, a like nature with emeralds*."¹¹ According to this writer, they came from India, and were rarely found in other countries. At the present day, however, the finest *beryls* are obtained from *Dauria*, on the frontiers of China. They occur, also, in the *Uralian Mountains*, and other parts of *Siberia*, in *France*, *Saxony*, the *United States*, and *Brazil*, especially the latter.¹² The normal type of the *Beryl*, as of the *emerald*, is the *hexaëdral prism*, more or less modified; the pointing, however, is not always complete.¹³ *Pliny* seems to regard this crystalline form of the stone as the result of the lapidary's art; he adds, however, that some suppose the *Beryl* to be naturally of that shape. The same writer enumerates eight different kinds: "The best were those of a pure sea-green, our *aqua marina*, or, as the French term it, *Beril aigue-marine*. The next in esteem were called *Chrysoberyls*, and are somewhat vaguely described as '*pavillo pallidiores, sed in aureum colorem exeunte fulgore*.'" This was probably the yellow *emerald*, such as occurs in *Auvergne*, or at *Haddam* in *Connecticut*. The third was called *Chrysoprase*, and would seem to have been, in fact, as *Pliny* says some considered it, a mineral *proprii generis*, different from the *Beryl*. It resembled in colour the juice of the *leak*, but with somewhat of a golden tinge, and hence its name. Although we are uncertain as to the mineral here described, yet it is not improbable that it was the same now called *Chrysoprase*, and to which *Leh-*

man was the first in modern times who gave the ancient name. The fourth variety of Beryl was of a colour approaching the hyacinth; the fifth were termed *αέρειδες*; the sixth were of a wax, the seventh of an olive colour. The last variety spoken of by Pliny resembled crystal, but contained hairy threads and impurities. These were probably such crystals of quartz as are often found, rendered partly opaque by chlorite, or penetrated by capillary crystals of epidote, actinolite, or other minerals. Pliny observes that the Indians stained rock-crystal in such a way as to counterfeit other gems, and especially the Beryl.¹

BESTIARII (θηριώμαχοι) were persons who fought with wild beasts in the games of the circus. They were either persons who fought for the sake of pay (*auctoramentum*), and who were allowed arms, or they were criminals, who were usually permitted to have no means of defence against the wild beasts.² The bestiarii, who fought with the beasts for the sake of pay, and of whom there were great numbers in the latter days of the Republic and under the Empire, are always spoken of as distinct from the gladiators, who fought with one another.³ It appears that there were schools in Rome, in which persons were trained to fight with wild beasts (*schola bestiarum* or *bestiariorum*).⁴

*BETA (τεύλος, -ον, -ιον, -ις, or σεύλον), the Beet, or *Beta vulgaris*. The Greeks distinguished two kinds of this vegetable by means of their colour, namely, the Black and the White Beet, the latter of which was also called the Sicilian. The white was preferred to the other. The Romans had also two kinds, in name at least, the vernal and autumnal, taking their names from the periods when they were sown. The largest beets were procured around Circii.⁵

*BETTONICA and BRETTANICA (βεττονική and βρεττανική), a species of plant, commonly called "the Betony." "It is almost incredible," observes Adams, "how much of confusion and mistake has arisen about these terms. With respect to the Betonica of Paul of Ægina, the most probable opinion is that held by Bauhin, namely, that it was either the *Veronica officinalis*, common male Speedwell, or the *V. serpyllifolia*, or smooth Speedwell. In Miller's *Gardener's Dictionary*, the former of these, and in the *Northern Flora* of Dr. Murray, the latter, gets the additional name of 'Paul's Betony.' The βεττονική, which was merely a synonyme of the κέστρον, was most probably either the *Betonica officinalis*, or, as Sprengel rather thinks, the *B. alopecuroides*. We now come to the βρεττανική of Dioscorides. He describes as resembling wild Dock (*λαπάθω άγριή*), but having a larger and rougher leaf. He ascribes to it, also, a styptic power, which rendered it well adapted for affections of the mouth and fauces. Paul of Ægina, in like manner, compares his βρεττανική to the wild Dock, and commends it for the cure of mortifications of the mouth, of which he no doubt means Scurvy. This is the plant upon the uses of which a small work was written by Antonius Musa, physician to Augustus. This Libellus was published at Zurich, A.D. 1537, with notes by Humelbergius. It is a tract, however, of little value, either in a philological or scientific point of view; and, indeed, there is much reason to doubt the genuineness of the work which we possess. Munting, in a very learned work, '*De Vera Antiquorum Herba Brittanica*,' gives an interesting exposition of the opinions entertained by modern

authorities on Betony respecting this herb. He shows that it has been referred to the *Cochlearia*, *Anagallis*, *Consolida*, *Veronica*, *Prunella*, &c. The most probable opinion, however, he thinks, is that it was some species of Dock or *Rumex*. Sprengel, too, inclines to the same opinion, that it was either the *Rumex hydrolapathum* or *Aquaticus*, L. In confirmation of this view of the matter, it may be proper to mention that the Brettonica is noticed under the name of 'the black Dock' by Aëtius." Another form of the ancient name is *Vettonica*, derived, according to Pliny, from the circumstance of the Vettones in Spain having discovered this herb. Its uses and virtue in medicine were almost countless, so that a proverb has arisen among the Italians respecting it: "*aver piu virtu che la bettonica*," "to possess more virtue than the bettonica."¹

*ΒΗΧΙΟΝ (βήχιον), a plant, which Woodville, Sprengel, Dierbach, and nearly all the commentators agree is the *Tussilago farfara*, or Colt's-foot. Galen says it derived its name from its being believed to possess the property of aiding coughs and difficulty of breathing (βήξ, -ηχός, being the Greek term for a cough). A patent medicine, prepared from the Colt's-foot, is, according to Adams, much cried up in England at the present day as a cure for coughs.²

ΒΙΑΨΩΝ ΔΙΚΗ (βιαιών δική). This action might be brought whenever rapes of free persons, or the illegal and forcible seizure of property of any kind, were the subject of accusation; and we learn from Demosthenes³ that it came under the jurisdiction of the Forty. According to Plutarch,⁴ the law prescribed that ravishers should pay a fine of 100 drachmæ; but other accounts merely state generally that the convict was mulcted in a sum equal to twice that at which the damages were laid (διπλήν τὴν βλάβην ὀφείλειν⁵); and the plaintiff in such case received one half of the fine, and the state, as a party mediately injured, the other. To reconcile these accounts, Meier⁷ supposes the rape to have been estimated by law at 100 drachmæ, and that the plaintiff fixed the damages in reference to other injuries simultaneous with, or consequent upon, the perpetration of the main offence. With respect to aggressions upon property, the action βιαιών is to be distinguished from ἐξούλης, in that the former implies the employment of actual violence, the latter merely such detention of property as amounted to violence in the contemplation of law,⁶ as, for instance, the non-payment of damages and the like, to the successful litigant after an award in his favour by a court of justice.⁹

BIB'ASIS (βίβασις) was a kind of gymnastic dance, much practised among the Spartans, by both men and women. The dance consisted in springing rapidly from the ground, and striking the feet behind; a feat of which a Spartan woman in Aristophanes¹⁰ prides herself. The number of successful strokes was counted, and the most skilful received prizes. We are told by a verse which has been preserved by Pollux,¹¹ that a Laconian girl had danced the bibasis a thousand times, which was more than had ever been done before.¹² The bibasis appears to have been nearly the same as the βαθαπυγίζειν, which Pollux¹³ explains by σμιῶ τῷ ποδὶ τὸν γλῶττον πατεῖν, on the meaning of which see Hesychius.¹⁴

BIBLIOPOLLA, a bookseller,¹ βιβλιοπώλης,² also called *librarius*,³ in Greek also βιβλίων κάπηλος, or βιβλιοκάπηλος.⁴ The shop was called *apotheca* (ἀποθήκη), or *taberna libraria*,⁵ or merely *libraria*.⁶ The Romans had their Paternoster Row; for the bibliopolæ or librarii lived mostly in one street, called Argiletum, to which Martial alludes⁷ when addressing his book on the prospect of the criticism it would meet with:

"Argiletanas mavis habitare tabernas,
Quum tibi, parve liber, scrinia nostra vacent."

Another favourite quarter of the booksellers was the Vicus Sandalarius.⁸ There seems also to have been a sort of bookstalls by the temples of Vertumnus and Janus, as we gather from Horace's address to his book of Epistles:⁹

"Vertumnum Janumque, liber, spectare videris."

Again, Horace¹⁰ prides himself on his books not being to be seen at the common shops and stalls, to be thumbed over by every passer-by:

"Nulla taberna meos habeat, neque pila libellos;
Queis manus insudet vulgi, Hermogenisque Tigelli."

Booksellers were not found at Rome only, though they were, of course, rare in smaller cities. Pliny¹¹ says he had not supposed that there were any booksellers at Lugdunum, but finds that there were, and that they even had his works on sale. Martial, in an amusing epigram,¹² tells a person called Quintus, who had asked him by a broad hint to give him a copy of his works, that he could get one at Tryphon's, the bookseller:

"Exigis ut donem nostros tibi, Quinte, libellos,
Non habeo, sed habet bibliopola Tryphon."

The booksellers not only sold books; they transcribed them also, and employed persons for the purpose; but they did not consider themselves answerable always for the correctness of the copy.¹³ Sometimes the author revised it to oblige a friend who might have bought it.¹⁴

On the shop-door or the pillar, as the case might be, there was a list of the titles of books on sale; allusion is made to this by Martial¹⁵ and by Horace.¹⁶

The remuneration of authors must have been very small, if we are to judge from the allusions of Martial, who says, for example, that a nice copy of his first book of Epigrams might be had for five denarii.¹⁷ Pliny the elder, however, when in Spain, was offered as much as four hundred thousand sesterces for his *Commentarii Electorum*.¹⁸

Books then, as now, often found their way into other shops besides book-shops, as waste paper; and schoolboys had frequently to go, for example, to the fishmonger's to see if he had the book they wanted.¹⁹ Mice, moths, beetles, and so forth, found plenty of food in musty unused books.²⁰

BIBLIOTHECA (βιβλιοθήκη, or ἀποθήκη βιβλίων), primarily, the place where a collection of books was kept; secondarily, the collection itself.²¹ Little as the states of antiquity dealt with the instruction of the people, public collections of books appear to have been very ancient. That of Pisistratus was intended for public use;²² it was subsequently removed to Persia by Xerxes. About the same time, Polycrates, tyrant of Samos, is said to

have founded a library. In the best days of Athens, even private persons had large collections of books; the most important of which we know anything belonged to Euclid, Euripides, and Aristotle.¹ Strabo says² that Aristotle was the first who, to his knowledge, made a collection of books, and taught the Egyptian kings the arrangement of a library. The most important and splendid public library of antiquity was that founded by the Ptolemies at Alexandria, begun under Ptolemy Soter, but increased and rearranged in an orderly and systematic manner by Ptolemy Philadelphus, who also appointed a fixed librarian, and otherwise provided for the usefulness of the institution. The library of the Ptolemies contained, according to Aulus Gellius,³ 700,000 volumes; according to Josephus, 500,000; and according to Seneca,⁴ 400,000. The different reckoning of different authors may be in some measure, perhaps, reconciled by supposing that they give the number of books only in a part of the library; for it consisted of two parts, one in the quarter of the city called Bruchion, the other in the part called Serapeion. Ptolemy Philadelphus bought Aristotle's collection to add to the library, and Ptolemy Evergetes continued to add to the stock. A great part of this splendid library was consumed by fire in the siege of Alexandria by Julius Caesar: some writers say that the whole was burned; but the discrepancy in the numbers stated above seems to confirm the opinion that the fire did not extend so far. At any rate, the library was soon restored, and continued in a flourishing condition till it was destroyed by the Arabs A.D. 640.⁵ Connected with the greater division of the library, in the quarter of Alexandria called Bruchion, was a sort of college, to which the name of Mouseion (or Museum) was given. Here many favoured literati pursued their studies, transcribed books, and so forth; lectures also were delivered. (*Vid. AUDITORIUM*.) The Ptolemies were not long without a rival in zeal. Eumenes, king of Pergamus, became a patron of literature and the sciences, and established a library, which, in spite of the prohibition against exporting papyrus issued by Ptolemy, who was jealous of his success, became very extensive, and perhaps next in importance to the library of Alexandria. It remained, and probably continued to increase, till Antonius made it a present to Cleopatra.⁶

The first public library in Rome was that founded by Asinius Pollio,⁷ and was in the atrium Libertatis (*vid. ATRIUM*) on Mount Aventine.⁸ Julius Caesar had projected a Greek and Latin library, and had commissioned Varro to take measures for the establishment of it; but the scheme was prevented by his death.⁹ The library of Pollio was followed by that of Augustus, in the Temple of Apollo on Mount Palatine,¹⁰ and another, bibliothecæ Octavianæ (so called from Augustus's sister Octavia), in the theatre of Marcellus.¹¹ There were also libraries on the Capitol,¹² in the Temple of Peace,¹³ in the palace of Tiberius,¹⁴ besides the Ulpian library, which was the most famous, founded by Trajan,¹⁵ called Ulpian from his own name, Ulpian. This library was attached by Diocletian as an ornament to his thermæ.¹⁶

Private collections of books were made at Rome soon after the second Punic war. The zeal of Cicero, Atticus, and others in increasing their libraries is well known.¹⁷ It became, in fact, the fashion

to have a room elegantly furnished as a library, and reserved for that purpose.¹ However ignorant or unstudious a person might be, it was fashionable to appear learned by having a library, though he might never even read the titles of the books. Seneca² condemns the rage for mere book-collecting, and rallies those who were more pleased with the outside than the inside. Lucian wrote a separate piece to expose this common folly (πρὸς ἀπαιδευτον καὶ πολλὰ βιβλία ὀνομαζόμενον).

A library generally had an eastern aspect: "Usus enim matutinum postulat lumen: item in bibliothecis libri non putrescent."³

In Herculaneum a library fully furnished was discovered. Round the walls it had cases containing the books in rolls (*vid. LIBER*); these cases were numbered. It was a very small room; so small that a person, by stretching out his arms, could touch both sides of it. The cases were called either *armaria*,⁴ or *locumenta*,⁵ or *foruli*,⁶ or *nidi*.⁷ Asinius Pollio had set the fashion in his public library of adorning the room with the portraits and busts of celebrated men, as well as statues of Minerva and the Muses. This example was soon followed in the private libraries of the rich.⁸ Martial⁹ sends to his brother Turanius a copy of some verses, which he sent with a bust of himself to Avitus, who wished to have a bust of Martial in his library. So, in the library which Hadrian founded at Athens, there were οἰκήματα ὑγῶμασι κεκοσμημένα καὶ γραφαῖς κατέκειται δὲ ἐξ αὐτῶν βιβλία.¹⁰ The charge of the libraries in Rome was given to persons called *librarii*. (*VID. LIBRARIUS*.)

BYKOS (βίκος), the name of an earthen vessel in common use among the Greeks.¹¹ Hesychius¹² defines it as a *στάμνος* with handles. It was used for holding wine,¹³ and salted meat and fish.¹⁴ Herodotus¹⁵ speaks of βίκους φοινικίους κατὰ νόμον οἶνον πλέουσ, which some commentators interpret by "vessels made of the wood of the palm-tree full of wine." But as Eustathius¹⁶ speaks of οἶνον φοινικίου βίκου, we ought probably to read in Herodotus βίκους φοινικίον, κ. τ. λ., "vessels full of palm wine."

BIDENS. (*VID. RASTRUM*.)

BIDENTAL, the name given to a place where any one had been struck by lightning (*fulguritus*?), or where any one had been killed by lightning and buried. Such a place was considered sacred. Priests, who were called *bidentales* (i. e., *sacerdotes*), collected the earth which had been torn up by the lightning, and everything that had been scorched, and hurned it in the ground with a sorrowful murmur.¹⁷ The officiating priest was said *condere fulgur*;¹⁸ he farther consecrated the spot by sacrificing a two-year-old sheep (*bidens*), whence the name of the place and of the priest, and also erected an altar, and surrounded it with a wall or fence. It was not allowable to tread on the place,¹⁹ or to touch it, or even to look at it.²¹ Sometimes a bidental which had nearly fallen to decay from length of time, was restored and renovated;²² but to remove the bounds of one (*movere bidental*), or in any way to violate its sacred precincts, was considered as sacrilege.²³ From the passage in Horace, it ap-

pears to have been believed, that a person who was guilty of profaning a bidental would be punished by the gods with phrensy; and Seneca¹ mentions another belief of a similar kind, that wine which had been struck by lightning would produce in any one who drank it death or madness. Persons who had been struck by lightning (*fulguriti*) were not removed, but were buried on the spot.²

BIDLÆI (βιδίαι), called in inscriptions βίδεοι or βίδνοι, were magistrates in Sparta, whose business was to inspect the gymnastic exercises. Their house of meeting (ἀρχεῖον) was in the marketplace.³ They were either five⁴ or six in number,⁵ and had a president, who is called in inscriptions πρέσβυς βιδέων.⁶ Böckh conjectures that βίδεοι or βίδνοι is the Laconian form for ἰδνοί or Ἰδνοί, and signifies witnesses and judges among the youth.⁷

Valkenaer⁸ supposes that the *bidiaei* were the same as the νομοφύλακες, and that we ought to read in Pausanias, καὶ νομοφύλακων καλονομένων βιδιάων, instead of καὶ νομοφύλακων καὶ καλονομένων βιδιάων: but the inscriptions given by Böckh show that the *bidiaei* and νομοφύλακες were two separate classes of officers.

BIGA or *BIGÆ*, in Greek *συνωρία* or *συνωρίς* (*bijuge curriculum*?), a vehicle drawn by two horses or other animals. This kind of turn-out is said by Pliny (*bigas primum Phrygum junxit natio*)¹ to have been invented by the Phrygians. It is one of the most ancient kinds, and in Homer by far the most common (οἰκόνγοι ἵπποι²). Four-horse chariots are also mentioned.³ Pliny⁴ mentions a chariot drawn by six horses. This was the largest number usual under the emperors;⁵ but Suetonius speaks of one which Nero drove at the Olympic games, drawn by ten horses.⁶ The name biga was applied more to a chariot used in the circus, or in processions or triumphs, and on other public occasions, than to the common vehicles of every-day life.⁷ The form of the biga resembled that of the Greek ἄρμα or δίφρος, being a rather short carriage on two wheels, open above and behind, upon which the driver usually stood to guide the horses. See the cut in the next article. (*VID. BIGATUS*.)

BIGATUS (i. e., *nummus*), a silver denarius, on which the representation of a biga was stamped.¹ This was an ancient stamp on Roman money, as we learn incidentally from Tacitus, who says² that the Germans, although mostly practising barter, still had no objection to old and well-known coins (*pecuniam veterem et diu notam*), such as *bigati*. *Bigati* were also called *argentum bigatum*.³ The value was different at different times. (*VID. DENARIUS*.) A denarius, on which the representation of a quadriga was stamped, was in the same manner called *Quadrigatus*. The annexed cuts, representing a *bigatus* and *quadrigatus*, are taken from coins in the British Museum.

BIPENNIS. (*Vid. SECURIS.*)

BIREMIS was used in two significations. I. It signified a ship with two banks of oars, an explanation of the construction of which is given in the article NAVIS. Such ships were called *diakpora* by the Greeks, which term is also used by Cicero (*Ipse Domitius dona plane habet dicrola*)² and Hirtius (*Capit ex eo pratio pentecrem unam, triremes duas, dicrolas octo*)². II. It signified a boat rowed by two oars,³ in which sense it must be used by Horace when he says :

"Tunc me, biremis præsidio scaphæ,
Tutum per Ægeos tumultus
Aura feret, geminusque Pollux."⁴

BIRRHUS (βίρρος, βήρος), a cape or hood, which was worn out of doors over the shoulders, and was sometimes elevated so as to cover the head. On the former account it is classed by an ancient grammarian with the *lacerna*, and on the latter with the cowl, or *cucullus*.⁵ It had a long nap (*amphibalus*, i. e., *amphimallus*, *villosus*), which was commonly of sheep's wool, more rarely of beaver's wool (*birrhus castoreus*). In consequence of its thickness, it was also rather stiff (*byrrhum rigentem*).⁶ According to the materials of which it was made, it might be either deer,⁷ or so cheap as to be purchased by the common people.

These garments, as well as *lacernæ*, were woven at Canusium in Apulia; and probably their name (*byrrhus*, i. e., βίρρος) was derived from the red colour of the wool for which that district was celebrated. They were also made in different parts of Gaul, especially among the Atrebatæ.¹⁰ Soon afterwards they came into general use, so that the birrhus is mentioned in the edict of Diocletian, published A.D. 303, for the purpose of fixing a maximum of prices for all the articles which were most commonly used throughout the Roman empire.

*BISON (*βίσων*), "the name of a sub-genus of the genus *bos* ('ox'), comprehending two living species, one of them the European, now become very scarce, and verging towards extinction; the other the American, and, notwithstanding the advances of man, still multitudinous. A good deal of conflicting opinion has thrown some obscurity over the European species. Pennant, in his 'British Zoology,' after stating his belief that the ancient wild cattle of Britain were the *Bisontes jubati* of Pliny, thus continues: 'The Urus of the Hercynian forest, described by Cæsar, was of this kind, the same which is called by the modern Germans *Aurochs*, i. e., *Bos sylvestris*.' This opinion is not correct. Though there are parts of Cæsar's description applicable to the European Bison, there is one striking characteristic which forbids us to conclude that Cæsar's Urus was identical with it. A glance at the European Bison will convince us that it could never have afforded the horns whose amplitude Cæsar celebrates. In the *Archæologia* (vol. iii., p. 15) it is stated, that the Borslar horn is supposed to have belonged to the bison or buffalo. That it might have belonged to a buffalo is not impossible; but that it did not belong to a bison is sufficiently clear, from the following description: 'It is two feet four inches long on the convex bend, and twenty three inches on the concave. The inside at the large end is three inches diameter, being perforated there so as to leave the thickness of only half an inch for about three inches deep; but farther on it is thicker, being not so much

or so neatly perforated.' Such a horn might indeed have crowned the head of Cæsar's Urus, a species which Cuvier believes to be extinct. Cæsar's Urus, then, was not, as it would appear, the European Bison. There can be little doubt that the *Bison jubatus* of Pliny,¹ which he seems to distinguish from the *Urus*, was the *European Bison*, or *Aurochs*; and though, in the fifteenth chapter of the eighth book, he mentions the tradition of a wild beast in Pæonia, called a *Bonasus*, after he has dismissed his *Bisontes jubati*, and with every appearance of a conclusion on his part that the *Bonasus* and *Bison* were not identical, his own description, when compared with that of Aristotle,² will leave little doubt that the *Bison jubatus* and *Bonasus* of Pliny and others, the *Βόνασος* or *Βόνασος* of Aristotle (for the word is written both ways), and the *Βίσων* of Opiian, were no other than the *European Bison*, the *Aurochs* (*Aurochs*) of the Prussians, the *Zubr* of the Poles, the *Taurus Pæoniæ*, &c., of Jonston and others, *l'Aurochs* and *le Bonasus* of Buffon, *Bos Urus* of Boddart, and *Bos Bonasus* of Linnæus. Cuvier considers it as certain, that the European Bison, the largest, or, at least, the most massive of all existing quadrupeds after the rhinoceros, an animal still to be found in some of the Lithuanian forests, and perhaps in those of Moldavia, Wallachia, and the neighbourhood of the Caucasus, is a distinct species, which man has never subdued. Following out this subject with his usual industry and ability, that great naturalist goes on to state, that if Europe possessed a *Urus*, a *Thur* of the Poles, different from the *Bison* or the *Aurochs* of the Germans, it is only in its remains that the species can be traced; such remains are found, in the skulls of a species of ox, different from the *Aurochs*, in the superficial heds of certain districts. This, Cuvier thinks, must be the *Urus* of the ancients, the original of our domestic Ox; the stock, perhaps, whence our wild cattle descended; while the *Aurochs* of the present day is nothing more than the *Bison* or *Bonasus* of the ancients, a species which has never been brought under the yoke.—The elevated ridge of the spine on the shoulders, long legs, a woolly fur, and the residence in mountain forests, cause the *Bison* to approach nearer the Damaline and Catoblepiæ genera than the Buffaloes."³ For some remarks on the knowledge possessed by the ancients of the latter, consult article BURALIS.

BISSEXTUM. (*Vid. CALENDAR, ROMAN.*)

BISSEXTUS, or BISSEXTILIS ANNUS. (*Vid. CALENDAR, ROMAN.*)

*BITUMEN, a Latin word used by Tacitus, Pliny, and other Roman writers, to indicate a species of mineral pitch or oil. The term appears to have some analogy with the Greek πίσσα, πίττα, "pitch," its earlier form having probably been "*pitumen*." The corresponding Greek word is ἀσφαλτός (in modern Latin *asphaltum*), for which no satisfactory derivation has been assigned. The most approved kind of Bitumen was the Jewish, from Lake Asphaltites (Dead Sea); but Bitumen in various states, from that of fluid transparent naphtha, to that of dry, solid, black asphaltum, was well known and much used among the ancients. They appear to have employed both Maltha and melted Asphaltum as a cement in the construction of buildings, &c. Thus the bricks of which the walls of Babylon were constructed were cemented by a bitumen, which was found abundantly in that vicinity on springs, or floating on the river Is, which fell into the Euphrates. Asphaltum or Maltha, either pure or mixed with a liquid extracted from the cedar was employed by the Egyptians in embalming dead

bodies.¹ In Syria, Asphaltum was dug from quarries in a solid state.² In Zante (the ancient Zacynthus) there is a pitch spring, which we know to have been at work for above 2000 years.³ At Agrigentum, in Sicily, a species of liquid bitumen was burned in lamps as a substitute for oil.⁴ The principal ingredient in the celebrated Greek fire is supposed by Klaproth to have been some variety of Asphaltum.—*Bitumen* is now employed as a generic term, comprehending several inflammable bodies of different degrees of consistency, namely, Naphtha, Petroleum, Mineral Tar, Mineral Pitch, and Asphaltum. From the description of ἀσφαλτος given by Dioscorides, it would appear that he applied the term not only to the *Bitumen solidum*, or *Asphaltum*, of Wallerus, but likewise to the more liquid sorts of bitumen.⁵

ΒΑΑΒΗΣ ΔΙΚΗ (βλάβης δίκη). This action was available in all cases in which one person had sustained a loss by the conduct of another; and from the instances that are extant, it seems that whether the injury originated in a fault of omission or commission, or impaired the actual fortune of the plaintiff or his prospective advantage, the action would lie, and might be maintained, against the defendant. It is, of course, impossible to enumerate all the particular cases upon which it would arise, but the two great classes into which βλάβαι may be divided are the ἐνθεσμοὶ and the ἀθεσμοὶ. The first of these will include all causes arising from the non-fulfilment of a contract to which a penal bond was annexed, and those in which the law specified the penalty to be paid by the defendant upon conviction; the second, all injuries of property which the law did not specify nominatim, but generally directed to be punished by a fine equal to twice the estimated damage if the offence was intentional, if otherwise by a bare compensation.⁶ Besides the general word βλάβης, others more specific, as to the nature of the case, are frequently added to the names of actions of this kind, as ἀνδροπόδων, τετραπόδων, μεταλλικῇ, and the like. The declaration of the plaintiff seems always to have begun with the words Ἐβλάψε με, then came the name of the defendant, and next a description of the injury, as οὐκ ἀποδοῖς ἐμοὶ τὸ ἀργύριον in Demosthenes.⁷ The proper cause was determined by the subject of litigation; and when we consider that the damage done by Philocleon to the cake-woman's basket,⁸ and supposititious testimony given in the name of another, thereby rendering such person liable to an action, ψευδομαρτυρῶν,⁹ were equally βλάβαι at Attic law, the variety of the actions, and, consequently, of the jurisdictions under which they fell, will be a sufficient excuse for the absence of farther specification upon this point.

*BLATTA (σίλφη), a name given by the Latin writers to an insect of the family of the Orthoptera, and of which they were acquainted with several kinds. From their shunning the light, Virgil¹⁰ has given them the epithet of *Lucifuga*. Our cockroach belongs to the Blatta, being the *Blatta Americana*. Pliny¹¹ mentions several medical applications of Blatta, after having been either triturated or boiled in oil. They were found serviceable in complaints of the ear, in cases of leprosy, and in removing warts. Schneider supposes the σίλφη of Lucian to belong to the class *Lepisma*, L. The σίλφη of Dioscorides would seem to be the *Blatta Orientalis*.¹²

*BLENNUS (βλέννος), called by Pliny *Blennius*, the Blenny or Butterfly-fish (*Blennius ocellaris*, L.). It is about seven inches long, and has a slimy mucus smeared over the skin, to which it owes its name, from the Greek βλέννα, "mucus," "slime." Athenæus says it resembles the Gudgeon. Several of the Blenny kind are viviparous.¹

*BLETON, BLITON, or BLITON (βλήτων, βλίτων, βλίτιον), the herb *Blite* or *Blites*, a kind of beet. Stackhouse and Dierbach agree with the older commentators, that it is the *Amaranthus Blitum*; and Sprengel inclines to this opinion in his notes to Dioscorides, although in his History of Medicine he had set it down as the *Blitum capitatum*.² The insipidity of the Blitum gave rise to a disease directed against the feeble in intellect, or the tame and spiritless in disposition.

*BOA. (Vid. DRACO.)

BOËDROMIA (Βοηδρομία, ἡ and τή), a festival celebrated at Athens on the seventh day of the month of Boëdromion, in honour of Apollo Boëdromius.³ The name Boëdromius, by which Apollo was called in Bœotia and many other parts of Greece,⁴ seems to indicate that by this festival he was honoured as a martial god, who, either by his actual presence or by his oracles, afforded assistance in the dangers of war. The origin of the festival is, however, traced by different authors to different events in Grecian story. Plutarch⁵ says that Theseus, in his war against the Amazons, did not give battle till after he had offered a sacrifice to Phobos; and that, in commemoration of the successful battle which took place in the month of Boëdromion, the Athenians, down to his own time, continued to celebrate the festival of the Boëdromia. According to Suidas, the Etymol. Magn., and Euripides,⁶ the festival derived its name and origin from the circumstance that when, in the reign of Erechtheus, the Athenians were attacked by Eumolpus, Xuthus or (according to Philochorus in Harpocration, s. v.) his son Ion came to their assistance, and procured them the victory. Respecting the particulars of this festival, nothing is known except that sacrifices were offered to Artemis.

BOËDROMION. (Vid. CALENDAR, GREEK.)

BOËTHETICE. (Vid. MEDICINA.)

BŒOTARCH (Βωωτάρχης or Βωωτάρχος). The Bœotians in ancient times occupied Arne in Thessaly.⁷ Sixty years after the taking of Troy they were expelled by the Thessalians, and settled in the country then called Cadmeïs, but afterward Bœotia. This country, during their occupation of it, was divided into several states, containing each a principal city, with its ξυνηλεις or ξύμμοροι (inhabitants of the same μοῖρα or district) living around it. Of these greater states, with dependant territories, there seem to have been in former times fourteen, a number which frequently occurs in Bœotian legends.⁸ The names are differently given by different writers on the subject; we know, however, for certain, that they formed a conspiracy called the Bœotian league, with Thebes at its head, the dependancies of which city formed about a third part of the whole of Bœotia. These dependant towns or districts were not immediately connected with the national confederacy, but with the neighbouring chief city, as Cynoscephalæ was with Thebes. In fact, they were obliged to furnish troops and money, to make up the contingent furnished by the state to which they belonged, to the general confederacy.⁹ Of the independent states, Thucydides¹⁰

1. (Pliny, H. N., xxxii., 9.—Athenæus, vii., c. 83.—Cuvier, An. King., vol. ii., p. 173.)—2. (Theophrast., H. P., vii., 1.—Dioscor., i., 143.)—3. (Müller, Dorians, ii., 8, § 5.)—4. (Paus., ix., 17, § 1.—Callim., Hymn. Apoll., 69.)—5. (Thes., 27.)—6. (Ion., 59.)—7. (Thucyd., i., 12.)—8. (Paus., ix., 3, § 4.)—9. (Arnold, Thucyd., iv., 76.)—10. (iv., 93.)

mentions seven by name; and gives us reasons for concluding that, in the time of the Peloponnesian war, they were ten or twelve in number, Thebes being the chief. Plataea had withdrawn from them, and placed itself under the protection of Athens as early as B.C. 519; and in B.C. 374, Thespiae, another member of the league, was destroyed by the Thebans.¹

Each of the principal towns of Boeotia seems to have had its *δῆμος* and *βουλή*.² The *βουλή* was presided over by an archon, who probably had succeeded to the priestly functions of the old kings, but possessed little, if any, executive authority. The polemarchs, who, in treaties and agreements, are mentioned next to the archon, had some executive authority, but did not command forces; *e. g.*, they could imprison,³ and they directed the levies of troops. But, besides the archon of each separate state, there was an archon of the confederacy—*ἀρχων ἐν κοινῷ Βοιωτῶν*, most probably always a Theban.⁴ His name was affixed to all alliances and compacts which concerned the whole confederacy, and he was president of what Thucydides⁵ calls the four councils, who directed the affairs of the league (*ἅπαν τὸ κύρος ἔχουσι*). On important questions they seem to have been united; for the same author speaks of them as *ἡ βουλή*, and informs us that the determinations of the Boeotarchs required the ratification of this body before they were valid. We will now explain who these Boeotarchs were. They were properly the military heads of the confederacy, chosen by the different states; but we also find them discharging the functions of an executive in various matters. In fact, they are represented by Thucydides⁶ as forming an alliance with foreign states; as receiving ambassadors on their return home; as negotiating with envoys from other countries; and acting as the representatives of the whole league, though the *βουλή* refused to sanction the measures they had resolved on in the particular case to which we are now alluding. Another instance in which the Boeotarchs appear as executive is their interference with Agesilaus, on his embarking from Aulis for Asia (B.C. 396), when they prevented him offering sacrifice as he wished.⁷ Still the principal duty of the Boeotarchs was of a military nature: thus they led into the field the troops of their respective states; and when at home, they took whatever measures were requisite to forward the military operations of the league or of their own state: for example, we read of one of the Theban Boeotarchs ordering the Thebans to come in arms to the ecclesia for the purpose of being ready to attack Plataea.⁸ Each state of the confederacy elected one Boeotarch, the Thebans two;⁹ although on one occasion, *i. e.*, after the return of the exiles with Pelopidas (B.C. 379), we read of there being three at Thebes.¹⁰ The total number from the whole confederacy varied with the number of the independent states. Mention is made of the Boeotarchs by Thucydides,¹¹ in connexion with the battle of Delium (B.C. 424). There is, however, a difference of opinion with respect to his meaning: some understand him to speak of eleven, some of twelve, and others of thirteen Boeotarchs. Dr. Arnold is disposed to adopt the last number; and we think the context is in favour of the opinion that there were then thirteen Boeotarchs, so that the number of free states was twelve. At the time of the battle of Leuctra (B.C. 371), we find seven Bœ-

otarchs mentioned;¹ on another occasion, when Greece was invaded by the Gauls (B.C. 279), we read of four. Livy² states that there were twelve; but, before the time (B.C. 171) to which his statement refers, Plataea had been reunited to the league. Still the number mentioned in any case is no test of the actual number, inasmuch as we are not sure that all the Boeotarchs were sent out by their respective states on every expedition or to every battle.

The Boeotarchs, when engaged in military service, formed a council of war, the decisions of which were determined on by a majority of votes, the president being one of the two Theban Boeotarchs who commanded alternately.³ Their period of service was a year, beginning about the winter solstice; and whoever continued in office longer than his time, was punishable with death both at Thebes and in other cities.⁴ Epaminondas and Pelopidas did so on their invasion of Laconia (B.C. 369), but their eminent services saved them; in fact, the judges did not even come to a vote respecting the former (*οὐδὲ ἀρχὴν περὶ αὐτοῦ θέσθαι τὴν ψῆφον*). At the expiration of the year, a Boeotarch was eligible to office a second time, and Pelopidas was repeatedly chosen.⁵ From the case of Epaminondas and Pelopidas, who were brought before Theban judges (*δικασταί*) for transgression of the law which limited the time of office, we may conclude that each Boeotarch was responsible to his own state alone, and not to the general body of the four councils.

Mention is made of an election of Boeotarchs by Livy.⁷ He farther informs us that the league (*concilium*) was broken up by the Romans B.C. 171.⁸ Still it must have been partially revived, as we are told of a second breaking up by the Romans after the destruction of Corinth, B.C. 146.⁹

*BOCA or BOCE (*βῶκη*, Aristot. : *βῶξ*, Oppian : *βοών*, Athenæus), a small fish not exceeding a palm in length; but, according to Willoughby, its flesh is wholesome and pleasant. Oppian makes mention of two species. Rondelet conjectures that the second was a species of *Mania*, meaning, as Adams supposes, the *Sparus Mania*.

*BOITOS (*βοίτος*), a species of fish, mentioned by Aristotle.¹⁰ It is supposed to be the *Cottus Gobio*, the Bull-head, or Miller's thumb. According to Ardi, an old MS. in the Vatican reads *κοίτος*.¹¹

*BOLBOI (*βολβοί*), a general name for bulbous roots.¹² With regard to the *βολβός ἐδάδιμος*, Adams remarks as follows in his Commentary on Paul of Ægina: "It is not well ascertained what the esculent bulbi of the ancients were. Hardouin conjectures that they were a delicious kind of onions. Matthioli and Nonnius are wholly undecided. Sprengel inclines, with Dalechamp and Sibthorp, in thinking that they were a species of Muscari, or Musk Hyacinth. The account of them given by Serapion, who calls them '*Cepæ sine tunics*,' agrees better with the conjecture of Hardouin. Eustathius also says that the Bulbus was a wild onion."¹³ The *βολβός ἱμερικός* is referred by Matthioli to the *Muscari Moschatum*; by Dodonæus to the *Narcissus Jonquilla*; by Lonicer to the *Scilla bifolia*; by Sibthorp to the *Ornithogalum steychyoïdes*; and by Camerarius to the *Narcissus poeticus*. Sprengel rather inclines to the opinion of Dodonæus. Dierbach holds the *βολβός* of Hippocrates to be the *Hycin-*

thus comosus. Stackhouse hesitates between a species of Garlic and one of Squills. The truth of the matter would appear to be, that, as various bulbous roots are possessed of emetic powers, the term was applied in a loose manner by the ancients. Dioscorides and most of the medical authorities state that the esculent *Bulbus* is aphrodisiacal.¹

BOMBYLIUS (*βομβύλιος*), a drinking-vessel with a very narrow mouth, whence it is called *στόματος* or *στενόστομος*.² The name is supposed to have been formed from the noise which water or any liquid makes in passing through a narrow opening (*βομβῶν ἐν τῇ πόσει*).³

***BOMBYLIUS** (*βομβύλιος*), a species of insect, of the order *Diptera*, distinguished chiefly by having a long proboscis, with which they sip the sweets from flowers. In their flight they emit a humming sound, whence their name, from *βομβέω*, "to hum." Aristotle would appear to have been well acquainted with the three species which modern naturalists have named *Bombylius major*, *B. minor*, and *B. medius*. These, however, must not be confounded with the *Bombyx mori*, or Silkworm.

BOMBIX. (*Vid. SERICA*.)

BOMOS. (*Vid. ARA*.)

BONA. The word *bona* is sometimes used to express the whole of a man's property;⁴ and in the phrases *bonorum emtio*, *cessio*, *possessio*, *usufructus*, the word "*bona*" is equivalent to property. It expresses all that a man has, whether as owner or merely as possessor, and everything to which he has any right. But the word *bona* is simply the property as an object; it does not express the nature of the relation between it and the person who has the ownership or the enjoyment of it, any more than the words "all that I have," "all that I am worth," "all my property," in English show the legal relation of a man to that which he thus describes. It is of some importance to understand the nature of the legal expression *in bonis*, as opposed to *dominium*, or *Quiritarian ownership*, and the nature of the distinction will be easily apprehended by any person who is slightly conversant with English law.

"There is," says Gaius,⁵ "among foreigners (*peregrini*) only one kind of ownership (*dominium*), so that a man is either the owner of a thing or he is not. And this was formerly the case among the Roman people; for a man was either owner *ex jure Quiritium*, or he was not. But afterward the ownership was split, so that now one man may be the owner (*dominus*) of a thing *ex jure Quiritium*, and yet another may have it in *bonis*. For instance, if, in the case of a *res mancipi*, I do not transfer it to you by *mancipatio*, nor by the form in *jure cessio*, but merely deliver it to you, the thing, indeed, becomes your thing (*in bonis*), but it will remain mine *ex jure Quiritium*, until by possession you have it by usucapion. For when the usucapion is once complete, from that time it begins to be yours absolutely (*pleno jure*), that is, it is yours both in *bonis*, and also yours *ex jure Quiritium*, just as if it had been *mancipato* to you, or transferred to you by the *in jure cessio*." In this passage Gaius refers to the three modes of acquiring property which were the peculiar rights or privileges of Roman citizens, *mancipatio*, *in jure cessio*, and usucapion, which are also particularly enumerated by him in another passage.⁶

From this passage it appears that the ownership of certain kinds of things among the Romans, called *res mancipi* (*vid. MANCIPIMUM*), could only be trans-

ferred from one person to another with certain formalities, or acquired by usucapion. But if it was clearly the intention of the owner to transfer the ownership, and the necessary forms only were wanting, the purchaser had the thing in *bonis*, and he had the enjoyment of it, though the original owner was still *legally* the owner, notwithstanding he had parted with the thing.

It thus appears that *Quiritarian ownership* of *res mancipi* originally and properly signified that ownership of a thing which the Roman law recognised as such; it did not express a compound, but a simple notion, which was that of absolute ownership. But when it was once established that one man might have the *Quiritarian ownership*, and another the enjoyment, and the sole right to the enjoyment of the same thing, the complete notion of *Quiritarian ownership* became a notion compounded of the strict legal notion of ownership, and that of the right to enjoy, as united in the same person. And as a man might have both the *Quiritarian ownership* and the right to the enjoyment of a thing, so one might have the *Quiritarian ownership* only, and another might have the enjoyment of it only. This bare ownership was sometimes expressed by the same terms (*ex jure Quiritium*) as the ownership which was complete, but sometimes it was appropriately called *nudum jus Quiritium*,¹ and yet the person who had such bare right was still called *dominus*, and by this term he is contrasted with the *usufructuarius* and the *bonæ fidei possessor*.

The historical origin of this notion, of the separation of the ownership from the right to enjoy a thing, is not known, but it may be easily conjectured. When nothing was wanting to the transfer of ownership but a compliance with the strict legal form, we can easily conceive that the Roman jurists would soon get over this difficulty. The strictness of the old legal institutions of Rome was gradually relaxed to meet the wants of the people, and in the instance already mentioned, the jurisdiction of the prætor supplied the defects of the law. Thus, that interest which a man had acquired in a thing, and which only wanted certain forms to make it *Quiritarian ownership*, was protected by the prætor. The prætor could not give *Quiritarian ownership*, but he could protect a man in the enjoyment of a thing—he could maintain his possession: and this is precisely what the prætor did with respect to those who were possessors of public land; they had no ownership, but only a possession, in which they were protected by the prætor's interdict. (*Vid. AGRARIÆ LEGES*.)

That which was in *bonis*, then, was that kind of interest or ownership which was protected by the prætor, which interest may be called *bonitarian* or *beneficial ownership*, as opposed to *Quiritarian* or *bare legal ownership*. It does not appear that the word *dominium* is ever applied to such *bonitarian ownership*, except it may be in one passage of Gaius,² the explanation of which is not free from difficulty.

That interest called in *bonis*, which arose from a bare tradition of a *res mancipi*, was protected by the *exceptio* and the *actio utilis in rem*.³ *Possessio* is the general name of the interest which was thus protected. The person who had a thing in *bonis* and *ex justa causa*, was also entitled to the *actio Publiciana* in case he lost the possession of the thing before he had gained the ownership by usucapion.⁴

The phrases *bonorum possessio*, *bonorum possessor*, might then apply to him who has had a *res mancipi* transferred to him by tradition only; but the phrase applies also to other cases, in which the

1. (Gaius, iii., 100.)—2. (i., 54.)—3. (*Dig. 41, tit. 1, s. 52*.)—4. (Gaius, iv., 36.)

prætor, by the help of fictions, gave to persons the beneficial interest to whom he could not give the ownership. When the prætor gave the goods of the debtor to the creditor, the creditor was said *in possessionem rerum, or bonorum debitoris mitti*.¹ (*Vid. BONORUM EMTIO, BONORUM POSSESSIO.*)

As to things nec mancipi, the ownership might be transferred by bare tradition or delivery, and such ownership was Quiritarian, inasmuch as the Roman law required no special form to be observed in the transfer of the ownership of res nec mancipi. Such transfer was made according to the *jus gentium* (in the Roman sense of that term).²

On this subject the reader may consult a long essay by Zimmern, *Ueber das Wesen des sogenannten bonitarischen Eigentums*.³

BONA CADUCA. *Caducum* literally signifies that which falls: thus *glans caduca*, according to Gaius,⁴ is the mast which falls from a tree. *Caducum*, in its general sense, might be anything without an owner, or what the person entitled to neglected to take;⁵ but the strict legal sense of *caducum* and *bona caduca* is that stated by Ulpian,⁶ which is as follows:

If a thing is left by testament to a person who has then a capacity to take it by the *jus civile*, but from some cause does not take it, that thing is called *caducum*: for instance, if a legacy was left to an unmarried person, or a *Latinus Junianus*, and the unmarried person did not, within a hundred days, obey the law by marrying, or if, within the same time, the *Latinus* did not obtain the *Jus Quiritium*, the legacy was *caducum*. Or if a *heres ex parte*, or a legatee, died after the death of the testator, and before the opening of the will, the thing was *caducum*. The thing which failed to come to a person in consequence of something happening in the life of the testator, was said to be *in causa caduci*; that which failed of taking effect between the death of the testator and the opening of the will, was called simply *caducum*.

The law above alluded to is the *Lex Julia et Papia Poppæa*, which is sometimes simply called *Julia*, or *Papia Poppæa*. This law, which was passed in the time of Augustus (B.C. 9), had the double object of encouraging marriages and enriching the treasury—*æarium*,⁷ and contained, with reference to these two objects, a great number of provisions. *Martial*⁸ alludes to a person who married in order to comply with the law.

That which was *caducum*, came, in the first place, to those among the *heredes* who had children; and if the *heredes* had no children, it came among those of the legatees who had children. The law gave the *jus accrescendi*, that is, the right to the *caducum* as far as the third degree of consanguinity, both ascending and descending,⁹ to those who were made *heredes* by the will. Under the provisions of the law, the *caducum*, in case there was no prior claimant, belonged to the *æarium*; or, as Ulpian¹⁰ expresses it, if no one was entitled to the *bonorum possessio*, or if a person was entitled, but did not assert his right, the *bona* became public property (*populo deferuntur*), according to the *Lex Julia caducaria*; but by a constitution of the Emperor Antoninus Caracalla, it was appropriated to the *fiscus*: the *jus accrescendi* above mentioned was, however, still retained. The lawyers, however (*virī prudentissimi*), by various devices, such as substitutions, often succeeded in making the law of no effect.

He who took the portion of a *heres*, which became *caducum*, took it by universal succession: in the case of a legacy, the *caducum* was a singular succession. But he who took an *hereditas caduca* took it with the bequests of freedom, of legacies, and *fidei commissa* with which it was burdened: if the *legata* and *fidei commissa* became *caduca*, all charges with which they were burdened became *caduca* also. In the time of Constantine, both the *cœlebs* and the *orbis*, or childless person (who was under a limited incapacity), obtained the full legal capacity of taking the inheritance.¹ Justinian² put an end to the *caducum*, with all its legal consequences. In this last-mentioned title (*De Caducis tollendis*) it is stated both that the name and the thing (*nomen et materia caducorum*) had their origin in the civil wars, that many provisions of the law were evaded, and many had become obsolete.³ As to the *Dos Caduca*, see *DOS*.

BONA FIDES. This term frequently occurs in the Latin writers, and particularly in the Roman jurists. It can only be defined with reference to things opposed to it, namely, *mala fides*, and *dolus malus*, both of which terms, and especially the latter, are frequently used in a technical sense. (*Vid. DOLUS MALUS.*)

Generally speaking, *bona fides* implies the absence of all fraud, and unfair dealing or acting. In this sense, *bona fides*, that is, the absence of all fraud, whether the fraud consists in simulation or dissimulation, is a necessary ingredient in all contracts.

Bona fide possidere applies to him who has acquired the possession of a thing under a good title, as he supposes. He who possessed a thing *bona fide*, had a capacity of acquiring the ownership by usucapion, and had the protection of the *actio Publiciana*. Thus a person who received a thing either *mancipi* or *nec mancipi*, not from the owner, but from a person whom he believed to be the owner, could acquire the ownership by usucapion.⁴ A thing which was *furtiva* or *vi possessa*, or the *res mancipi* of a female who was in the tutela of her agnati, unless it was delivered by her under the auctoritas of her tutor, was not subject to usucapion, and therefore, in these cases, the presence or absence of *bona fides* was immaterial.⁵ A person who bought from a pupillus without the auctoritas of his tutor, or with the auctoritas of a person whom he knew not to be the tutor, did not purchase *bona fide*; that is, he was guilty of a legal fraud. A sole tutor could not purchase a thing *bona fide* from his pupillus; and if he purchased it from another, to whom a non *bona fide* sale had been made, the transaction was null.⁶

A *bona fide possessor* was also protected as to property acquired for him by another person.⁷

In various actions arising out of mutual dealings, such as buying and selling, lending and hiring, partnership, and others, *bona fides* is equivalent to *æquum* and *justum*; and such actions were sometimes called *bonæ fidei actiones*. The formula of the prætor, which was the authority of the *judex*, empowered him in such cases to inquire and determine *ex bona fide*, that is, according to the real merits of the case.⁸

BONA RAPTA. The *actio vi bonorum raptorum* was granted by the prætor against those who had by force carried off a man's property. The offence was, in fact, a species of *furtum*. If the person injured brought his action within one year after the

time when he was first able to bring his action, he might recover fourfold; if after the year, he only recovered the value of the goods. If a slave was the offender, the owner of the goods had a *noxalis actio* against the master.¹

BONA VACANTIA was originally the property which a person left at his death without having disposed of it by will, and without leaving any *heredes*. Such property was open to occupancy, and so long as the strict laws of inheritance existed, such an event must not have been uncommon. A remedy was, however, found for this by the bonorum possessio of the prætor.

It does not appear that the state originally claimed the property of a person who died intestate and without *heredes legitimi*. The claim of the state to such property seems to have been first established by the Lex Julia et Papia Poppæa. (*Vid.* BONA CADUCA.) The state, that is, in the first instance the ærarium, and afterward the fiscus, did not take such property as heres, but it took it *per universitatem*. In the later periods of the Empire, in the case of a soldier dying without *heredes*, the legion to which he belonged had a claim before the fiscus; and various corporate bodies had a like preference in the case of a member of the corporation dying without *heredes*.²

BONORUM CESSIO. There were two kinds of bonorum cessio, *in jure* and *extra jus*. The *in jure* cessio is treated under its proper head.

The *bonorum cessio extra jus* was introduced by a Julian law, passed either in the time of Julius Cæsar or Augustus, which allowed an insolvent debtor to give up his property to his creditors. The debtor might declare his willingness to give up his property by letter or by a verbal message. The debtor thus avoided the infamia consequent on the bonorum emtio, which was involuntary, and he was free from all personal execution. He was also allowed to retain a small portion of his property for his support. An old gloss describes the bonorum cessio thus: "*Cedere bonis est ab universitate rerum suarum recedere.*"

The property thus given up was sold, and the proceeds distributed among the creditors. The purchaser, of course, did not obtain the Quiritarian ownership of the property by the act of purchase. If the debtor subsequently acquired property, this also was liable to the payment of his old debts, with some limitations, if they were not already fully satisfied.

The benefit of the lex Julia was extended by the imperial constitutions to the provinces.

The history of the bonorum cessio does not seem quite clear. The Julian law, however, was not the oldest enactment which relieved the person of the debtor from being taken in execution. The lex Poetelia Papiria (B.C. 327) exempted the person of the debtor (*nisi qui noxam meruisset*), and only made his property (*bona*) liable for his debts. It does not appear from the passage in Livy³ whether this was a bonorum cessio in the sense of the bonorum cessio of the Julian law, or only a bonorum emtio with the privilege of freedom from arrest. The Tablet of Heraclea⁴ speaks of those *qui in jure bonam copiam jurabant*; a phrase which appears to be equivalent to the bonorum cessio, and was a declaration on oath *in jure*, that is, before the prætor, by the debtor that his property was sufficient to pay his debts. But this was still accompanied with infamia. So far as we can learn from Livy, no such declaration of solvency was required from the debtor by the Poetelia lex. The Julian law rendered

the process of the cessio bonorum more simple, by making it a procedure *extra jus*, and giving farther privileges to the insolvent. Like several other Julian laws, it appears to have consolidated and extended the provisions of previous enactments.¹

BONORUM COLLATIO. By the strict rules of the civil law, an emancipated son had no right to the inheritance of his father, whether he died testate or intestate. But, in course of time, the prætor granted to emancipated children the privilege of equal succession with those who remained in the power of the father at the time of his death; and this grant might be either *contra tabulas* or *ab intestato*. But this favour was granted to emancipated children only on condition that they should bring into one common stock with their father's property, and for the purpose of an equal division among all the father's children, whatever property they had at the time of the father's death, and which would have been acquired for the father in case they had still remained in his power. This was called bonorum collatio. It resembles the old English hotchpot, upon the principle of which is framed the provision in the statute 22 and 23 Charles II., c. 10, s. 5, as to the distribution of an intestate's estate.²

BONORUM EMPTIO ET EMTOR. The expression bonorum emtio applies to a sale of the property either of a living or of a dead person. It was in effect, as to a living debtor, an execution. In the case of a living person, his goods were liable to be sold if he concealed himself for the purpose of defrauding his creditors, and was not defended in his absence; or if he made a bonorum cessio according to the Julian law; or if he did not pay any sum of money which he was by judicial sentence ordered to pay, within the time fixed by the laws of the Twelve Tables³ or by the prætor's edict. In the case of a dead person, his property was sold when it was ascertained that there was neither heres nor bonorum possessor, nor any other person entitled to succeed to it. In this case the property belonged to the state after the passing of the Lex Julia et Papia Poppæa. If a person died in debt, the prætor ordered a sale of his property on the application of the creditors.⁴ In the case of the property of a living person being sold, the prætor, on the application of the creditors, ordered it to be possessed (*possideri*) by the creditors for thirty successive days, and notice to be given of the sale. The creditors were said *in possessionem rerum debitoris mitti*: sometimes a single creditor obtained the possessio. When several creditors obtained the possessio, it was usual to intrust the management of the business to one of those who was chosen by a majority of the creditors. The creditors then met and chose a magister, that is, a person to sell the property,⁵ or a curator bonorum if no immediate sale was intended. The purchaser, *emtor*, obtained by the sale only the bonorum possessio: the property was his in bonis until he acquired the Quiritarian ownership by usucapion. The foundation of this rule seems to be, that the consent of the owner was considered necessary in order to transfer the ownership. Both the bonorum possessores and the emtores had no legal rights (*directæ actiones*) against the debtors of the person whose property was possessed or purchased, nor could they be legally sued by them; but the prætor allowed *utiles actiones* both in their favour and against them.⁶

BONORUM POSSESSIO is defined by Ulpian⁷ to be "the right of suing for or retaining a patrimo-

1. (Gaius, iii., 209.—Dig. 47, tit. 8.)—2. (Marzoll, Lehrbuch der Institut. des Röm. Rechts.)—3. (viii., 28.)—4. (Mazocchi, p. 423.)

1. (Gaius, iii., 28.—Dig. 42, tit. 3.—Cod. vii., tit. 71.)—2. (Dig. 36, tit. 6.—Cod. vi., tit. 20.)—3. (Aul. Gell., xv., 13; xx., 1.)—4. (Gaius, ii., 154, 157.)—5. (Cic., ad Att., i., 9; vi., 1.—Pro Quinctio, c. 15.)—6. (Gaius, iii., 77; iv., 35, 65, and 111.)—7. (Dig. 37, tit. 1, s. 3.)

ny or thing which belonged to another at the time of his death." The strict laws of the Twelve Tables as to inheritance were gradually relaxed by the prætor's edict, and a new kind of succession was introduced, by which a person might have a bonorum possessio who could have no hereditas or legal inheritance.

The bonorum possessio was given by the edict both *contra tabulas*, *secundum tabulas*, and *intestati*.

An emancipated son had no legal claim on the inheritance of his father; but if he was omitted in his father's will, or not expressly exheredated, the prætor's edict gave him the bonorum possessio *contra tabulas*, on condition that he would bring into hotchpot (*bonorum collatio*) with his brethren who continued in the parent's power, whatever property he had at the time of the parent's death. The bonorum possessio was given both to children of the blood (*naturales*) and to adopted children, provided the former were not adopted into any other family, and the latter were in the adoptive parent's power at the time of his death. If a freedman made a will without leaving his patron as much as one half of his property, the patron obtained the bonorum possessio of one half, unless the freedman appointed a son of his own blood as his successor.

The bonorum possessio *secundum tabulas* was that possession which the prætor gave, conformably to the words of the will, to those named in it as heredes, when there was no person entitled to make a claim against the will, or none who chose to make such a claim. It was also given *secundum tabulas* in cases where all the requisite legal formalities had not been observed, provided there were seven proper witnesses to the will.

In the case of intestacy (*intestati*), there were seven degrees of persons who might claim the bonorum possessio, each in his order, upon there being no claim of a prior degree. The first three classes were children, *legitimi heredes* and *proximi cognati*. Emancipated children could claim as well as those who were not emancipated, and adoptive as well as children of the blood; but not children who had been adopted into another family. If a freedman died intestate, leaving only a wife (in manu) or an adoptive son, the patron was entitled to the bonorum possessio of one half of his property.

The bonorum possessio was given either *cum re* or *sine re*. It was given *cum re* when the person to whom it was given thereby obtained the property or inheritance. It was given *sine re* when another person could assert his claim to the inheritance by the *jus civile*: as, if a man died intestate, leaving a *suus heres*, the grant of the bonorum possessio would have no effect; for the heres could maintain his legal right to the inheritance. Or, if a person who was named heres in a valid will was satisfied with his title according to the *jus civile*, and did not choose to ask for the bonorum possessio (which he was entitled to if he chose to have it), those who would have been heredes in case of an intestacy might claim the bonorum possessio, which, however, would be unavailing against the legal title of the testamentary heres, and, therefore, *sine re*.

Parents and children might claim the bonorum possessio within a year from the time of their being able to make the claim; others were required to make the claim within a hundred days. On the failure of such party to make his claim within the proper time, the right to claim the bonorum possessio devolved on those next in order, through the seven degrees of succession.

He who received the bonorum possessio was not thereby made *heres*, but he was placed *heredis loco*; for the prætor could not make a heres. The property of which the possession was thus given was

only in bonis, until, by usucapion, the possession was converted into Quiritarian ownership (*dominium*). All the claims and obligations of the deceased person were transferred with the bonorum possessio to the possessor or prætorian heres; and he was protected in his possession by the *interdictum quorum bonorum*. The benefit of this interdict was limited to cases of bonorum possessio, and this was the reason why a person who could claim the inheritance in case of intestacy by the civil law, sometimes chose to ask for the bonorum possessio also. The prætorian heres could only sue and be sued in respect of the property by a legal fiction. He was not able to sustain a *directa actio*; but, in order to give him this capacity, he was, by a fiction of law, supposed to be what he was not, *heres*; and he was said *fictio se herede agere, or intendere*. The actions which he could sustain or defend were *actiones utiles*.¹ A good general view of the bonorum possessio is given by Marezoll, *Lehrbuch der Institutionen des Röm. Rechts*, § 174.

*BONASSUS (Βόνασσος), a quadruped, the same with the Bison. (*Vid. Bison*.)

*BOSCAΣ (Βοσκάς), the Wild Duck, *Anas Boscas*, L. (*Vid. ANAS*.)

*BOSTRYCHITES (βοστρυχίτης), a stone resembling a lock of female hair.² It is supposed to have been amianthus.³

*BOS (βοῦς), a generic term, applied to several varieties of the ox and cow, namely, of the *Bos Taurus*, L. "The immense advantages derived from the domesticated ox in the beginning of human civilization," observes Lieut. Col. Smith, "may be gathered from the conspicuous part its name and attributes perform in the early history of mankind. We find the Bull among the signs of the Zodiac; it typifies the sun in more than one system of mythology; it was personally worshipped among the Egyptians, and is still venerated in India. The Cow is repeatedly a mystical type of the earth in the mystical systems of ancient Greece, or a form of Bhavani with the Hindus. The Vedas consider it the primordial animal, the first created by the three kinds of gods who were directed by the Supreme Lord to furnish the earth with animated beings. The Ox first enabling man to till the ground, was a direct cause of private territorial property, and of its consequences, wealth, commerce, leisure, and learning; he was no less the means of abstracting mankind from the necessity of shedding blood, and thus he became the emblem of justice, the vehicle of Siva. This merited consideration we see dexterously used by ancient legislators, to soften the brutality of human manners, either by forbidding the flesh as food in those countries where his acknowledged utility was counteracted by obstacles in the increase, or by commanding the frequent use of sacrifices by a proper slaughter, and where fire and salt should be employed to check a horrid species of massacre and practice of devouring the flesh in a raw state.—The words *Thur, Tur, Toor, Tier, Deer, Stier, Steer*, in the northern dialects of Europe, in their early and in their latest acceptations, are direct names of well-known ruminants; but in proportion as we pursue the root towards its origin in Central Asia, we find that the parent language of the Gethic and Slavonian, as well as those of the Hellenic and other tongues, unite in fixing it upon a larger bovine animal, perfectly applicable to that known in Cæsar's Commentaries by the name of *Urus*, implying, as some think, primæval, ancient, sylvan, fierce, mysterious; still retained in the Teutonic *ur* and its numerous ad-

1. (Gaius, iii., 25-38; iv., 34.—Ulp., *Frags.*, tit. 28, 29.—Dig. 37, tit. 4, s. 19; tit. 11.—Dig. 38, tit. 6.)—2. (Plin., *H. N.*, xxxvii., 10.)—3. (Moore's *Anc. Mineral*, p. 182.)

juncts. We here find the root of the denomination of several regions in which the parent race of the Tauri, or the Urus, has existed or still resides. Thus, Turan, of Eastern Persia; Turan, south of the Caucasus; the present Turcomania; the Thurgaw; the Canton of Uri; the Thuringian forest; the Tauric Chersonese; the Tauri, a Sarmatian tribe; the Taurini, inhabiting Italy, near the present Turin, &c. In most of these countries the gigantic Urus has left his remains, or the more recent Urus has been known to herd. The appellations *ox* and *cow* also afford matter for speculation: the former has been regarded by some as a title of power, and they connect it with the proper name Ochus in ancient Persia (*Ochi* or *Achi*), equivalent to 'dignus,' or 'majestate dignus.' Okous, 'a bull,' is a common name among the Kurds and other Caucasian tribes; while, on the other hand, the appellations *bovǵ*, *bos*, the Arabic *bakr*, as also Koe, Kuhe, Cow, Gaw, and Ghai, are all evidently from a common root descriptive of the voice of cattle.—It has been conjectured that the original domestication of the common Ox (*Bos Taurus*) took place in Western Asia, and was performed by the Caucasian nations, who thereby effected a leading cause of that civilization which their descendants carried westward and to the southeast, where the genuine Taurine races, not multiplying or yielding equal returns to human industry and human wants, have caused the veneration in which they are held, and necessitated the prohibition of feeding on their flesh. It is to these circumstances, also, that we may refer the domestication of the Buffalo, whose strength and habits were suited to supply the deficiencies of the Ox; and a similar effect has since operated in Egypt; for, from the period of the introduction of the Buffalo into that country, domestic cattle are not only fewer, but far from deserving the commendations bestowed upon them by the ancients.¹¹

"The character of domestic oxen is absolutely the same as the fossil, and the wild breeds differ only in the flexures of the hams and in external appearance, occasioned by the variations of climate, food, and treatment. The hunched races of Africa may be regarded as introduced with the Arabian invasions after the Hegira; for in the numerous representations of Taurine animals, sacred victims, or in scenes of tillage upon the monuments of ancient Egypt, none occur. The breeds of the Kisguise and Calmuc Tartars, those of Podolia and the Ukraine, of European Turkey, and the Roman States, are among the largest known. They are nearly all distinguished by ample horns spreading sideways, then forward and upward, with dark points: their colour is a bluish ash, passing to black. That in the Papal dominions is not found represented on the ancient bas-reliefs of Rome, but was introduced most probably by the Goths, or at the same time with the Buffalo. Italy possesses another race presumed to have existed in ancient times, valued for its fine form and white colour: it is not so large, but the horns are similarly developed. Tuscany produces this race, and droves of them have been transported to Cuba, and thence to Jamaica. Ancient Egypt nourished a large white breed, which, however, is not the most common upon the monuments of that country, where the cattle are usually represented with large, irregular marks of black or brown upon a white ground."¹²

As regards the origin of our domestic Ox from the Urus of antiquity, consult remarks under the articles *BISON* and *URUS*.

**BOS MARINUS* (*βοῦς θαλάττιος*), a species of

large fish, the *Raia Oxyrynchus*, L., called in English the Sharp-nosed Ray. The French name is *Alene* The *λεῖοβατος* of Aristotle is a variety of it.

BOONAI (*Βούναι*) were persons in Athens who purchased oxen for the public sacrifices and feasts. They are spoken of by Demosthenes¹ in conjunction with the *ἱεροποιοί* and those who presided over the mysteries, and are ranked by Libanius² with the *sitonæ*, generals, and ambassadors. Their office is spoken of as honourable by Harpocration,³ but Pollux⁴ includes them among the inferior offices, or offices of service (*ὑπηρεταί*).⁵

BOREASMOI or BOREASMOS (*Βορεασμοί* or *Βορεασμός*), a festival celebrated by the Athenians in honour of Boreas,⁶ which, as Herodotus⁷ seems to think, was instituted during the Persian war, when the Athenians, being commanded by an oracle to invoke their *γαμβρός ἐπίκουρος*, prayed to Boreas. The fleet of Xerxes was soon afterward destroyed by a north wind, near Cape Sepias, and the grateful Athenians erected to his honour a temple on the banks of the Ilissus. But, considering that Boreas was intimately connected with the early history of Attica, since he is said to have carried off and married Oreithyia, daughter of Erechtheus,⁸ and that he was familiar to them under the name of *brother-in-law*, we have reason to suppose that even previous to the Persian wars certain honours were paid to him, which were, perhaps, only revived and increased after the event recorded by Herodotus. The festival, however, does not seem ever to have had any great celebrity, for Plato⁹ represents Phædrus as unacquainted even with the site of the Temple of Boreas. Particulars of this festival are not known, except that it was celebrated with banquets.

Pausanias¹⁰ mentions a festival celebrated with annual sacrifices at Megalopolis in honour of Boreas, who was thought to have been their deliverer from the Lacedæmonians.¹¹

Ælian¹² says that the Thuriars also offered an annual sacrifice to Boreas, because he had destroyed the fleet with which Dionysius of Syracuse attacked them; and adds the curious remark, that a decree was made which bestowed upon him the right of citizenship, and assigned to him a house and a piece of land. This, however, is perhaps merely another way of expressing the fact that the Thuriars adopted the worship of Boreas, and dedicated to him a temple, with a piece of land.

BOTANOMANTEIA. (*Vid. DIVINATIO*.)

BOTULUS (*ἄλλας, φάσκη*), a sausage, was a very favourite food among the Greeks and Romans. The *tomaculum* was also a species of sausage, but not the same as the botulus, for Petronius¹³ speaks of *tomacula cum botulis*. The sausages of the ancients, like our own, were usually made of pork,¹⁴ and were cooked on a gridiron or frying-pan, and eaten warm (*fuereunt et tomacula supra craticulam argenteam ferventia*).¹⁵ They were sold in the streets and in the baths, and the botularius was accustomed to cry out his sausage for sale.¹⁶

Sausages were also made with the blood of animals, like our black-puddings;¹⁷ and Tertullian¹⁸ informs us that, among the trials to which the heathens exposed Christians, one was to offer them such sausages (*botulos cruore distentos*), well knowing that the act by which they thus tempted them to transgress was forbidden by the Christian laws.¹⁹

ΒΟΥΛΗ' (ἡ τῶν πεντακοσίων). In the heroic ages, represented to us by Homer, the βουλή is simply an aristocratical council of the elders among the nobles, sitting under their king as president, who, however, did not possess any greater authority than the other members, except what that position gave him. The nobles, thus assembled, decided on public business and judicial matters, frequently in connexion with, but apparently not subject to, nor of necessity controlled by, an ἀγορά, or meeting of the freemen of the state.¹ This form of government, though it existed for some time in the Ionian, Æolian, and Achaean states, was at last wholly abolished. Among the Dorians, however, especially with the Spartans, this was not the case; for it is well known that they retained the kingly power of the Heracleidae, in conjunction with the γερουσία (vid. GEROUSIA), or assembly of elders, of which the kings were members. At Athens, on the contrary, the βουλή was a representative, and in most respects a popular body (δημοτικόν), the origin, nature, and duties of which we proceed to describe.

Its first institution is generally attributed to Solon. There are, however, strong reasons for supposing that, as in the case of the areiopagus, he merely modified the constitution of a body which he found already existing. In the first place, it is improbable, and, in fact, almost inconsistent with the existence of any government, except an absolute monarchy, to suppose that there was no such council. Besides this Herodotus² tells us that in the time of Cylon (B.C. 620), Athens was under the direction of the presidents of the Naucrarias (ναυκραρίαι), the number of which was forty-eight, twelve out of each of the four tribes. Moreover, we read of the case of the Alcmaeonidae being referred to an aristocratical tribunal of 300 persons, and that Isagoras, the leader of the aristocratic party at Athens, endeavoured to suppress the council, or βουλή, which Cleisthenes had raised to 600 in number, and to vest the government in the hands of 300 of his own party.³ This, as Mr. Thirlwall⁴ remarks, can hardly have been a chance coincidence: and he also suggests that there may have been two councils, one a smaller body, like the Spartan γερουσία, and the other a general assembly of the eupatrids; thus corresponding, one to the senate, the other to the comitia curiata, or assembly of the burghers at Rome. But, be this as it may, it is admitted that Solon made the number of his βουλή 400, taking the members from the first three classes, 100 from each of the four tribes. On the tribes being remodelled by Cleisthenes (B.C. 510), and raised to ten in number, the council also was increased to 500, fifty being taken from each of the ten tribes. It is doubtful whether the βουλευται, or councillors, were at first appointed by lot, as they were afterward; but as it is stated to have been Solon's wish to make the βουλή a restraint upon the people, and as he is, moreover, said to have chosen (ἐπιλεξάμενος⁵) 100 members from each of the tribes, it seems reasonable to suppose that they were elected, more especially when there is no evidence to the contrary.⁶ It is, at any rate, certain that an election, where the eupatrids might have used influence, would have been more favourable to Solon's views than an appointment by lot. But, whatever was the practice originally, it is well known that the appointment was in after times made by lot, as is indicated by the title (οἱ ἀπὸ τοῦ κλήρου βουλευταί), suggested by the use of beans in drawing the lots.⁷ The in-

dividuals thus appointed were required to submit to a scrutiny, or δοκιμασία, in which they gave evidence of being genuine citizens (γνήσιοι ἐξ ἁμφόν), of never having lost their civic rights by ἀρετία, and also of being under 30 years of age. (Vid. DOKIMASIA.) They remained in office for a year, receiving a drachma (μισθὸς βουλευτηκός) for each day on which they sat:¹ and independent of the general account, or εὐθῆναι, which the whole body had to give at the end of the year, any single member was liable to expulsion for misconduct by his colleagues.²

This senate of 500 was divided into ten sections of fifty each, the members of which were called prytanes (πρυτανεῖς), and were all of the same tribe; they acted as presidents both of the council and the assemblies during 35 or 36 days, as the case might be, so as to complete the lunar year of 354 days (12×29½). Each tribe exercised these functions in turn, and the period of office was called a prytany (πρυτανεία). The turn of each tribe was determined by lot, and the four supernumerary days were given to the tribes which came last in order.³ Moreover, to obviate the difficulty of having too many in office at once, every fifty was subdivided into five bodies of ten each; its prytany also being portioned out into five periods of seven days each: so that only ten senators presided for a week over the rest, and were thence called πρόεδροι. Again, out of these proedri an ἐπιστάτης was chosen for every day in the week, to preside as a chairman in the senate and the assembly of the people; during his day of office he kept the public records and seal.⁴

The prytanes had the right of convening the council and the assembly (ἐκκλησία). The duty of the proedri and their president was to propose subjects for discussion, and to take the votes both of the councillors and the people; for neglect of their duty they were liable to a fine.⁵ Moreover, whenever a meeting, either of the council or the assembly, was convened, the chairman of the proedri selected by lot nine others, one from each of the non-presiding tribes: these also were called proedri, and possessed a chairman of their own, likewise appointed by lot from among themselves. On their functions, and the probable object of their appointment, some remarks are made in the latter part of this article.

We now proceed to speak of the duties of the senate as a body. It is observed under ΑΡΕΙΟΠΑΓΟΣ that the chief object of Solon in forming the senate and the areiopagus was to control the democratical powers of the state; for this purpose Solon ordained that the senate should discuss and vote upon all matters before they were submitted to the assembly, so that nothing could be laid before the people on which the senate had not come to a previous decision. This decision or bill was called προβούλευμα, and if the assembly had been obliged either to acquiesce in any such proposition, or to gain the consent of the senate to their modification of it, the assembly and the senate would then have been almost equal powers in the state, and nearly related to each other, as our two houses of Parliament. But, besides the option of adopting or rejecting a προβούλευμα, or ψήφισμα as it was sometimes called, the people possessed and exercised the power of coming to a decision completely different from the will of the senate, as expressed in the προβούλευμα. Thus, in matters relating to peace and war, and confederacies, it was the duty of the senators to watch over the interests of the state,

1. (Il., ii., 53, 143; xviii., 503.—Od., ii., 239.)—2. (v., 71.)—3. (Herod., v., 72.—Plut., Sol., 12.)—4. (Hist. of Greece, ii., 41.)—5. (Plut., Sol., 19.)—6. (Thirlwall's Hist. of Greece, ii., 42.)—7. (Thucyd., viii., 69.)

1. (Büchh., i., 310, transl.)—2. (Harpocr., s. v. Ἐκφυλλοφορία.—Æsch., c. Ctes., p. 56, ed. Bekk.)—3. (Clinton, F. H., vol. ii., p. 346.)—4. (Suid.—Harpocr.)—5. (Demosth., c. Timocr., 703-707.)

and they could initiate whatever measures, and come to whatever resolutions they might think necessary; but on a discussion before the people it was competent for any individual to move a different or even contrary proposition. To take an example: In the Eubœan war (B.C. 350), in which the Thebans were opposed to the Athenians, the senate voted that all the cavalry in the city should be sent out to assist the forces then besieged at Tamyra; a *προβούλευμα* to this effect was proposed to the people, but they decided that the cavalry were not wanted, and the expedition was not undertaken. Other instances of this kind occur in Xenophon.¹

In addition to the bills which it was the duty of the senate to propose of their own accord, there were others of a different character, viz., such as any private individual might wish to have submitted to the people. To accomplish this, it was first necessary for the party to obtain, by petition, the privilege of access to the senate (*πρόσδοον γράψασθαι*), and leave to propose his motion; and if the measure met with their approbation, he could then submit it to the assembly.² Proposals of this kind, which had the sanction of the senate, were also called *προβουλεύματα*, and frequently related to the conferring of some particular honour or privilege upon an individual. Thus the proposal of Ctesiphon for crowning Demosthenes is so styled, as also that of Aristocrates for conferring extraordinary privileges on Charidemus, an Athenian commander in Thrace. Any measure of this sort, which was thus approved of by the senate, was then submitted to the people, and by them simply adopted or rejected; and "it is in these and similar cases that the statement of the grammarians is true, that no law or measure could be presented for ratification by the people without the previous approbation of the senate, by which it assumed the form of a decree passed by that body."³

In the assembly the bill of the senate was first read, perhaps by the crier, after the introductory ceremonies were over; and then the *proedri* put the question to the people, whether they approved of it, or wished to give the subject farther deliberation.⁴ The people declared their will by a show of hands (*προχειροτονία*). Sometimes, however, the bill was not proposed and explained by one of the *proedri*, but by a private individual—either the original applicant for leave to bring forward the measure, or a senator distinguished for oratorical power. Examples of this are given by Schömann.⁵ If the *προβούλευμα* of the senate were rejected by the people, it was, of course, null and void. If it happened that it was neither confirmed nor rejected, it was *ἐπέτειον*, that is, only remained in force during the year the senate was in office.⁶ If it was confirmed it became a *ψήφισμα*, or decree of the people, binding upon all classes. The form for drawing up such decrees varied in different ages. Before the archonship of Euclides (B.C. 403), they were generally headed by the formula, 'Ἐδοξε τῇ βουλῇ καὶ τῷ δήμῳ: then the tribe was mentioned in whose prytany the decree was passed; then the names of the *γραμματεῖς* or scribe, and chairman; and, lastly, that of the author of the resolution. Examples of this form occur in Andocides;⁷ thus: 'Ἐδοξε τῇ βουλῇ καὶ τῷ δήμῳ, Αἰαντὶς ἐπρυτάνευε, Κλεογένης ἐγραμμάτευε, Βοηθὸς ἐπεσείσται, τῷδε Δημόφανος συνέγραψεν.⁸ From the archonship of Euclides till about B.C. 325, the decrees commence with the name of

the archon; then come the day of the month, the tribe in office, and, lastly, the name of the proposer. The motive for passing the decree is next stated; and then follows the decree itself, prefaced with the formula *δεδοχθαι τῇ βουλῇ καὶ τῷ δήμῳ*. The reader is referred to Demosthenes, *De Corona*, for examples. After B.C. 325, another form was used, which continued unaltered till the latest times.¹ We will here briefly state the difference between the *νόμοι* and *ψήφισματα*: it is as follows: The former were constitutional laws; the latter, decrees of the people on particular occasions.²

Mention has just been made of the *γραμματεῖς*, whose name was affixed to the *ψήφισματα*, as in the example given above: it may be as well to explain that this functionary was a clerk chosen by lot by the senate in every prytany, for the purpose of keeping the records, and resolutions passed during that period; he was called the clerk according to the prytany (*ὁ κατὰ πρυτανείαν*), and the name of the clerk of the first prytany was sometimes used to designate the year.³

With respect to the power of the senate, it must be clearly understood that, except in cases of small importance, they had only the right of originating, not of finally deciding on public questions. Since, however, the senators were convened by the prytanes every day, except on festivals or *ἀγέροι ἡμέραι*,⁴ it is obvious that they would be fit recipients of any intelligence affecting the interests of the state, and it is admitted that they had the right of proposing any measure to meet the emergency; for example, we find that Demosthenes gives them an account of the conduct of Æschines and himself, when sent out as ambassadors to Philip, in consequence of which they propose a bill to the people. Again, when Philip seized on Elateia (B.C. 338), the senate was immediately called together by the prytanes to determine what was best to be done.⁵ But, besides possessing the initiatory power of which we have spoken, the senate was sometimes delegated by the people to determine absolutely about particular matters, without reference to the assembly. Thus we are told⁶ that the people gave the senate power to decide about sending ambassadors to Philip; and Andocides⁷ informs us that the senate was invested with absolute authority⁸ to investigate the outrages committed upon the statues of Hermes previously to the sailing of the Sicilian expedition.

Sometimes, also, the senate was empowered to act in conjunction with the *nomothetæ* (*συννομοθετεῖν*), as on the revision of the laws after the expulsion of the Thirty by Thrasybulus and his party, B.C. 403.⁹ Moreover, it was the province of the senate to receive *εἰσαγγελία*, or informations of extraordinary crimes committed against the state, and for which there was no special law provided. The senate in such cases either decided themselves, or referred the case to one of the courts of the *heliææ*, especially if they thought it required a higher penalty than it was competent for them to impose, viz., 500 drachmæ. It was also their duty to decide on the qualification of magistrates, and the character of members of their own body. (*Vid. DOXIMASIA.*) But, besides the duties we have enumerated, the senate discharged important functions in cases of finance. All legislative authority, indeed, in such matters rested with the people, the amount of expenditure and the sources of revenue being determined by the decrees which they passed; but the administration was intrusted to the senate, as the

1. (Hellen., i., 7, § 9; vii., 1, § 2).—2. (Demosth., c. Timocr., 715).—3. (Schömann, *De Ath. Com.*, p. 103, transl.).—4. (Aristoph., *Thesm.*, 290).—5. (*De Ath. Com.*, p. 106, transl.).—6. (Demosth., c. Arist., 651).—7. (*De Myst.*, p. 13.).—8. (Compare *Ἡρωδ.*, i., 118.)

1. (Schömann, p. 136, transl.).—2. (Thucyd., iii., 36, ed. Arnold.).—3. (Pollux, *Onom.*, viii., 98.—Böckh, vol. i., p. 250, transl.).—4. (Pollux, viii., 95).—5. (Demosth., *De Fals. Leg.*, 346.—*Is. executive power of the state, and responsible (*ὑπεύθυνος*) to the people. Thus Xenophon¹ tells us that the senate was occupied with providing money, with receiving the tribute, and with the management of naval affairs and the temples; and Lysias² makes the following remark: "When the senate has sufficient money for the administration of affairs, it does nothing wrong; but when it is in want of funds, it receives informations, and confiscates the property of the citizens." The letting of the duties (*τελώνων*) was also under its superintendence, and those who were in possession of any sacred or public moneys (*ἱερά καὶ ὄσια*) were bound to pay them into the senate-house; and in default of payment, the senate had the power of enforcing it, in conformity with the laws for the farming of the duties (*οἱ τελωνικαὶ νόμοι*). The accounts of the moneys that had been received, and of those still remaining due, were delivered to the senate by the *ἀποδectæ*, or public treasurers. (*Ἰδ. ΑΡΟΔΕΤÆ*.) "The senate arranged, also, the application of the public money, even in trifling matters, such as the salary of the poets, the superintendence of the cavalry maintained by the state, and the examination of the infirm (*ἰδύνατοι*) supported by the state, are particularly mentioned among its duties; the public debts were also paid under its direction. From this enumeration we are justified in inferring that all questions of finance were confided to its supreme regulation."³ Another very important duty of the senators was to take care that a certain number of triremes was built every year, for which purpose they were supplied with money by the state; in default of so doing, they were not allowed to claim the honour of wearing a crown or chaplet (*στέφανος*) at the expiration of their year of office.⁴

It has been already stated that there were two classes or sets of *proedri* in the senate, one of which, amounting to ten in number, belonged to the presiding tribe; the other consisted of nine, chosen by lot by the chairman of the presiding *proedri* from the nine non-presiding tribes, one from each, as often as either the senate or the people were convened. It must be remembered that they were not elected as the other *proedri*, for seven days, but only for as many hours as the session of the senate, or meeting of the people, lasted. Now it has been a question what were the respective duties of these two classes: but we have no hesitation in stating our conviction that it was the *proedri* of the presiding tribe who proposed to the people in assembly the subjects for discussion; recited, or caused to be recited, the previous bill (*προβούλευμα*) of the senate; officiated as presidents in conjunction with their *ἐπιστάτης*, or chairman, and discharged, in fact, all the functions implied by the words *χρηματίζειν πρὸς τὸν δῆμον*. For ample arguments in support of this opinion, the reader is referred to Schömann.⁵ It does indeed appear, from decrees furnished by inscriptions and other authorities, that in later times the *proedri* of the nine tribes exercised some of those functions which the orations of Demosthenes and his contemporaries justify us in assigning to the *proedri* of the presiding tribe. It must, however, be remarked, that all such decrees were passed after B.C. 308, when there were twelve tribes; and that we cannot, from the practice of those days, arrive at any conclusions relative to the customs of former ages.

If it is asked what, then, were the duties of these *proedri* in earlier times, the answer must be in a great measure conjectural; but the opinion of Schömann on this point seems very plausible. He ob-

serves that the *prytanes* had extensive and important duties intrusted to them; that they were all of one tribe, and therefore closely connected; that they officiated for thirty-five days as presidents of the representatives of the other tribes; and that they had ample opportunities of combining for the benefit of their own tribe at the expense of the community. To prevent this, and watch their conduct whenever any business was brought before the senate and assembly, may have been the reason for appointing, by lot, nine other quasi-presidents, representatives of the non-presiding tribes, who would protest and interfere, or approve and sanction, as they might think fit. Supposing this to have been the object of their appointment in the first instance, it is easy to see how they might at least have been united with the proper *proedri* in the performance of duties originally appropriated to the latter.

In connexion with the *proedri*, we will explain what is meant by the phrase *ἡ προεδρεύουσα φυλή*. Our information on this subject is derived from the speech of Æschines against Timarchus, who informs us that, in consequence of the unseemly conduct of Timarchus on one occasion before the assembly, a new law was passed, in virtue of which a tribe was chosen by lot to keep order, and sit as presidents under the *βῆμα*, or platform on which the orators stood. No remark is made on the subject to warrant us in supposing that senators only were elected to this office; it seems more probable that a certain number of persons was chosen from the tribe on which the lot had fallen, and commissioned to sit along with the *prytanes* and the *proedri*, and that they assisted in keeping order. We may here remark, that if any of the speakers (*ῥήτορες*) misconducted themselves either in the senate or the assembly, or were guilty of any act of violence to the *ἐπιστάτης*, after the breaking up of either, the *proedri* had the power to inflict a summary fine, or bring the matter before the senate and assembly at the next meeting, if they thought the case required it.¹

The meetings of the senate were, as we learn from various passages of the Attic orators, open to strangers; thus Demosthenes² says that the senate-house was, on a particular occasion, full of strangers (*μεστὸν ἦν ἰδιωτῶν*): in Æschines³ we read of a motion "that strangers do withdraw" (*μεταστησάμενος τοὺς ἰδιώτας*). Nay, private individuals were sometimes, by a special decree, authorized to come forward and give advice to the senate.⁴ The senate-house was called *τὸ βουλευτήριον*, and contained two chapels, one of *Ζεὺς βουλευαῖος*, another of *Ἀθηνᾶ βουλευαῖα*, in which it was customary for the senators to offer up certain prayers before proceeding to business.⁵

The *prytanes* also had a building to hold their meetings in, where they were entertained at the public expense during their *prytany*. This was called the *πρυτανεῖον*, and was used for a variety of purposes. (*Ἰδ. ΠΡΥΤΑΝΕΙΟΝ*.) Thucydides,⁷ indeed, tells us that, before the time of Theseus, every city of Attica had its *βουλευτήριον* and *πρυτανεῖον*: a statement which gives additional support to the opinion that Solon did not originate the senate at Athens.

The number of tribes at Athens was not always ten; an alteration took place in B.C. 306, when Demetrius Poliorcetes had liberated the city from the usurpation of Cassander. Two were then added, and called *Demetrius* and *Antigonis*, in honour of Demetrius and his father.⁸ It is evident that

this change, and the consequent addition of 100 members to the senate, must have varied the order and length of the prytanes. The tribes just mentioned were afterward called Ptolemais and Attalis; and in the time of Hadrian, who beautified and improved Athens,¹ a thirteenth was added, called from him Hadrianis. An edict of this emperor has been preserved, which proves that even in his time the Athenians kept up the show of their former institutions.

ΒΟΥΛΕΥΤΕΩΣ ΓΡΑΦΗ (Βουλευσεως γραφή), an impeachment for conspiracy. Βουλευσεως, being in this case the abbreviated form of ἐπιβουλευσεως, is the name of two widely different actions at Attic law. The first was the accusation of conspiracy against life, and might be instituted by the person thereby attacked, if competent to bring an action; otherwise, by his or her legal patron (κύριος). In case of the plot having succeeded, the deceased might be represented in the prosecution by near kinsmen (οἱ ἐντὸς ἀνεψιότητος), or, if they were incompetent, by the κύριος, as above mentioned.² The criminality of the accused was independent of the result of the conspiracy,³ and the penalty, upon conviction, was the same as that incurred by the actual murderers.⁴ The presidency of the court, upon a trial of this kind, as in most δίκαι φονικαί, belonged to the king archon,⁵ and the court itself was composed of the ephetae, sitting at the Palladium, according to Isæus and Aristotle, as cited by Harpocration, who, however, also mentions that the Areiopagus is stated by Dinarchus to have been the proper tribunal.

The other action, βουλευσεως, was available upon a person finding himself wrongfully inscribed as a state debtor in the registers or rolls, which were kept by the different financial officers. Meier,⁶ however, suggests that a magistrate that had so offended would probably be proceeded against at the εὐθύναι, or ἐπιχειροποισίαι, the two occasions upon which the public conduct of magistrates was examined, so that, generally, the defendant in this action would be a private citizen, that had directed such an insertion at his own peril. From the passage in Demosthenes, it seems doubtful whether the disfranchisement (ἀτιμία) of the plaintiff as a state debtor was in abeyance while this action was pending. Demosthenes at first asserts,⁷ but afterward⁸ argues that it was not. See, however, Meier,⁹ and Böckh's note.

There is no very obvious distinction laid down between this action and ψευδεγγραφή: but it has been conjectured by Suidas, from a passage in Lycurgus, that the latter was adopted when the defendant was a debtor to the state, but found his debt wrongly set down, and that βουλευσεως was the remedy of a discharged debtor again registered for the debt already paid.¹⁰ If the defendant lost his cause, his name was substituted for that of the plaintiff.¹¹ The cause was one of the γραφαὶ ἰδίαὶ that came under the jurisdiction of the thesmothetae.¹²

BOULEUTERION. (Vid. BOULE.)

BRACÆ or BRACCÆ (ἀναξυρίδες), trousers, pantaloons.

These, as well as various other articles of armour and of dress (vid. ACINACES, ARCUS, ARMILLA), were common to all the nations which encircled the Greek and Roman population, extending from the Indian to the Atlantic Ocean. Hence Aristagoras, king of Miletus, in his interview with Cleomenes,

king of Sparta, described the attire of a large portion of them in these terms: "They carry bows and a short spear, and go to battle in trousers and with hats upon their heads." Hence, also, the phrase *Braccati militis arcus*, signifying that those who wore trousers were in general armed with the bow.³ In particular, we are informed of the use of trousers or pantaloons among the following nations: 1. The Medes and Persians (περὶ τὰ σκέλεα ἀναξυρίδας²). 2. The Parthians and Armenians.⁴ 3. The Phrygians.⁵ 4. The Sacæ (ἀναξυρίδας ἐνδεδύκεσαν⁶). 5. The Sarmatæ (*Sarmaticæ braccæ*). 6. The Dacians and Getæ.⁸ 7. The Teutones.⁹ 8. The Franks (ἀναξυρίδας, οἱ μὲν λινῶς, οἱ δὲ σκυτίνας, διαζωννύμενοι τοῖς σκέλεσι περιамπτόχονται¹⁰). 9. The Belgæ (ἀναξυρίσι χρόνται περιτεταμέναις¹¹). 10. The Britons (*veteres braccæ Britonis pauperis*).¹² 11. The Gauls (*Gallia Bracata*, now Provence; *sagatos braccatosque*; ¹⁴ *χρόνται ἀναξυρίσι, ὡς ἐκείνοι βράκας προσαγορεύοντο*¹⁵).

The Gallic term "brakes," which Diodorus Siculus has preserved in the last-cited passage, also remains in the Scottish "breeks" and the English "breeches." Corresponding terms are used in all the northern languages.¹⁶ Also the Cossack and Persian trousers of the present day differ in no material respect from those which were anciently worn in the same countries.

In conformity with the preceding list of testimonies, the monuments of every kind which contain representations of the nations included in it, exhibit them in trousers, thus clearly distinguishing them from Greeks and Romans. An example is seen in the annexed group of Sarmatians, taken from the column of Trajan.

The proper braccæ of the eastern and northern nations were loose (κεχαλασμένοι; ¹⁷ *laxa*¹⁸), and they are therefore very aptly, though ludicrously, described in Euripides as "variegated bags" (τοὺς θυλάκους τοὺς ποικίλους¹⁹). To the Greeks they must have appeared highly ridiculous, although Ovid mentions the adoption of them by the descendants of some of the Greek colonists on the Euxine.²⁰

Trousers were principally worn in Europe; but Agathias states²¹ that in Europe they were also made of linen and of leather; probably the Asiatics made them of cotton and of silk. Sometimes they were striped (*virgata*²²), ornamented with a woof of various col-

ours,¹ or embroidered.² They gradually came into use at Rome under the emperors. Severus wore them, and gave them as presents to his soldiers,³ but the use of them was afterward restricted by Honorius.

BRACHIA'LE. (Vid. ARMILLA.)

BRASIDEIA (Βρασιδεΐα), a festival celebrated at Sparta in honour of their great general Brasidas, who, after his death, received the honours of a hero.⁴ It was held every year with orations and contests, in which none but Spartans were allowed to partake.

Brasidae were also celebrated at Amphipolis, which, though a colony of Athens, transferred the honour of κτίστης from Hagnon to Brasidas, and paid him heroic honours by an annual festival with sacrifices and contests.⁵

*BRASSICA (κράμβη), the Cabbage. Some varieties of this plant have been cultivated from the very earliest times of which we have any record. But the migrations and changes of the best sorts have not been traced; neither is it at all probable that the varieties which the ancients enjoyed have descended to us unaltered. Three kinds of cabbage were known to the Romans in the time of Cato:⁶ the first had a large stalk, and leaves also of considerable size; the second had crisped leaves; the third, which was the least esteemed, had small-sized leaves and a bitterish taste. According to Columella, the brassica or cabbage was a favourite edible with the Romans, and in sufficient plenty to be even an article of food for slaves. It was sown and cut all the year round; the best time, however, for planting it was after the autumnal equinox. When it had been once cut after this, it put forth young and tender shoots the ensuing spring. Apicius, however, the famous gourmand, disdained to employ these, and inspired the young prince Drusus with the same dislike towards them, for which, according to Pliny,⁷ he was reproved by his father Tiberius. This same writer mentions various kinds, of which the most esteemed was that of Aricia, with numerous and very thick leaves. Cato's second kind, the *Olus Apianum* (more correctly *Apianum*), is the *Brassica viridis crispa* of Bauhin. The *Olus Aricum* is the *Brassica oleracea gongyloides*, L.; the *Brassica Halmvridia* is thought to have been the *Crambe maritima*; some, however, are in favour of the *Convolvulus soldanella*. "It is uncertain," observes Beckmann, "whether we still possess that kind of cabbage which the ancients, to prevent intoxication, ate raw like salad."⁸ Of red cabbage no account is to be found in any ancient author. The ancient Germans, and, in fact, all the northern nations of Europe, cultivated the cabbage from very remote times. The Saxon name for February is *sprout-kale*, and that is the season when the sprouts from the old stalks begin to be fit for use. The Saxons must of course, therefore, have been familiar with the culture of cabbage or kale, as it is not at all probable that they invented the name after their settlement in Britain. We nowhere find among the Greeks and Romans any traces of that excellent preparation of cabbage called by the Germans *sour-kraut*, though the ancients were acquainted with the art of preparing turnips in the same manner.⁹ Whether *sour-kraut* be a German invention appears somewhat doubtful, if the statement of Belon be correct, who informs us that the Turks in

his time were accustomed to pickle cabbage for winter food.¹

*BRATHY (βράθυ), the Savine, or *Juniperus Sabina*, L. According to Pliny, there were two kinds, the one resembling the tamarisk, the other the cypress; and hence some called the latter the Cretan cypress. The two species described by Dioscorides are hence supposed by Sprengel to be the *tamariscifolia* and *cypressifolia*.

BRAURONIA (Βραυρώνια), a festival celebrated in honour of Artemis Brauronia, in the Attic town of Brauron,² where, according to Pausanias,³ Orëstes and Iphigenia, on their return from Tauria, were snatched by the Athenians to have landed, and left the statue of the Taurian goddess.⁴ It was held every fifth year, under the superintendence of ten *leporotoloi*;⁵ and the chief solemnity consisted in the circumstance that the Attic girls between the ages of five and ten years, dressed in crocus-coloured garments, went in solemn procession to the sanctuary,⁶ where they were consecrated to the goddess. During this act the *leporotoloi* sacrificed a goat, and the girls performed a propitiatory rite in which they imitated bears. This rite may have simply arisen from the circumstance that the bear was sacred to Artemis, especially in Arcadia;⁷ but a tradition preserved in Suidas⁸ relates its origin as follows: In the Attic town of Phanidæ a bear was kept, which was so tame that it was allowed to go about quite freely, and received its food from and among men. One day a girl ventured to play with it, and, on treating the animal rather harshly, it turned round and tore her to pieces. Her brothers, enraged at this, went out and killed the bear. The Athenians now were visited by a plague; and when they consulted the oracle, the answer was given that they would get rid of the evil which had befallen them if they would compel some of their citizens to make their daughters propitiate Artemis by a rite called *ἀρκτεῖν*, for the crime committed against the animal sacred to the goddess. The command was more than obeyed; for the Athenians decreed that from thenceforth all women, before they could marry, should have once taken part in this festival, and have been consecrated to the goddess. Hence the girls themselves were called *ἀρκτοι*, the consecration *ἀρκτεία*, the act of consecrating *ἀρκτεῖν*, and to celebrate the festival *ἀρκτεῖσθαι*.⁹ But as the girls, when they celebrated this festival, were nearly ten years old, the verb *δεκατεῖν* was sometimes used instead of *ἀρκτεῖν*. According to Hesychius, whose statement, however, is not supported by any other ancient authority, the Iliad was recited on this occasion by rhapsodists.

There was also a quinquennial festival called Brauronia, which was celebrated by men and dissolute women, at Brauron, in honour of Dionysus.¹⁰ Whether its celebration took place at the same time as that of Artemis Brauronia (as has been supposed by Müller,¹¹ in a note, which has, however, been omitted in the English translation) must remain uncertain, although the very different characters of the two festivals incline us rather to believe that they were not celebrated at the same time.

BREVIARIUM or BREVIARIUM ALARICI-ANUM. Alaric the Second, king of the Visigoths, who reigned from A.D. 484 to A.D. 507, in the

Knowl., vol. xv., p. 258.—Columella, xii., 54.—Pallad., Decem., 5, p. 1011.—Nicander, ap. Athen., iv., p. 133.)

twenty-second year of his reign (A.D. 506) commissioned a body of jurists, probably Romans, to make a selection from the Roman laws and the Roman text-writers, which should form a code for the use of his Roman subjects. The code, when made, was confirmed by the bishops and nobility; and a copy, signed by Anianus, the referendarius of Alaric, was sent to each comes, with an order to use no other law or legal form in his court (*ut in foro tuo nulla alia lex neque juris formula proferri vel recipi præsumentur*). The signature of Anianus was for the purpose of giving authenticity to the official copies of the code; a circumstance which has been so far misunderstood that he has sometimes been considered as the compiler of the code. This code has no peculiar name, so far as we know: it was called *Lex Romana*, and, at a later period, frequently *Lex Theodosii*, from the title of the first and most important part of its contents. The name *Breviarium*, or *Breviarium Alaricianum*, does not appear before the sixteenth century.

The following are the contents of the *Breviarium*, with their order in the code: 1. *Codex Theodosianus*, xvi. books. 2. *Novellæ* of Theodosius II., Valentinian III., Marcian, Majorian, Severus. 3. The *Institutiones* of Gaius. 4. *Pauli Receptæ Sententiæ*, v. books. 5. *Codex Gregorianus*, 13 titles. 6. *Codex Hermogenianus*, 2 titles. 7. *Papinianus*, lib. i., *Responsorium*.

The code was thus composed of two kinds of materials, imperial constitutions, which, both in the code itself, and the commentaries or notice prefixed to it, are called *Leges*; and the writings of Roman jurists, which are called *Jus*. Both the *Codex Gregorianus* and *Hermogenianus*, being compilations made without any legal authority, are included under the head of *Jus*. The selections are extracts, which are accompanied with an interpretation, except in the case of the *Institutiones* of Gaius; as a general rule, the text, so far as it was adopted, was not altered. The *Institutiones* of Gaius, however, are abridged or epitomized, and such alterations as were considered necessary for the time are introduced into the text: this part of the work required no interpretation, and, accordingly, it has none.

This code is of considerable value for the history of Roman law, as it contains several sources of the Roman law which otherwise are unknown, especially Paulus and the first five books of the *Theodosian Code*. Since the discovery of the *Institutiones* of Gaius, that part of this code is of less value.

The author of the *Epitome* of Gaius in the *Breviarium* paid little attention to retaining the words of the original, and a comparison of the *Epitome* and the MS. of Gaius is therefore of little advantage in this point of view. The *Epitome* is, however, still useful in showing what subjects were discussed in Gaius, and thus filling up (so far as the material contents are concerned) some of the lacunæ of the Verona MS.

A complete edition of this code was undertaken by Scharf, in his *Codex Theodosianus*, Basileæ, 1523, small folio. The whole is contained in the edition of the *Theodosian Code* by Cujacius, Lugd., 1566, folio. The *Theodosian Code* and the *Novellæ* alone are contained in the editions of Marville and Ritter; the remainder is contained in Schulting, *Jurisprudentia Vetus Ante-Justiniana*, Lugd. Bat., 1717. The whole, together with the fragments of Ulpian and other things, is contained in the *Jus Civile Antejustinianum*, Berlin, 1815.¹

BRIDGE (*γέφυρα*, *pons*). The most ancient bridge upon record, of which the construction has been described, is the one erected by Nitocris over

the Euphrates at Babylon.¹ It was in the nature of a drawbridge, and consisted merely of stone piers without arches, but connected with one another by a framework of planking, which was removed at night to prevent the inhabitants from passing over from the different sides of the river to commit mutual depredations. The stones were fastened together by iron cramps soldered with lead, and the piers were built while the bed of the river was free from water, its course having been diverted into a large lake, which was again restored to the usual channel when the work had been completed.² Compare the description given by Diodorus Siculus,³ who ascribes the work to Semiramis.

Temporary bridges constructed upon boats, called *σχεδιαί*,⁴ were also of very early invention. Darius is mentioned as having thrown a bridge of this kind over the Thracian Bosphorus;⁵ but we have no details respecting it beyond the name of its architect, Mandrocles of Samos.⁶ The one constructed by order of Xerxes across the Hellespont is more celebrated, and has been minutely described by Herodotus.⁷ It was built at the place where the Chersonese forms almost a right angle, between the towns of Sestos and Madytus on the one side, and Abydos on the other. The first bridge which was constructed at this spot was washed away by a storm almost immediately after it was completed,⁸ and of this no details are given. The subsequent one was executed under the directions of a different set of architects.⁹ Both of them appear to have partaken of the nature of *suspension* bridges, the platform which formed the passage-way being secured upon enormous cables formed by ropes of flax (*λευκόλινον*) and papyrus (*βυβλίνον*) twisted together, and then stretched tight by means of windlasses (*ὄνοι*) on each side.

The bridges hitherto mentioned cannot be strictly denominated Greek, although the architects by whom the last two were constructed were natives of the Greek islands. But the frequent mention of the word in Homer proves that they were not uncommon in Greece, or, at least, in the western part of Asia Minor, during his time. The Greek term for a permanent bridge is *γέφυρα*, which the ancient etymologists connected with the *Gephyrai* (*Γεφυραῖοι*), a people whom Herodotus¹⁰ states to have been Phœnicians, though they pretended to have come from Eretria; and the etymologists accordingly tell us that the first bridge in Greece was built by this people across the Cephissus; but such an explanation is opposed to sound etymology and common sense. As the rivers of Greece were small, and the use of the arch known to them only to a limited extent (*vid.* *Arcus*), it is probable that their bridges were built entirely of wood, or, at best, were nothing more than a wooden platform supported upon stone piers at each extremity, like that of Nitocris described above. Pliny¹¹ mentions a bridge over the Acheron 1000 feet in length, and also says¹² that the island Eubœa was joined to Bœotia by a bridge; but it is probable that both these works were executed after the Roman conquest.

In Greece also, as well as in Italy, the term *bridge* was used to signify a roadway raised upon piers or arches to connect the opposite sides of a ravine, even where no water flowed through it.¹³

The Romans were undoubtedly the first people who applied the arch to the construction of bridges, by which they were enabled to erect structures of great beauty and solidity, as well as utility; for by

1. (Savigny, Geschichte des Röm. Rechts in Mittelalter, ii., § 8.—Gaius, Præfatio Primæ Editioni Præmissa.)

this means the openings between the piers for the convenience of navigation, which in the bridges of Babylon and Greece must have been very narrow, could be extended to any necessary span.

The width of the passage-way in a Roman bridge was commonly narrow, as compared with modern structures of the same kind, and corresponded with the road (*via*) leading to and from it. It was divided into three parts. The centre one, for horses and carriages, was denominated *agger* or *iter*; and the raised footpaths on each side (*decursoria*), which were enclosed by parapet walls similar in use and appearance to the *pluteus* in the basilica. (*Vid. BASILICA*, p. 142.)

Eight bridges across the Tiber are enumerated by P. Victor as belonging to the city of Rome. Of these, the most celebrated, as well as the most ancient, was the *PONS SUBLICIUS*, so called because it was built of wood; *sublices*, in the language of the Formiani, meaning wooden beams.¹ It was built by Ancus Marcius, when he united the Janiculum to the city,² and became renowned from the well-known feat of Horatius Cocles in the war with Porsenna.³ In consequence of the delay and difficulty then experienced in breaking it down, it was reconstructed without nails, in such a manner that each beam could be removed and replaced at pleasure.⁴ It was so rebuilt by the pontifices,⁵ from which fact, according to Varro,⁶ they derived their name; and it was afterward considered so sacred, that no repairs could be made in it without previous sacrifice conducted by the pontifex in person.⁶ In the age of Augustus it was still a wooden bridge, as is manifest from the epithet used by Ovid:⁸

*"Tum quoque priscorum Virgo simulacra virorum
Mittere roboreo scirpea ponte solet;"*

in which state it appears to have remained at the time of Otho, when it was carried away by an inundation of the Tiber.⁹ In later ages it was also called *Pons Æmilii*, probably from the name of the person by whom it was rebuilt; but who this Æmiliius is uncertain. It may have been Æmiliius Lepidus the triumvir, or probably the Æmiliius Lepidus who was censor with Munatius Plancus, under Augustus, ten years after the *Pons Sublcius* fell down, as related by Dion Cassius.¹⁰ We learn from P. Victor, in his description of the Regio xi., that these two bridges were one and the same: "*Æmil-*

ius qui ante sublcius." It is called Æmilian by Juvenal¹ and Lampridius,² but is mentioned by Capitolinus³ as the *Pons Sublcius*; which passage is alone sufficient to refute the assertion of some writers, that it was built of stone at the period when the name of Æmiliius was given to it.⁴

This bridge was a favourite resort for beggars, who used to sit upon it and demand alms.⁵ Hence the expression of Juvenal,⁶ *aliquis de ponte*, for a beggar.⁷

It was situated at the foot of the Aventine, and was the bridge over which C. Gracchus directed his flight when he was overtaken by his opponents.⁸

II. *PONS PALATINUS* formed the communication between the Palatine and its vicinities and the Janiculum, and stood at the spot now occupied by the "*Ponte Rotto*." It is thought that the words of Livy⁹ have reference to this bridge. It was repaired by Augustus.¹⁰

III., IV. *PONS FABRICIUS* and *PONS CESTIUS* were the two which connected the Insula Tiberina with the opposite sides of the river; the first with the city, and the latter with the Janiculum. Both are still remaining. The Pons Fabricius was originally of wood, but was rebuilt by L. Fabricius, the *curator viarum*, as the inscription testifies, and a short time previous to the conspiracy of Catiline;¹¹ which passage of Dion Cassius, as well as the words of the scholiast on Horace,¹² warrant the assumption that it was then first built of stone. It is now called "*Ponte quattro capi*." The Pons Cestius is by some authors supposed to have been built during the reign of Tiberius by Cestius Gallus, the person mentioned by Pliny,¹³ though it is more reasonable to conclude that it was constructed before the termination of the Republic, as no private individual would have been permitted to give his own name to a public work under the Empire.¹⁴ The inscriptions now remaining are in commemoration of Valentinianus, Valens, and Gratianus, the emperors by whom it was restored. Both these bridges are represented in the annexed woodcut: that on the right hand is the Pons Fabricius, and is curious as being one of the very few remaining works which bear the date of the Republic; the Pons Cestius, on the left, represents the efforts of a much later age; and, instead of the buildings now seen upon the island, the temples which originally stood there, as well as the island itself, have been restored.

V. *PONS JANICULENSIS*, which led direct to the Janiculum. The name of its founder and period of its construction are unknown; but it occupied the site of the present "*Ponte Sisto*," which was built by Sixtus IV. upon the ruins of the old bridge.

VI. *PONS VATICANUS*, so called because it formed the communication between the Campus Martius and Campus Vaticanus. When the waters of the Tiber are very low, vestiges of the piers are still discernible at the back of the Hospital of San Spir-

ito. By modern topographers this bridge is often called "*Pons Triumphalis*," but without any classical authority; the inference, however, is not improbable, because it led directly from the Campus to the Clivus Cinnæ (now Monte Mario), *prope* which the triumphal processions descended.

VII. *PONS ÆLIUS*, built by Hadrian, which led from the city to the Mausoleum (*vid. MAUSOLEUM*) of that emperor, now the bridge and castle of St. An-

gelo. A representation of this bridge is given in the following woodcut, taken from a medal still extant. It affords a specimen of the style employed

at the period when the fine arts are considered to have been at their greatest perfection at Rome.

VIII. PONS MILVIUS, on the Via Flaminia, now

Ponte Molle, was built by Æmilius Scaurus the censor,² and is mentioned by Cicero³ about 45 years after its formation. Its vicinity was a favourite place of resort for pleasure and debauchery in the licentious reign of Nero.⁴ Upon this bridge the ambassadors of the Allobroges were arrested by Cicero's retainers during the conspiracy of Catiline.⁵ Catulus and Pompey encamped here against Lepidus when he attempted to annul the acts of Sulla.⁶ And, finally, it was at this spot that the battle between Maxentius and Constantine, which decided the fate of the Roman Empire, took place (A.D. 312).

The Roman bridges without the city were far too many to be enumerated here. They formed

one of the chief embellishments in all the public roads; and their frequent and stupendous remains, still existing in Italy, Portugal, and Spain, attest, even to the present day, the scale of grandeur with which their works of national utility were always carried on. Subjoined is a representation of the bridge at Ariminum (*Rimini*), which remains entire, and was commenced by Augustus and terminated by Tiberius, as we learn from the inscription, which is still extant. It is introduced in order to give the reader an idea of the style of art during the age of Vitruvius, that peculiar period of transition between the austere simplicity of the Republic and the profuse magnificence of the Empire.

The bridge thrown across the Bay of Baïæ by Caligula,⁷ the useless undertaking of a profligate prince, does not require any farther notice; but the bridge which Trajan built across the Danube, which is one of the greatest efforts of human ingenuity, must not pass unmentioned. A full account of its construction is given by Dion Cassius,⁸ and it is also mentioned by Pliny.⁹ The form of it is given in the following woodcut, from a representation of it on the column of Trajan at Rome, which has given rise to much controversy, as it does not agree in many respects with the description of Dion Cassius. The inscription, supposed to have belonged to this bridge, is quoted by Leunclavius¹⁰ and by Gruter.¹¹

SUB JUGUM ECCE RAPITUR ET DANUVIUS.

purposes of sculpture. It was destroyed by Hadrian,¹² under the pretence that it would facilitate the incursions of the barbarians into the Roman territories, but in reality, it is said, from jealousy and despair of being able himself to accomplish any equally great undertaking, which is supposed to be

It will be observed that the piers only are of stone, and the superstructure of wood.

The Conte Marsigli, in a letter to Montfaucon, gives the probable measurements of this structure, from observations made upon the spot, which will serve as a faithful commentary upon the text of Dion. He considers that the whole line consisted of 23 piers and 22 arches, making the whole bridge about 3010 feet long, and 48 in height, which are much more than the number displayed upon the column. But this is easily accounted for without impairing the authority of the artist's work. A fewer number of arches were sufficient to show the general features of the bridge, without continuing the monotonous uniformity of the whole line, which would have produced an effect ill adapted to the

confirmed by the fact that he afterward put to death the architect, Artemidorus, under whose directions it was constructed.

The Romans also denominated by the name of *pontes* the causeways which in modern language are termed "viaducts." Of these, the *Pons ad Nonam*, now called Ponte Nono, near the ninth mile from Rome, on the *Via Prænestina*, is a fine specimen.

Among the bridges of temporary use, which were

made for the immediate purposes of a campaign, the most celebrated is that constructed by Julius Cæsar over the Rhine within the short period of ten days. It was built entirely of wood, and the whole process of its construction is minutely detailed by its author.¹ An elevation of it is given by Palladio, constructed in conformity with the account of Cæsar, which has been copied in the editions of Oudendorp and the Delphin.

Vegetius,² Herodian,³ and Lucan⁴ mention the use of casks (*dolia, cupæ*) by the Romans, to support rafts for the passage of an army; and Vegetius⁵ says that it was customary for the Roman army to carry with them small boats (*monoxuli*) hollowed out from the trunk of a tree, together with planks and nails, so that a bridge could be constructed and bound together with ropes upon any emergency without loss of time. Pompey passed the Euphrates by a similar device during the Mithradatic war.⁶ The annexed woodcut, taken from a bas-relief on the column of Trajan, will afford an idea of the general method of construction and form of these bridges, of which there are several designs upon the same monument, all of which greatly resemble each other.

When the Comitia were held, the voters, in order to reach the enclosure called *septum* and *ovile*, passed over a wooden platform, elevated above the ground, which was called *Pons Suffragiorum*, in order that they might be able to give their votes without confusion or collusion.

Pons is also used to signify the platform (*ἐπιβάθρα, ἀποβάθρα*) used for embarking in, or disembarking from, a ship.

*"Interea Æneas socios de puppibus altis
Pontibus exponit."*⁷

The method of using these *pontes* is represented in the annexed woodcut, taken from a very curious intaglio, representing the history of the Trojan war, discovered at *Bonilla* towards the latter end of the 17th century, which is given by Fabretti, *Syntagma de Column. Trajani*, p. 315.

*BROMOS (*βρόμος* or *βρόμος*), a plant, which Dierbach makes to be the *Avena sativa*, "Oats." Stackhouse, however, is in favour of the *Secale Cereale*, and Sprengel of the *Avena fatua*, or "wild Oats."

BRONZE (*χαλκός, æs*), a compound of copper and tin. Other metals are sometimes combined with the above; but the most ancient bronzes, properly so called, are found to consist of those two ingredients. In the article on *Æs*, some farther

particulars are supplied respecting the different compositions of *bronze* and *brass*. The distinctive terms should always be observed in speaking of these substances, as the indiscriminate use of them has led to great error and confusion in describing works of art.

There can be no question as to the remote antiquity of metallurgy; though at what precise period the various metals were known, in what order they were discovered, and by what processes extracted—either simply, or by reducing their ores when they were found in that state, there are no satisfactory means of judging. In the twenty-eighth chapter of the book of Job we read, "Surely there is a vein for the silver, and a place for gold where they find it. Iron is taken out of the earth, and brass (copper) is molten out of the stone." This passage, taken as a whole, and supported as it is by various intimations throughout the Pentateuch, shows that at this early period greater advances had been made in mining and the metallurgic arts than is usually supposed. There is the same dearth of exact information on the practice of the metal-founders and workers of the archaic ages, even after the different substances were known, and objects of imitative art had been executed in them.

The most ancient Greek bronzes extant are composed simply of copper and tin; and it is remarkable how nearly the relative proportions of the metals agree in all the specimens that have been analyzed. Some bronze nails from the ruins of the Treasury of Atreus at Mycenæ; some ancient coins of Corinth; a very ancient Greek helmet, on which is a boustrophedon inscription, now in the British Museum; portions of the breastplates of a piece of armour called the Bronzes of Siris, also preserved in our national collection; and an antique sword found in France, produced in 100 parts,

87.43 and 88 copper

12.53 and 12 tin

99.96 100

At a later period than that to which some of the above works may be referred, the composition of bronze seems to have been a subject to which the greatest attention was paid; and the addition of a variety of metals seems to have been made to the original (if it may be so called) combination of copper and tin. The few writers on art whose evidence has reached our times, make particular mention of certain of these bronzes, which, notwithstanding the changes they underwent by the introduction of novel elements, were still ranked under the words *χαλκός* and *æs*. That which appears to have held the first place in the estimation of the ancients was the *æs Corinthiacum*, which some pretended was an alloy made accidentally, in the first instance, by the melting and running together of various metals (especially gold and bronze), at the burning of Corinth by Lucius Mummius, about 146 B.C. This account is obviously incorrect, as some of the artists whose productions are mentioned as composed of this highly valued metal lived long before the event alluded to. Pliny¹ particularizes three classes of the Corinthian bronze. The first, he says, was white (*candidum*), the greater proportion of silver that was employed in its composition giving it a light colour. In the second sort or quality gold was introduced, in sufficient quantity to impart to the mixture a strong yellow or gold tint. The third was composed of equal proportions of the different metals. The next bronze of note among the ancient Greek sculptors is distinguished by the title of *hepatizon*, which it seems to have acquired from its colour, which bore some resemblance

1. (De Bell. Gall., iv., 17.)—2. (iii., 7.)—3. (viii., 4, 8.)—4. (iv., 420.)—5. (l. c.)—6. (Florus, iii., 5.)—7. (Virg., *Æn.*, x., 286.)

blance to that of the *liver* (ἥπαρ). Pliny says it was inferior to the Corinthian bronze, but was greatly preferred to the mixtures of Delos and Ægina, which for a long period had a high reputation, and were much sought after. The colour of the bronze called *hepatizon* must have been very similar to that of the *cinque cento* bronzes—a dull, reddish brown. The next ancient bronze in order of celebrity seems to have been the *as Deliacum*. Its reputation was so great that the island of Delos became the mart to which all who required works of art in metal crowded, and led, in time, to the establishment there of some of the greatest artists of antiquity. Next to the Delian, or, rather, in competition with it, the *as Ægineticum* was esteemed. We are told that no metal was produced naturally in Ægina, but the founders and artists there were so skilful in their composition of bronze, that the island acquired great celebrity on that account. Two of the most distinguished among the sculptors of ancient times, Myron and Polyclethus, contemporaries of Phidias, not only showed their rivalry in producing the finest works of art, but also in the choice of the bronze they used. Myron, we are informed, always preferred the Delian, while Polyclethus adopted the Æginetan mixture—*emulatio autem et in materia fuit*.¹ From a passage in Plutarch, it has been supposed that this far-famed Delian bronze was of a light and somewhat sickly tint.² Plutarch says that in his time its composition was unknown.

Of some of the other bronzes enumerated in the writings of the ancients, little or nothing is known beyond the titles. Three of these are the *as Demonesium*,³ the *as nigrum*,⁴ and the Tartessian bronze (Ταρτησσιος χαλκός) mentioned by Pausanias.⁵

Before quitting the subject of mixtures of metals, it may be right to allude to a composition mentioned by Pliny⁶ under the title of *aurichalcum*, written also *orichalcum*, which some writers have supposed was an established bronze composed of gold and bronze, or, at least, of gold and copper. It is possible there may have been a factitious substance so designated; but the true meaning of the word appears to be *mountain-metal*, from the Greek words *ὄρος* or *ὄρεα*, a mountain, and *χαλκός*: and the accidental similarity of sound has doubtless led modern writers into error respecting the meaning of the first two syllables, and into the belief that it was intended to designate the combination of the two metals alluded to. Reference to the passage in Pliny will make this clear to the reader. He says distinctly it was not found in his time, the mines which produced it being exhausted.

Although, strictly speaking, it does not belong to our subject, a mixture, which was employed and much esteemed by the ancients, may be mentioned in this place. It was called *electrum*, and was composed of gold and silver in certain proportions. It was, in all probability, only used for extraordinary purposes. Thus Helen is said to have dedicated, in the Temple of Minerva at Lindus, a cup made of *electrum*, of the exact size and form of one of her own breasts (*Minerva templum habet Lindos. . . . in quo Helena sacravit calicem ex electro. Adjicit historia, mamma sua mensura*).⁷

The ancients were partial to polychromic sculpture, as is evident from the variety of colours and materials they employed even in the best period of Greek art, namely, the age of Pericles, when Phidias, Ageladas, Myron, Polyclethus, Alcamenes, and Pythagoras, were in the zenith of their glory. This taste was carried into metal-works, and seems, if

the accounts that have been brought down to us are to be credited, to have existed in very early times. This is not the place to discuss the genuineness of the passage in Homer in which mention is made of the shield of Achilles. It is only necessary here to state, that in one of its compartments, oxen, sheep, and various other objects were represented, and that they were distinguished by variety of colours. Pliny¹ says that the artist Aristonidas made a statue of Athamas, in which he proposed to himself the difficult task of producing the effect of shame, or blushing, by using a mixture of iron with the bronze in which the work was executed (*Æs ferrumque miscuit, ut rubigine ejus per nitorem aris relucens exprimeretur verecundia rubor*). Plutarch tells us that a statuette called Silanio or Silanion made statue of Jocasta dying, and so composed his materials that a pallid appearance or complexion was produced. This, it is said, was effected by the introduction of silver. Callistratus speaks of a statue of Cupid by Praxiteles, and another of Occasion (Καιρός), represented under the form of a youth; also one of Bacchus by Praxiteles; all of which were remarkable for the colour of the bronze imitating the appearance of nature. A bronze relief of the battle of Alexander and Porus is also referred to for its truth of effect, produced by the blending of colours, and which rendered it worthy to be compared with the finest pictures.

With the very limited data we possess, it is impossible to offer much conjecture upon these statements, or to say how much or how little they are to be relied upon. Some of the accounts are most probably inventions of the fancy; some of them may be founded on facts greatly overcharged, the effects described being produced by overlaying the metal with colour, or in some cases, perhaps, by what is now called plating. A slight acquaintance with the nature of metal, and the processes of founding, will be sufficient to convince any one of the impracticability of effecting (at least by melting the materials together, and so producing variety of tints) what it is pretended was done in some of the instances referred to.

The earliest mode of working in metal among the Greeks seems to have been with the hammer; by beating out lumps of the material into the form proposed, and afterward fitting the pieces together by means of pins or keys. It was called *σφυρήλατον*, from *σφυρα*, a hammer. Pausanias² describes this process in speaking of a very ancient statue of Jupiter at Sparta, the work of Learchus of Rhegium. With respect to its supposed antiquity, Pausanias can only mean that it was very ancient, and of the archaic style of art. The term *sphurelata* is used by Diodorus Siculus in describing some very ancient works which are said to have decorated the celebrated gardens and palace of Ninus and Semiramis at Babylon. Pliny³ mentions a statue of Diana Anaitis worked in the same way; and, that there may be no doubt that it was of solid hammer-work, he uses two expressions to convey his meaning. The statue was of gold, and the passage describing it has given rise to much discussion: "*Aurea statua prima nulla inanitate, et antequam ex ere aliqua illo modo fieret quam vocant holosphyraton, in templo Anaitidis posita dicitur*." A statue of Dionysius by Onassimedes, of solid bronze, is mentioned by Pausanias⁴ as existing at Thebes in his time. The next mode, among the Greeks, of executing metal-works seems to have been by plating upon a nucleus, or general form, of wood: a practice which was employed also by the Egyptians, as is proved by a specimen of their art preserved in the British

1. (Plin., H. N., xxiv., 2.)—2. (Vid. Quatremère de Quincy, Jupiter Olympien.—Plut., De Pyth. Orac.)—3. (Pollux.—Hæsch.)—4. (Philost.—) 5. (vi., 19, § 2.)—6. (H. N., xxiv., 2.)—7. (Plin., H. N., xxxiii., 23.)

1. (xxxiv., 40.)—2. (iii., 17, § 6.)—3. (H. N., xxxiii., 24.)—4. (ix., 12, § 3.)

Museum The subject is a small head of Osiris, and the wood is still remaining within the metal. It is probable that the terms *holosphyraton* and *sphyraton* were intended to designate the two modes of hammer-work; the first on a solid mass, and the other hammering out plates.

It is extremely difficult to determine at what date the casting of metal was introduced. That it was known at a very early period there can be no doubt, although it may not have been exercised by statuary in European Greece till a comparatively late date. The art of founding may be divided into three classes or stages. The first is the simple melting of metals; the second, casting the fused metals into prepared forms or moulds; and the third, casting into a mould, with a core or internal nucleus, by which the metal may be preserved of a determined thickness. The first stage must have been known at a period of which we have no record beyond that intimation especially alluded to in Job, which establishes the fact that some of the processes of metallurgy were well known when that book was composed. The earliest works of art described as of hammer-work were probably executed in lumps of metal that had already undergone this simple preparation. The casting of metal into moulds must also have been practised very early. There are no means of knowing of what material or composition the forms or moulds were made, but in all probability clay (dried, and then perhaps baked) was employed for the purpose. The circumstance of a spot where clay abounded having been chosen for the founding of the bronze works for the Temple of Solomon supports this supposition. Of course, all the earliest works produced in this stage of the art must have been solid. The third process, that of casting into a mould with a core, was an important step in the statuary's art. Unfortunately, there is no record of the time, nor of the mode in which this was effected by the ancients, unless we consider the statements of Pausanias of sufficient authority for the date of the various discoveries among the Greeks. His account would imply that the art of casting was not known before the time of Theodorus of Samos, who probably lived between eight and seven hundred years before our era.¹ Herodotus,² Pliny,³ and Pausanias make honourable mention of Rhæcus and Theodorus. Pausanias says⁴ that they first invented *casting in bronze* (διέχεαν χαλκῶν καὶ ἀγάλματα ἐκνεύσαντο). Pliny, who seems to have written down whatever he heard, says,⁵ "In Samo primum omnium 'plastice' invenisse Rhæcum et Theodorum;" but he proves the incorrectness of this statement by recording an instance of the proficiency of Theodorus in his art, when he says "He cast a bronze statue of himself, holding in one hand a file (in allusion, probably, to his profession), and in the other a quadriga of such small dimensions that a fly might cover it with its wings;" an example of practical skill that at once places him in a much more advanced rank in his art than the inventor of its first and most simple process could have attained.

The ancients used something answering the purpose of a solder for fastening the different pieces of metal together; but it is difficult to determine whether the term *κόλλησις* means a solder or only a species of glue. Pausanias distinctly speaks of it as something different from nails or cramps, and gives us the name of its inventor, Glaucus of Chios. He is speaking of a vase of iron, which he says was the work Γλαύκων τοῦ Χίου, σιδήρου κόλλησιν ἀνδρὸς εὐρόντος μὲν δὲ ἡ κόλλα συνέχει τε, καὶ

ἐστὶν αὐτῇ τῷ σιδήρῳ δεσμός.¹ Pliny, in like manner, speaks of a solder under the title of *plumbum argentarium*.² Many of the works in the British Museum, as well as in other collections, show the points of junction of the various pieces of which the objects are composed; but how they were fastened together is a matter of doubt, the rust that has accumulated, both within and without, quite precluding the possibility of minute and satisfactory examination. Some of them appear to have been fitted together somewhat in the manner called *dove tailing*, and then *pinned*; but whether they were then soldered, or merely beaten together with the hammer, and then worked over to make the surface entire, cannot be determined. The modern practice of burning the parts together seems, as far as there are opportunities of judging, to have been quite unknown to the ancients.

The finest collection of ancient bronzes is in the Museo Borbonico at Naples. They have been found chiefly in the ruins of Herculaneum and Pompeii, and among them are some examples of great skill and beauty. A few of the heads offer peculiarities in the treatment of the hair, the small corkscrew curls, and the ends of the beards being formed of separate pieces of metal fastened on. Several of the statues have the eyes of paste and of stones, or sometimes of a different metal from the material of the rest of the work. Silver was often united with bronze. Cicero mentions a statue of "Apollo aneus, cujus in femore litterulis minutis argenteis nomen Myronis erat inscriptum."³ In a bronze statue of a youth, in the collection at Paris, are the remains of a Greek inscription in silver letters. They are inserted into the left foot. The Museo Borbonico possesses some examples of inlaid silver-work. There are also instances of it in the collection of bronzes in the British Museum.

The names of few sculptors, or, rather, statuary of celebrity, have reached us who were not chiefly distinguished for the excellence of their works in bronze. Theodorus of Samos has already been mentioned; Gitiadas of Sparta and Glaucias of Ægina may be added as holding an eminent place among the earlier artists in bronze. A list of the statuary of Greece who excelled in works in metal would almost be a history of sculpture. It will be enough to state that Ageladas, the master of Phidias, Phidias, Alcamenes, Agoracritus, Polyclethus, Myron, Praxiteles, and Lysippus exercised, and contributed to bring to perfection, this branch of art. Bronze-casting seems to have declined in Greece soon after the time of Alexander the Great, about 330 B.C. The accounts given of the number of works executed about that period almost exceed belief. Lysippus alone is said, according to Pliny, to have produced above 600, or, according to another reading, above 1500.⁴

The Romans were never distinguished for the cultivation of the arts of design; and, when statues were required by them in the earlier period of their history, they were obliged to call in the aid of Etruscan artists. Afterward, as their empire was extended, the city was filled with the works of the best schools of Greece, and numbers of artists of that country, no longer able to find employment at home, established themselves in the capital of the West. Zenodorus is said to have executed some magnificent works in the time of Nero; and the remains of art of the time of Trajan, Hadrian, and the Antonines, prove that artists of great skill were living at the date of those emperors. Many of the

1. (x., 16, § 1.—Compare Herodotus, i., 25, who speaks of ὑποκηρητάριον σιδήρεον κόλλητρον.)—2. (H. N., xxxiv., 17.)—3. (Verr., iv., 43.)—4. (Phn., R. N., xxxiv., 17.—Sillig, Cat. A., tif., s. v. Lysippus.)

1. (Paus., iii., 12, § 8.)—2. (i., 51; iii., 41, 60.)—3. (H. N., xxv., 43, &c.)—4. (viii., 14, § 5.)—5. (l. c.)

examples of bronze works that have reached us exhibit signs of having been gilt, and the writers of antiquity refer occasionally to the practice. It does not seem to have been employed till taste had much deteriorated; probably when the value and richness of the material were more highly estimated than the excellence of the workmanship. Nero commanded a statue of Alexander, the work of Lysippus, to be gilt; but Pliny¹ tells us it was found to injure the beauty and effect of the work, and the gold was removed.

The greatest destruction, at one time, of ancient works of art is supposed to have occurred at the taking of Constantinople, in the beginning of the thirteenth century. The collection of statues had been made with great care, and their number had accumulated to an amount which seems quite surprising when it is considered how long a time had elapsed since art had been encouraged or protected. At the period alluded to we are told that some of the finest works of the ancient masters were purposely destroyed; either in mere wantonness, or with the view of turning the material into money, or for sale to the metal founders for the value of the bronze. Among the few works saved from this devastation are the celebrated bronze horses which now decorate the exterior of St. Mark's Church at Venice. They have been ascribed, but without sufficient authority, to Lysippus.

Before taking leave of the subject of metal-working, it may be right to add a few words upon *torcutive* art (*τορκευτική*). From the difference of opinion that exists among antiquaries and scholars, it is easier to say what it is not than what it is. Some believe it to be equivalent to the *calatrata* of the Latins, which seems to mean *chasing*. Others suppose it means the art of turning, from *τόρνος*: and others think it applies to works in relieve, from *τόπος*, clear, distinct. Some believe it is the art of uniting two or more metals; and others, that it is the union of metal with any other material. Millingen, who is one of the best authorities on such subjects, says, "The art of working the precious metals either separately, or uniting them with other substances, was called *torcutive*. It was known at a very early epoch, as may be inferred from the shield of Achilles, the ark of Cypselus, and other productions of the kind."² There is an example of this kind of work, noticed by the above writer, in the British Museum. It is not cast, but consists of very thin laminated plates of silver, beaten or punched out, and chased. The relief is bold, and the accessories are of sheet gold, overlaid.

*BRUCUS or BRUCHUS (*βροῦκος, βροῦχος*), a very formidable species of locust, described by Theophrastus³ as the most destructive of their kind. The term, however, does not appear to have been very well defined by the Greek writers.⁴ The *Bruchus* in the Linnæan system is an insect that commits great ravages on the different grains of the majority of leguminous plants, and of some kernel fruits, and particularly on beans, lentils, vetches, and pease.⁵ The *βροῦχος* of the ancients appears to have been the same with the *Cossus* of Pliny and Festus.⁶

*BRYON (*βρύον*), a term used in a variety of senses: 1. As applied to the germe of a flower by Theophrastus.⁷ 2. To the male Catkins by the same writer.⁸ 3. To the flowers or corollæ by the same,⁹ and also by Nicander.¹⁰ 4. To the sea-algæ by The-

ophrastus.¹ 5. To the *Usnea* by Dioscorides, Galen, and Paulus Ægineta.² The term *Usnea* is borrowed from the Arabian medical authors, and applied to a genus of Lichens. 6. To the grape of the white poplar.³ 7. To a kind of shrub like lettuce.⁴

*BRYON'IA (*βρυωνία*), a species of wild vine, Bryony. The name *βρυωνία* was applied to two kinds of vine, the *ἄμπελος λευκή*, or white vine (the *Bryonia alba* of Pliny), and the *ἄμπελος μέλαινα*, or black vine (*Bryonia nigra*). The term, however, is more properly applied to the latter of the two. It is the same with the *Tamus Communis*, L.⁵

*BU'BALIS or BUBALUS (*βούβαλις* or *-ας*), I. names first applied by Aristotle⁶ and his successors to a species of Antelope, most probably the Stag-like Antelope. "How these writers," observes Lieutenant-colonel Smith, "came to designate such an animal by an appellation which is symphonic with that of the *Buffalo* in all the dialects of Northern and Central Asia, cannot be explained but by the supposition that Aristotle gave that name in consequence of some imperfect information which he may have obtained on this subject through the Macedonian invaders of Eastern Persia. It is worthy of remark, however, that in the case of those animals of a large size that used, until of late, to be classed with the antelope, the more equivocal characteristic approximates them to the Bovine nearly as much as to the Caprine nature. Hence the naturalists of the present day have found it necessary to interpose a new genus, the characters of which should embrace the evanescent distinctions of Antelope, Capra, and Ovis, together with the incipient characters which show the approximation to Bos. This is the *Genus Damalis*. The native names of the animals thus generically separated, import that they are considered distinct from the Antelope in their own countries; and although no great stress should usually be laid upon local names, yet it would be treating the knowledge and experience of the resident nations with an indiscriminating indifference, if, upon inquiry, it should be found that, from the earliest antiquity to the present time, every people who have intimate knowledge of the animals under consideration should agree in bestowing one generic designation upon them, and yet that such designation should be rejected by systematic writers for one less analogous. Such, however, is the case with the groups of animals before us, which, whether they be Indian or African, have in their local names either something that shows their separation from Antelope, or, what is more common, a generic indication, which proves them to be regarded as more nearly allied to Bos than to Capra. Where the Persian, Arabo-Indee, and Eastern and Western Arabic are concerned, it appears that all the species we are about to enumerate will be found designated by the generic word *Ghau*, 'ox' or 'cow'; *Bakr*, 'oxen,' 'cows,' in the Arabic, or *Bakrah* in the Persian. The appellation given by Aristotle may, after these remarks, be easily traced to its source."⁷

*II. The *Buffalo*. "The name *Bubalis* is asserted to have been transferred from the Antelope *Bubalis* of authors (*Genus Damalis*) to the animals of the Buffalo group, during the sixth century of the Roman Empire. It is true, as Buffon maintains, that Aristotle, Pliny, and Oppian did not know the Buffalo by the name of *Bubalis*, but it cannot be denied that, in the age of Martial,⁸ this name was vaguely applied even to the Urns, and consequent-

ly, that the vulgar were already familiarized with it as early as the time of the Flavian line. Now the Bubalis of Aristotle must have been a rare animal, which certainly bore no such Greek name in its native regions, and therefore the word itself originated and became common in some other way. The learned among the ancients were as liable to misapply appellations of strange animals as the moderns, and the Arachosian oxen of Aristotle may have been known to the Greek soldiers of Alexander by another name; indeed, by the name which it appears the Buffalo bore among the northern nations of Central Asia from the earliest periods; a name which, although it has the sound of a Greek compound, is nevertheless of genuine Turanian origin. It is composed of the syllable *Bu*, 'ox,' joined to a distinctive epithet. Taking the Tartaric to be the root, we find that nearly all the dialects of ancient Turan, Cheen, and the posterior Slavonic, designate both the Buffalo and the Bull by the words *Busan*, *Buka*, *Busum*, *Buja*, *Buha*, *Bucha*, *Buga*, *Bujan*. *Buwol* is the modern Russian, *Bawol* the Polish, *Buwal* Bohemian, and *Bial* Hungarian. In most of the countries where the above dialects are spoken, the Buffalo is nearly as common as the domestic ox, and, moreover, some of these dialects were spoken by the very nations who introduced the animal into Western Asia, Africa, and Europe. From a careful consideration of the whole subject, the presumption will be found to be fairly established, that the nations who invaded the Roman and Byzantine empires brought with them the very animal whose name had reached Europe, perhaps by means of the Greek followers of the Seleucian dynasty, and that the word *Bubalis* is the true name of the Buffalo, as clearly as *Urus* and *Bison* are derived from the Teutonic *Aurochs* (*Uroks*) and *Wizend*. Aristotle and others evidently knew the Buffalo (*βόες ὄγριοι ἐν Ἀραχωρίαις*, *Bos Indicus*, or *Arachosian Ox*). It is described as differing from the *Ox* as the Wild Boar does from the Hog; to be black, powerful, with the nose turned up, and the horns bent outward. In that period, the species was not found farther west than Northeastern Persia. Paul Warnefried, surnamed Diaconus, fixes the appearance of Buffaloes in Italy in the reign of Aigilulf, or the close of the sixth century, that is, in the year 596. But we may reasonably look for their appearance in the east of Europe to an earlier date. If the myriads of Attila's forces drawn out of Eastern and Central Asia, were supported by droves of cattle bearing grain (buck-weed), as is still done with buffaloes in common trade, and by the nomad equestrian nations, who lead or follow these animals in their native regions, there is no reason for us to conclude that the Arachosian Buffalo was not in their herds; or if it could be proved that the power of the Huns did not extend into the northern provinces of Persia or Chorasnia, the Avars and Bulgarians may be regarded as the conductors of that species to the valley of the Danube, Thrace, and Illyricum. This was probably during the reign of Marcian, or about 453, and the subsequent introduction of the animals into Italy might result from causes not connected with the migrations of barbarians.¹

*BUBO, the Horned Owl. (Vid GLAUX.)

BUC'CINA (*βυκάνη*), a kind of horn-trumpet, anciently made out of a shell. It is thus happily described by Ovid:

"Cava buccina sumitur illi
Tortilis, in latum quæ turbine crescit ab imo:
Buccina, quæ in medio concepit ut aëra ponto,
Littora voce replet sub utroque jacentia Phæbo."²

1. (Smith in Griffith's Cuvier, vol. iv., p. 378, seqq.)—2. (Met., i., 335.,

The musical instrument *buccina* nearly resembles in shape the shell *buccinum*, and, like it, might almost be described from the above lines (in the language of conchologists) as spiral and gibbous. The two drawings in the annexed woodcut agree with this account. In the first, taken from a frieze,¹ the *buccina* is curved for the convenience of the performer, with a very wide mouth, to diffuse and increase the sound. In the next, a copy of an ancient sculpture taken from Blanchini's work,² it still retains the original form of the shell. According to

Hyginus,³ the *buccina* was invented by Tyrrhenus, a son of Hercules, which, if the tradition were of any value, would refer this, as well as many other musical instruments in use among the Romans, to an Etruscan origin. Propertius⁴ testifies to its being a very ancient instrument. Athenæus⁵ mentions a kind of shell called *κῆρυξ* (according to Casaubon, the shell of the murex), probably from its sonorous qualities.

The inscriptions quoted by Bartholini⁶ seem to prove that the *buccina* was distinct from the *cornu*; but it is often confounded with it.⁷ The *buccina* seems to have been chiefly distinguished by the twisted form of the shell, from which it was originally made. In later times it was carved from horn, and perhaps from wood or metal, so as to imitate the shell.

The *buccina* was chiefly used to proclaim the watches of the day⁸ and of the night, hence called *buccina prima, secunda*, &c.⁹ It was also blown at funerals, and at festive entertainments both before sitting down to table and after.¹⁰ Macrobius¹¹ tells us that tritons holding *buccinae* were fixed on the roof of the temple of Saturn.

According to Festus,¹² *buccina* is derived from the Greek *βυκάινον*, a word not found in the lexicons, or, as others say, from the Hebrew *buk*, a trumpet. Varro considers it as formed by Onomatopœia from *bou*, in allusion to its sound. It is more probably derived from *buccinum*, the name of a shellfish.

The sound of the *buccina* was called *buccinus*, and the musician who played it *buccinator* (in Greek *βυκωντής*).

*BU'CERAS (*βουκέρας*), the herb Fenugreek, *Trigonella færum Græcum*. The name is derived from *βουξ*, "an ox," and *κέρας*, "a horn," the seed resembling the horn of an ox. 'Other appellations for this same plant, as given by Dioscorides and Pliny, are *telis*, *carphos*, *ægoceras*, *ceraitis*, *lotus*, and *itasis*. The Roman writer gives a long account of its several uses in the healing art, especially in female complaints.¹³

*BUFO, the Toad. (Vid. PHRYNOS.)

(Senec., Thyest., 798.)—9. (Polyb., xiv., 3.—Liv., xxvi., 15.—Sil. Ital., vii., 154.—Propert., IV., iv., 63.—Cic., Pro Murena, 9.)—10. (Tacit., Ann., xv., 30.)—11. (ii., 6.)—12. (s. v.)—13. (Theophrast., C. P., v., 13; vi., 14.—Dioscor., ii., 124.—Phn., II. N., xxiv., ult.)

*BUGLOSSA and BUGLOSSOS (βουγλωσσός or -ov), the herb Bugloss or Ox-tongue, deriving its name from the likeness its leaf bears to the tongue of the ox (βοῦς, "an ox," and γλῶσσα, "the tongue"). Owing to the natural resemblance which runs through the genera of *Anchusa*, *Borrage*, and *Lycopsis*, there is some difficulty in deciding exactly to what genus and species the βουγλωσσός of the ancients should be referred. Sibthorp and Sprengel prefer the *Anchusa Italica*, or Italian Alkanet.¹—II. The Sole. (Vid. SOLEA.)

BULLA, a circular plate or boss of metal, so called from its resemblance in form to a bubble floating upon water. Bright studs of this description were used to adorn the sword-belt (*aurea bullis cingula*; *bullis asper bauteus*). Another use of them was in doors, the parts of which were fastened together by brass-headed, or even by gold-headed nails.² The magnificent bronze doors of the Pantheon at Rome are enriched with highly-ornamented bosses, some of which are here shown.

The golden bosses on the doors of the Temple of Minerva at Syracuse were remarkable both for their number and their weight.³

We most frequently read, however, of bullæ as ornaments worn by children suspended from the neck, and especially by the sons of the noble and wealthy. Such a one is called *hæres bullatus* by Juvenal.⁴ His bulla was made of thin plates of gold. Its usual form is shown in the annexed woodcut, which represents a fine bulla preserved in the British Museum, and is of the size of the original.

The bulla was worn by children of both sexes for ornament, as a token of paternal affection and a sign of high birth;⁵ and, as it was given to infants, it sometimes served, like other ornaments or playthings (*crepundia*), to recognise a lost child.⁶ Probably, also, it contained amulets.⁷

Instead of the bulla of gold, boys of inferior rank, including the children of freedmen, wore only a piece of leather (*lorum*);⁸ *nodus tantum et signum de paupere loro*;⁹ *litterinis scortica*¹⁰.

On arriving at adolescence, the bulla was laid aside, together with the prætexta, and it was often consecrated, on this occasion, to the Lares, or to some divinity.¹

Valerius Maximus² mentions a *statua bullata*, and examples of boys represented with the bulla are not unfrequent in statues, on tombs, and in other works of art.³

*BUMAMMA, a kind of large grape, so called because formed and swelling out like an udder or teat (from βοῦ, an intensive particle, and mamma, "a dug" or "breast"). The Greek form of the name is *Bumastus*, βοῦμαστος, from βοῦ, and μαστός, "a breast" or "dug." Varro⁴ and Macrobius⁵ employ *Bumamma*; Virgil⁶ and Pliny,⁷ *Bumastus*.

*BUMASTUS. (Vid. BUMAMMA.)

*BUNIAS (βουνιάς), a species of plant, the wild Narew. "The term Bunias," remarks Adams, "occurs first in Nicander, and that it is synonymous with the Gongylis is declared by Galen and Paulus Ægineta; and, farther, that it was the *Brassica Napobrassica*, L., or wild Narew, is admitted by all the late authorities on classical botany, with the exception of Dierbach, who most unaccountably contends that it is the *Brassica Oleracea*, or Sea-cabbage."⁸

*BUNION (βουνιον), a plant of the family of the *Umbellifera*. The preponderance of authority is in favour of its being the *Bunium bulbocastanum*, or Earth-nut, a plant having a bulbous root, round, and good to eat. The term βουλοκάστανον occurs in the medical works of Alexander Trallianus. The *Ψευδοβουνιον* was taken for the *Barbarea vulgaris* by Dodonæus and Bauhin; but Sprengel contends that these authorities were in error, and holds it to be the *Pimpinella tenuis*, Sieb.⁹

*BUPRESTIS (βούρηστις), an insect treated of by all the ancient writers on Toxicology. It proves fatal to cattle when eaten among the grass, producing a burning sensation, whence it derives its name (βοῦς, "an ox" or "cow," and πρήθω, "to inflame"). Belon mentions that he found in Greece a species of *Cantharis*, which corresponded with the ancient description of the Buprestis. "In fact," says Adams, "there is every reason to identify it with the *Meloe vesicatoria*, often mistaken for the Spanish fly." The Buprestis of the ancients must not be confounded with the Buprestis of Linnæus.¹⁰

BURIS. (Vid. ARATUM, p. 79.)

BUSTUARIUM. (Vid. BUSTUM.)

BUSTUM. It was customary among the Romans to burn the bodies of the dead before burying them. When the spot appointed for that purpose adjoined the place of sepulture,¹¹ it was termed *bustum*,¹² and hence that word is said by Cicero¹³ to be synonymous with *τύμβος*: when it was separate from it, it was called *ustrina*.¹⁴

There was a Bustum at Rome, in the centre of the Campus Martius, connected with the mausoleum of Augustus, where the remains of that emperor and many of his family were burned and buried. It is described by Strabo,¹⁵ who says that it was of white stone surrounded by an iron railing, and planted on the inside with poplars.¹⁶ In the year 1777, several blocks of travertine stone (*λίθου λευκοῦ*)¹⁷ were discovered in the space before the Church of San Carlo at Corso, upon which were inscribed the names of several members of the family of Au-

gustus, with the words *HIC CREMATUS EST*, which identifies that locality with the *bustum* of Augustus. The blocks are now preserved at the Vatican.

From this word three others derive their significations:

I. *BUSTUARIJ*, gladiators, who were hired to fight round the burning pyre of the deceased, in consequence of the belief that the Manes were gratified by blood.¹

II. *BUSTUARIE*, women of abandoned character, *inter busta ac monumenta prostantes*.²

III. *BUST- $\kappa\rho\alpha\iota$* ,³ persons suffering the extreme of poverty; so called because they satisfied their cravings by snatching from the flames of the funeral pyre the bread and other eatables which the superstition of the living dedicated to the dead.⁴

Bustum is also used for the hollow space on the top of an altar in which the fire was kindled.⁵

**BUTYRUM* (*βοῦτυρον*), Butter. "This substance," observes Beckmann, "though commonly used at present in the greater part of Europe, was known very imperfectly to the ancients; to some, indeed, it was not known at all. The translators of the Hebrew writings seem to have thought that they found it mentioned in Scripture,⁶ but those best acquainted with Biblical criticism unanimously agree that the word *chamea* signifies milk or cream, or sour thick milk, and that, at any rate, it does not mean butter. The word plainly alludes to something liquid, as it appears that *chamea* was used for washing the feet, that it was drunk, and that it had the power of intoxicating; and we know that mare's milk, when sour, will produce the like effect. We can imagine streams of milk, but not streams of butter. This error has been occasioned by the seventy interpreters, who translate the Hebrew word by the term *boutyron* (*βοῦτυρον*). These translators, who lived two hundred years after Hippocrates, might, as Michaelis remarks, have been acquainted with butter, or have heard of it; but it is highly probable that they meant cream, and not our usual butter."

"The oldest mention of butter, though dubious and obscure, is in the account given of the Scythians by Herodotus.⁷ According to the historian, they poured the milk of mares into wooden vessels, caused it to be violently stirred or shaken by their blind slaves, and thus separated the part that arose to the surface, which they considered more valuable and more delicious than that which was collected below it. Herodotus here evidently speaks of the richest part of the milk being separated from the rest by shaking; and that what he alludes to here was actually butter, would plainly appear from comparing with what he says the much clearer account of his contemporary Hippocrates. 'The Scythians,' remarks this latter writer, 'pour the milk of their mares into wooden vessels, and shake it violently; this causes it to foam, and the fat part, which is light, rising to the surface, becomes what is called butter (*δὲ βοῦτυρον καλοῦσι*).' Mention of butter occurs several times, in fact, in the writings of Hippocrates,⁸ and he prescribes it externally as a medicine; he gives it, however, another name, *pikerion* (*πικέριον*), which seems to have been in use among the Greeks earlier than the former, and to have been afterward neglected. That this word

signified *butter*, and was no longer employed in the time of Galen, appears from his translating it, in his explanation of the obsolete expressions of Hippocrates, by the word *boutyron* (*βοῦτυρον*).¹ It was, even before that period, explained in the same manner by Erotian, in his Dictionary of the words used by that Greek physician; and he remarks from an ancient writer, that the Phrygians called butter *πικέριον* (*pikerion*), and that the Greeks seem to have borrowed the word from that people.² The poet Anaxandrides, who lived soon after Hippocrates, describing the wedding of Iphicrates, who married the daughter of Cotys, king of Thrace, and the Thracian entertainment given on that occasion, says that the Thracians ate butter, which the Greeks at that time considered a wonderful kind of food.³ It is very remarkable, that the word for butter does not occur in Aristotle, and that he even scarcely alludes to that substance, though we find in his works some very proper information respecting milk and cheese, which seems to imply careful observation. At first he gives only two component parts, the watery and caseous; but he remarks afterward, for the first time, in a passage where one little expects it, that in milk there is also a fat substance, which, under certain circumstances, is like oil.⁴ In Strabo there are three passages that refer to this subject, but from which little information can be obtained. This author says that the Lusitanians used butter instead of oil;⁵ he mentions the same circumstance respecting the Ethiopians;⁶ and he relates in another place, that elephants, when wounded, drank this substance in order to make the darts fall from their bodies.⁷ The use of butter by the Ethiopians or Abyssinians is confirmed by Ludolfus.⁸ Ælian also states that the Indians anointed the wounds of their elephants with butter. Aristotle, however, makes the wounded elephants drink oil, and not butter;⁹ but the difficulty may easily be obviated by supposing the butter spoken of by Strabo to have been in a liquid state.—We are told by Plutarch that a Spartan lady paid a visit to Berenice, the wife of Deiotarus, and that the one smelled so much of sweet ointment, and the other of butter, that neither of them could endure the other.¹⁰ Was it customary, therefore, at that period, for people to perfume themselves with butter?"

"The remarks of Dioscorides and Galen on the present subject are of much more importance. The former says that good butter was prepared from the fattest milk, such as that of sheep or goats; by shaking it in a vessel till the fat was separated. To this butter he ascribes the same effects, when used externally, as those produced by our butter at present. He adds also, and he is the first writer that makes the observation, that fresh butter might be melted, and poured over pulse and vegetables instead of oil, and that it might be employed in pastry in the room of other fat substances.¹¹ Galen, who distinguishes and confirms, in a more accurate manner, the healing virtues of butter, expressly remarks that cow's milk produces the fattest butter; that butter made from sheep's or goat's milk is less rich; and that ass's milk yields the poorest. He expresses his astonishment, therefore, that Dioscorides should say that butter was made from the milk of sheep and goats. He assures us that he had seen it made from cow's milk, and he believes it had thence acquired its name.¹² This derivation of the term *boutyron*, from *βοῦς*, 'a cow,' and *τυρός*,

'cheese,' 'coagulated milk,' was a favourite with the Greek and Roman writers, but is altogether erroneous. The term is of foreign origin, and the reader may see some curious speculations on this subject in the Vorhalle of Ritter, who seeks to connect the name with the mythology of *Boudha*, and with the germe of civilization introduced into the West by the sacerdotal colonies from India.¹

"From what has thus far been said, it would appear that butter must have been very little known to, or used by, the Greeks and Romans, till the time of Galen, that is, at the end of the second century. It appears, also, that when they had learned the art of making it, they employed it only as an ointment in their baths, and particularly in medicine. Pliny recommends it, mixed with honey, to be rubbed over children's gums, in order to ease the pain of teething, and also for ulcers in the mouth.² The Romans, in general, seem to have used butter for anointing the bodies of their children, to render them pliable;³ and we are told that the ancient Burgundians smeared their hair with it.⁴ If we except the passage of Dioscorides already referred to, we find no proof whatever that it was used by the Greeks or Romans in cookery, or the preparation of food. No notice is taken of it by Apicius; nor is it mentioned by Galen for any other but medical purposes. This is easily accounted for by the ancients having entirely accustomed themselves to the use of oil; and, in like manner, butter at present is very little employed in Italy, Spain, Portugal, and the southern parts of France. One chief cause of this is the difficulty of preserving it for any length of time in warm countries; and it would seem that among the ancients in the south of Europe it was rather in an oily state, and almost liquid. The Northern nations, in modern times, cut, knead, and spread butter; the ancients poured it out as one pours out oil. Galen, for example, tells us, that to make soot of butter (which was used in curing inflammations of the eyes, and other disorders), the outter must be poured into a lamp." For more information on this subject, the reader is referred to *Beckmann's History of Inventions*.⁵

BUXUM properly means the wood of the Box-tree, but was given as a name to many things made of this wood. According to Strabo,⁶ the best box-trees grew in the district of Amastriane, in Paphlagonia, and especially in the neighbourhood of Cytorus. Pliny⁷ also names the Gallic, Pyrenean, Bercyentian, Corsican, and Macedonian box-wood.

The tablets used for writing on, and covered with wax (*tabula cerata*), were usually made of this wood. Hence we read in Propertius,

"Vulgari buxo sordida cera fuit."⁸

These *tabellæ* were sometimes called *cerata buxa*. In the same way the Greek *πυξίον*, formed from *πύξος*, "box-wood," came to be applied to any tablets, whether they were made of this wood or any other substance; in which sense the word occurs in the Septuagint (*τὰ πυξία τὰ λίθινα*).⁹

Tops were made of box-wood (*vobule buxum*;¹⁰ *buxum torquere flagello*¹¹); and also all wind instruments, especially the flute, as is the case in the present day (*Phrygiæ foramine buxi*).¹² Combs, also, were made of the same wood; whence Juvenal¹³ speaks of *caput intactum buxo*.¹⁴

*BUXUS (*πύξος*), the Box-tree, or *Buxus Semper-virens*, L. The Box loves cold and mountainous

situations; the paces most famed for its growth are mentioned in the beginning of the previous article. "Box-wood is an unique among timber, and combines qualities which are not found existing together in any other kind. It is as close and heavy as ebony; not very much softer than *lignum vite*, it cuts better than any other wood; and, when an edge is made of the ends of the fibres, it stands better than lead or tin, nay, almost as well as brass. Like holly, the Box is very retentive of its sap, and warps when not properly dried; though, when sufficiently seasoned, it stands well. Hence, for the wooden part of the finer tools, for everything that requires strength, beauty, and polish in timber, there is nothing equal to it. This will explain why so many different articles among the ancients were made of this wood. (*Vid. BUXUM*.) There is one purpose for which box, and box alone, is properly adapted, and that is the process of xylography, or engraving on wood."

*BYBLUS (*βύβλος*), the plant from which the Egyptians formed paper, the *Cyperus Papyrus*. (*Vid. PAPHYRUS*.)

BYSSUS (*βύσσως*). It has been a subject of some dispute whether the byssus of the ancients was cotton or linen. Herodotus¹ says that the mummies were wrapped up in *byssine sindon* (*σινδόων βυσσίνης τελαμῶσι*), which Rosellini and many modern writers maintain to be cotton. The only decisive test, however, as to the material of mummy-cloth, is the microscope; and from the numerous examinations which have been made, it is quite certain that the mummy-cloth was made of flax, and not of cotton; and, therefore, whenever the ancient writers apply the term byssus to the mummy-cloth, we must understand it to mean linen.²

The word byssus appears to come from the Hebrew *butz* (*בִּזְ*), and the Greeks probably got it through the Phœnicians.³ Pausanias⁴ says that the district of Elis was well adapted for growing byssus, and remarks that all the people whose land is adapted for it sow hemp, flax, and byssus. In another passage⁵ he says that Elis is the only place in Greece in which byssus grows, and remarks that the byssus of Elis is not inferior to that of the Hebrews in fineness, but not so yellow (*ξανθή*). The women in Patræ gained their living by making head-dresses (*κεκρύφαλοι*), and weaving cloth, from the byssus grown in Elis.⁶

Among later writers, the word byssus may, perhaps, be used to indicate either cotton or linen cloth. Böttiger⁷ supposes that the byssus was a kind of muslin, which was employed in making the celebrated Coan garments. It is mentioned in the Gospel of St. Luke⁸ as part of the dress of a rich man: "Ἐνεδύσκετο πορφύραν καὶ βύσσον." It was sometimes dyed of a purple or crimson colour (*βύσσινον πορφύροισιν*).⁹ Pliny¹⁰ speaks of it as a species of flax (*linum*), and says that it served *mulierum maxime deliciis*. Pollux,¹¹ also, says that it was a kind of *λίνον* grown in India; but he appears to include cotton under this term.

C., K., &c.

CABEIRIA (*Καβείρια*), mysteries, festivals and orgies solemnized in all places in which the Pelasgian Cabiri, the most mysterious and perplexing deities of Grecian mythology, were worshipped, but especially in Samothrace, Imbros, Lemnos, Thebes, Anthedon, Pergamus, and Berytos.¹ Lit-

tle is known respecting the rites observed in these mysteries, as no one was allowed to divulge them. Diagoras is said to have provoked the highest indignation of the Athenians by his having made these and other mysteries public.² The most celebrated were those of the island of Samothrace, which, if we may judge from those of Lemnos, were solemnized every year, and lasted for nine days. The admission was not confined to men, for we find instances of women and boys being initiated.³ Persons on their admission seem to have undergone a sort of examination respecting the life they had led hitherto,⁴ and were then purified of all their crimes, even if they had committed murder.⁵ The priest who undertook the purification of murderers bore the name of *κοίτης*. The persons who were initiated received a purple riband, which was worn around their bodies as an amulet to preserve them against all dangers and storms of the sea.⁶

Respecting the Lemnian Cabiria, we know that their annual celebration took place at night,⁷ and lasted for nine days, during which all the fires of the island which were thought to be impure were extinguished, sacrifices were offered to the dead, and a sacred vessel was sent out to fetch new fire from Delos. During these sacrifices the Cabiri were thought to be absent with the sacred vessel; after the return of which the pure fire was distributed, and a new life began, probably with banquets.⁸

The great celebrity of the Samothracian mysteries seems to have obscured and thrown into oblivion those of Lemnos, from which Pythagoras is said to have derived a part of his wisdom.⁹ Concerning the celebration of the Cabiria in other places, nothing is known, and they seem to have fallen into decay at a very early period.

*ΚΑΛΙΑ (κακαλία), a plant mentioned by Dioscorides, Pliny, and others. It is supposed by Sprengel to be the *Mercurialis tomentosa*. Sibthorp and Fée, however, are undecided, though the latter inclines somewhat to the *Cacalia petasites sive albigifrons*.¹⁰

ΚΑΚΗΓΟΡΙΑΣ ΔΙΚΗ (κακηγορίας δίκη) was an action for abusive language in the Attic courts, called, in one passage of Demosthenes,¹¹ *κακηγορίου δίκη*, and also called *λοιδορίας δίκη* (δύων *λοιδορίας*),¹² and *κακολογίας δίκη*. This action could be brought against an individual who applied to another certain abusive epithets, such as *ἀνδρόφονος*, *πατραλοίας*, &c., which were included under the general name of *ἀπώρητα*. (Vid. ΑΠΩΡΗΤΑ.) It was no justification that these words were spoken in anger.¹³ By a law of Solon, it was also forbidden to speak evil of the dead; and if a person did so, he was liable to this action, which could be brought against him by the nearest relative of the deceased.¹⁴ If an individual abused any one who was engaged in any public office, the offender not only suffered the ordinary punishment, but incurred the loss of his rights as a citizen (*ἀτιμία*), since the state was considered to have been insulted.¹⁵

If the defendant was convicted, he had to pay a fine of 500 drachmæ to the plaintiff.¹⁶ Plutarch, however, mentions that, according to one of Solon's laws, whoever spoke evil of a person in the ten-

ples, courts of justice, public offices, or in public festivals, had to pay five drachmæ; but, as Plutarch has observed, the law of Solon was probably changed, and the heavier fine of 500 drachmæ substituted in the place of the smaller sum. Demosthenes, in his oration against Meidias,¹⁷ speaks of a fine of 1000 drachmæ; but this is probably to be explained by supposing that Demosthenes brought two actions *κακηγορίας*, one on his own account, and the other on account of the insults which Meidias had committed against his mother and sister.¹⁸

This action was probably brought before the *thesmothetæ*,¹⁹ to whom the related *ἑθρευσ γραφή* belonged.

ΚΑΚΟΔΟΓΙΑΣ ΔΙΚΗ. (Vid. ΚΑΚΗΓΟΡΙΑΣ ΔΙΚΗ.)

ΚΑΚΟΤΕΧΝΙΩΝ ΔΙΚΗ (κακοτεχνιών δίκη) corresponds in some degree with an action for subornation of perjury. It might be instituted against a party to a previous suit, whose witnesses had already been convicted of falsehood in an action *ψευδομαρτυριών*.²⁰ It has been also surmised that this proceeding was available against the same party when persons had subscribed themselves falsely as summoners in the declaration or indictment in a previous suit;²¹ and if Plato's authority with respect to the terms of Attic law can be considered conclusive, other cases of conspiracy and contrivance may have borne this title.²² With respect to the court into which these causes were brought, and the advantages obtained by the successful party, we have no information.²³

ΚΑΚΟΣΙΣ (κάκωσις), in the language of the Attic law, does not signify every kind of ill-treatment, but

1. The ill-treatment of parents by their children (*κάκωσις γονέων*).
2. Of women by their husbands (*κάκωσις γυναικῶν*).
3. Of heiresses (*κάκωσις τῶν ἐπικλήρων*).
4. Of orphans and widows by their guardians or any other persons (*κάκωσις τῶν ὀρφανῶν καὶ χηρευσουσῶν γυναικῶν*).

1. *Κάκωσις γονέων* was committed by those who struck their parents, or applied abusive epithets to them, or refused them the means of support when they were able to afford it, or did not bury them after their death, and pay them proper honours.²⁴ It was no justification for children that their parents had treated them badly. If, however, they were illegitimate, or had not received a proper education from their parents, they could not be prosecuted for *κάκωσις*.²⁵

2. *Κάκωσις γυναικῶν* was committed by husbands who ill-treated their wives in any manner, or had intercourse with other women,²⁶ or denied their wives the marriage duties; for, by a law of Solon, the husband was bound to visit his wife three times every month, at least if she was an heiress.²⁷ In the comedy of Cratinus, called the "Wine Flask" (*Πυνίχη*), Comedy was represented as the wife of Cratinus, who brought an action against him because he neglected her, and devoted all his attention to the wine flask.²⁸

3. *Κάκωσις τῶν ἐπικλήρων* was committed by the nearest relatives of poor heiresses, who neither married them themselves, nor gave them a dowry in order to marry them to persons of their own rank in life;²⁹ or, if they married them themselves, did not perform the marriage duties.³⁰

4. *Κάκωσις τῶν ὀρφανῶν καὶ χηρευσουσῶν γυναικῶν*

κῶν was committed by those who injured in any way either orphans or widows, both of whom were considered to be in an especial manner under the protection of the state.¹ The speech of Isæus on the inheritance of Hagnias, is a defence against an ἰσαγγελία κακώσεως of this kind.

All these cases of κακώσεις belonged to the jurisdiction of the chief archon (ἄρχων ἐπώνυμος). If a person wronged in any way orphans, heiresses, or widows, the archon could inflict a fine upon them himself; or, if he considered the person deserving of greater punishment, could bring him before the heliæ.² Any private individual could also accuse parties guilty of κακώσεις by means of laying an information (ἰσαγγελία) before the chief archon, though sometimes the accuser proceeded by means of a regular indictment (γραφή), with an ἀνάκρισις before the archon.³ Those who accused persons guilty of κακώσεις incurred no danger, as was usually the case, if the defendant was acquitted, and they did not obtain the fifth part of the votes of the dicasts.⁴

The punishment does not appear to have been fixed for the different cases of κακώσεις, but it was generally severe. Those found guilty of κακώσεις γόνεων lost their civil rights (ἀτιμία), but were allowed to retain their property (οἱτοὶ ἀτιμοὶ ἦσαν τὰ σώματα, τὰ δὲ χρήματα ἐχόντων); but if the κακώσεις consisted in beating their parents, the hands of the offenders might even be cut off.⁵

*CACTUS (κάκτος), a species of plant. Sprengel inclines to the opinion that it was the kind of artichoke called Cardoon, namely, the *Cinara cardunculus*. Stackhouse suggests that it was the *Cactus opuntia*, or Indian Fig. The locality of the κάκτος of Theophrastus does not suit well with either of these plants. Schneider proposes the *Acarna cancellata*. Sprengel's opinion is, perhaps, after all, the more correct one, and is advocated by Fée. Pliny describes the Cactus as growing only in Sicily.⁷

CADAVEVER. (Vid. Fovus.)

CADISKOI or CADOI, also CADDISKOI (καδίσκοι, κάδοι, καδίσκοι⁸), were small vessels or urns, in which the counters or pebbles of the dicasts were put, when they gave their votes on a trial.⁹ There were, in fact, usually two καδίσκοι: one, that in which the voting pebble was put; this was made of copper: the other, that in which the other pebble, which had not been used, was put; this was made of wood.¹⁰ Those who did not vote at all put both their pebbles into the latter, which was called the ἄκυρος καδίσκος, while the other was called κύριος καδίσκος. After all had voted, the presiding officer emptied the counters or pebbles from the metal urn, the κύριος καδίσκος, and counted them on a table, and judgment was then given accordingly.¹¹ The pebbles were distinguished from one another by proper marks. Formerly only one urn had been used; and the dicasts kept the counter which they did not use.¹² This vessel was called also ἀμφορεύς. Sometimes, also, the dicasts had only one counter each, and there were two καδίσκοι, one for acquitting, the other for condemning.¹³

When there were several contesting parties, there were several καδίσκοι, according to the number of the parties; as in Demosthenes¹⁴ there were four.

1. (Demosth., c. Macart., 1076.—δ ἄρχων, ὅστις ἐπεμελεῖτο τῶν ἄρχων καὶ τῶν ὀρφανῶν: Ulpiā, ad Demosth., c. Timocr.—2. (Demosth., c. Macart., 1076, Lex.)—3. (Demosth., c. Pantenet., 980.)—4. (Harpoer., s. v. ἰσαγγελία.)—5. (Andoc., De Myst., 36.—Xen. Mem., ii, 2, § 13.)—6. (Meursius, Them. Attic., i, 2.)—7. (Theophrast., H. P., vi, 4.—Theocr., Id., x, 4.—Adams, Append., s. v.)—8. (Pollux, Onom., x, 15-20.)—9. (Harpoer., s. v.)—10. (Isæus, De Hagn. Hæred., § 281.—Lycurg., c. Leocrat., 240.)—11. (Meier, Att. Process., p. 720-724.)—12. (Pollux, Onom., viii, 125.)—13. (Meier, Att. Process., p. 724.)—14. (Macart., p. 1353, 10, ed. Bekker.)

The dicasts then had either one pebble, which they put into the καδίσκος of the party in whose favour they meant to vote; or they had as many pebbles as there were καδίσκοι (but only one favourable one among them), which they put in according to their opinion.¹ The pebble was dropped into the urn through a long tube, which was called κηρός.² The noise which the pebble made in striking against the bottom of the καδίσκος was represented by the syllable κόγξ.³

*CADMEIA or CAD'MIA (Καδμεία or -μία), a species of earth, as the ancients termed it; more correctly, however, Calamine, or an ore of zinc. Geoffroy says, "The dealers in metals call by the name of Cadmia the *Lapis Calaminaris*, used in making copper into brass." Dr. Kidd calls it a native oxide of zinc. According to Dr. Hill, the *Cadmia factitia* of the ancients was a recement of copper, produced in the furnaces where that metal was separated from its ore. According to Sprengel, the kind called βοτρυτῆς, or clustered Cadmia, was our Tutty; it consists of zinc with a small proportion of copper. The καπνιτής, or Smoky Cadmia, according to Dr. Hill, was a fine powder collected at the mouths of the furnaces. The πλακίς, or Crust-like Cadmia, was the coarsest and heaviest of all.⁴ "With Cadmia (or an ore of zinc)," observes Dr. Moore, "the ancients were well acquainted, though they are commonly supposed not to have known zinc itself, except as combined with copper in the form of brass. But a passage in Strabo authorizes the belief that they also knew this metal in its separate state. The geographer says,⁵ that near Andeira, a town of Troas, is found a stone, which, being burned, becomes iron, and distils false silver (ἀποσταζει ψευδάργυρον) when heated in a furnace together with a certain earth, which, receiving the addition of copper, forms the alloy that some call brass (ὀρείχαλκον). He adds respecting this false silver, which was probably our zinc, that it occurs also near Tmolus. Stephanus states the same thing in somewhat clearer words, and refers to both Theopompus and Strabo as authorities.—This earth, which is supposed to derive its name, *Cadmia*, from Cadmus, son of Agenor,⁶ who first introduced at Thebes the making of brass,⁷ is spoken of by Aristotle,⁸ who informs us that the Mossynæcians had anciently prepared a brass of a pale colour and superior lustre, mixing it not with tin, but with a certain earth found among them. Theophrastus alludes to the same, but without naming it. Pliny⁹ repeatedly speaks of Cadmia, but it is evident that he does not always mean one and the same thing. Cadmia seems to have signified with him not only our Calamine, but a copper ore which contained zinc; and the same name was extended to what the Germans call *offenbruch*, 'furnace-calamine,' which, in melting ores that contain zinc, or in making brass, falls to the bottom of the furnace, and contains more or less of calcined zinc."¹⁰

CADUCEUS (κηρύκειον, κηρύκιον,¹¹ κηρυκήιον¹²) was the staff or mace carried by heralds and ambassadors in time of war.¹³ This name is also given to the staff with which Hermes or Mercury is usually represented, as is shown in the following figure of Hermes, taken from an ancient vase, which is given in Millin's *Peintures de Vases antiques*.¹⁴

The caduceus was originally only an olive-branch

1. (Meier, Att. Process.)—2. (Photius, s. v.—Pollux, Onom., x, 15.)—3. (Philol. Museum, vol. i, p. 425, note.)—4. (Dioscor., v, 85.—Paul. Ægin., vii, 3.—Adams, Append., s. v.)—5. (p. 610.)—6. (Hardouin, ad Plin., vol. ix, p. 195.)—7. (Hygin., Fab., 272.)—8. (Op., vol. i, p. 1155, B.)—9. (H. N., xxiv, 1: xxvii, 10, &c.)—10. (Moore's Anc. Mineral., p. 49, seqq.)—11. (Thucyd., i, 53.)—12. with the *στέμματα*, which were afterward formed into snakes.¹ Later mythologists invented tales about these snakes. Hyginus tells us that Mercury once found two snakes fighting, and divided them with his wand; from which circumstance they were used as an emblem of peace.²

From caduceus was formed the word *caduceator*, which signified a person sent to treat of peace.³ Thus Anlus Gellius⁴ tells us that Q. Fabius sent to the Carthaginians a spear and a caduceus as the emblems of war or peace (*hastam et caduceum, signa duo belli aut pacis*). The persons of the *caduceatores* were considered sacred.⁵

It would appear, however, that the Roman ambassadors did not usually carry the caduceus, since Marcan⁶ informs us that the Roman ambassadors carried vervain (*segmina*) that no one might injure them, in the same manner as the Greek ambassadors carried the *cerycia* (*κηρύκια*).

CADUCUM. (*Vid.* BONA CADUCA.)

CADUS (*κάδος, κάδος*), a large earthen vessel, which was used for several purposes among the ancients. Wine was frequently kept in it; and we learn from an author quoted by Pollux, that the amphora was also called *cadus*.⁷ The vessel used in drawing water from wells was called *cadus*,⁸ or *γυλός*.⁹ The name of *cadus* was sometimes given to the vessel or urn in which the counters or pebbles of the *dicasts* were put when they gave their vote on a trial, but the diminutive *καδίσκος* was more commonly used in this signification. (*Vid.* CADISKOI.)

*CÆCUBUM VINUM, a name given to a wine which was at one time the best growth of the Falernian vineyards. "Formerly," says Pliny,¹⁰ "the Cæcuban wine, which came from the poplar marshes of Amyclæ, was most esteemed of all the Campanian wines; but it has now lost its repute, partly from the negligence of the growers, and partly from the limited extent of the vineyard, which has been nearly destroyed by the navigable canal that was begun by Nero from Avernus to Ostia." The Cæcuban is described by Galen¹¹ as a generous, durable wine, but apt to affect the head, and ripening only after a long term of years. In another place¹² he remarks that the Bithynian white wine, when

very old, passed with the Romans for Cæcuban; but that, in this state, it was generally bitter and unfit for drinking. From this analogy we may conclude that, when new, it belonged to the class of rough, sweet wines. It appears to have been one of Horace's favourite wines, of which he speaks, in general, as having been reserved for important festivals. After the breaking up of the principal vineyards which supplied it, this wine would necessarily become very scarce and valuable.¹

CÆLATURA. (*Vid.* BRONZE, p. 179.)

*CÆPA or CÆPE (*κόμμυρον*), the Onion, or *Al lium Cæpa*, L. The Greeks had numerous kinds, or, rather, varieties of this vegetable, which are mentioned by Dioscorides.² The Romans, on the other hand, had two principal kinds, the *Pallacana* and the *Condimentarium*, the latter of which was subdivided into many species. The *Pallacana* (*cæpa*) had hardly any head, and consisted principally of a long stem: it admitted of being often cut. The *Condimentarium* (*cæpe*), so called because it could be potted and kept for use, was likewise termed *Capitatum*, from its exuberant head.—"Though the history of the onion can be but imperfectly traced in Europe, there is no doubt as to its great antiquity in Africa, since there is evidence to show that this bulb was known and much esteemed in Egypt 2000 years before Christ. Juvenal,³ indeed, says that the Egyptians were forbidden to eat the onion, this vegetable having been deified by them. The prohibition, however, seems only to have extended to the priests, who, according to Plutarch,⁴ 'abstained from most kinds of pulse;' and the abhorrence felt for onions, according to the same author, was confined to the members of the sacerdotal order. That onions were cultivated in Egypt, is proved," continues Wilkinson, "from the authority of many writers, as well as from the sculptures; their quality was renowned in ancient, and has been equally so in modern times; and the Israelites, when they left the country, regretted the 'onions,' as well as the cucumbers, the melons, the leeks, the garlic, and the meats they 'did eat' in Egypt. Among the offerings presented to the gods, both in the tombs and temples, onions are introduced, and a priest is frequently seen holding them in his hand, or covering an altar with a bundle of their leaves and roots. Nor is it less certain that they were introduced at private as well as public festivals, and brought to table with gourds, cucumbers, and other vegetables; and if there is any truth in the notion of their being forbidden, we may conclude that this was entirely confined to the priestly order. The onions of Egypt were mild and of an excellent flavour, a character enjoyed by them at the present day; and they were eaten crude as well as cooked, by persons both of the higher and lower classes. It is difficult, however, to say if they introduced them to table like the cabbage, as a *hors d'œuvre* to stimulate the appetite, which Socrates recommends in the Banquet of Xenophon. On this occasion, some curious reasons for their use are brought forward by different members of the party. Nicerates observes that onions relish well with wine, and cites Homer in support of his remark; Callias affirms that they inspire courage in the hour of battle; and Charmides suggests their utility in deceiving a jealous wife, who, finding her husband return with his breath smelling of onions, would be induced to believe he had not saluted any one while from home."⁵

CÆRITUM TABULÆ. The inhabitants of Cære obtained from the Romans, in early times, the Ro-

man franchise, but without the *suffragium*.¹ Some ancient writers thought that the Cærites originally had the full franchise, and were afterward deprived of the *suffragium*.² The names of the citizens of Cære were kept at Rome in lists called *tabula Cærurum*, in which the names of all other citizens who had not the *suffragium* appear to have been entered in later times. All citizens who were degraded by the censors to the rank of *ararians* were classed among the Cærites; and hence we find the expressions of *ararium facere*³ and in *tabulas Cærurum referri*⁴ used as synonymous. (Vid. *ÆRARI*.)

*CALAMINTHE (*καλαμίνθη*), a shrub, which Sprengel, in the first edition of his R. H. H., makes to be the *Melissa Cretica*; but in his second, the *Thymus nepeta*, or *Calmint*. In his edition of Dioscorides he calls the first species the *Melissa Cretica*; the second, the *Thymus nepeta*, Scop.; and the third, the *Melissa altissima*.⁵

CALAMIS'TRUM, an instrument made of iron, and hollow like a reed (*calamus*), used for curling the hair. For this purpose it was heated, the person who performed the office of heating it in wood-ashes (*cimis*) being called *cimisfo* or *cinerarius*.⁶

This use of heated irons was adopted very early among the Romans,⁷ and became as common among them as it has been in modern times.⁸ In the age of Cicero, who frequently alludes to it, the Roman youths, as well as the matrons, often appeared with their hair curled in this manner (*calamistrati*). We see the result in many antique statues and busts.

CAL'AMUS (*Κάλαμος*), a sort of reed which the ancients used as a pen for writing.¹⁰ The best sorts were got from Ægypt and Cnidus.¹¹ So Martial,¹²

"*Dat chartis habiles calamos Memphitica tellus.*"

When the reed became blunt, it was sharpened with a knife, *scalprum librarium*,¹³ and to a reed so sharpened the epithet *temperatus*, used by Cicero, probably refers,¹⁴ "*calamo et atramento temperato res agetur.*" One of the inkstands given under the article ATRAMENTUM has a *calamus* upon it. The *calamus* was split like our pens, and hence Ausonius¹⁵ calls it *fissipes*, or cloven-footed.

*ΚΑΛ'ΑΜΟΣ ἀρωματικός. Sprengel feels little hesitation in deciding that this is the *Acorus Calamus*, or Sweet Flag. Schneider states that Stackhouse, in the second edition of his work, is disposed to refer the *κάλamos ἐδομος* of Theophrastus to the same. The term *ἐπίγειος* also occurs in Theophrastus. (Vid. *SACCHARUM*.)¹⁶

*ΚΑΛ'ΑΜΟΣ φραγμίτης. All agree that this is the *Arundo phragmitis*, L., or common Reed. Sprengel refers the *κάλamos χαράκις* of Theophrastus to the same.¹⁷

*ΚΑΛ'ΑΜΟΣ αὐλητικός, the same as the *donaξ*, and, consequently, the *Arundo donax*.¹⁸ (Vid. *DONAX*.)

*ΚΑΛ'ΑΜΟΣ ὁ ναστός. The early commentators on Dioscorides have settled the identity of this with the *τοξικός* of Theophrastus; and Sprengel refers it very properly, as Adams thinks, to the *Arundo arenaria*, or sea-side Reed.¹⁹

*ΚΑΛ'ΑΜΟΣ δ' Ἰνδικός, most probably the Bamboo Cane, or *Bambusa Arundinacea*. Mention of the Bamboo Cane is made by Herodotus, and also by

Ctesias. (Vid. *SACCHARUM*.) The *Κάλαμος Ἰνδικός ἀπολελιθαιμένος* of Theophrastus, or petrified *Calamus Indicus*, was one of the starry-surfaced fossil Coralloids. "It was not named so without reason," observes Hill, "for the specimen which I have of it very prettily and exactly resembles that body."²¹

*CALCIFRAGA. (Vid. *EMPETRON*.)

CALANTICA or CALVA'TICA, a head-dress. This word is sometimes given as answering to the Greek *κεκρυφάλος*, but the Latin *reticulum* (*quod capillum contineret, dictum a rete reticulum*) corresponds better to *κεκρυφάλος*, which was a caul or coif of network for covering the hair, and was worn by women during the day as well as the night. This kind of covering for the head was very ancient, for it is mentioned by Homer,³ and it also appears to have been commonly used. It occurs in several paintings found at Pompeii, from one of which the following cut is taken, representing Neptune and a nymph, on whose head this kind of net-work appears.⁴

The persons who made these nets were called *κεκρυφαλοπλόκοι*,⁵ and also *σακχυνάται*,⁶ according to Pollux,⁷ who explains the word by *οἱ πλέκοντες ταῖς γυναιξὶ τοὺς κεκρυφάλους*. These nets appear to have been sometimes made of gold threads,⁸ and at other times of silk,⁹ or the Elean byssus,¹⁰ and probably of other materials which are not mentioned by ancient writers.

The head-dress made of close materials must be distinguished from the *κεκρυφάλος* or *reticulum*. The former was called *mitra* or *calantica*, which words are said to be synonymous,¹¹ though in a passage in the *Digest*¹² they are mentioned together as if they were distinct. Such head-dresses frequently occur in paintings on vases. Their forms are very various, as the two following woodcuts, taken from Millin, *Peintures de Vases Antiques*,¹³ will show.

The first is an exact copy of the painting on the vase, and represents a man and a woman reclining on a couch, with a small figure standing by the woman's side, the meaning of which is not quite clear.

The next woodcut only contains a part of the

original painting, which consists of many other female figures, engaged in the celebration of certain mysteries.

The mitra was originally the name of an eastern head-dress, and is sometimes spoken of as characteristic of the Phrygians.¹ Pliny² says that Polygnotus was the first who painted Greek women *nitris versicoloribus*.

It appears from a passage in Martial³ (*fortior in-tortos servat vesica capillos*) that a bladder was sometimes used as a kind of covering for the hair.

CALATHUS, dim. CALATHISCUS (κάλαθος, καλαθίσκος), also called ΤΑΛΑΡΟΣ, usually signified the basket in which women placed their work, and especially the materials for spinning. Thus Pollux⁴ speaks of both τάλαρος and κάλαθος as τῆς γυναικωνίτιδος σκεύη; and in another passage⁵ he names them in connexion with spinning, and says that the τάλαρος and καλαθίσκος were the same. These baskets were made of osiers or reeds; whence we read in Pollux⁶ πλέκειν τάλάρους καὶ καλαθίσκους, and in Catullus,⁷

“Ante pedes autem candentis mollia lanæ
Vellera virgati custodibant calathisci.”

They appear, however, to have been made in earlier times of more valuable materials, since we read in Homer⁸ of a silver τάλαρος. They frequently occur in paintings on vases, and often indicate, as Böttiger⁹ has remarked, that the scene represented takes place in the gynæconitis, or women's apartments. In the following woodcut, taken from a painting on a vase,¹⁰ a slave, belonging to the class called quasillarie, is presenting her mistress with the calathus, in which the wool was kept for embroidery, &c.

Baskets of this kind were also used for other purposes,¹¹ such as for carrying fruits, flowers, &c.¹²

1. (Virg., *Æn.*, ix., 616, seq.)—2. (H. N., xxxv., 35.)—3. (VIII., xxxiii., 19.)—4. (x., 125.)—5. (vii., 20.)—6. (vii., 173.)—7. (lxiv., 319.)—8. (Od., iv., 125.)—9. (Vasengem., iii., 44.)—10. (Millin, *Peintures de Vases Antiques*, vol. i., pl. 4.)—11. (Böttiger, *Sabina*, v. l. ii., p. 252, 258.)—12. (Ovid, *Art. Am.*, i., 261.)

The name of calathi was also given to cups for holding wine.¹

Calathus was properly a Greek word, though used by the Latin writers. The Latin word corresponding to it was *qualus*,² or *quasillus*.³ From *quasillus* came *quasillaria*, the name of the slave who spun, and who was considered the meanest of the female slaves (*Convocat omnes quasillarias, familiæque sortissimam partem*⁴).

CALCAR, a spur, that is, a goad attached to the heel (*calx*) in riding on horseback, and used to urge on the horse to greater swiftness.⁵

The early adoption of this contrivance by the Romans appears from the mention of it in Plautus⁶ and Lucertius.⁷ It is afterward often alluded to by Cicero,⁸ Ovid,⁹ Virgil,¹⁰ and subsequent Roman authors. On the other hand, we do not find that the Greeks used spurs, and this may account for the fact that they are seldom, if ever, seen on antique statues.

The spurs of a cock are called *calcaria*.

CALCEUS (dim. CALCEOLUS), CALCEAMEN, CALCEAMENTUM (ὀπόμεμα, πέλδιον), a shoe or boot, anything adapted to cover and preserve the feet in walking.

The use of shoes was by no means universal among the Greeks and Romans. The Homeric heroes are represented without shoes when armed for battle. (*VID. ARMA, BALTEUS*.) According to the institutions of Lycurgus, the young Spartans were brought up without wearing shoes (*ἀνυπόδητοι*¹), in order that they might have the full use of their feet in running, leaping, and climbing. Socrates, Phocion, and Cato frequently went barefoot (*ἀνυπόδητος*,¹² *pede nudo*¹⁴). The Roman slaves had no shoes (*nudo talo*¹⁵), their naked feet being marked with chalk or gypsum. The covering of the feet was removed before reclining at meals. (*VID. CÆNA*.) To go barefoot also indicated haste, grief, distraction of mind, or any violent emotion, as when the chorus of Oceanides hasten to the fettered Prometheus (*ἀπέδιλοι*¹⁶); when Venus goes in quest of Adonis (*ἀσύνδαλος*¹⁷), and when the vestals flee from Rome with the apparatus of sacred utensils.¹⁸ For similar reasons, sorceresses go with naked feet when intent upon the exercise of magical arts¹⁹ (*nuda pedem*,²⁰ *pedibus nudis*²¹), although sometimes one foot only was unshod (*unum exuta pedem vincit*²²), and is so painted on fictile vases. That it was a very rare thing at Rome to see a respectable female out of doors without shoes, is clear from the astonish-

ment experienced by Ovid, until he was informed of the reason of it, in a particular instance.

"*Huc pede matronam vidi descendere nudo :
Obstupui tacitus, sustinuique gradum.*"

The feet were sometimes bare in attendance on funerals. Thus the remains of Augustus were collected from the pyra by noblemen of the first rank with naked feet.¹ A picture found at Herculaneum exhibits persons with naked feet engaged in the worship of Isis;² and this practice was observed at Rome in honour of Cybele.³ In case of drought, a procession and ceremonies, called *Nudipedalia*, were performed with a view to propitiate the gods by the same token of grief and humiliation.⁴

The idea of the defilement arising from contact with anything that had died, led to the entire disuse of skin or leather by the priests of Egypt. Their shoes were made of vegetable materials (*calceos ex papyro*⁵). (*Vid. BAXA.*)

Those of the Greeks and Romans who wore shoes, including generally all persons except youths, slaves, and ascetics, consulted their convenience, and indulged their fancy, by inventing the greatest possible variety in the forms, colours, and materials of their shoes. Hence we find a multitude of names, the exact meaning of which it is impossible to ascertain, but which were often derived either from the persons who were supposed to have brought certain kinds of shoes into fashion, or from the places where they were procured. We read, for example, of "shoes of Alcibiades," of "Sicyonian," and "Persian," which were ladies' shoes;⁶ of "Laconian," which were men's shoes;⁷ and of "Cretan," "Milesian," and "Athenian" shoes.

The distinctions depending upon form may be generally divided into those in which the mere sole of a shoe was attached to the sole of the foot by ties or bands, or by a covering for the toes or the instep (*vid. SOLEA, CREPIDA, SOCCUS*); and those which ascended higher and higher, according as they covered the ankles, the calf, or the whole of the leg. To *calceamenta* of the latter kind, *i. e.*, to shoes and boots as distinguished from sandals and slippers,

the term "calceus" was applied in its proper and restricted sense.

1. (Suet., Octav., 100.)—2. (Ant. d'Ercol., ii., 320.)—3. (Prudent., Peris., 154.)—4. (Tertull., Apol., 40.)—5. (Mart. Capell., 2.)—6. (Cic., De Orat., i., 54.—Hesych.)—7. (Aristoph., Thes., 149.)

Besides the difference in the intervals to which the calceus extended from the sole upward to the knee, other varieties arose from its adaptation to particular professions or modes of life. Thus the *CALIGA* was principally worn by soldiers; the *PERO* by labourers and rustics; and the *COTHURNUS* by tragedians, hunters, and horsemen.

Understanding "calceus" in its more confined application, it included all those more complete coverings for the feet which were used in walking out of doors or in travelling. As most commonly worn, these probably did not much differ from our shoes, and are exemplified in a painting at Herculaneum,¹ which represents a female wearing bracelets, a wreath of ivy, and a panther's skin, while she is in the attitude of dancing and playing on the cymbals. Her shoes are yellow, illustrating the fact that they were worn of various colours, especially by females. (*Vid. preceding woodcut.*) The shoe-ties (*corrugia*) are likewise yellow. These shoes appear light and thin, corresponding to the dress and attitude of the wearer. On the other hand, a marble foot in the British Museum exhibits the form of a man's shoe. Both the sole and the upper leather are thick and strong. The toes are uncovered, and a thong passes between the great and the second toe, as in a sandal.

For an example of calcei reaching to the middle of the leg, see the figure of Orestes in *AMENTUM* (p. 47). In the Panathenaic frieze of the Parthenon, boots much like his, but reaching still higher, are worn by many of the Athenian horsemen. They are fastened tightly below the knee, and fit closely in every part, showing how completely the sculptor avoided the reproach of making the foot "float" in the shoe (*natare*,² *ἐνεον ἐν ταῖς ὑβίσιν*³). In many statues the flaps are produced by turning down the head and claws of the quadruped out of whose hide the boot was made. We often see it laced in front. (*Vid. COTHURNUS.*)

Upon no part of their dress did the ancients bestow greater attention than upon this. Theophrastus⁴ considers it as a proof of rusticity to wear shoes larger than the foot.⁵ If, on the one hand, Ovid⁶ advises the lover, "*Nec vagus in lata pes tibi pelle natet*," we find Quintilian, on the other hand, laying down similar maxims for the statesman and the orator.⁷ Overnicety produced the inconvenience of pinching shoes,⁸ especially when they were pointed at the toes and turned upward (*uncinati*). Besides the various and splendid colours of the leather, the patterns still existing on marble statues show that it was cut in a very elaborate manner. When Lucullus triumphed after his victories in Asia, he displayed fine shoes from Syria, painted with spots in imitation of jewels.⁹ Real gems and gold were added by some of the emperors, especially Heliogabalus, who wore beautiful carmes on his boots and shoes, but with the natural effect of exciting ridicule rather than admiration.¹⁰

The form and colour of the calceus were also

1. (Ant. d'Ercol., i., tav. 21.)—2. (Ovid.)—3. (Aristoph., Equit., 321.)—4. (Char., 4.)—5. (Compare Hor., Sat., i., iii., 32.)—6. (De Art. Am., i., 516.)—7. (Ins. Or., xi., 3, p. 439, ed. Spalding.)—8. (Hor., Ep., i., x., 43.)—9. (Serr. in *Æn.*, iv., 261.)—10. (Lamprid., Heliog., 23.—Alex. Sev., 4.)

among the insignia of rank and office. Those who were elevated to the senate wore high shoes like buskins, fastened in front with four black thongs (*nigris pellibus*¹), and adorned with a small crescent.² Hence Cicero,³ speaking of the assumption of the senatorial dignity by Asinius, says *mutavit calceos*. Another man, in similar circumstances, was told that his nobility was in his heels.⁴ Among the calcei worn by senators, those called *mullei*, from their resemblance to the scales of the red mullet,⁵ were particularly admired; as well as others called *alutæ*, because the leather was softened by the use of alum.⁶

CALCULATOR (*λογιστής*) signifies a keeper of accounts in general, but was also used in the signification of a teacher of arithmetic; whence Martial⁷ classes him with the *notarius*, or writing-master. The name was derived from *calculi*, which were commonly used in teaching arithmetic, and also in reckoning in general. (*Vid.* ANACTUS, No. VI.) Among the Greeks the *λογιστής* and *γραμματιστής* appear to have been usually the same person.

In Roman families of importance there was a *calculator* or account-keeper,⁸ who is, however, more frequently called by the name of *dispensator* or *procurator*, who was a kind of steward.⁹

CALCULI were little stones or pebbles, used for various purposes; such, for example, as the Athenians used in voting (*vid.* CADISKOR), or such as Demosthenes put in his mouth when declaiming, in order to mend his pronunciation.¹⁰ Calculi were used in playing a sort of draughts. (*Vid.* LATRUNCULI.) Subsequently, instead of pebbles, ivory, or silver, or gold, or other men (as we call them) were used, but still called calculi. The calculi were *bicolores*.¹¹ Calculi were also used in reckoning, and hence the phrases *calculus ponere*,¹² *calculus subducere*.¹³ (*Vid.* ANACTUS, No. VI.)

CALDA. (*Vid.* CALIDA.)

CALDARIUM. (*Vid.* BATHS, p. 149.)

CALENDAR (GREEK). The Greek year was divided into twelve lunar months, depending on the actual changes of the moon. The first day of the month (*νομήνια*) was not the day of the conjunction, but the day on the evening of which the new moon first appeared; consequently full moon was the middle of the month, and is called *διχόμηνης*, or "the divider of the month."¹⁴ The lunar month consists of 29 days and about 13 hours; accordingly, some months were necessarily reckoned at 29 days, and rather more of them at thirty days. The latter were called *full months* (*πληρεῖς*), the former *hollow months* (*κοῖλοι*). As the twelve lunar months fell short of the solar year, they were obliged every other year to interpolate an intercalary month (*μὴν ἐμβολημαῖος*) of 30 or 29 days. The ordinary year consisted of 354 days, and the interpolated year, therefore, of 384 or 383. This interpolated year (*τρίετηρος*) was seven days and a half too long; and, to correct the error, the intercalary month was from time to time omitted. The Attic year began with the summer solstice: the following is the sequence of the Attic months, and the number of days in each: Hecatombeon (30), Metageitnion (29), Boedromion (30), Pyanepsion (29), Mæmacterion (30), Poseideon (29), Gamelion (30), Anthesterion (29), Elaphebolion (30), Munychion (29), Thargelion (30), Scirophorion (29). The intercalary month was a

second Poseideon inserted in the middle of the year. Every Athenian month was divided into three decads. The days of the first decad were designated as *ισταμένοι* or *ἀρχομένοι μηνός*, and were counted on regularly from 1 to 10; thus *δευτέρα ἀρχομένοι* or *ισταμένοι* is "the second day of the month." The days of the second decad were designated as *ἐπὶ δέκα*, or *μεσοῖντος*, and were counted on regularly from the 11th to the 20th day, which was called *εἰκάς*. There were two ways of counting the days of the last decad: they were either reckoned onward from the 20th (thus *πρώτη ἐπὶ εἰκάδι* was the 21st), or backward from the last day, with the addition *φθίνοντος*, *πανομένου*, *λήγοντος*, or *ἀπύοντος*; thus the 21st day of a hollow month was *ἐνὰ τῇ φθίνοντος*—of a full month, *δεκάτῃ φθίνοντος*. The last day of the month was called *ἐνὶ καὶ νέα*, "the old and new," because, as the lunar month really consisted of more than 29 and less than 30 days, the last day might be considered as belonging equally to the old and new month.¹

The first calendars of the Greeks were founded on rude observations of the rising and setting of certain fixed stars; as Orion, the Pleiades, Arcturus, &c. The earliest scientific calendar, which superseded these occasional observations, was that of Meton. He observed that 235 lunar months correspond very nearly to 19 solar years. Accordingly, he introduced a cycle of 19 years, or 6940 days, distributed into months, so that they corresponded to the changes of the moon throughout the whole period. This cycle was called the year of Meton (*Μέτωνος ἐνιαυτός*), and the calendar based upon it was published at Athens in Ol. 86, 4. The calendar commenced with the month Scirophorion (16th July, B.C. 432). This cycle of 19 years was an extension of the octaëteris of Cleostratus, which contained 8 years, or 99 months, or 2922 days. Three of the months in the octaëteris were intercalary, occurring in the third, fifth, and eighth years of the cycle. If Meton had reckoned every month full, his cycle would have contained 7050 days, or 7050—6940=110 days too much; consequently, it was necessary to take 110 hollow months in each cycle. Dividing 7050 by 110 we get the quotient 64, which denotes the interval between every two successive days to be rejected (*ἡμέραι ἐξαίρετοι*). Meton's canon begins with two full months, and then we have hollow and full months alternately; but, after the interchange has taken place eight times, two full months come together, because there must be 17 full months in every 32. The Metonic cycle was corrected in Ol. 110, by Callippus of Cyzicus. Meton had made the solar year $\frac{1}{70}$ of a day too long. Callippus accordingly assumed a $4 \times 19 = 76$ years' cycle omitting one day, or 27759 days. The epoch of this cycle is 28th June, B.C. 330, Ol. 112, 3. A farther correction of the Metonic cycle was introduced by Hipparchus, the celebrated astronomer, as even Callippus had still left the solar year too long by $\frac{1}{3000}$ of a day; he therefore assumed a cycle of $4 \times 19 = 4 \times 76$ years wanting one day, or 111035 days. This period of 304 years, with 112 intercalary months, is called the year of Hipparchus.

Separate years were designated at Athens by the name of the chief archon, hence called *ἀρχων ἐπώνυμος*, or "the name-giving archon;" at Sparta, by the first of the ephors; at Argos, by the priesthood of Juno, &c. The method of reckoning by Olympiads was brought into use by Theopompus of Tauromenium about Ol. 130. As this clumsy method of reckoning is still found in books, it will be right to give the rules for converting Olympiads into the year B.C., and *vice versa*.

1. (*Vid.* Aristoph., *Nub.*, 1131, &c.)

1. (Horr., *Sat.*, l. vi., 27.—Heindorf in loc.)—2. (Mart., ii., 29.—Juv., viii., 192.)—3. (Phil., xiii., 13.)—4. (Philostr., *Horr.*, viii.)—5. (Isidor., *Orig.*, xix., 14.)—6. (Mart., vii., l. cc.—Lydua, *De Mar.*, i., 32.—Ovid, *De Art. Am.*, iii., 271.)—7. (x., 62.)—8. (Dig. 38, tit. i., s. 7.)—9. (Cic., *ad Att.*, xi., 1.—Plin., *Ep.*, ii., 19.—Suet., *Gal.*, c. 12.—Vesp., c. 22.)—10. (Cic., *De Orat.*, i., 61.)—11. (Sidon., *Epist.*, viii., 12.—Ovid, *Trist.*, ii., 477.—Mart., xiv., 17, 2; xiv., 20.)—12. (Colum., iii., 3.)—13. (Cic., *De Fin.*, ii., 19, &c.)—14. (Ibid., *Olymp.*, iii., 34.)

I. To find the year B.C., given the n th year of Ol. p , take the formula $781 - (4p + n)$. If the event happened in the second half of the Attic year, this must be farther reduced by 1; for the Attic year, as mentioned above, commenced with the summer solstice. Thus Socrates was put to death in Thargelion of Ol. 95, 1. Therefore in B.C. $(781 - (4 \times 95 + 1) - 1) = (781 - 381) - 1 = 400 - 1 = 399$.

II. To find the Olympiad, given the year n B.C., take the formula $\frac{781-n}{4}$. The quotient is the Ol., and the remainder the current year of it; if there is no remainder, the current year is the 4th of the Olympiad. If the event happened in the second half of the given year, it must be increased by 1. Thus, to take the event just mentioned, Socrates was put to death $\frac{781 - (399 + 1) - 781 - 400}{4} = \text{Ol. 95, 1.}$

1. Demosthenes was born in the summer of 382, therefore in $\frac{781 - 382 - 399}{4} = \text{Ol. 99, 3.}$

On the Greek calendar in general, the reader may consult Ideler's *Handbuch der Mathematischen und Technischer Chronologie*, Th. i., p. 227-392.

CALENDÆ. (Vid. CALENDAR, ROMAN.)

CALENDAR (ROMAN), Calendarium, or, rather, Kalendarium.

The Year of Romulus.—The name of Romulus is commonly attached to the year which is said to have prevailed in the earliest times of Rome; but tradition is not consistent with regard to the form of it. The historians Licinius Macer and Fenestella maintained that the oldest year consisted of twelve months, and that it was already in those days an *annus vertens*, that is, a year which coincided with the period of the sun's course. Censorinus, however, in whose work this statement occurs,¹ goes on to say that more credit is due to Gracchanus, Fulvius (Nobilior), Varro, and others, according to whom the Romans, in the earliest times, like the people of Alba from whom they sprung, allotted to the year but ten months. This opinion is supported by Ovid in several passages of his *Fasti*;² by Gellius,³ Macrobius,⁴ Solinus,⁵ and Servius.⁶ Lastly, an old Latin year of ten months is implied in the fact, that at Laurentum⁷ a sacrifice was offered to Juno Kalendaris on the first of every month except February and January. These ten months were called Martins, Aprilis, Maius, Junius, Quintilis, Sextilis, September, October, November, December. That March was the first month in the year is implied in the last six names; and even Plutarch, who ascribes twelve months to the Romulan year,⁸ places Januarius and Februarius at the end. The fact is also confirmed by the ceremony of re-kindling the sacred fire in the Temple of Vesta on the first day of March, by the practice of placing fresh laurels in the public buildings on that day, and by many other customs recorded by Macrobius.⁹ With regard to the length of the months, Censorinus, Macrobius, and Solinus agree in ascribing thirty-one days to four of them, called *pleni menses*; thirty to the rest, called *cavi menses*. The four longer months were Martins, Maius, Quintilis, and October; and these, as Macrobius observes, were distinguished in the latest form of the Roman calendar by having their names two days later than any of the other months. The symmetry of this arrangement will appear by placing the numbers in succession: 31, 30; 31, 30; 31, 30, 30; 31; 30, 30. Ovid, indeed, appears to speak of the months as coinciding with the lunar period:

1. (De Die Natali, c. 20.—Compare also the beginning of c. 19.)—2. (i., 27, 43; iii., 99, 119, 151.)—3. (Noct. Att., iii., 16.)—4. (Saturn., i., 12.)—5. (Polyh., i.)—6. (in Virg., Georg., i., 43.)—7. (Macrobius, i., 5.)—8. Numa, c. 73.)—9. (i., 12.)

"*Annus erat decimum cum luna repleverat annum;*"

but the language of a poet must not be pressed too closely. On the other hand, Plutarch, in the passage already referred to, while he assigns to the old year twelve months and 365 days, speaks of the months as varying without system between the limits of twenty and thirty-five days. Such an irregularity is not incredible, as we find that even when Censorinus wrote (A.D. 238), the Alban calendar gave 36 days to March, 22 to May, 18 to Sextilis, and 16 to September; while at Tusculum Quintilis had 36 days, October 32; and again, at Aricia, the same month, October, had no less than 39.¹ The Romulan year, if we follow the majority of authors, contained but 304 days; a period differing so widely from the real length of the sun's course, that the months would rapidly revolve through all the seasons of the year. This inconvenience was remedied, says Macrobius,² by the addition of the proper number of days required to complete the year; but these days, he goes on to say, did not receive any name as a month. Servius speaks of the intercalated period as consisting of two months, which at first had no name, but were eventually called after Janus and Februus. That some system of intercalation was employed in the Romulan year was also the opinion of Licinius Macer.³ This appears to be all that is handed down with regard to the earliest year of the Romans.

As a year of ten months, i. e., 304 days, at once falls greatly short of the solar year, and contains no exact number of lunations, some have gone so far as to dispute the truth of the tradition in whole or part, while others have taxed their ingenuity to account for the adoption of so anomalous a year. Puteanus,⁴ calling to mind that the old Roman or Etruscan week contained eight days, every eighth day being specially devoted to religious and other public purposes, under the name of *nonæ* or *nundinæ*, was the first to point out that the number 304 is a precise multiple of eight. To this observation, in itself of little moment, Niebuhr has given some weight, by farther noticing that the 38 nundines in a year of 304 days tally exactly with the number of *dies fasti* afterward retained in the Julian calendar. Another writer, Pontedera, observed that 304 bore to 365 days nearly the ratio of 5 to 6, six of the Romulan years containing 1824, five of the longer periods 1825 days; and Niebuhr,⁵ who is a warm advocate of the ten-month year, has made much use of this consideration. He thus explains the origin of the well-known quinquennial period called the *lustrum*, which Censorinus⁶ expressly calls an *annus magnus*, that is, in the modern language of chronology, a cycle. Moreover, the year of ten months, says the same writer,⁷ was the term for mourning, for paying portions left by will, for credit on the sale of yearly profits; most probably for all loans; and it was the measure for the most ancient rate of interest. (Vid. INTEREST OF MONEY.) Lastly, he finds in the existence of this short year the solution of certain historical difficulties. A peace, or, rather, truce with Veii was concluded in the year 280 of Rome, for 40 years. In 316, Fidenæ revolted and joined Veii, which implies that Veii was already at war with Rome; yet the Veientes are not accused of having broken their oaths.⁸ Again, a twenty years' truce, made in 329, is said by Livy to have expired in 347.⁹ These facts are explained by supposing the years in question to have been those of ten months; for 40 of these are equal to 33½ ordinary

1. (Censorinus, c. 22.)—2. (i., 13.)—3. (Macrobius, i., 13.)—4. (De Nundinis in Grævius's Thesaurus, vol. vii.)—5. (Rom. Hist., vol. i., p. 271.)—6. (c. 18.)—7. (p. 279.)—8. (Livy, iv., 17.)—9. (iv., 58.)

years, 20 to 16½; so that the former truce terminated in 314, the latter in 346. Similarly, the truce of eight years concluded with the Volscians in 323, extended, in fact, to no more than 6½ full years; and hence the Volscians resumed the war in 331, without exposing themselves to the charge of perjury.

These ingenious, and, perhaps, satisfactory speculations of the German critic, of course imply that the decemestrial year still survived long after the regal government had ceased; and, in fact, he believes that this year and the lunar year, as determined by Scaliger's proposed cycle of 22 years, co-existed from the earliest times down to a late period. The views of Niebuhr do not require that the months should have consisted of 31 or 30 days; indeed, it would be more natural to suppose that each month, as well as the year, contained a precise number of eight-day weeks; eight of the months, for instance, having four such weeks, the two others but three. Even in the so-called calendar of Numa we find the Etruscan week affecting the division of the month, there being eight days between the nones and ides, from which circumstances the nones received their name; and, again, two such weeks from the ides to the end of the month, and this whether the whole month contained 31 or 29 days.

The Year of Numa.—Having described the Romulan year, Censorinus¹ proceeds thus: "Afterward, either by Numa, as Fulvius has it, or, according to Junius, by Tarquin, there was instituted a year of twelve months and 355 days, although the moon in twelve lunations appears to complete but 354 days. The excess of a day was owing either to error, or, what I consider more probable, to that superstitious feeling, according to which an odd number was accounted full (*plenus*) and more fortunate. Be this as it may, to the year which had previously been in use (that of Romulus) one-and-fifty days were now added; but, as these were not sufficient to constitute two months, a day was taken from each of the before-mentioned hollow months, which, added thereto, made up 57 days, out of which two months were formed, Januarius with 29, and Februarius with 28 days. Thus all the months henceforth were full, and contained an odd number of days, save Februarius, which alone was hollow, and hence deemed more unlucky than the rest." In this passage it is fitting to observe, that the terms *pleni* and *cavi* menses are applied in a sense precisely opposite to the practice of the Greek language in the phrases *μήνες πληρεῖς* and *κοῖλοι*. The mysterious power ascribed to an odd number is familiar from the *Numero deus impare gaudet* of Virgil. Pliny also² observes, "*Impares numeros ad omnia vehementiores credimus.*" It was, of course, impossible to give an odd number of days, at the same time, to the year on the one hand, and to each of the twelve months on the other; and yet the object was in some measure effected by a division of February itself into 23 days, and a supernumerary period of five days. (See the mode of intercalation below.) The year of Numa, then, according to Censorinus, contained 355 days. Plutarch tells us that Numa estimated the anomaly of the sun and moon, by which he means the difference between twelve lunations and the sun's annual course, at eleven days, *i. e.*, the difference between 365 and 354 days. Macrobius, too, says that the year of Numa had at first 354, afterward 355 days.³

Twelve lunations amount to 354 days, 8h., 48' 36", so that the so-called year of Numa was a tol-

erably correct lunar year, though the months would have coincided more accurately with the single lunations if they had been limited to 30 and 29 days, instead of 31, 29, and 28 days. That it was, in fact, adapted to the moon's course, is the concurrent assertion of ancient writers, more particularly of Livy, who says: "*(Numa) omnium primum ad cursum lunæ in duodecim mensis describit annum.*" Unfortunately, however, many of the same writers ascribe to the same period the introduction of such a system of intercalation as must at once have dislocated the coincidence between the civil month and the lunar period. At the end of two years the year of Numa would have been about 22 days in arrear of the solar period, and, accordingly, it is said an intercalary month of that duration, or else of 23 days, was inserted at or near the end of February, to bring the civil year into agreement with the regular return of the seasons. Of this system of intercalation a more accurate account shall presently be given. But there is strong reason for believing that this particular mode of intercalation was not contemporary in origin with the year of Numa.

In antiquarian subjects it will generally be found that the assistance of etymology is essential; because the original names that belong to an institution often continue to exist, even after such changes have been introduced, that they are no longer adapted to the new order of things; thus they survive as useful memorials of the past. In this way we are enabled, by the original meaning of words, aided by a few fragments of a traditional character, to state that the Romans in early times possessed a year which altogether depended upon the phases of the moon. The Latin word *mensis*,¹ like the Greek *μήν* or *μῆς*, and the English *month*, or German *monath*, is evidently connected with the word *moon*. Again, while in the Greek language the name *νοῦμηνία* (new moon), or *ἐνη καὶ νέα*, given to the first day of a month, betrays its lunar origin, the same result is deduced from the explanation of the word *kalendæ*, as found in Macrobius.² "In ancient times," says that writer, "before Cn. Flavius the scribe, against the pleasure of the patricians, made the *fasti* known to the whole people (the *ed* of the 4th century B.C.), it was the duty of one of the pontifices minores to look out for the first appearance of the new moon, and, as soon as he described it, to carry word to the *rex sacrificulus*. Then a sacrifice was offered by these priests; after which, the same pontifex, having summoned the plebs (*calata plebe*) to a place in the Capitol near the Curia Calabra, which adjoins the Casa Romuli, there announced the number of days which still remained to the nones, whether five or seven, by so often repeating the word *καλῶ*." There was no necessity to write this last word in Greek characters, as it belonged to the old Latin. In fact, in this very passage it occurs in both *calata* and *calabra*; and again, it remained to the latest times in the word *nomenclator*. In regard to the passage here quoted from Macrobius, it must be recollected that, while the moon is in the immediate vicinity of the sun, it is impossible to see it with the naked eye, so that the day on which it is first seen is not of necessity the day of the actual conjunction. We learn elsewhere, that, as soon as the pontifex discovered the thin disc, a hymn was sung, beginning *Jana novella*, the word *Jana*³ being only a dialectic variety of *Diana*, just as *Dispieter* or *Diupiter* corresponds to *Jupiter*; and other examples might readily be given, for the change occurs in almost every word which has the syllables *de* or *di* before a vowel. Again, the consecration of the kalends to

1 (c. 20.)—2. (H. N., xxviii., 5.)—3. (Compare Liv., i., 19.—Ovid, *Fast.*, i., 43; iii., 151.—Aurel. Vict., c. 3.—Florus, i., 2.—Sextus, c. 1.)

1. (Varro, *De Ling. Lat.*, vi., or, in the old editions, v., 54.)—2. (i., 15.)—3. (Macrobius, *Sat.*, i., 9.—Varro, *De Re Rust.*, i., 37.)

Juno is referred by the latter writer to the fact that the months originally began with the moon, and that Juno and Luna are the same goddess; and the poet likewise points at the same connexion in his explanation of Juno's epithet *Lucina*. Moreover, at Laurentum, Juno was worshipped as Juno Kalendaris. Even so late as 448 B.C., strictly lunar months were still in use; for Dionysius¹ says that Appius, in that year, received the consular authority on the ides of May, being the day of full moon; for at that time, he adds, the Romans regulated their months by the moon. In fact, so completely was the day of the month which they called the ides associated with the idea of the full moon, that some derived the word ἀπὸ τοῦ εἰδους, quod eo die plenam speciem luna demonstrat.² Quietly to insert the idea of *plenam*, when the Greek word signified merely *speciem*, is in accordance with those loose notions which prevailed in all ancient attempts at etymology. But, though the derivation is of course groundless, it is of historical value, as showing the notion connected with the term ides.

For the same reason, probably, the ides of March were selected for the sacrifice to the goddess Anna Perenna, in whose name we have nothing more than the feminine form of the word *annus*, which, whether written with one *n* or two, whether in its simple form *annus* or diminutive *annulus*, still always signifies a *circle*. Hence, as the masculine form was easily adopted to denote the *period* of the sun's course, so the feminine, in like manner, might well be employed to signify, first, the moon's revolution, and then the moon herself. The tendency among the Romans to have the same word repeated, first as a male, and then as a female deity, has been noticed by Niebuhr; and there occurs a complete parallel in the name *Dianus*, afterward *Janus*, for the god of *dies*, or light, the sun; *Diana*, afterward *Jana*, for the goddess of light, the moon, to say nothing of the words *Jupiter* and *Juno*. That the month of March should have been selected arose from its being the first of the year, and a sacrifice to the moon might well take place on the day when her power is fully displayed to man. The epithet *Perenna* itself means no more than *ever-circling*. Nay, Macrobius himself⁴ connects the two words with *annus*, when he states the object of the sacrifice to be, *ut annare perennareque commode liceat*.

Another argument in favour of the lunar origin of the Roman month is deducible from the practice of counting the days backward from the kalends, nones, and ides; for the phrases will then amount to saying, "It wants so many days to the new moon, to the first quarter, to full moon." It would be difficult, on any other hypothesis, to account for the adoption of a mode of calculation, which, to our notions, at least, is so inconvenient; and, indeed, it is expressly recorded that this practice was derived from Greece, under which term the Athenians probably are meant; and by these we know that a strictly lunar year was employed down to a late period.⁵

But perhaps the most decisive proof of all lies in the simple statement of Livy,⁶ that Numa so regulated his lunar year of twelve months by the insertion of intercalary months, that at the end of every *nineteenth* year it again coincided with the same point in the sun's course from which it started. His words are, "*Quem (annum) intercalariis mensibus interponendis ita dispensavit ut vicesimo anno ad metam eandem solis unde orsi sunt, plenis annorum omnium spatii, dies congruerent.*" We quote the text,

because editors, in support of a theory, have taken the liberty of altering it by the insertion of the word *quarto*, forgetting, too, that the words *quarto et vicesimo anno* signify, not *every twenty-fourth year*, which their theory requires, but *every twenty-third*, according to that peculiar error of the Romans which led them to count both the extremes in defining the interval from one point to another, and which still survives in the medical phrases *tertian* and *quartan ague*, as well as in the French expressions *huit jours for a week*, and *quinze jours for a fortnight*. Accordingly, it is not doing violence to words, but giving the strict and necessary meaning to them, when, in our own translation of the passage in Livy, we express *vicesimo anno* by *every nineteenth year*.

Now 19 years, it is well known, constitute a most convenient cycle for the conjunction of a lunar and solar year. A mean lunation, or synodic month, according to modern astronomy, is 29d., 12h., 44' 3"; and a mean tropical year 365d., 5h., 48' 48". Hence it will be found that 235 lunations amount to 6939d., 16h., 31' 45", while 19 tropical years give 6939d., 14h., 27' 12", so that the difference is only 2h., 4' 33". Although it was only in the second century B.C. that Hipparchus gave to astronomical observations a nicety which could pretend to deal with seconds (his valuation of the synodic month was 29d., 12h., 44' 3½"), yet, even in the regal period of Rome, the Greek towns in the south of Italy must already have possessed astronomers, from whom the inhabitants of Latium could have borrowed such a rough practical knowledge of both the moon and sun's period as was sufficient to show that at the end of 19 solar years the moon's age would be nearly what it was at the commencement; and it should be recollected that the name of Numa is often connected by tradition with the learning of Magna Græcia. At any rate, a cycle of 19 years was introduced by Meton, at Athens, in the year 432 B.C.; and the knowledge of it among the learned may probably have preceded, by a long period, its introduction into popular use, the more so as religious festivals are generally connected with the various divisions of time, and superstition, therefore, would be most certainly opposed to innovations of this nature. How the Romans may have intercalated in their 19 lunar years the seven additional months which are requisite to make up the whole number of 235 (=12×19+7) lunations, is a subject upon which it would be useless to speculate. From a union of these various considerations, it must be deemed highly probable that the Romans at one period possessed a division of time dependent upon the moon's course.

Year of the Decemviri (so called by Ideler).—The motives which induced the Romans to abandon the lunar year are nowhere recorded, nor, indeed, the date of the change. We have seen, however, that even in the year 448 B.C., the year was still regulated by the moon's course. To this must be added, that, according to Tuditanus and Cassius Hemina, a bill on the subject of intercalation was brought before the people by those decemviri who added the two new tables to the preceding Ten,² that is, in the year 450 B.C. That the attention of these decemviri was called to the calendar is also proved by the contents of the Eleventh Table, wherein it is decreed that "the festivals shall be set down in the calendars." We have the authority of Varro, in deed, that a system of intercalation already existed at an earlier date; for he says that there was a very ancient law engraved on a bronze pillar by L. Pinarius and Furius in their consulate *cui mæntio intercalaris ascribitur*. We add the last words in

1. (Ovid, Fast., i., 55; vi., 39.—Macrobius, Sat., i., 9, 15.)—2. (Antiq. Rom., x., 59.)—3. (Macrobius, ib.)—4. (c. 12.)—5. (Macrobius, c. 16. (i., 19.)

1. (Ptolemy, Almag., iv., 2.)—2. (Macrobius, c. 13.)

Latin from the text of Macrobius,¹ because their import is doubtful. If we are right in interpreting them thus, "the date upon which is expressed by a month called *intercalary*," all that is meant may be one of the intercalary lunations, which must have existed even in the old lunar year. At the period of the decemviral legislation there was probably instituted that form of the year of 354 days, which was corrected by the short intercalary month called Mercedonius or Mercedinus; but so corrected as to deprive the year and month of all connexion with the moon's course. The length of the several ordinary months was probably that which Censorinus has erroneously allotted to the months of Numa's lunar year, viz.:

Martius	31 days.	September	29 days.
Aprilis	29 "	October	31 "
Maius	31 "	November	29 "
Junius	29 "	December	29 "
Quintilis	31 "	Januarius	29 "
Sextilis	29 "	Februarius	28 "

Such, at any rate, was the number of days in each month immediately prior to the Julian correction; for both Censorinus and Macrobius say that Cæsar added two days to Januarius, Sextilis, and December, and one to Aprilis, Junius, September, and November. Hence Niebuhr appears to have made an error when he asserts² that July acquired two more days at the reformation of the calendar, and founds thereon a charge of carelessness against Livy. That November had but 29 days prior to the correction—in other words, that the XVII. Kal. Dec. immediately followed the Idus Nov., appears likewise, from a comparison of Cicero's letters to Tiro;³ for he reaches Corcyra a. d. V. Id. Nov., and on the XV. Kal. Dec. complains, "*Septimum jam diem enebamus*." The seven days in question would be IV. Id., III. Id., Prid. Id., Id. Nov., XVII. Kal. Dec., XVI. Kal. Dec., XV. Kal. Dec. That the place of the nones and ides was in each month the same before the Julian correction as afterward, is asserted by Macrobius.

The main difficulty is with regard to the mode of intercalation. Plutarch, we have already observed, speaks of an intercalation, by him referred to Numa, of 22 days in alternate years in the month of February. Censorinus, with more precision, says that the number of days in each intercalation was either 22 or 23, and Macrobius agrees with him in substance. Of the point at which the supernumerary month was inserted, the accounts are these: Varro⁴ says the twelfth month was February; and when intercalations take place, the last five days of this month are removed. Censorinus agrees herewith, when he places the intercalation generally (*potissimum*) in the month of February, between the Terminalia and the Regifugium, that is, immediately after the day called by the Romans a. d. VI. Kal. Mart., or by us the 23d of February. This, again, is confirmed by Macrobius. The setting aside of the last five days agrees with the practice which Herodotus ascribes to the Egyptians, of considering the five days over the 360 as scarcely belonging to the year, and not placing them in any month. So completely were these five days considered by the Romans to be something extraneous, that the soldier appears to have received pay only for 360 days. For in the time of Augustus the soldier received *deni asses* per day, i. e., $\frac{1}{16}$ of a denarius; but Domitian⁵ *addidit quartum stipendium aureos termos*. Thus, as 25 denarii made an aureus, the annual pay prior to Domitian was $\frac{360 \times 10}{16}$ de-

narii, or $\frac{360 \times 10}{16 \times 25}$ aurei = 9 aurei; and thus the addition of three aurei was precisely a fourth more. Lastly, the festival Terminalia, as its name implies, marked the end of the year; and this, by-the-way, again proves that March was originally the first month.

The intercalary month was called *Μεσικίδιος*, or *Μεσικιδάιος*.¹ We give it in Greek characters, because it happens somewhat strangely that no Latin author has mentioned the name, the term mensis intercalaris or intercalarius supplying its place. Thus, in the year of intercalation, the day after the ides of February was called, not, as usual, a. d. XVI. Kalendas Martius, but a. d. XI. Kalendas intercalaris. So, also, there were the Nonæ intercalares and Idus intercalares, and after this last came either a. d. XV. or XVI. Kal. Mart., according as the month had 22 or 23 days; or, rather, if we add the five remaining days struck off from February, 27 or 28 days. In either case the Regifugium retained its ordinary designation a. d. VI. Kal. Mart.² When Cicero writes to Atticus, "*Accepi tuas litteras a. d. V. Terminalia*" (i. e., Feb. 19), he uses this strange mode of defining a date, because, being then in Cilicia, he was not aware whether any intercalation had been inserted that year. Indeed, he says, in another part of the same letter, "*Ea sic observabo, quasi intercalatum non sit*."

Besides the intercalary month, mention is occasionally made of an intercalary day. The object of this was solely to prevent the first day of the year, and perhaps also the nones, from coinciding with the nundine, of which mention has been already made.³ Hence, in Livy,⁴ "*Intercalatum eo anno; postridie Terminalia intercalares fuerunt*." This would not have been said had the day of intercalation been invariably the same; and, again, Livy,⁵ "*Hoc anno intercalatum est. Tertia die post Terminalia Calendæ intercalares fuerunt*," i. e., two days after the Terminalia, so that the dies intercalaris was on this occasion inserted, as well as the month so called. Nay, even after the reformation of the calendar, the same superstitious practice remained. Thus, in the year 40 B.C., a day was inserted for this purpose, and afterward an omission of a day took place, that the calendar might not be disturbed.⁶

The system of intercalating in alternate years 22 or 23 days, that is, of ninety days in eight years, was borrowed, we are told by Macrobius, from the Greeks; and the assertion is probable enough, first, because from the Greeks the Romans generally derived all scientific assistance; and, secondly, because the decemviral legislation was avowedly deduced from that quarter. Moreover, at the very period in question, a cycle of eight years appears to have been in use at Athens, for the Metonic period of 19 years was not adopted before 432 B.C. The Romans, however, seem to have been guilty of some clumsiness in applying the science they derived from Greece. The addition of ninety days in a cycle of eight years to a lunar year of 354 days would, in substance, have amounted to the addition of $1\frac{1}{4}$ (=90÷8) days to each year, so that the Romans would virtually have possessed the Julian calendar. As it was, they added the intercalation to a year of 355 days; and, consequently, on an average, every year exceeded its proper length by a day, if we neglect the inaccuracies of the Julian calendar. Accordingly, we find that the civil and solar years were greatly at variance in the year 564 A.U.C. On the 11th of Quintilis in that year, a remarkable

1. (c. 13.)—2. (ii., 531, note 1179.)—3. (ad Fam., xvi., 7, 9.)—4. (De Ling. Lat., vi., 55.)—5. (Suet., Dom., 7.)

1. (Plutarch, Numa, 19.—Cæs., 59.)—2. (Vid. Ascon., ad Orat. pro Milon.—Fast. Triumphal., 493 A.U.C.)—3. (Macrobius, c. 9.)—4. (xlv., 44.)—5. (xlii., 11.)—6. (Dion, xlviii., 33.)

eclipse of the sun occurred.¹ This eclipse, says Ideler, can have been no other than the one which occurred on the 14th of March, 190 B.C. of the Julian calendar, and which at Rome was nearly total. Again, the same historian² mentions an eclipse of the moon, which occurred in the night between the 3d and 4th of September, in the year of the city 586. This must have been the total eclipse in the night between the 21st and 22d of June, 163 B.C.

That attempts at legislation for the purpose of correcting so serious an error were actually made, appears from Macrobius, who, aware himself of the cause of the error, says that, by way of correction, in every third octoennial period, instead of 90 intercalary days, only 60 were inserted. Again, it appears that M. Atilius Glabrio, in his consulship 169 B.C., that is, the very year before that in which the above-mentioned lunar eclipse occurred, introduced some legislative measure upon the subject of intercalation.³ According to the above statement of Macrobius, a cycle of 24 years was adopted, and it is this very passage which has induced the editors of Livy to insert the word *quarto* in the text already quoted.

As the festivals of the Romans were for the most part dependant upon the calendar, the regulation of the latter was intrusted to the college of pontifices, who in early times were chosen exclusively from the body of patricians. It was, therefore, in the power of the college to add to their other means of oppressing the plebeians, by keeping to themselves the knowledge of the days on which justice could be administered, and assemblies of the people could be held. In the year 304 B.C., one Cn. Flavius, a secretary (*scriba*) of Appius Claudius, is said fraudulently to have made the *Fasti* public.⁴ It appears, however, from the last passage, that Atticus doubted the truth of the story. In either case, the other privilege of regulating the year by the insertion of the intercalary month gave them great political power, which they were not backward to employ. Everything connected with the matter of intercalation was left, says Censorinus,⁵ to the unrestrained pleasure of the pontifices; and the majority of these, on personal grounds, added to or took from the year by capricious intercalations, so as to lengthen or shorten the period during which a magistrate remained in office, and seriously to benefit or injure the farmer of the public revenue. Similar to this is the language employed by Macrobius,⁶ Ammianus,⁷ Solinus,⁸ Plutarch,⁹ and their assertions are confirmed by the letters of Cicero, written during his proconsulate in Cilicia, the constant burden of which is a request that the pontifices will not add to his year of government by intercalation.

In consequence of this license, says Suetonius,¹⁰ neither the festivals of the harvest coincided with the summer, nor those of the vintage with the autumn. But we cannot desire a better proof of the confusion than a comparison of three short passages in the third book of Cæsar's *Bell. Civ.*—*"Pride nonas Januariæ navis solvit," jamque hiems adpropinquabat, multi jam menses transierant et hiems jam precipitaverat.*"

Year of Julius Cæsar.—In the year 46 B.C., Cæsar, now master of the Roman world, crowned his other great services to his country by employing his authority, as pontifex maximus, in the correction of this serious evil. For this purpose he availed himself of the services of Sosigenes the peripatetic,

and a *scriba* named M. Flavius, though he himself too, we are told, was well acquainted with astronomy, and, indeed, was the author of a work of some merit upon the subject, which was still extant in the time of Pliny. The chief authorities upon the subject of the Julian reformation are Plutarch,¹ Dio Cassius,² Appian,³ Ovid,⁴ Suetonius,⁵ Pliny,⁶ Censorinus,⁷ Macrobius,⁸ Ammianus Marcellinus,⁹ Solinus.¹⁰ Of these, Censorinus is the most precise: "The confusion was at last," says he, "carried so far, that C. Cæsar, the pontifex maximus, in his third consulate, with Lepidus for his colleague, inserted between November and December two intercalary months of 67 days, the month of February having already received an intercalation of 23 days, and thus made the whole year to consist of 445 days. At the same time, he provided against a repetition of similar errors by casting aside the intercalary month, and adapting the year to the sun's course. Accordingly, to the 355 days of the previously existing year, he added ten days, which he so distributed between the seven months having 29 days, that January, Sextilis, and December received two each, the others but one; and these additional days he placed at the end of the several months, no doubt with the wish not to remove the various festivals from those positions in the several months which they had so long occupied. Hence, in the present calendar, although there are seven months of 31 days, yet the four months which from the first possessed that number are still distinguishable by having their nones on the seventh, the rest having them on the fifth of the month. Lastly, in consideration of the quarter of a day, which he considered as completing the true year, he established the rule, that at the end of every four years a single day should be intercalated where the month had been hitherto inserted, that is, immediately after the Terminalia; which day is now called the Bissextum."

This year of 445 days is commonly called by chronologists the year of confusion; but by Macrobius, more fitly, the last year of confusion. The kalends of January, of the year 708 A.U.C., fell on the 13th of October, 47 B.C. of the Julian calendar; the kalends of March, 708 A.U.C., on the 1st of January, 46 B.C.; and, lastly, the kalends of January, 709 A.U.C., on the 1st of January, 45 B.C. Of the second of the two intercalary months inserted in this year after November, mention is made in Cicero's letters.¹¹

It was probably the original intention of Cæsar to commence the year with the shortest day. The winter solstice at Rome, in the year 46 B.C., occurred on the 24th of December of the Julian calendar. His motive for delaying the commencement for seven days longer, instead of taking the following day, was probably the desire to gratify the superstition of the Romans, by causing the first year of the reformed calendar to fall on the day of the new moon. Accordingly, it is found that the mean new moon occurred at Rome on the 1st of January, 45 B.C., at 6h. 16' P.M. In this way alone can be explained the phrase used by Macrobius:—*"Annum civilem Cæsar, habitis ad lunam dimensionibus constitutum, edicto palam proposito publicavit."* This edict is also mentioned by Plutarch where he gives the anecdote of Cicero, who, on being told by some one that the constellation Lyra would rise the next morning, observed, "Yes, no doubt, in obedience to the edict."

The mode of denoting the days of the month, will

1. (Liv., xxxvii., 4.)—2. (xlv., 37.)—3. (Macrobius, c. 13.)—4. (Liv., xi., 46.)—Cic., Pro Muræna, c. 11.—Plin., H. N., xxxiii., 1.—Val. Max., ii., 5.—Aul. Gell., vi., 9.—Macrobius, i., 15.—Pomponius, De Origine Juris, in the Digests, i., tit. 2.—Cicero, ad Att., vi., 1.)—5. (c. 20.)—6. (i., 14.)—7. (xxvi., 1.)—8. (c. 1.)—9. (Jul., 59.)—10. (Jul., 40.)—11. (c. 6.)—12. (c. 9.)—13. (c. 25.)

1. (Cæsar, c. 59.)—2. (xliii., 26.)—3. (De Bell. Civ., i., ad extr.)—4. (Fasti, iii., 155.)—5. (Jul., c. 40.)—6. (Plin., xxxiii., 57.)—7. (c. 20.)—8. (Sat., i., 14.)—9. (xxvi., 1.)—10. (C. 45.)—11. (Ad Fam., vi., 14.)

cause no difficulty, if it be recollected that the kalends always denote the first of the month, that the nones occur on the seventh of the four months March, May, Quintilis or July, and October, and on the fifth of the other months; that the ides always fall eight days later than the nones; and, lastly, that the intermediate days are in all cases reckoned backward, upon the Roman principle already explained of counting both extremes.

For the month of January the notation will be as follows:

1 Kal. Jan.	17 a. d. XVI. Kal. Feb.
2 a. d. IV. Non. Jan.	18 a. d. XV. Kal. Feb.
3 a. d. III. Non. Jan.	19 a. d. XIV. Kal. Feb.
4 Prid. Non. Jan.	20 a. d. XIII. Kal. Feb.
5 Non. Jan.	21 a. d. XII. Kal. Feb.
6 a. d. VIII. Id. Jan.	22 a. d. XI. Kal. Feb.

9 a. d. V. Id. Jan.	25 a. d. VIII. Kal. Feb.
10 a. d. IV. Id. Jan.	26 a. d. VII. Kal. Feb.
11 a. d. III. Id. Jan.	27 a. d. VI. Kal. Feb.
12 Prid. Id. Jan.	28 a. d. V. Kal. Feb.
13 Id. Jan.	29 a. d. IV. Kal. Feb.
14 a. d. XIX. Kal. Feb.	30 a. d. III. Kal. Feb.
15 a. d. XVIII. Kal. Feb.	31 Prid. Kal. Feb.
16 a. d. XVII. Kal. Feb.	

The letters *a. d.* are often, through error, written together, and so confounded with the preposition *ad*, which would have a different meaning, for *ad kalendas* would signify *by, i. e., on or before the kalends*. The letters are in fact an abridgment of *ante diem*, and the full phrase for "on the second of January" would be *ante diem quartum nonas Januarias*. The word *ante* in this expression seems really to belong in sense to *nonas*, and to be the cause why *nonas* is an accusative. Hence occur such phrases as¹ *ante diem quartum Kal. Decembris distulit*, "he put it off to the fourth day before the kalends of December,"² *Is dies erat ante diem V. Kal. Apr.*, and *ante quem diem iturus sit, for quo die*.³ The same confusion exists in the phrase *post paucos dies*, which means "a few days after," and is equivalent to *paucis post diebus*. Whether the phrase *Kalenda Januarii* was ever used by the best writers is doubtful. The words are commonly abbreviated; and those passages where Aprilis, Decembris, &c., occur, are of no avail, as they are probably accusatives. The *ante* may be omitted, in which case the phrase will be *die quarto nonarum*. In the leap year (to use a modern phrase), the last days of February were called,

Feb. 23. a. d. VII. Kal. Mart.
Feb. 24. a. d. VI. Kal. Mart. posteriorem.
Feb. 25. a. d. VI. Kal. Mart. priorem.
Feb. 26. a. d. V. Kal. Mart.
Feb. 27. a. d. IV. Kal. Mart.
Feb. 28. a. d. III. Kal. Mart.
Feb. 29. Prid. Kal. Mart.

In which the words *prior* and *posterior* are used in reference to the retrograde direction of the reckoning. Such, at least, is the opinion of Ideler, who refers to Celsus in the Digests.⁴

From the fact that the intercalated year has two days called *ante diem sextum*, the name of bissextile has been applied to it. The term *annus bissextilis*, however, does not occur in any writer prior to Beda, but, in place of it, the phrase *annus bissextus*.

It was the intention of Cæsar that the bissextum should be inserted *peracto quadrienni circuitu*, as Censorinus says, or *quinto quoque incipiente anno*, to use the words of Macrobius. The phrase, however, which Cæsar used seems to have been *quarto quoque anno*, which was interpreted by the priests to mean

every third year. The consequence was, that in the year 8 B.C., the Emperor Augustus, finding that three more intercalations had been made than was the intention of the law, gave directions that for the next twelve years there should be no bissextile.

The services which Cæsar and Augustus had conferred upon their country by the reformation of the year seems to have been the immediate causes of the compliments paid to them by the insertion of their names in the calendar. Julius was substituted for Quintilis, the month in which Cæsar was born, in the second Julian year, that is, the year of the dictator's death;¹ for the first Julian year was the first year of the corrected Julian calendar, that is, 45 B.C. The name Augustus, in place of Sextilis, was introduced by the emperor himself, at the time when he rectified the error in the mode of intercalating,² *anno Augustano xx.* The first year of the Augustan era was 27 B.C., viz., that in which he first took the name of Augustus, *se vii. et M. Vipsanio Agrippa coss.* He was born in September, but gave the preference to the preceding month, for reasons stated in the *senatus consultum*, preserved by Macrobius.³ "Whereas the Emperor Augustus Cæsar, in the month of Sextilis, was first admitted to the consulate, and thrice entered the city in triumph, and in the same month the legions from the Janiculum placed themselves under his auspices, and in the same month Egypt was brought under the authority of the Roman people, and in the same month an end was put to the civil wars; and whereas, for these reasons, the said month is, and has been, most fortunate to this empire, it is hereby decreed by the senate that the said month shall be called Augustus." "A plebiscitum to the same effect was passed on the motion of Sextus Pacuvius, tribune of the plebs."

The month of September in like manner received the name of Germanicus from the general so called, and the appellation appears to have existed even in the time of Macrobius. Domitian, too, conferred his name upon October, but the old word was restored upon the death of the tyrant.

The Fasti of Cæsar have not come down to us in their entire form. Such fragments as exist may be seen in Gruter's *Inscriptiones*, or more completely in Foggini's work, *Fastorum Anni Romani . . . reliquia*. See also some papers by Ideler in the *Berlin Transactions* for 1822 and 1823.

The Gregorian Year.—The Julian calendar supposes the mean tropical year to be 365d. 6h.; but this, as we have already seen, exceeds the real amount by 11' 12", the accumulation of which, year after year, caused, at last, considerable inconvenience. Accordingly, in the year 1582, Pope Gregory the XIIIth., assisted by Aloysius, Lilius, Christoph Clavius, Petrus Ciaconius, and others, again reformed the calendar. The ten days by which the year had been unduly retarded were struck out by a regulation that the day after the fourth of October in that year should be called the fifteenth; and it was ordered that, whereas hitherto an intercalary day had been inserted every four years, for the future three such intercalations in the course of four hundred years should be omitted, viz., in those years which are divisible without remainder by 100, but not by 400. Thus, according to the Julian calendar, the years 1600, 1700, 1800, 1900 and 2000 were to have been bissextile; but, by the regulation of Gregory, the years 1700, 1800, and 1900 were to receive no intercalation, while the years 1600 and 2000 were to be bissextile as before. The bull which effected this change was issued Feb. 24, 1582. The fullest account of this correction is to be found in the work of Clavius, entitled *Romani*

1. (Cic., Phil., iii., 8.)—2. (Cæs., Bell. Gall., i., 6.)—3. (Cæs., Bell. C'v., i., 11.)—4. (50, tit. 16, s. 98.)

1. (Censorinus, c. 22.)—2. (Suet., Octav., c. 31.)—3. (c. 12.)

Calendarii a Gregorio XIII. P.M. restituti Explicatio. As the Gregorian calendar has only 97 leap-years in a period of 400 years, the mean Gregorian year is $(303 \times 365 + 97 \times 366) \div 400$, that is, 365d., 5h., 49' 12", or only 24" more than the mean tropical year. This difference, in sixty years, would amount to 24', and in 60 times 60, or 3600 years, to 24 hours, or a day. Hence the French astronomer, Delambre, has proposed that the years 3600, 7200, 10,800, and all multiples of 3600, should not be leap-years. The Gregorian calendar was introduced into the greater part of Italy, as well as in Spain and Portugal, on the day named in the bull. Into France, two months after, by an edict of Henry III., the 9th of December was followed by the 20th. The Catholic parts of Switzerland, Germany, and the Low Countries adopted the correction in 1583, Poland in 1586, Hungary in 1587. The Protestant parts of Europe resisted what they called a papistical invention for more than a century. At last, in 1700, Protestant Germany, as well as Denmark and Holland, allowed reason to prevail over prejudice, and the Protestant cantons of Switzerland copied their example the following year.

* In England, the Gregorian calendar was first adopted in 1752, and in Sweden in 1753. In Russia, and those countries which belong to the Greek Church, the Julian year, or *old style* as it is called, still prevails.

In this article free use has been made of Ideler's work *Lehrbuch der Chronologie*. For other information connected with the Roman measurement of time, see CLEPSYDRA, DIES, HORA, HOROLOGIA, LUSTRUM, NUNDINÆ, SÆCULUM, SIDERA.

The following Calendar, which gives the rising and setting of the stars, the Roman festivals, &c., is taken from an article on the Roman Calendar in Pauly's *Real-Encyclopädie der classischen Alterthumsweisenschaft*. It has been principally compiled from Ovid's *Fasti*, Columella, and Pliny's *Natural History*. The letter O. signifies Ovid, C. Columella, P. Pliny; but when C. is placed immediately after the date, it signifies a day on which the Comitia were held.

EXPLANATION OF ABBREVIATIONS.

A, B, C, D, E, F, G, H. These letters are found in all the old calendars, and no doubt were used for the purpose of fixing the *nundines* in the week of eight days; precisely in the same way in which the first seven letters are still employed in ecclesiastical calendars to mark the days of the Christian week.

Agon., *Agonalia*.—Arm., *Armilustrum*, Varro.—Apollin., *Apollinæres*.—August., *Augustalia*.—C., *Comitalis*, *Comitiavit*.—Cæs., *Cæsaris*.—Capit., *Capitolio*.—Car., *Carmenalia*.—Car., *Carna*.—Cer., *Cerealia*, Varro.—Cir. and Circ., *Circenses*, *Circo*.—Comp., *Comptalia*.—Con., *Consualia*, Plutarch.—Div., *Divalia*, Festus.—Eid., *Eidus*.—En., *Endotercis*, that is, *intercisus*.—Epul., *Epulum*.—Eq., *Equiria*, Varro, Ovid, Festus.—Equir. prob., *Equirum probandorum*, Valer. CALIDA, or CALDA, the warm drink of the Greeks and Romans, which consisted of warm wa-

ter mixed with wine, with the addition, probably, of spices. This was a very favourite kind of drink with the ancients, and could always be procured at certain shops or taverns called *thermopolia*,¹ which Claudius commanded to be closed at one period of his reign.² The vessels in which the wine and water was kept hot appear to have been of a very elegant form, and not unlike our tea-urns both in appearance and construction. A representation of one of these vessels is given in the *Museo Borbonico*,³ from which the following woodcut is taken. In the

middle of the vessel there is a small cylindrical furnace, in which the wood or charcoal was kept for heating the water; and at the bottom of this furnace there are four small holes for the ashes to fall through. On the right-hand side of the vessel there is a kind of cup, communicating with the part surrounding the furnace, by which the vessel might be filled without taking off the lid; and on the left-hand side there is, in about the middle, a tube with a cock for drawing off the liquid. Beneath the conical cover, and on a level with the rim of the vessel, there is a movable flat cover, with a hole in the middle, which closes the whole urn except the mouth of the small furnace.

Though there can be no doubt that this vessel was used for the purpose which has been mentioned, it is difficult to determine its Latin name; but it was probably called *authepsa*. (*Vid. AUTHEPSA*.) Pollux⁴ mentions several names which were applied to the vessels used for heating water, of which the *ἰππολέτης*, which also occurs in Lucian,⁵ appears to answer best to the vessel which has been described above.⁶

**CALIDRIS* (*καλίδρις*), the name of a bird mentioned by Aristotle. Belon conjectures that it was a bird called *Chevalier* by the French. The term *Calidris* is now applied to the Red-shank.

CALIGA, a strong and heavy sandal worn by the Roman soldiers.

Although the use of this species of calceamentum extended to the centurions, it was not worn by the superior officers. Hence the common soldiers, including centurions, were distinguished by the name

of *caligati*.¹ Service in the ranks was also designated after this article of attire. Thus Marins was said to have risen to the consulship *a caliga*, i. e., from the ranks,² and Ventidius *juventam inopem in caliga militari tolerasse*.³ The Emperor Caligula received that cognomen when a boy, in consequence of wearing the caliga, and being inured to the life of a common soldier.⁴ Juvenal expressed his determination to combat against vice as a soldier, by saying he would go in *caliga* (*veniam caligatus*).⁵

The triumphal monuments of Rome show most distinctly the difference between the caliga of the common soldier (*vid. ARMA*, p. 95) and the calceus worn by men of higher rank. (*Vid. ABOLLA*, p. 11; *ARA*, p. 78.)

The sole of the caliga was thickly studded with hob-nails (*clavi caligarii*); a circumstance which occasioned the death of a brave centurion at the taking of Jerusalem. In the midst of victory his foot slipped, as he was running over the marble pavement (*λιθοστρωτον*) of the temple, and, unable to rise, he was overpowered by the Jews who rushed upon him.⁷ The use of hob-nails (*εἰς τὰ ὑποδήματα ἥλυνος ἐγκροῦσαι*) was regarded as a sign of rusticity by the Athenians.⁸

The "caliga speculatoria,"⁹ made for the use of spies (*speculatores*), was probably very strong, thick, and heavy, and hence very troublesome (*molestissima*).¹⁰

The making and sale of caligæ, as well as of every other kind of shoe, was a distinct trade, the person engaged in it being called "*caligarius*," or "*sutor caligarius*."¹¹ After the decline of the Roman Empire, the caliga, no longer worn by soldiers was assumed by monks and ascetics.

**CALLIONYMUS* (*καλλιόνυμος*), a species of fish, so called by Aristotle.¹² Elian¹³ gives the name as *καλλιόνυμος*; Athenæus,¹⁴ οὐρανοσκόπος, with which Galen agrees; Oppian,¹⁵ ἡμεροκότης; and Pliny¹⁶ *Uranoscopus*. It is the Star-gazer, the *Uranoscopus scaber*, L., called in French *Rat*, and in Italian *Boca in Capo*, according to Rondelet and Schneider.¹⁷ The eyes of this fish are placed in the upper part of its head.

CALLISTEIA (*καλλιστεία*), a festival, or, perhaps, merely a part of one, held by the women of Lesbos, at which they assembled in the sanctuary of Hera, and the fairest received the prize of beauty.¹⁸

A similar contest of beauty, instituted by Cypselus, formed a part of a festival celebrated by the Parrhasians in Arcadia, in honour of the Eleusinian Demeter. The women taking part in it were called *Χρυσόφοροι*.¹⁹

A third contest of the same kind, in which, however, men only partook, is mentioned by Athenæus²⁰ as occurring among the Eleans. The fairest man received as a prize a suit of armour, which he dedicated to Athena, and was adorned by his friends with ribands and a myrtle wreath, and accompanied to the temple. From the words of Athenæus,²¹ who, in speaking of these contests of beauty, mentions Tenedos along with Lesbos, we must infer that in the former island also Callisteia were celebrated.

CALONES were the slaves or servants of the Roman soldiers, so called from carrying wood (*κάλα*)

for their use. Taus says Festus: "*Calones militum servi, quia ligatas clavos gerebant, quia Graeci κάλον vocabant.*" So, also, Servius: "*Calus dicebant maiores nostri fustes, quos portabant servi sequentes dominos ad praetia.*" From the same word κάλον comes καλόπους, a shoemaker's last.² These calones are generally supposed to have been slaves, and almost formed a part of the army, as we may learn from many passages in Caesar: in fact, we are told by Josephus that, from living always with the soldiers, and being present at their exercises, they were inferior to them alone in skill and valour. The word calo, however, was not confined to this signification, but was also applied to farm-servants, instances of which usage are found in Horace.³

In Caesar this term is generally found by itself; in Tacitus it is coupled and made almost identical with *lixa*. Still the calones and *lixae* were not the same: the latter, in fact, were freemen, who merely followed the camp for the purposes of gain and merchandise, and were so far from being indispensable to an army that they were sometimes forbidden to follow it (*ne lixae sequerentur exercitum*).⁴ Thus, again, we read of the "*lixae mercatoresque, qui plaustris merces portabant,*"⁵ words which plainly show that the *lixae* were traders and dealers. Livy also⁶ speaks of them as carrying on business. The term itself is supposed to be connected with *lixa*, an old word signifying water, inasmuch as the *lixae* supplied this article to the soldiers: since, however, they probably furnished ready-cooked provisions to the soldiers, it seems not unlikely that their appellation may have some allusion to this circumstance.⁷

CAL'OPUS, CALOPODIUM. (Vid. FORM.)

CALUMNIA. *Calumniari* is defined by Marcian,⁸ "*Falsa crimina intendere*;" a definition which, as there given, was only intended to apply to criminal matters. The definition of Paulus⁹ applies to matters both criminal and civil: "*Calumniosus est qui sciens prudensque per fraudem negotium alicui comparat.*" Cicero¹⁰ speaks of "calumnia," and of the "*nimis callida et malitiosa juris interpretatio,*" as things related. Gaius says, "*Calumnia in adfectu est, sicut furti crimen,*" the criminality was to be determined by the intention.

When an accuser failed in his proof, and the *reus* was acquitted, there might be an inquiry into the conduct and motives of the accuser. If the person who made this judicial inquiry (*qui cognovit*) found that the accuser had merely acted from error of judgment, he acquitted him in the form *non probasti*; if he convicted him of evil intention, he declared his sentence in the words *calumniatus es*, which sentence was followed by the legal punishment.

According to Marcian, as above quoted, the punishment for calumnia was fixed by the *lex Remmia*, or, as it is sometimes, perhaps incorrectly, named, the *lex Memmia*.¹¹ But it is not known when this *lex* was passed, nor what were its penalties. It appears from Cicero¹² that the false accuser might be branded on the forehead with the letter K, the initial of *Kalumniia*; and it has been conjectured, though it is a mere conjecture, that this punishment was inflicted by the *lex Remmia*.

The punishment for calumnia was also *exsilium*, relegatio in insulam, or loss of rank (*ordinis amissio*); but probably only in criminal cases, or in matters relating to status.¹³

In the case of *actiones*, the calumnia of the actor was checked by the calumniae iudicium, the iudicium contrarium, the iurjurandum calumniae, and the restitutio, which are particularly described by Gaius.¹ The defendant might in all cases avail himself of the calumniae iudicium, by which the plaintiff, if he was found to be guilty of calumnia, was mulcted to the defendant in the tenth part of the value of the object-matter of the suit. But the actor was not mulcted in this action, unless it was shown that he brought his suit without foundation, knowingly and designedly. In the contrarium iudicium, of which the defendant could only avail himself in certain cases, the rectitude of the plaintiff's purpose did not save him from the penalty. Instead of adopting either of these modes of proceeding, the defendant might require the plaintiff to take the oath of calumnia, which was to the effect, "*Se non calumnia causa agere.*" In some cases the defendant also was required by the praetor to swear that he did not dispute the plaintiff's claim, *calumnia causa*. Generally speaking, if the plaintiff put the defendant to his oath (*iurjurandum ei deferbat*), the defendant might put the plaintiff to his oath of calumny.² In some actions, the oath of calumny on the part of the plaintiff was a necessary preliminary to the action. In all *iudicia publica*, it seems that the oath of calumnia was required from the accuser.

If the restitutio pœna was required from the actor, the defendant could not have the benefit of the calumniae iudicium, or of the oath of calumny; and the iudicium contrarium was not applicable to such cases.

Persons who for money either did or neglected to do certain things, calumniae causa, were liable to certain actions.³

CAMARA (καμάρα) or CAMERA is used in two different senses:

I. It signifies a particular kind of arched ceiling in use among the Romans,⁴ and, most probably, common also to the Greeks, to whose language the word belongs. It was formed by semicircular bands or beams of wood, arranged at small lateral distances, over which a coating of lath and plaster was spread, and the whole covered in by a roof, resembling in construction the hooped awnings in use among us,⁵ or like the segment of a cart-wheel, from which the expression *rotatio camazarum* is derived.⁶ Subsequently to the age of Augustus, it became the fashion to line the *camarae* with plates of glass; hence they are termed *vitreae*.⁷

II. Small boats used in early times by the people who inhabited the shores of the Palus Mæotis, capable of containing from twenty-five to thirty men, were termed *καμάραι* by the Greeks.⁸ They were made to work fore and aft, like the fast-sailing proas of the Indian seas, and continued in use until the age of Tacitus, by whom they are still named *camarae*,⁹ and by whom their construction and uses are described.¹⁰

*CAMELOPARDALIS (καμηλοπάρδαλις), the Camelopard or Giraffe, the *Giraffa Camelopardalis*, L. "The name Giraffa," observes Lt. Col. Smith, "is derived from the Arabic *Zuraphahta*, which is itself corrupted from *Amharic Zirataka*; and the Romans, who had seen this animal several times exhibited from the period when Julius Cæsar first displayed one to the people, described it under the name of *Camelopardalis*, on account of its similarity to the Camel in form, and to the Panther or

Pardalis in spots. This beautiful animal is noticed by Oppian,¹ Diodorus Siculus,² Horace,³ Strabo,⁴ and Pliny;⁵ but the first satisfactory description is found in the *Æthiopica* of Heliodorus.⁶ Schneider follows Pallas in referring the *πάρδιον* of Aristotle⁷ to this same animal. Modern naturalists have known the Giraffe only since Mr. Patterson, Col. Gordon, and M. le Vaillion found it in South Africa; but as the Romans were acquainted with the animal, it must have existed to the north of the equinoctial line. It would appear, moreover, that a variety or second species is found in Central Africa; for Park, in describing his escape from captivity among the Moors, noticed an animal of a gray colour, which he refers to the *Camelopardalis*. Lt. Col. Smith considers this animal as the wild Camel of the mountains, the existence of which has been attested by several negroes brought from the interior, and in the Prænestine Mosaics, where two spotted *Camelopardales* are seen together; a larger animal is likewise represented, with short horns, but without spots, and the name YABOUC written over. In a drawing of the same mosaic, the word appears to be partly effaced, but to have been PA-FOUC. It is remarkable, that while the spotted figures are without a name, the animal in question, occupying that part of the picture which designates the Cataracts of the Nile, should be called by the Ethiopian appellation of the *Camelopard*, which, according to Pliny, was *Nabis*, resembling the Hot-tentot *Naip*; or, by the second reading, be like the Arabic, or one of its dialects.—The absence of the Giraffe from Europe for three centuries and a half naturally induced a belief that the descriptions of this animal were fabulous, or nearly so, and that a creature of such extraordinary height and apparent disproportions was not to be found among the actual works of nature. This skepticism was first shaken by Le Vaillant, the traveller, and is now completely removed.¹⁰

*CAME'LUS (*κάμηλος*), the Camel. As Buffon remarks, Aristotle has correctly described the two species of Camel, which he calls the Bactrian and the Arabian, the former being the *Camelus Bactrianus*, L., or the Camel with two hunches, one on the shoulders, and the other on the croup; and the latter, the *Camelus Dromedarius*, L., or the species with only one hunch, and of which the Dromedary, properly so called, is a breed. The Dromedary of the Greeks is the Mahairy, and is the most celebrated for speed. "The name by which these animals are generally known in Europe is evidently derived from an Eastern root, namely, *Djemel* of the Arabs, *Gamal* or *Gimal* of the Hebrews, and points out the quarter where they have been domesticated from a period anterior to all historical documents. Although the Greek and Roman writers take universally as little notice of the Camel as an inhabitant of Northwestern Africa or Egypt, as they speak repeatedly of him in Syria, Arabia, and the rest of Western Asia, we may easily infer, from a consideration of the peculiar structure of this animal, that the predestined habitation of the genus was on the sandy deserts of the Zahara, as well as the plains of Arabia, Persia, the Indies, and Southern Tartary. The silence of profane writers, however, is compensated by the Sacred Writings. In Genesis, the King of Egypt is mentioned as having bestowed Camels upon Abram; consequently, their presence in the valley of the Nile is established before the era of the earliest Greek or Roman writers. And yet it is a singular fact, that the Camel is not rep-

resented in the hieroglyphics, either in domestic scenes or in subjects relating to religion. In all obvious cases, the intelligence of man may be considered as acting in unison with the intentions of Nature; now, as this sagacity to appreciate his own interests had already, in the earliest ages, carried the Camel over India, China, and Middle Russia, it is certainly rather surprising that the Romans, in their frequent wars in Northern Africa, should not have found them of sufficient importance to be mentioned, till Procopius first notices camel-riding Moors in arms against Solomon, the lieutenant of Belisarius: from that period, and most particularly during the progress of the sword of the Koran to Morocco, the Camel is the most striking, and considered the most useful animal in the country. It is probable that this animal increased in proportion as agriculture diminished; at least the two facts are coeval. With the Koran, also, the Camel first crossed the Bosphorus, and spread with the Turks over their present dominions in Europe."¹¹

*CAMM'ARUS (*κάμματος* or *-ης*), a variety of the *Caris*, or *Squilla*, according to Athenæus. It is the common Lobster, the *Cammarus* of Pliny, and the *Cancer Cammarus* of Linnæus. Aristotle, in the second chapter of the fourth book of his "History of Animals," gives a most faithful and elaborate account of the species, which is still an inhabitant of the Mediterranean.¹²

CAM'INUS. (*Vid. HOUSE*.)

CAMPESTRE (*sc. subligar*) was a kind of girdle or apron, which the Roman youths wore round their loins when they exercised naked in the Campus Martius.³ The campestre was sometimes worn in warm weather in place of the tunic under the toga (*campestri sub toga cinctus*).

CAMPIDUCTO'RES were persons who taught soldiers their exercises.⁵ In the times of the Republic, this duty was discharged by a centurion, or a veteran soldier of merit and distinction (*Exercitationibus nostris non veteranorum aliquis, cui decus muralis aut civica, sed Græculus magister assistit*).

CAMPUS MARTIUS. The term *campus* belongs to the language of Sicily, in which it signified a hippodrome or race-course (*καμπός, ἵπποδρόμος, Σικελότης*); but among the Romans it was used to signify an open plain, covered with herbage, and set apart for the purpose of exercise or amusement. Eight of these plains are enumerated by P. Victor as appertaining to the city of Rome; among which the most celebrated was the Campus Martius, so called because it was consecrated to the god Mars.¹ Some difference exists between Livy and Dionysius Halicarnassus respecting the period at which this consecration took place. The former states² that, upon the expulsion of the Tarquins, the people took possession of their property (*ager Tarquiniorum*), situate between the city and the Tiber, and assigned it to the god of war, by whose name it was subsequently distinguished; whereas the latter says³ that the *ager Tarquiniorum* had been usurped from that divinity, to whom it belonged of old, and appropriated by the Tarquins, so that it was only restored to its original service upon their expulsion, which gains confirmation from a law of Numa, quoted by Festus,¹¹ "*Secunda spolia in Martis aram in campo Solitaurilia utra voluerit cadito*."¹²

From the greater extent and importance of this plain beyond all the others, it was often spoken of as the plain, *κατ' ἐξοχήν*, without any epithet to dis-

(Compare Liv., i., 44.)

inguish it, as in the passage of Festus just cited;¹ and, therefore, whenever the word is so used, it is the Campus Martius which is to be understood as always referred to.

The general designation Campus Martius comprised two plains, which, though generally spoken of collectively, are sometimes distinguished.² The former of these was the so-called ager Tarquiniorum, to which Juvenal³ refers, *inde Superbi Totum regis agrum*; the other was given to the Roman people by the vestal virgin Caia Taratia or Suffetia,⁴ and is sometimes called *Campus Tiberinus*,⁵ and sometimes *Campus Minor*.⁶

It is difficult to determine the precise limits of the Campus Martius, but in general terms it may be described as situated between the *Via Lata* and *Via Flaminia* on the north, the *Via Recta* on the south; as bounded by the Tiber on the west, and the Pantheon and gardens of Agrippa towards the east; and the *Campus Minor*, or *Tiberinus*, occupied the lower portion of the circuit towards the *Via Recta*, from the Pons Ælius to the Pons Janiculensis. (*Vid. BRIDGE*.)⁷

That the Campus Martius was originally *without* the city is apparent, first, from the passages of Livy and Dionysius above referred to; secondly, from the custom of holding the Comitia Centuriata there, which could not be held within the *Pomœrium*; hence the word *campus* is put for the comitia,⁸ which also explains the expression of Cicero,⁹ *fors domina campi*, and of Lucan,¹⁰ *venalis campus*, which means "a corrupt voter;" thirdly, because the generals who demanded a triumph, not being allowed to enter the city, remained with their armies in the Campus Martius; and, finally, because it was not lawful to bury within the city, whereas the monuments of the illustrious dead were among the most striking ornaments with which it was embellished.¹¹ (*Vid. BUSTUM*.) But it was included in the city by Aurelian when he enlarged the walls.¹²

The principal edifices which adorned this famous plain are described by Strabo,¹³ and are amply treated of by Nardini.¹⁴ It was covered with perpetual verdure,¹⁵ and was a favourite resort for air, exercise, or recreation, when the labours of the day were over.¹⁶ Its ample area was crowded by the young, who there initiated themselves in all warlike and athletic exercises, and in the games usual to the palestra; for which purpose the contiguous Tiber rendered it peculiarly appropriate in early times, before public baths were established.¹⁷ Hence *campus* is used as "a field" for any exercise, mental or bodily.¹⁸ Wooden horses were also kept in the Campus Martius, under porticoes in winter, and in the open plain during summer, in order to give expertness in mounting and dismounting; a necessary practice when stirrups were not in use.¹⁹ Horse-races (*equiria*) also took place here, unless when the campus was overflowed, upon which occasions they were removed to the Campus Martialis on the Cælian.²⁰

CAMPUS SCELEATUS was a spot within the walls, and close by the Porta Collina, where those of the vestal virgins who had transgressed their vows were entombed alive, from which circum-

stance it takes its name.¹ As it was unlawful to bury within the city, or to slay a vestal, whose person, even when polluted by the crime alluded to, was held sacred, this expedient was resorted to in order to elude the superstition against taking away a consecrated life, or giving burial within the city.²

CANABOS or CINABOS (*κάναβος* or *κίναβος*) was a figure of wood, in the form of a skeleton, round which the clay or plaster was laid in forming models. Figures of a similar kind, formed to display the muscles and veins, were studied by painters in order to acquire some knowledge of anatomy.³

CANA'LIS, which means properly a pipe or gutter for conveying water, is also used in three specific significations:

I. To designate a particular part of the Forum Romanum.⁴

"*In foro infimo boni homines atque dites ambulant;
In medio propter canalem, ibi ostentatores meri.*"

The immediate spot so designated is not precisely known; but we can make an approximation which cannot be far from the truth. Before the *Cloacæ* were made, there was a marshy spot in the Forum called the *Lacus Curtius*;⁵ and as the *Cluacæ Maxima* was constructed for the purpose of draining off the waters which flowed down from the Palatine Hill into the Forum, it must have had a mouth in it, which was probably near the centre. The "kenel," therefore, which conducted the waters to this embouchure, was termed *Canalis in Foro*; and because the idle and indigent among the lower classes were in the habit of frequenting this spot, they were named *CANALICOLÆ*.⁶ The *canalis* appears to have had gratings (*cancelli*) before it, to which Cicero⁷ refers when he says, that after the tribune P. Sextus had arrived at the *Columna Menia*, "*tantus est ex omnibus spectaculis usque a Capitolio, tantus ex fori cancellis plausus excitatus*;" by which he means all classes, both high and low: the upper, who sat between the *Columna Menia* and the *Capitol*; and the lower, who were stationed near the *cancelli* of the *canalis*. In the modern city of Rome, the foul waters empty themselves into the sewers through an archway nearly six feet high, the mouth of which is closed by an iron grating called *cancello*, so that the passer-by is annoyed by the effluvia exhaling from them; which, we learn from a passage in Tertullian,⁸ was also the case in the ancient city.

II. CANALIS is used by Vitruvius⁹ to signify the channel which lies between the volutes of an Ionic capital, above the cymatium or echinus, which may be understood by referring to the representation of an Ionic capital given in the article *ASTRÆALUS*.

III. In reference to aquæducts, CANALIS is used by Frontinus¹⁰ for a conduit of water running parallel to the main course (*specus*), though detached from it. Accurately speaking, it therefore means a pipe of lead or clay,¹¹ or of wood,¹² attached to the aquæduct, which brought a stream of water from the same source, but for some specific use, and not for general distribution; though the word is sometimes used for a watercourse of any kind.

CANATHRON (*κάναθρον*), a carriage, the upper part of which was made of basket-work, or more properly, the basket itself, which was fixed in the carriage.¹³ Homer calls this kind of basket *πίερος*.¹⁴

1. (Propert., ii., 16, 34.—Ovid, Fast., vi., 237.—Liv., xl., 45.—Lucan, i., 180.—Hor., Carm., III., i., 10.—Cic., Cat., i., 5.—De Off., i., 29.)—2. (Strabo, v., 8.)—3. (Sat., vi., 525.)—4. (Aul. *CANCER, the Crab. (*Vid.* CARCINUS.)

CANDE'LA, a candle, made either of wax (*cerea*) or tallow (*sebacea*), was used universally by the Romans before the invention of oil lamps (*lucernæ*).¹ They used for a wick the pith of a kind of rush called *scirpus*.² In later times candelæ were only used by the poorer classes; the houses of the more wealthy were always lighted by *lucernæ*.³

CANDELA'BRUM was originally used as a candlestick, but was afterward used to support lamps (*λυχνόδοχος*), in which signification it most commonly occurs. The candelabra of this kind were usually made to stand upon the ground, and were of a considerable height. The most common kind were made of wood;⁴ but those which have been found in Herculaneum and Pompeii are mostly of bronze. Sometimes they were made of the more precious metals, and even of jewels, as was the one which Antiochus intended to dedicate to Jupiter Capitolinus.⁵ In the temples of the gods and palaces there were frequently large candelabra made of marble, and fastened to the ground.⁶

There is a great resemblance in the general plan and appearance of most of the candelabra which have been found. They usually consist of three parts: 1. the foot (*βάσις*); 2. the shaft or stem (*καυλός*); 3. the plinth or tray (*δοσικός*), large enough for a lamp to stand on, or with a socket to receive a wax candle. The foot usually consists of three lions' or griffins' feet, ornamented with leaves; and the shaft, which is either plain or fluted, generally ends in a kind of capital on which the tray rests for supporting the lamp. Sometimes we find a figure between the capital and the tray, as is seen in the candelabrum, on the right hand of the annexed wood-

cut, one on the left hand is also a representation of a candelabrum found in the same city,¹ and is made with a sliding shaft, by which the light might be raised or lowered at pleasure.

The best candelabra were made at Ægina and Tarentum.²

There are also candelabra of various other forms, though those which have been given above are by far the most common. They sometimes consist of a figure supporting a lamp,³ or of a figure, by the side of which the shaft is placed with two branches, each of which terminates in a flat disc, upon which

a lamp was placed. A candelabrum of the latter kind is given in the preceding woodcut.⁴ The stem is formed of a liliaceous plant; and at the base is a mass of bronze, on which a Silenus is seated, engaged in trying to pour wine from a skin which he holds in his left hand, into a cup in his right.

There was another kind of candelabrum, entirely

different from those which have been described, which did not stand upon the ground, but was pla-

cut, which is taken from the *Museo Borbonico*,⁷ and represents a candelabrum found in Pompeii. The

1. (Varro, *De Ling. Lat.*, v. 31.—Martial, xiv. 43.—Athen., xv., p. 700.)—2. (Plin., *II. N.*, xvi., 70.)—3. (Juv., *Sat.*, iii., 287.)—4. (Cic., *ad Quint. Frat.*, iii., 7.—Martial, xiv., 44.—Petron., c. 95.—Athen., xv., p. 700.)—5. (Cic., *Veir.*, iv., 28.)—6. (Musco, *Pio-Clem.*, iv., 1, 5; v., 1, 3.)—7. (*iv.*, pl. 57.)

ced upon the table. These candelabra usually consist of pillars, from the capitals of which several lamps hang down, or of trees, from whose branches lamps also are suspended. The preceding woodcut represents a very elegant candelabrum of this kind, found in Pompeii.¹

The original, including the stand, is three feet high. The pillar is not placed in the centre, but at one end of the plinth, which is the case in almost every candelabrum of this description yet found. The plinth is inlaid in imitation of a vine, the leaves of which are of silver, the stem and fruit of bright bronze. On one side is an altar with wood and fire upon it, and on the other a Bacchus riding on a tiger.

CANDYS (κάνδης), a gown worn by the Medes and Persians over their trousers and other garments.² It had wide sleeves, and was made of woollen cloth, which was either purple or of some other splendid colour. In the Persepolitan sculptures, nearly all the principal personages are clothed in it. The three here shown are taken from Sir R. K. Porter's Travels.³

We observe that the persons represented in these sculptures commonly put their hands through the sleeves (διεπρόκτες τὰς χεῖρας διὰ τῶν κανδύων), but sometimes keep them out of the sleeves (ἔξω τῶν χειρῶν); a distinction noticed by Xenophon.⁴ The Persian candys, which Strabo⁵ describes as a "flowered tunic with sleeves," corresponded to the woollen tunic worn by the Babylonians over their linen shirt (ἐλπίνεον κιθῶνα ἐπεπύονει;⁶ ἐπεπύοντες ἐρεούς⁷). A gown of the same kind is still worn by the Arabians, Turks, and other Orientals, and by both sexes.

CANE'PHOROS (κανηφόρος). When a sacrifice was to be offered, the round cake (τροχία φθόις;⁸ πόπανον,⁹ ὀλή, mola salsa), the chaplet of flowers, the knife used to slay the victim, and sometimes the frankincense, were deposited in a flat circular basket (κάνεον, canistrum), and this was frequently carried by a virgin on her head to the altar. The practice was observed more especially at Athens. When a private man sacrificed, either his daughter or some unmarried female of his family officiated as his canephoros;¹⁰ but in the Panathenaia, the Dionysia, and other public festivals, two virgins of the first Athenian families were appointed for the purpose. Their function is described by Ovid in the following lines:

"*Illa forte die castæ de more puella
Vertice supposito festas in Palladis arces
Pura coronatis portabant sacra canistris.*"¹¹

That the office was accounted highly honourable appears from the fact that the resentment of Harmodius, which instigated him to kill Hipparchus, arose from the insult offered by the latter in forbid-

ding the sister of Harmodius to walk as canephoros in the Panathenaic procession.¹ An antefixa in the British Museum (see woodcut) represents the two canephoræ approaching a candelabrum. Each of them elevates one arm to support the basket, while

she slightly raises her tunic with the other. This attitude was much admired by ancient artists. Pliny² mentions a marble canephoros by Scopas, and Cicero³ describes a pair in bronze, which were the exquisite work of Polykleitos. (Vid. CARYATIS.)

*CAN'CAMUM (κάνκαμον), a substance mentioned by Dioscorides,⁴ and which Paul of Ægina⁵ describes as the gum of an Arabian tree, resembling myrrh, and used in perfumes. Avicenna calls it a gum of a horrid taste. Alston remarks that "some have taken *Lacca* to be the *Cancaum* Dioscoridis; but it seems to have been unknown to the ancient Greeks." Upon the whole, Sprengel inclines to the supposition that it may have been a species of the *Amryis Kataf*.⁶

CANIC'OLEÆ. (Vid. CANALIS.)

*CANIC'ULA. (Vid. SIRIUS.)

*CANIS (κύων), the Dog. "The parent-stock of this faithful friend of man must always remain uncertain. Some zoologists are of opinion that the breed is derived from the wolf; others, that it is a familiarized jackal: all agree that no trace of it is to be found in a primitive state of nature. That there were dogs, or, rather, animals of the canine form, in Europe long ago, we have evidence from their remains; and that there are wild dogs we also know. India, for example, affords many of them, living in a state of complete independence, and without any indication of a wish to approach the dwellings of man. These dogs, however, though they have been accurately noticed by competent observers, do not throw much light upon the question. The most probable opinion is that advanced by Bell, in his 'History of British Quadrupeds.' This author thus sums up: 'Upon the whole, the argument in favour of the view which I have taken, that the wolf is probably the original of all the canine races, may be stated as follows: the structure of the animal is identical, or so nearly so as to afford the strongest *a priori* evidence in its favour. The Dog must have been derived from an animal susceptible of the highest degree of domestication, and capable of great affection for mankind; which has been abundantly proved of the wolf. Dogs having returned to a wild state, and continued in that condition through many generations, exhibit characters which approximate more and more to those of the wolf, in proportion as the influence of domestication ceases to act. The two animals, moreover, will breed together, and produce fertile young; and the period of gestation is the same. The period at which the domestication of the Dog first took place is wholly lost in the mist of antiquity. The earliest mention of it is the

1. (Mus. Borb., ii., pl. 13.)—2. (Xen., Cyr., i., 2, § 2.—Anab., i., 5, § 8.—Diod. Sic., xvii., 77.)—3. (vol. i., pl. 49.)—4. (Cypri., vii., 3, § 10, 13.)—5. (Herod., i., 195.)—6. (Strabo, xvi., 1, 20.)—7. (Addeci Epigr., Brunck, ii., 241.)—8. (Flan., V. II., xi., 5.)—9. (Aristoph., Acharn., 241–252.)—10. (Met., ii., 713–715.)

1. (Thucyd., vi., 56.—Ælian, V. H., xi., 8.)—2. (H. N., xxxvi., 4, 7.)—3. (Verr., II., iv., 3.)—4. (i., 23.)—5. (vii., 3.)—6. (Adams, Append., s. v.)

Scriptures occurs during the sojourn of the Israelites in Egypt: 'But against Israel shall not a dog move his tongue.' It is again mentioned in the Mosaic law in a manner which would seem to show that dogs were the common scavengers of the Israelitish camp, as they still are in many cities of the East: 'Neither shall ye eat any flesh that is torn of beasts in the field; ye shall cast it to the dogs.' A similar office seems to be repeatedly alluded to in the course of the Jewish history. The Dog was considered by the Jews as eminently an unclean animal, and was the figure selected for the most contemptuous insults. It is impossible not to be struck with the similarity which exists in the feelings of many Oriental nations at the present day, among whom the very phraseology of the Scriptures is, with little modification, applied to a similar purpose.¹ The Dog was held in great veneration in many parts of Egypt, particularly at the city of Cynopolis, where it was treated with divine honours. According to Plutarch, however, the animal lost this high rank by reason of its eating the flesh of Apis, after Cambyse had slain the latter and thrown it out, on which occasion no other animal would taste or even come near it. But considerable doubt has been thrown on this story, and the idea seems so nearly connected, as Wilkinson remarks, with the group of the god Mithras, where the dog is represented feeding on the blood of the slaughtered ox, that there is reason to believe the story derived its origin from the Persian idol. The Egyptians, as appears from the monuments, had several breeds of dogs: some solely used for the chase; others admitted into the parlour, or selected as the companions of their walks; and some, as at the present day, chosen on account of their peculiar ugliness. The most common kinds were a sort of fox-dog and a hound; they had also a short-legged dog, not unlike our turnspit, which was a great favourite in the house. The fox-dog appears to have been the parent-stock of the modern red wild dog of Egypt, which is so common at Cairo and other towns of the lower country.²—The *Albanian Dog* has been noticed by historians, naturalists, and poets, ever since Europe first began to be raised into consequence and importance. A supernatural origin and infallible powers have been attributed to it. Diana is said to have presented Procris with a dog which was always sure of its prey, and to this animal the canine genealogists of antiquity attributed the origin of the celebrated race of the southeast of Europe, particularly of Molossus and Sparta. The very fine breed of dogs now found very plentifully in this corner of Europe, particularly in Albania, accords with the descriptions existing of its progenitors, indigenous in the same countries, and does not seem to have degenerated. The Mastiff (*Canis Anglicus*, L.) is another fine and powerful species. This breed was assiduously fostered by the Romans while they had possession of Britain, and many of them were exported to Rome, to combat wild animals in the amphitheatre. The *catuli Melitæi* were a small species, or a kind of lap-dog. The modern Maltese dog is a small species of the Spaniel, and so, perhaps, was the ancient.³

*CANNA, a Cane or Reed. (Vid. CALAMUS.)

*CANNABIS (*κάνναβις*), Hemp. The *κάνναβις ἕρπας* of Dioscorides and Galen is evidently the *Cannabis sativa*, or Hemp. Sprengel agrees with C. Bauhin, that the *κάνναβις ἀγρία* is the *Althæa cannabina*.⁴

*CANTHARIS (*κάνθαρις*). From the ancient authorities having stated of the *κάνθαρις* that it is found among grain (Nicander applies to it the epithet *σιτηράγιος*), it has been inferred that it could not have been what is now called the *Cantharis*, or Spanish Fly, since this latter is found principally upon the ash, the privet, and the elder, and seldom or never among grain. Sprengel thinks it probable that Dioscorides¹ was acquainted with two species of Cantharides; the one he pronounces to be the *Mylabris Dioscoridis* (the same, probably, as the *Mylabris cichorii* of Latreille and Wilson); the other he is confident was not the *Lytta vesicatoria*, and he hesitates whether to call it the *Melœ proscarabæus*. Stackhouse, again, suggests that the *κάνθαρις* of Theophrastus² was the *Curculio granarius*. "To me it now appears," observes Adams, "that the common *κάνθαρις* of the Greeks was the *Mylabris cichorii*. It is still extensively used in the East for making blistering plasters."³

CANTHARUS (*κάνθαρος*). I. was a kind of drinking-cup, furnished with handles (*cantharus ansæ*). It is said by some writers to have derived its name from one Cantharus, who first made cups of this form.⁴ The cantharus was the cup sacred to Bacchus,⁵ who is frequently represented on ancient vases holding it in his hand, as in the following woodcut, which is taken from a painting on an ancient vase.⁶

*II. CANTHARUS was also the name of a fish, which Elian calls *κάνθαρος θαλάττιος*. It is the *Sparus cantharus*, L. Its flesh is like that of the Gilt-head in taste and other qualities.⁷

*III. CANTHARUS, the Beetle. (Vid. SCARABÆUS.)

CANTICUM. In the Roman theatre, between the first and second acts, flute music appears to have been introduced,⁸ which was accompanied by a kind of recitative, performed by a single actor, or, if there were two, the second was not allowed to speak with the first. Thus Diomedes⁹ says, "*In canticis una tantum debet esse persona, aut si duæ fuerint, ita debent esse, ut ex oculo una audiat nec colloquatur, sed secum, si opus fuerit, verba faciat.*" Ia

1. (ii. 64.)—2. (II. P., viii., 10.)—3. (Adams, Append., s. v.)—4. (Virg., Eclog., vi., 17.)—5. (Athen., xi., p. 474, c.—Pollux, Onom., vi., 96.—Plin., II. N., xxxiv., 19, § 25.)—6. (Macrob., Sat., v., 21.—Plin., H. N., xxxiii., 53.)—7. (Millingen, Peintures Antiques, pl. 53.)—8. (Aristot., II. A., viii., 13.—Adams, Append., s. v.)—9. (Plaut., Pseudol., I., v., 160.)—10. (ii., p. 489. ed. Putsch.)

1. (Penny Cyclopædia, vol. i., p. 57, seqq.)—2. (Wilkinson, Manners and Customs, &c., vol. iii., p. 32.)—3. (Griffith's Cuvier, vol. ii., p. 327.)—4. (Dioscor., iii., 155.—Adams, Append., s. v.)

the canticum, as violent gesticulation was required, it appears to have been the custom, from the time of Livius Andronicus, for the actor to confine himself to the gesticulation, while another person sang the recitative.¹ The canticum always formed a part of a Roman comedy. Diomedes observes that a Roman comedy consists of two parts, dialogue and canticum (*Latina comædiæ duobus tantum membris constant, diverbio et cantico*). Wolf² endeavours to show that cantica also occurred in tragedies and the Atellanæ fabulæ. There can be no doubt that they did in the latter; they were usually composed in the Latin, and sometimes in the Greek language, whereas the other parts of the Atellanæ plays were written in Oscan. (*Vid. ATELLANÆ FABULÆ.*)

CAPELEION. (*Vid. CAUPONA.*)

*CAPER (τράγος), the he-Goat. *Capra* is the name for the female, to which αἴξ corresponds in Greek. The generic appellation in the Linnæan system is *Capra hircus*. The ancients were likewise acquainted with the wild Goat, or *Capra ibex*; it is supposed to be the *Ako* or *Akko* of Deuteronomy,³ and the τραγέλαφος of the Septuagint and of Diodorus Siculus.⁴ Among the Egyptians, the Goat was regarded as the emblem of the generative principle, and was held sacred in some parts of the land. The Ibex, or wild goat of the Desert, however, was not sacred. It occurs sometimes in astronomical subjects, and is frequently represented among the animals slaughtered for the table and the altar, both in the Thebaid and in Lower Egypt.⁵ "It is a fact of a singular nature," observes Lt. Col. Smith, "that, as far as geological observations have extended over fossil organic remains, among the multitude of extinct and existing genera, and species of mammiferous animals, which the exercised eye of comparative anatomists has detected, no portions of Caprine or Ovine races have yet been satisfactorily authenticated; yet, in a wild state, the first are found in three quarters of the globe, and perhaps in the fourth; and the second most certainly exists in every great portion of the earth, New-Holland, perhaps, excepted. It would almost seem as if this class of animals were added by Providence to the stock of other creatures for the express purpose of being the instruments which should lead man to industry and peace; at least such an effect may, in a great measure, be ascribed to them; and, if not the first companion, the Goat may nevertheless be regarded as the earliest passive means by which mankind entered upon an improving state of existence. The skins of these animals were probably among the first materials employed for clothing. Afterward the long hair of the goat was mixed up with the short and soft fur of other animals, and, united with the gum of trees or animal glue, manufactured into that coarse but solid felt known in Northern Asia from the earliest ages, and noticed by historians and poets. It was probably of this material that the black war-tunics of the Cimbri were made, in their conflicts with Marius; and we know it was the winter dress of the auxiliary cohorts, and even of the Roman legions in Britain, at least to the period of Constantine. But, long before this era, the gradual advance of art was felt, even in the depth of Northern Europe; the distaff had reached the Scandinavian nations; and the thread, at first platted into ribands, afterward enlarged, and wrought like matting into a kind of thrum, was at length woven into narrow, and, last of all, into broad pieces of cloth. In the riband plat (i. e., plaid) we

see the origin of the check dresses common to most nations of northern latitudes during their incipient state of civilization; for these were made by plating the ribands into broader and warmer pieces. The stripes, almost universal in the South, were the same plats sewed together. That goat's hair was the chief ingredient among the Scandinavians, is proved by their divinities being dressed in *Geita Kurtlu*. The domestic goat in the north and west of the Old World preceded sheep for many ages, and predominated while the country was chiefly covered with forests; nor is there evidence of wool-bearing animals crossing the Rhine or the Upper Danube till towards the subversion of the Roman Empire."⁶

*CAPHURÁ (καφουρά), the Camphor-tree. Symeon Seth is the first Greek who makes mention of the Camphor-tree, or *Laurus Camphora*, L. He describes it as a very large tree, growing in India, the wood of which is light and ferulaceous. Camphor was first introduced into medical practice by the Arabians.

CAPILLUS. (*Vid. COMA.*)

CAPISTRUM (φορβεύ), a halter, a tie for horses, asses, or other animals, placed round the head or neck, and made of osiers or other fibrous materials. It was used in holding the head of a quadruped which required any healing operation,⁷ in retaining animals at the stall,⁸ or in fastening them to the yoke, as shown in the woodcut ARATUM (p. 79). In representations of Bacchanalian processions, the tigers or panthers are attached to the yoke by capistra made of vine-branches. Thus we read of the *vite capistrata tigris* of Ariadne,⁹ and they are seen on the bas-relief of a sarcophagus in the Vatican representing her nuptial procession. See the annexed woodcut.

In ploughing fields which were planted with vines or other trees, the halter had a small basket attached to it, enclosing the mouth, so as to prevent the ox from cropping the tender shoots (*fiscellis capistrari*).¹⁰ Also, when goatherds wished to obtain milk for making cheese, they fastened a muzzle or capistrum, armed with iron points, about the mouth of the kid, to prevent it from sucking.¹¹

Bands of similar materials were used to tie vines to the poles (*pali*) or transverse rails (*juga*) of a trellis.¹²

The term φορβεύ was also applied to a contrivance used by pipers (*αὐληταί*) and trumpeters to compress their mouths and cheeks, and thus to aid them in blowing. (*Vid. CHIRIPOTA.*) This was said to be the invention of Marsyas.¹³

CAPITIS DEMINU'TIO. (Vid. CAPUT.)

CAPITO'LIUM. This word is used in different significations by the Latin writers, the principal of which are the following :

I. **CAPITOLIUM**, a small temple (*sacellum*¹), supposed to have been built by Numa, and dedicated to Jupiter, Juno, and Minerva,² situated in the Regio ix. on the Esquiline, near to the spot which was afterward the Circus of Flora.³ It was a small and humble structure, suited to the simplicity of the age in which it was erected,⁴ and was not termed capitolum until after the foundation of the one mentioned below, from which it was then distinguished as the *Capitolium vetus*.⁵ Martial⁶ alludes to it under the name of *antiquum Jovem*.

II. **CAPITOLIUM**, the Temple of Jupiter Optimus Maximus, in the Regio viii. on the Mons Tarpeius,⁷ so called from a human head being discovered in digging the foundations.⁸ Martial distinguishes very clearly this temple from the one mentioned above :

"*Esquilis domus est, domus est tibi colle Dianæ;
Inde novum, veterem prospicis inde, Jovem.*"⁹

Tarquinius Priscus first vowed during the Sabine war to build this temple, and commenced the foundations.¹⁰ It was afterward continued by Servius Tullius, and finally completed by Tarquinius Superbus out of the spoils collected at the capture of Suessa Pometia,¹¹ but was not dedicated until the year B.C. 507, by M. Horatius.¹² It was burned down during the civil wars, at the time of Sulla, B.C. 83,¹³ and rebuilt by him, but dedicated by Lutatius Catulus, B.C. 69.¹⁴ It was again burned to the ground by the faction of Vitellius, A.D. 70,¹⁵ and rebuilt by Vespasian; upon whose death it was again destroyed by fire, and sumptuously rebuilt for he third time by Domitian.¹⁶

The Capitolium contained three temples within the same peristyle, or three cells parallel to each other, the partition walls of which were common, and all under the same roof.¹⁷ In the centre was the seat of Jupiter Optimus Maximus,¹⁸ called *cella Jovis*,¹⁹ and hence he is described by Ovid²⁰ as "*media qui sedet æde Deus.*" That of Minerva was on the right;²¹ whence, perhaps, the allusion of Horace,²² "*Proximos illi tamen occupavit Pallas honores;*" and that of Juno upon the left; but compare Livy,²³ "Jupiter Optimus Maximus, Juno regina, et Minerva," and Ovid,²⁴ which passages are considered by some writers to give Juno the precedence over Minerva. The representation of the Capitolium in the next woodcut is taken from a medal.

the exact position occupied by this temple has

1. (Varro, De Ling. Lat., v., 158.)—2. (Varro, l. c.)—3. (Varro, l. c.—Notit. Imper.—P. Victor.)—4. (Val. Max., iv., 4, § 11.)—5. (Varro, l. c.)—6. (Egipr., v., xxii., 4.)—7. (Livy, i., 55.)—8. N., iii., 9.)—11. (Tacit., l. c.—Livy, i., 55.)—12. (Livy, ii., 8.)—13. (Tacit., l. c.—Plin., H. N., xiii., 27.—Plut., Sull., c. 27.)—14. (Tacit., l. c.—Plin., H. N., xix., 6.—Liv., Epit., 98.)—15. (Tacit., l. c.—Plin., H. N., xxxiv., 17.)—16. (Suet., Dom., c. 5.)—17. (Dionys., iv., p. 248.)—18. (Dionys., l. c.)—19. (Gell., vii., 1, 2.—Livy, x., 23.)—20. (Ex Pont., iv., 9, 32.)—21. (Livy, vii., 3.)—22. (Carm., i., xii., 19.—23. (iii., 17.)—24. (Trist., iii., 289, 203.)

been the subject of much dispute. Some writers consider it to have been upon the north, and some upon the south point of the Mons Capitolinus; some, that it stood upon a different summit from the *arx*, or fortress, with the *intermontium* between them; others, that it was within the *arx*, which is again referred by some to that side of the mount which overhangs the Tiber, and by others to the opposite acclivity. The reader will find the subject fully discussed in the following works: Marlian., *Urb. Rom. Topogr.*, ii., 1, 5.—Donat., *De Urb. Rom.*—Lucio Mauro, *Antichità di Roma*.—Andreas Fulvio, *Id.*—Biondo, *Roma Restaurat.*—Nardini, *Roma Antica*, v., 14.—Bunsen and Plattner, *Beschreibung Roms.*—Niebuhr, *Hist. Rom.*, vol. i., p. 502, transl.

III. **CAPITOLIUM** is sometimes put for the whole mount, including both summits, as well as the *intermontium*, which was originally called Mons Saturnius,¹ and afterward Mons Tarpeius,² from the virgin Tarpeia, who was killed and buried there by the Sabines; and, finally, Mons Capitolinus, for the reason already stated; and, when this last term became usual, the name of Tarpeia was confined to the immediate spot which was the scene of her destruction,³ viz., the rock from which criminals were cast down. This distinction, pointed out by Varro, is material; because the epithet Tarpeian, so often applied by the poets to Jupiter, has been brought forward as a proof that the temple stood upon the same side as the rock, whereas it only proves that it stood upon the Tarpeian or Capitoline Mount. At other times *capitolium* is used to designate one only of the summits, and that one apparently distinct from the *arx*;⁴ which obscurity is farther increased, because, on the other hand, *arx* is sometimes put for the whole mount,⁵ and at others for one of the summits only.⁶

There were three approaches from the Forum to the Mons Capitolinus. The first was by a flight of 100 steps (*centum gradus*⁷), which led directly to the side of the Tarpeian Rock. The other two were the *clivus Capitolinus* and *clivus Asyli*,⁸ one of which entered on the north, and the other on the south side of the intermontium, the former by the side of the Carceres Tulliani, the latter from the foot of the Via Sacra, in the direction of the modern accesses on either side of the Palazzo de' Consolatori; but which of these was the *clivus Capitolinus* and which the *clivus Asyli*, will depend upon the disputed situation of the *arx* and Temple of Jupiter Optimus Maximus.

The epithets *aurea*⁹ and *fulgens*¹⁰ are illustrative of the materials with which the Temple of Jupiter O. M. was adorned: its bronze gates,¹¹ and gilt ceilings and tiles.¹² The gilding of the latter alone cost 12,000 talents.¹³

IV. **CAPITOLIUM** is also used to distinguish the chief temples in other cities besides Rome.¹⁴

CAPITULUM. (Vid. COLUMNA.)

*CAPNIOS or CAPNOS (κάπνιος or καπνός), a plant which all the authorities agree in referring to the *Fumaria officinalis*, or common Fumitory. Sibthorp is the only exception, who prefers the *F. parvisflora*, Lam. It is the *Fel terra* of Scribonius Largus.¹⁵ The juice of this plant was used, according to Pliny, in the cure of ophthalmia.¹⁶ It derives its name from its juice, when spread over the eyes, af-

1. (Varro, De Ling. Lat., v., 42.)—2. (Id., v., 41.—Dionys., iii., p. 193; iv., p. 247.)—3. (Varro, l. c.)—4. (Dionys., x., p. 611.—Livy, i., 33; ii., 8.—Aul. Gell., v., 12.)—5. (Livy, v., 40.)—6. (Compare Livy, ii., 49; iii., 15; v., 41.—Flor., iii., 21.—Virg., Æn., viii., 652.—Serv., ad Virg., l. c.)—7. (Tacit., Hist., iii., 71.)—8. (Tacit., l. c.)—9. (Virg., Æn., viii., 348.)—10. (Hor., Carm., iii., iii., 43.)—11. (Livy, x., 23.)—12. (Plin., H. N., xxxiii., 18.)—13. (Plut., Poplic., p. 104.)—14. (Sil. Ital., xi., 267.—Plaut., Cure., ii., 19.—Suet., Tiber., 40.)—15. (Adams, Append., s. v.)—16. (H. N., xxv., 13.)

fecting them like smoke (καπνός). Its flower is purple. The modern Greeks call this plant κάπνο and καπνώγορτο. Sibthorp found it growing very abundantly in cultivated places.¹

*CAPP'ARIS (κάππαρις), a plant which Sprengel, Stackhouse, and Schneider agree in referring to the *Capparis Spinosa*, L., or Thorny Caper-bush. Sibthorp, however, is in favour of a variety of the *C. Spinosa*, to which he gives the name of *Capparis ovata*.² Dioscorides mentions several kinds from different countries, all differing in their qualities. The best came from Caria, the next in the order of merit from Phrygia.³

*CAPRA, the she-Goat, the αἴξ of the Greeks. (Vid. CAPER.)

*CAPREA, a wild she-Goat, or, rather, a species of wild goat generally. Pliny⁴ speaks of it as being possessed of a very keen sight, which may, perhaps, identify it with the *Dorcas*, or Gazelle. Cuvier, however, makes Pliny's *Caprea* the same with the *Cervus Capreolus*, L., or Roebuck. (Vid. DORCAS.)

*CAPRIFICATIO, the process of caprification, or a ripening of figs on the domestic tree by means of insects found on the wild fig. The process is described briefly by Eustathius,⁵ and more at large by Pliny.⁷ The former, speaking of the wild fig-trees, says that what are called ψήγες ("little gnats") pass from them into the fruit of the domestic fig, and strengthen it to such a degree as to prevent its falling off from the tree. The latter remarks that the wild fig-tree engenders small gnats (*culicæ*), which, when the natal tree decays, and fails to afford them nutriment, betake themselves to the domestic tree, and, penetrating by their bites into the fruit of this, introduce, along with themselves, the heat of the sun, which causes the fruit into which they have entered to ripen. These insects consume, also, the milky humour in the young fruit, the presence of which would make them ripen more slowly. The process of caprification, as given by modern authorities, is as follows: "The operation is rendered necessary by the two following facts, namely, that the cultivated fig bears, for the most part, female flowers only, while the male flowers are abundant upon the wild fig-tree; and, secondly, that the flower of the fig is upon the inside of the receptacle which constitutes the fruit. It is hence found necessary to surround the plantations and gardens containing the figs with branches and limbs bearing male flowers from the wild fig-tree, thus preparing the way for the fertilizing the female flowers in the garden: and from these wild flowers the fertilizing pollen is borne to the other figs upon the wings and legs of small insects which are found to inhabit the fruit of the wild fig."⁶

*CAPRIFYCUS (ἐπινεύς, ἐπινός), the wild fig-tree, the *Ficus Carica*, L. (Vid. SYCE, and CAPRIFICATIO.)

*CAPRIMULGUS. (Vid. AIGOTHELAS.)

*CAPROS (κάπρος), I. the wild Boar, called by the Romans *Aper*. (Vid. SUS.) The flesh of this animal was highly esteemed by that people, and it was customary to serve up whole ones at table. Hence the boar was termed *cana caput*, or, as we would say, the "head dish;" hence, also, the language of Juvenal in speaking of the wild boar, "*animal propter convivia natum*," "an animal born for the sake of banquets."⁹

*II. A species of fish, the *Zeus Aper* of Linnæus, called in Italian *Riondo*, and in French *Sauglier*. It is a small yellowish fish, inhabiting the Mediter-

anean, and is the same with the *perca pusilla* of Brunnich.¹

CAPSA (dim. CAPSULA), or SCRINIUM, was the box for holding books among the Romans. These boxes were usually made of beech-wood,² and were of a cylindrical form. There is no doubt respecting their form, since they are often placed by the side of statues dressed in the toga. The following woodcut, which represents an open capsula with six rolls of books in it, is from a painting at Pompeii.

There does not appear to have been any difference between the capsula and the scrinium, except that the latter word was usually applied to those boxes which held a considerable number of rolls (*scrinia da magnis*).³ Boxes used for preserving other things besides books were also called capsæ,⁴ while in the *scrinia* nothing appears to have been kept but books, letters, and other writings.

The slaves who had the charge of these book-chests were called *capsarii*, and also *custodes scriniorum*; and the slaves who carried, in a capsula behind their young masters, the books, &c., of the *sumus* of respectable Romans, when they went to school, were also called *capsarii* (*Quem sequitur custos angusta vernula capsæ*). We accordingly find them mentioned together with the *pædagog* (*constat quosdam cum pædagogis et capsariis uno prandio necatos*).⁵

When the capsula contained books of importance, it was sealed or kept under lock and key;⁷ whence Horace⁸ says to his work, "*Odisti claves, et grata sigilla pudico*."⁹

CAPSA'RII, the name of three different classes of slaves:

1. Of those who took care of the clothes of persons while bathing in the public baths. (Vid. BATHS, p. 147.) In later times they were subject to the jurisdiction of the *præfectus vigilum*.¹⁰ 2. Of those who had the care of the capsæ, in which books and letters were kept. (Vid. CAPSÆ.) 3. Of those who carried the books, &c., of boys to school. (Vid. CAPSÆ.)

CAP'SULA. (Vid. CAPSÆ.)

CAP'ULUS (κόπη, λαβή), the hilt of a sword. This was commonly made of wood or horn, but sometimes of ivory¹¹ or of silver,¹² which was either embossed¹³ or adorned with gems (*capulis radiantibus enses*).¹⁴ Philostratus¹⁵ describes the hilt of a Persian acinaces, which was made of gold set with beryls, so as to resemble a branch with its buds. These valuable swords descended from father to son.¹⁶ When Theseus for the first time appears at Athens before his father Ægeus, he is known by the carving upon the ivory hilt of his sword, and is

thus saved from being poisoned by the aconite which Medea has administered.¹

The handles of knives were made of the same materials, and also of amber.² Of the beautiful and elaborate workmanship sometimes bestowed on knife-handles, a judgment may be formed from the three specimens here introduced.³

The term *capulus* is likewise applied to the handle of a plough by Ovid, as quoted in ARATRUM, p. 80.

CAPUT, the head. The term "head" is often used by the Roman writers as equivalent to "person" or "human being."⁴ By an easy transition, it was used to signify "life;" thus, *capite damnari, plecti, &c.*, are equivalent to capital punishment.

Caput is also used to express a man's *status*, or civil condition; and the persons who were registered in the tables of the censor are spoken of as *capita*, sometimes with the addition of the word *civium*, and sometimes not.⁵ Thus to be registered in the census was the same thing as *caput habere*: and a slave and a filius familias, in this sense of the word, were said to have no *caput*. The sixth class of Servius Tullius comprised the proletarii and the capite censi, of whom the latter, having little or no property, were barely rated as so many *head* of citizens.⁶

He who lost or changed his status was said to be *capite minutus, deminutus, or capitis minor*.⁷ The phrase *se capite deminuere* was also applicable in case of a voluntary change of status.⁸

Capitis minutio is defined by Gaius⁹ to be *status permutatio*. A Roman citizen possessed *libertas, civitas, and familia*: the loss of all three, or of *libertas* and *civitas* (for *civitas* included *familia*), constituted the *maxima capitis deminutio*. This *capitis deminutio* was sustained by those who refused to be registered at the census, or neglected the registration, and were thence called *incensi*. The *incensus* was liable to be sold, and so to lose his liberty; but this being a matter which concerned citizenship and freedom, such penalty could not be inflicted directly, and the object was only effected by the fiction of the citizen having himself abjured his freedom. (*Vid. BANISHMENT*, p. 136.) Those who refused to perform military service might also be sold.¹⁰ A Roman citizen who was taken prisoner by the enemy lost his civil rights, together with his liberty, but he might recover them on returning to his country. (*Vid. POSTLIMINIUM*.) Persons con-

demned to ignominious punishments, as to the mines, sustained the *maxima capitis deminutio*. A free woman who cohabited with a slave, after notice given to her by the owner of the slave, became an ancilla, by a *senatus consultum* passed in the time of Claudius.¹

The loss of *civitas* only, as when a man was interdicted from fire and water, was the *media capitis deminutio*. (*Vid. BANISHMENT*.)

The change of *familia* by adoption, and by the *in manum conventio*, was the *minima capitis deminutio*. A father who was adrogated suffered the *minima capitis deminutio*, for he and his children were transferred into the power of the adoptive father. A son who was emancipated by his father also sustained the *minima capitis deminutio*; the cause of which could not be the circumstance of his being freed from the *patria potestas*, for that made the son a *liberum caput*; but the cause was, or was considered to be, the form of sale by which the emancipation was effected.

A *judicium capitale*, or *pœna capitalis*, was one which affected a citizen's caput.

CAPUT. (*Vid. INTEREST OF MONEY*.)

CAPUT EXTORUM. The Roman soothsayers (*haruspices*) pretended to a knowledge of coming events from the inspection of the entrails of victims slain for that purpose. The part to which they especially directed their attention was the liver, the convex upper portion of which seems to have been called the *caput extorum*.² Any disease or deficiency in this organ was considered an unfavourable omen; whereas, if healthy and perfect, it was believed to indicate good fortune. The *haruspices* divided it into two parts, one called *familiaris*, the other *hostilis*: from the former they foretold the fate of friends, from the latter that of enemies. Thus we read³ that the head of the liver was mutilated by the knife of the operator on the "familiar" part (*caput jecinoris a familiari parte cœsum*), which was always a bad sign. But the word "caput" here seems of doubtful application; for it may designate either the convex upper part of the liver, or one of the prominences of the various lobes which form its lower and irregularly concave part. It is, however, more obvious and natural to understand by it the upper part, which is formed of two prominences, called the great and small, or right and left lobes. If no caput was found, it was a bad sign (*nihil tristius accidere potuit*); if well defined, or double, it was a lucky omen.⁴

*CARA, a plant. (*Vid. CAREUM*.)

*CARABUS (*κράβος*), a crustaceous animal, of which there is frequent mention in the classics. It is the *Locusta* of Pliny, in French *langouste*. There is some difficulty, remarks Adams, in determining to what species of *Cancer* it applies. Schneider thinks it was certainly not the *Cancer homarus*; and he is not quite satisfied that it was the *C. elephas*.⁵

CARACALLA was an outer garment used in Gaul, and not unlike the Roman *lacerna*. (*Vid. LACERNA*.) It was first introduced at Rome by the Emperor Aurelius Antoninus Bassianus, who compelled all the people that came to court to wear it, whence he obtained the surname of Caracalla. This garment, as worn in Gaul, does not appear to have reached lower than the knee, but Caracalla lengthened it so as to reach the ankle. It after ward became common among the Romans, and garments of this kind were called *caracallæ Antonianæ*

to distinguish them from the Gallic caracallæ.¹ It usually had a hood to it, and came to be worn by the clergy. Jerome² speaks of "*palliolum miræ pulchritudinis in modum caracallarum sed absque cuculis*."

CARBA'TINA. (Vid. PERO.)

*CARBUNCULUS (ἀνθράξ), the Carbuncle, a precious stone, deriving its name, both in Greek and Latin, from its resemblance to a small ignited coal. The ancients called by these two names all the red transparent gems, which have since been distinguished by the different appellations of Ruby, Garnet, &c., all of which they regarded merely as species of the Carbuncle. Theophrastus and Strabo enumerate the Carthaginian and Garamantian carbunculi among those most in repute. "Those carbuncles," observes Dr. Moore, "which Pliny calls Alabandic, because they were cut and polished at Alabanda, were precious garnets, still called by some mineralogists Alabandines or Alamandines. What he afterward says of Alabandic carbuncles, which were darker coloured and rougher than others, may be explained by supposing that near Alabanda both precious and common garnets were obtained." The term *Carbunculus* was also applied to a species of black marble, on account of its likeness to a quenched coal, and out of which mirrors were sometimes made.³

CARCER. Carcer (*kerker*, Ger., γοργύρα, Greek) is connected with ἔρκος and ἔργω, the guttural being interchanged with the aspirate. Thus also Varro, "*Carcer a coercendo quod prohibentur exire*."

CARCER (GREEK). Imprisonment was seldom used among the Greeks as a legal punishment for offences; they preferred banishment to the expense of keeping prisoners in confinement. We do, indeed, find some cases in which it was sanctioned by law; but these are not altogether instances of its being used as a punishment. Thus the farmers of the duties, and their bondsmen, were liable to imprisonment if the duties were not paid by a specified time; but the object of this was to prevent the escape of defaulters, and to ensure regularity of payment.⁴ Again, persons who had been mulcted in penalties might be confined till they had paid them.⁵ The ἀτίμοι also, if they exercised the rights of citizenship, were subject to the same consequences.⁷ Moreover, we read of a δειμὸς for theft; but this was a προστήκημα, or additional penalty, the infliction of which was at the option of the court which tried the case; and the δειμὸς itself was not an imprisonment, but a public exposure in the ποδοκάκκη, or stocks, for five days and nights—the τὸ ἐν ζύλῳ δεδεσθαι. We may here observe, that in most cases of theft the Athenians proceeded by "civil action;" and if the verdict were against the defendant (ἐτὶ τὴν ἰδίαν δίκην κλοπῆς ἄλογι), he had to pay, by way of reparation, twice the value of the stolen property: this was required by law. The προστήκημα was at the discretion of the court.⁸ Still the idea of imprisonment *per se*, as a punishment, was not strange to the Athenians. Thus we find that Plato⁹ proposes to have three prisons: one of these was to be a σωφρονιστήριον, or penitentiary; another a place of punishment—a sort of penal settlement away from the city.

The prisons in different countries were called by different names: thus there was the Ἀναγκαῖον, in Bœotia; the Κεάδας, at Sparta; the Κέραμος, at Cyprus; the Κῶς, at Corinth; and, among the Ioni-

ans, the γοργύρα, as at Samos.¹ The prison at Athens was in former times called δεσμωτήριον, and afterward, by a sort of euphemism, οἰκήμα. It was chiefly used as a guardhouse, or place of execution, and was under the charge of the public officers called the eleven, οἱ ἐνδεκα. One gate in the prison, through which the condemned were led to execution, was called τὸ Χαρμενέιον.²

The Attic expression for imprisonment was δεῖν. Thus, in the oath of the βουλευταί, or senators, occurs the phrase οὐδὲ δῆσά Ἀθηναίων οὐδένα. Hence we have the phrase ἀδεσμός φυλάκη,³ the "libera custodia" of the Romans, signifying that a party was under strict surveillance and guard, though not confined within a prison.

CARCER (ROMAN). A carcer or prison was first built at Rome by Ancus Marcius, overhanging the Forum.⁴ This was enlarged by Servius Tullius, who added to it a souterrain or dungeon, called from him the Tullianum. Sallust⁵ describes this as being twelve feet under ground, walled on each side, and arched over with stonework. For a long time this was the only prison at Rome,⁶ being, in fact, the "Tower," or state prison of the city, which was sometimes doubly guarded in times of alarm, and was the chief object of attack in many conspiracies.⁷ Varro⁸ tells us that the Tullianum was also named "Lautumia;" from some quarries in the neighbourhood; or, as others think, in allusion to the "Lautumia" of Syracuse, a prison cut out of the solid rock. In later times the whole building was called the "Mamertine." Close to it were the Scalæ Gemoniæ, or steps, down which the bodies of those who had been executed were thrown into the Forum, to be exposed to the gaze of the Roman populace.⁹ There were, however, other prisons besides this, though, as we might expect, the words of Roman historians generally refer to this alone. One of these was built by Appius Claudius, the decemvir, and in it he was himself put to death.¹⁰

The carcer of which we are treating was chiefly used as a place of confinement for persons under accusation, till the time of trial; and also as a place of execution, to which purpose the Tullianum was specially devoted. Thus Sallust¹¹ tells us that Lentulus, an accomplice of Catiline, was strangled there. Livy also¹² speaks of a conspirator being *delegatus in Tullianum*, which in another passage¹³ is otherwise expressed by the words *in inferiorem demissus carcerem, necatusque*.

The same part of the prison was also called "robur," if we may judge from the words of Festus: "*Robur in carcere dicitur is locus, quo præcipitur malefactorum genus*." This identity is farther shown by the use made of it; for it is spoken of as a place of execution in the following passages: "*In robore et tenebris exspirare*."¹⁴ "*Robur et saxum* (sc. Tarpeium) *minitari*."¹⁵ So also we read of the "*catenas*—*et Italum robur*."¹⁶

CARCERES. (Vid. CIRCUS.)

*CARCHARIAS (καρχαρία), a species of fish, called in English the White Shark, and in French *Requin*. The scientific name is *Squalus carcharias*, L., or *Carcharias vulgaris*, Cuvier. The Carcharias is the same with the *Lamia* of Aristotle,¹⁷ Galen, and Pliny;¹⁸ the *λάμνη* of Oppian; the *κυνὸν θαλάττιος* ("sea-dog") of Ælian;¹⁹ and the *κάρχαρος κυνὸν* of Lycophron.²⁰ It has also been called by some

Piscis Jonæ, from its having been supposed to be the fish which swallowed *Jona*.¹

CARCHÆSIUM (*καρχήσιον*), a beaker or drinking-cup, which was used by the Greeks in very early times, so that one is said to have been given by Jupiter to Alcmena on the night of his visit to her.² It was slightly contracted in the middle, and its two handles extended from the top to the bottom.³ It was much employed in libations of blood, wine, milk, and honey.⁴ The annexed woodcut represents a magnificent carchesium, which was presented by Charles the Simple to the Abbey of St. Denys. It was cut out of a single agate, and richly engraved with representations of bacchanalian subjects. It held considerably more than a pint, and its handles were so large as easily to admit a man's hand.

The same term was used to designate the tops of a ship, that is, the structure surrounding the mast immediately above the yard (*vid. ANTENNA*), into which the mariners ascended in order to manage the sail, to obtain a distant view, or to discharge missiles (*hic summi superat curchesia mali*⁵). This was probably called "carchesium" on account of its resemblance in form to the cup of that name. The ceruchi or other tackle may have been fastened to its lateral projections, which corresponded to the handles of the cup (*summitas mali, per quam funes trahuntur*;⁶ *foramina, quæ summo mali funes recipiunt*⁷). Pindar⁸ calls the yard of a ship "the yoke of its carchesium," an expression well suited to the relative position of the parts.

The carchesia of the three-masted ship built for Hiero II. by Archimedes were of bronze. Three men were placed in the largest, two in the next, and one man in the smallest. Breastworks (*Θωράκια*) were fixed to these structures, so as to supply the place of defensive armour; and pulleys (*τροχῆλαι, trochleæ*) for hoisting up stones and weapons from below.⁹ The continuation of the mast above the carchesium was called "the distaff" (*ῥηλᾶκῆρ*), corresponding to our topmast or topgallant-mast.¹⁰ This part of an ancient vessel was sometimes made to produce a gay and imposing effect when seen from a distance (*lucida qua splendent summi carchesia mali*¹¹). The carchesium was sometimes made to turn upon its axis (*versatile*¹²), so that by means of its apparatus of pulleys it served the purposes of a crane.

*CARCINIUM (*καρκίνιον*), according to Pennant, a species of shellfish, the same with the *Cancer Bernardus*, Linn., or Hermit-crab. It is more correct, however, to say that the Greeks applied the name *Carcinon* generically to the parasite crusta-

cea which lodge themselves in the empty shells of the mollusca, and which the Latins designated by the synonymous appellation of *Cancelli*. Aldrovandus, Gesner, Rondelet, Swammerdam, and other modern naturalists, preserve this last denomination; but Fabricius has bestowed that of *Pagurus* upon this genus, a name by which the ancients designated a sort of crab, or one of the brachyurous crustacea. Aristotle mentions the fact, now so well established, that the shell serving as an habitation to the *Carcinon* or *Pagurus* was not of its own formation; that it had possessed itself of it after the death of the molluscous animal which had formed it; and that its body was not adherent to it, as is that of the last-mentioned animal.¹

*CARCINUS (*καρκίνος*), the genus *Cancer* or Crab, of which many species are described by Aristotle. According to Pennant, Aristotle notices the Velvet-crab, or *Cancer velutinus*, L.² The *καρκίνος ποτάμιος* belongs to the genus *Thelphusa*. "This species of crab enjoyed a great celebrity among the Greeks, and we see it on the coins of Agrigentum in Sicily, where it is represented with so much truth that it is impossible to mistake it. Particular mention is made of this crustaceum in the writings of Pliny, Dioscorides, Nicander, and others. It is the *Grancio* or *Granzo* of the Italians. It was believed that the ashes of this species were useful, from their desiccative qualities, to those who had been bitten by a mad dog, either by employing those ashes alone, or mixed with incense and gentian. According to Ælian, the fresh-water crabs, as well as the tortoises and crocodiles, foresaw the inundations of the Nile, and, about a month previously to that event, resorted to the most elevated situations in the neighbourhood. The kind of crustacea termed by modern naturalists *Ocypode* is probably the same of which Pliny makes mention, and which the Greeks, by reason of the celerity of its movements, designated as the *Hippeus* (*ἵππεύς*), or "Horseman."—With regard to the *Cancer Pinnotheres*, or small Crab, *vid. PINNOPHYLAX*.³

*CARDAMINE (*καρδαμίνη*), the second species of *Σισυμβριον*. The term is applied by modern botanists to a genus closely allied to the Cresses. (*Vid. SISYMBRIUM*).⁴

*CARDAMOMUM, according to Pliny,⁵ a species of aromatic shrub, producing a seed or grain of the same name with the parent plant. This seed was used in unguents. The Roman writer mentions four kinds of this seed: the first, which was the best, was of a very bright green, and hard to break up; the second was of a whitish-red colour; the third, smaller, and of a darker hue; the fourth and worst, of different colours, having little odour, and very friable. The Cardamomum had a fragrance resembling that of *Costus*, or Spikenard. The Cardamomum of the shops at the present day appears to be the same with that of the ancients, and is the fruit or seed of the *Anomum Cardamomum*. It comes, not from Arabia, as Pliny says the ancient kinds did, but from India; and, indeed, it was in this way the Greeks and Romans actually obtained theirs, by the Red Sea, and the overland trade through Arabia. Only three kinds are known at the present day, the large, medium, and small sized. M. Bonastre thinks that *cardamomum* means "amomum in husks," or "husk-amomum" (*amome à siliques*), the Egyptian term *kardh* meaning, as he says, "a husk." Other etymologists, however, make the term in question come from *καρδία*, "a heart," and *ἀμωμον*, and consider it to mean "strengthening, exhilarating, or cardiac amomum."⁶

*CARD'AMUM (κάρδαμον), a species of plant. Schneider remarks that Sprengel holds it to be the *Lepidium sativum*, or cultivated Pepper-wort; Stackhouse, however, is for the *Sisymbrium nasturtium*, or Water-cress; while Coray thinks it is either the *Lepidium perfoliatum*, or *Orientalis*, Tournefort. "There can be little doubt," observes Adams, "that it was a sort of Cress, but the species cannot be determined with any degree of certainty."¹

CARDO (θαιρός, στροφεύς, στρόφιγξ, γίγγλυμος), a hinge, a pivot.

The first figure in the annexed woodcut is designed to show the general form of a door, as we find it with a pivot at the top and bottom (*a, b*) in ancient remains of stone, marble, wood, and bronze. The second figure represents a bronze hinge in the Egyptian collection of the British Museum: its pivot (*b*) is exactly cylindrical. Under these is drawn the threshold of a temple, or other large edifice, with the plan of the folding-doors. The pivots move in holes fitted to receive them (*b, b*), each of

which is in an angle behind the antepagmentum (*marmoreo aratus stridens in limine cardo*²). This representation illustrates the following account of the breaking down of doors: "*Janua evulsis funditus cardinibus prosternuntur*."³ When Hector forces the gate of the Grecian camp, he does it by breaking both the hinges (ὑποστέρους θαιρούς⁴), i. e., as explained by the scholiasts, the pivots (στρόφιγγας) at the top and bottom. (*Vid. CATARACTA.*)

According to the ancient lexicons, "cardo" denoted not only the pivot, but sometimes the socket (*foramen*) in which it turned. On this assumption we may vindicate the accuracy of such expressions as *Postes a cardine vellit*, and *Emoti procumbunt cardine postes*;⁵ θαιρῶν ἐξεπύσαντες.⁶ In these instances, "postis" appears to have meant the upright pillar (*a, b*) in the frame of the door. The whole of this "post," including the pivots, appears to be called *στροφεύς* and "cardo" by Theophrastus and Pliny, who say that it was best made of elm, because elm does not warp, and because the whole door will preserve its proper form, if this part remains unaltered.⁷

To prevent the grating or creaking noise* (*strepitus*¹⁰) made by opening a door, lovers and others who had an object in silence (*cardine tacito*¹¹) poured water into the hole in which the pivot moved.¹²

The Greeks and Romans also used hinges exactly like those now in common use. Four Roman hinges of bronze, preserved in the British Museum, are shown in the following woodcut.

The proper Greek name for this kind of hinge was γίγγλυμος: whence Aristotle¹³ applies it to the

joint of a bivalve shell; and the anatomists call those joints of the human body *ginglymoid* which allow motion only in one plane, such as the elbow joint. Of this kind of hinge, made by inserting a pin through a series of rings locking into one another, we have examples in helmets and cuirasses.¹

The form of the door above delineated makes it manifest why the principal line laid down in surveying land was called "cardo" (*vid. AGRIMENSORES*);² and it farther explains the application of the same term to the North Pole, the supposed pivot on which the heavens revolved.³ The lower extremity of the universe was conceived to turn upon another pivot, corresponding to that at the bottom of the door;⁴ and the conception of these two principal points in geography and astronomy led to the application of the same term to the east and west also.⁵ Hence our "four points of the compass" are called by ancient writers *quatuor cardines orbis terrarum*, and the four principal winds, N., S., E., and W., are the *cardinales venti*.⁶

The fundamental idea of the pivots which served for hinges on a door may be traced in the application of the same terms to various contrivances connected with the arts of life, more especially to the use of the tenon (*cardo, στρόφιγξ*) and mortise (*foramen, βάσις*) in carpentry;⁷ *tignum cardinatum*;⁸ *cardines securiculati*,⁹ i. e., dove-tailed tenons, called *securiculati* because they had the shape of an axe (*securicula*). We also find these terms applied to the pivot which sustained and moved the hand on the dial (*orbis*) of an anemoscope;¹⁰ to the pins at the two ends of an axle, on which it revolves;¹¹ and to cocks used for drawing fluids through pipes (*bronze cock in the Museum at Naples*¹²).

Lastly, "cardo" is used to denote an important conjuncture or turn in human affairs,¹³ and a definite age or period in the life of man (*turpes extremi cardinis annos*¹⁴).

*CARDUE' LIS, a small bird, feeding among thistles, whence its Latin name, from *carduus*, "a thistle." It appears to be the same with the *Acanthis* of Aristotle.¹⁵ (*Vid. ACANTHIS.*)

*CARD'UUS, the Thistle, of which several kinds were known to the ancients. The λευκάκανθος of Theophrastus¹⁶ (ἄκανθα λευκή of Dioscorides¹⁷) is the *Carduus leucographus* of modern botanists: the ἄκανθα χαλκήια is the *Carduus cyanoides*, L. The κίρσιον of Dioscorides, so called because reputed to heal in varicose complaints (κίρσιος, *varix*), is the *C. Marianus*, or St. Mary's Thistle. The modern Greek name is κοφάγκαθο. Sibthorp found it in the Peloponnesus, in Cyprus, and around Constantinople. It grows wild, according to Billerbeck, throughout Europe.¹⁸ The σκόλυμος is a species of

edible thistle, and, according to Sibthorp, is the same with the *Scolymus Hispanicus*; Schneider, however, is in favour of the *Cynara cardunculus*, or Cardon Artichoke.¹ (*Vid. CYNTHA*.)

*CARÆUM (κάρος), the plant called *Carroway*, the *Carum carui*, L. It took its name from the country of Caria, where the best grew,² and the name is, in fact, an adjective, there being an ellipsis of *cuminum*; for the *Caræum* is, in truth, the *Cuminum sylvestre*. Billerbeck thinks³ that the *Chara* or *Cara* which the soldiers of Cæsar⁴ ate with milk, and which they also made up into bread during the scarcity of provisions which prevailed in the camp of the latter at Dyrrhachium, was no other than the root of the *Caræum*. Cuvier,⁵ however, with more appearance of reason, declares for a species of wild cabbage (*une espèce de chou sauvage*), of which Jacquin has given a description under the title of *Crambe Tartaria*. The *Chara* of modern botanists is quite different from this, being a small aquatic herb.

*CAREX, a species of Rush. The *Carex* is mentioned by Virgil⁶ with the epithet *acuta*, and Martyn⁷ remarks of it as follows: "This plant has so little said of it, that it is hard to ascertain what species we are to understand by the name. It is called 'sharp' by Virgil, which, if it be meant of the end of the stalk, is no more than what Ovid has said of the *Juncus*, or common Rush. It is mentioned also in another passage of Virgil,⁸ 'tu post carecta latebas,' from which we can gather no more than that these plants grew close enough together for a person to conceal himself behind them. Catullus mentions the *Carex* together with Fern, and tells what season is best to destroy them. Since, therefore, it is difficult to determine what the *Carex* is from ancient authorities, we must depend upon the account of Anguillara, who assures us that, about Padua and Vincenza, they call a sort of rush *Carèze*, which seems to be the old word *Carex* modernized. Caspar Bauhin says it is that sort of rush which he has called *Juncus acutus panicula sparsa*. It is, therefore, our common hard rush, which grows in pastures and by waysides in a moist soil. It is more solid, hard, and prickly at the point than our common soft rush, which seems to be what the ancients called *Juncus*."⁹

*CARIS (καρίς), a sea-animal of the class *Crustacea*. According to Adams, it is the *Squilla* of Cicero and Pliny,¹⁰ a term that has been retained in the Linnæan nomenclature. It is the *Cancer squilla*, L. The larger kind of *Squilla*, he adds, is called White Shrimp in England; the smaller, Prawn. The *καρίς κυψή* of Aristotle is a variety of the *Cancer squilla*, called in French *Crochette*. In the systems of Latreille and Fleming, the term *Carides* is applied to a subdivision of the *Crustacea*. In these systems, the Prawn gets the scientific name of *Palæmon serratus*, the common Shrimp that of *Crangon vulgaris*.¹¹

CARINA. (*Vid. NAVIS*.)

CARMENTALIA. Carmenta, also called Carmentis, is fabled to have been the mother of Evander, who came from Pallantium in Arcadia and settled in Latium; he was said to have brought with him a knowledge of the arts, and the Latin alphabetical characters as distinguished from the Etruscan.¹² In honour of this Carmenta, who was supposed to be more than human,¹³ were celebrated the Carmentalia,¹⁴ even as early as the time of

Romulus, if we may believe the authority of Plutarch.¹ These were *feriæ stativæ*, i. e., annually held on a certain day, the 11th of January; and an old calendar² assigns to them the four following days besides; of this, however, there is no confirmation in Ovid.³ A temple was erected to the same goddess at the foot of the Capitoline Hill, near the Porta Carmentalis, afterward called Scelærata.⁴ The name Carmenta is said to have been given to her from her prophetic character, carmens or carmentis being synonymous with vates. The word is, of course, connected with carmen, as prophecies were generally delivered in verse. Her Greek title was Θέμις.⁵ Plutarch⁶ tells us that some supposed Carmenta to be one of the Fates who presided over the birth of men: we know, moreover, that other divinities were called by the same name; as, for instance, the Carmenta Postverta and Carmenta Prorsa were invoked in cases of childbirth; for farther information with respect to whom, see Aul. Gell., xvi., 6; Ovid, *Fast.*, i., 634.

CARNEIA (Καρνεῖα), a great national festival, celebrated by the Spartans in honour of Apollo Carneios, which, according to Sosibius,⁷ was instituted Olymp. 26, although Apollo, under the name of Carneios, was worshipped in various places of Peloponnesus, particularly at Amyclæ, at a very early period, and even before the Dorian migration.⁸ Wachsmuth,⁹ referring to the passage of Athenæus above quoted, thinks that the Carneia had long before been celebrated; and that when, in Olymp. 26, Therpander gained the victory, musical contests were only added to the other solemnities of the festival. But the words of Athenæus, who is the only authority to which Wachsmuth refers, do not allow of such an interpretation, for no distinction is there made between earlier and later solemnities of the festival, and Athenæus simply says the institution of the Carneia took place Olymp. 26 (Ἐγένετο δὲ ἡ θῆσις τῶν Καρνεῖων κατὰ τὴν ἑκτὴν καὶ εἰκοστὴν Ὀλυμπιάδα, ὡς Σωσίβιος ὁρίσιν, ἐν τῷ περὶ χρόνων). The festival began on the seventh day of the month of Carneios=Metageitnion of the Athenians, and lasted for nine days.¹⁰ It was, as far as we know, a warlike festival, similar to the Attic Boëdromia. During the time of its celebration, nine tents were pitched near the city, in each of which nine men lived in the manner of a military camp, obeying in everything the commands of a herald. Müller also supposes that a boat was carried round, and upon it a statue of the Carneian Apollo (Ἀπόλλων στεμματίας), both adorned with lustratory garlands, called *δίκηλον στεμματιαῖον*, in allusion to the passage of the Dorians from Naupactus into Peloponnesus.¹¹ The priest conducting the sacrifices at the Carneia was called Ἀγχιγίς, whence the festival was sometimes designated by the name Ἀγχιγόρια or Ἀγχιγόρειον;¹² and from each of the Spartan tribes five men (Καρνεάται) were chosen as his ministers, whose office lasted four years, during which period they were not allowed to marry.¹³ Some of them bore the name of Σπαφύλοδρόμοι.¹⁴ Therpander was the first who gained the prize in the musical contests of the Carneia, and the musicians of his school were long distinguished competitors for the prize at this festival,¹⁵ and the last of this school who engaged in the contest was Pericleidas.¹⁶ When we read in Herodotus¹⁷ and Thucyd-

ides¹ that the Spartans, during the celebration of this festival, were not allowed to take the field against an enemy, we must remember that this restriction was not peculiar to the Carneia, but common to all the great festivals of the Greeks; traces of it are found even in Homer.²

Carneia were also celebrated at Cyrene,³ in Thera,⁴ in Gythion, Messene, Sicyon, and Sybaris.⁵

CAR/NIFEX, the public executioner at Rome, who executed slaves and foreigners,⁶ but not citizens, who were punished in a manner different from slaves. It was also his business to administer the torture. This office was considered so disgraceful, that he was not allowed to reside within the city,⁷ but lived without the Porta Metia or Esquilina,⁸ near the place destined for the punishment of slaves,⁹ called Sestertium under the emperors.¹⁰

It is thought by some writers, from a passage in Plautus,¹¹ that the carnifex was anciently keeper of the prison under the triumviri capitales; but there does not appear sufficient authority for this opinion.¹²

*CARO'TA, the wild Carrot, called by the Greeks δαῦκος. (Vid. DAUCUS.)

CARPENTUM, a cart; also a rectangular two-wheeled carriage, enclosed, and with an arched or sloping cover overhead.

The carpentum was used to convey the Roman matrons in the public festal processions;¹³ and, as this was a high distinction, the privilege of riding in a carpentum on such occasions was allowed to particular females by special grant of the senate. This was done on behalf of Agrippina (τῷ καρπεντῷ ἐν ταῖς πανηγύρεσι χρῆσθαι¹⁴), who availed herself of the privilege so far as even to enter the Capitol in her carpentum.¹⁵ A medal was struck (see wood-

cut) to commemorate this decree of the senate in her favour. When Claudius celebrated his triumph at Rome, he was followed by his empress Messalina in her carpentum.¹⁶

This carriage contained seats for two, and sometimes for three persons, besides the coachman.¹⁷ It was commonly drawn by a pair of mules (*carpentum mulare*¹⁸), but more rarely by oxen or horses, and sometimes by four horses like a quadriga. For grand occasions it was very richly adorned. Agrippina's carriage, as above represented, shows painting or carving on the panels, and the head is supported by Caryatides at the four corners.

The convenience and stateliness of the carpentum were also assumed by magistrates, and by men of luxurious habits, or those who had a passion for driving.¹⁹

When Caligula instituted games and other solemnities in honour of his deceased mother Agrippina, her carpentum went in the procession.¹ This practice, so similar to ours of sending carriages to a funeral, is evidently alluded to in the alto-relievo here represented, which is preserved in the British Museum. It has been taken from a sarcophagus, and exhibits a close carpentum drawn by four horses. Mercury, the conductor of ghosts to Hades, appears on the front, and Castor and Pollux, with their horses, on the side panel.

The coins of Ephesus show a carpentum, proving that it was used to add to the splendour of the processions in honour of Diana. It probably carried a statue of the goddess, or some of the symbols of her attributes and worship.

Carpenta, or covered carts, were much used by our ancestors the Britons, and by the Gauls, the Cimbri, the Allobroges, and other northern nations.² These, together with the carts of the more common form, including baggage-wagons, appear to have been comprehended under the term *carri* or *carra*, which is the Celtic name with a Latin termination. The Gauls and Helvetii took a great multitude of them on their military expeditions; and, when they were encamped, arranged them in close order, so as to form extensive lines of circumvallation.³

The agricultural writers use "carpentum" to denote either a common cart⁴ or a cart-load, e g., xxiv. *stercoris carpenta*.⁵

*CARPES'IUM (καρπῆσιον), an aromatic sometimes used in place of Cassia. Galen describes it as resembling Valerian. Some of the earlier commentators, and, as it would appear, the Arabian physicians also, supposed it Cubebs; but this opinion is rebutted by Matthiolus and C. Bauhin. Dr. Hill says of it, "If the Arabians were acquainted with our Cubebs at all, it appears that, not knowing what the *Carpesium* and *Ruscus* were, they ignorantly attributed the virtues ascribed by the Greeks to their medicines to the Cubebs."⁶

*CARP'INUS, a species of Maple, called also the Hornbeam, or Yoke-elm. It is a tree that loves the mountains, and is described by Pliny as having its wood of a red colour and easy to cleave, and covered with a livid and rugged bark. It was called *Zygia* (ζυγία) by the Greeks, because often used to make yokes (ζυγά) for oxen. The scientific name is *Carpinus betulus*.⁷

KAPHOY Δ'IKH (καρπού δίκη), a civil action under the jurisdiction of the thesmothetæ, might be instituted against a farmer for default in payment of rent.⁸ It was also adopted to enforce a judicial award when the unsuccessful litigant refused to surrender the land to his opponent,⁹ and might be used to determine the right to land,¹⁰ as the judgment would determine whether the plaintiff could claim rent of the defendant.

CARRAGO, a kind of fortification, consisting of a great number of wagons placed round an army. It was employed by barbarous nations, as, for instance, the Scythians,¹ Gauls (*vid. CARPENTUM*), and Goths.²

Carrago also signifies sometimes the haggage of an army.³

CARRUCA was a carriage, the name of which only occurs under the emperors. It appears to have been a species of rheda (*vid. RHEDA*), whence Martial, in one epigram,⁴ uses the words as synonymous. It had four wheels, and was used in travelling. Nero is said never to have travelled with less than 1000 carrucæ.⁵ These carriages were sometimes used in Rome by persons of distinction, like the carpenta (*vid. CARPENTUM*), in which case they appear to have been covered with plates of bronze, silver, and even gold, which were sometimes ornamented with embossed work. Alexander Severus allowed senators at Rome to use carrucæ and rheda plated with silver;⁶ and Martial⁷ speaks of an *aurea carruca* which cost the value of a farm. We have no representations of carriages in ancient works of art which can be safely said to be carrucæ, but we have several delineations of carriages ornamented with plates of metal.⁸ Carrucæ were also used for carrying women, and were then, as well, perhaps, as in other cases, drawn by mules,⁹ whence Ulpian¹⁰ speaks of *mula carrucaria*.

CARRUS. (*vid. CARPENTUM*.)

CARYA or CARYATIS (*Κάρυα* or *Καρυαίς*), a festival held at Caryæ, in Laconia, in honour of Artemis Caryatis.¹¹ It was celebrated every year by Lacedæmonian maidens (*Καρυαίδες*) with national dances of a very lively kind,¹² and with solemn hymns.

CARYATIS (*καρυαίς*), pl. CARYATIDES. From the notices and testimonies of ancient authors, we may gather the following account: That Caryæ was a city (*civitas*) in Arcadia, near the Laconian border; that its inhabitants joined the Persians after the battle of Thermopylæ;¹³ that on the defeat of the Persians the allied Greeks destroyed the town, slew the men, and led the women into captivity; and that, as male figures representing Persians were afterward employed with an historical reference instead of columns in architecture (*vid. ATLANTES, PERSÆ*), so Praxiteles and other Athenian artists employed female figures for the same purpose, intending them to express the garb, and to commemorate the disgrace of the Caryatides, or women of Caryæ.¹⁴ This account is illustrated by a bas-relief with a Greek inscription, mentioning the conquest of the Caryatæ, which is preserved at Naples, and copied in the following woodcut.

In allusion to the uplifted arm of these marble statues, a celebrated parasite, when he was visiting in a ruinous house, observed, "Here we must dine with our left hand placed under the roof, like Caryatides." (*vid. CARPENTUM*.) The Caryatides executed by Diogenes of Athens, and placed in the Pantheon at Rome, above the sixteen columns which surrounded the interior, may have resembled those which are represented in a similar position in one of the paintings on the walls of the baths of Titus.¹⁵ It is proper to observe that Lessing, and various

writers after him, treat the preceding account as fabulous.

After the subjugation of the Caryatæ, their territory became part of Laconia. The fortress (*ῥοπίον*)¹ had been consecrated to Artemis,² whose image—was in the open air, and at whose annual festival (*Καρυαίς ἐορτή*)³ the Laconian virgins continued, as before, to perform a dance of a peculiar kind, the execution of which was called *καρυαίξεν*. Blomfield thinks that the Caryatides in architecture were so called for these figures resembling the statue of *Ἀρτεμὶς Καρυαίς*, or the Laconian virgins who celebrated their annual dance in her temple.⁴

*CARYON (*κάρυν*), the Walnut. "By itself," observes Adams, "the *κάρυν* is undoubtedly to be generally taken for the *Juglans regia*, or common Walnut. I am farther disposed to agree with Stackhouse in holding the *κάρνα Εὐβοϊκά, Περσικά, and Βασιλικά* as mere varieties of the same. The *κάρυν Ποντικόν* or *λεπτο-κάρυν*, of Dioscorides and Galen, is as certainly the *Nux Avellana*, or Filbert being the fruit of the *Corylus Avellana*, or Hazel nut."⁵ (*vid. AVELLANÆ NUCES*.)

*CARIOPHYLLON (*καρυόφυλλον*), Cloves, or the flower-buds of the *Caryophyllus aromaticus* (*Eugenia Caryophyllata* of the London Dispensary). They are first noticed by Paul of Ægina.⁶ Symeon Seth⁷ likewise gives a short account of cloves. There is no mention of the clove in the works of Dioscorides, Galen, Oribasius, or Aëtius, but it is regularly noticed in the *Materia Medica* of all the Arabian physicians.⁸

*CASIA or CASSIA (*κασία, κασσία*), Cassia. Moses Charraz says of it, "The tree called Cassia is almost like that which bears the Cinnamon. These two barks, though borne by different trees, are boiled and dried after the same manner, and their taste and scent are almost alike." "I can see no difficulty," observes Adams, "about recognising it as the *Laurus Cassia*." Stackhouse, however, prefers the *Laurus gracilis*, but upon what authority he does not explain. The *κασσία σνρίξ* and *ξύλοκασσία* are thus explained by Alston: "The *Cassia lignea* of the ancients was the larger branches of the cinnamon-tree cut off with their bark, and sent together to the druggists; their *Cassia fistula*, or *Syrinx*, was the same cinnamon in the bark only, as we now have it stripped from the tree, and rolled up into a kind of *Fistula*, or pipes." The Greeks then were unacquainted with our *Cassia fistula*, which was first introduced into medical practice by the Arabians.¹⁰

*CASSITEROS. (*vid. PLUMBUM*.)

*CASTANEA (*καστανά, καστάνια, or κύστανά*), the Chestnut-tree, or *Fagus Castanea*, L. Its fruit was called by the Latin writers *Castanea nux*, and

1. (Trebell. Poll. Gallien., 13.)—2. (Amm. Marcell., xxxi., 20. —Compare Veget., iii., 10.)—3. (Trebell. Poll., Claud., 8—Vopisc., Aurelian., 11.)—4. (iii., 47.)—5. (Suet., Ner., 30.)—6. (Lamp., Alex. Sev., 43.)—7. (iii., 72.)—8. (See Inghirami, Monum. Etruschi., iii., 18, 23.—Millingen, Uned. Mon., ii., 14.)—9. (Dig. 34, tit. 2, s. 13.)—10. (Dig. 21, tit. 1, s. 38, § 8.)—11. (Hesych., s. v. *Καρυαίς*.)—12. (Paus., iii., 10, § 8; iv., 16, § 5.—Pollux, Onom., iv., 104.)—13. (Herod., viii., 26.—Vitruv., i., 1, vii., 3.)—14. (Vitruv., l. c.—Plin., II. N., xxvii., 45 and 11.)—15. (Descr. des Bains de Titus, pl. 10.—Wolf and Buttmann's Museum, i., tab. 3, fig. 5.)

also simply *Castanea*. Among the Greeks, on the other hand, chestnuts had various names. They are called *Διδς βάλανοι* by Theophrastus;¹ *Σαρδία-ναι βάλανοι* by Dioscorides and Galen; *ἀσπίνα κά-ρυα* by Nicander;² and *κάρνα* simply by Xenophon,³ who mentions that the nation of the Mosynœci lived entirely on them.⁴ The Chestnut-tree is generally considered to be a native of Asia, in many parts of which it is to be found in situations where it is not very likely to have been planted. Tradition says that it was brought from Asia Minor, and soon spread over all the warmer parts of Europe. In the southern parts of the latter continent, chestnuts grow so abundantly as to form a very large portion of the food of the common people, who, besides eating them both raw and roasted, form them into puddings, and cakes, and even bread.⁵ The name *Castanea* is derived by Vossius from that of the town of Castanœa in Thessaly, where this tree grew very abundantly. This etymology, however, is more than doubtful.

CASSIA LEX. (Vid. TABELLARIA.)

CASSIS. (Vid. GALEA, RETE.)

CASTELLUM AQUÆ, a reservoir, or building constructed at the termination of an aquæduct, when it reached the city walls,⁶ for the purpose of forming a head of water, so that its measure might be taken, and thence distributed through the city in the allotted quantities. The more ancient name in use, when the aquæducts were first constructed, was *dividiculum*.⁷

The *castella* were of three kinds, public, private, and domestic.

I. *CASTELLA PUBLICA*. Those which received the waters from a public duct to be distributed through the city for public purposes: 1. *Castra*, the prætorian camps. 2. The fountains and pools in the city (*lucus*). 3. *Munera*, under which head are comprised the places where the public shows and spectacles were given, such as the circus, amphitheatres, naumachies, &c. 4. *Opera publica*, under which were comprised the baths, and the service of certain trades—the fullers, dyers, and tanners—which, though conducted by private individuals, were looked upon as public works, being necessary to the comforts and wants of the whole community. 5. *Nomine Cesaris*, which were certain irregular distributions for particular places, made by order of the emperors. 6. *Beneficia Principis*, extraordinary grants to private individuals by favour of the sovereign. Compare Frontinus, § 3, 78, in which the respective quantities distributed under each of these denominations are enumerated.

II. *CASTELLA PRIVATA*. When a number of individuals, living in the same neighbourhood, had obtained a grant of water, they clubbed together and built a *castellum*,⁸ into which the whole quantity allotted to them collectively was transmitted from the *castellum publicum*. These were termed *privata*, though they belonged to the public, and were under the care of the *curatores aquarum*. Their object was to facilitate the distribution of the proper quantity to each person, and to avoid puncturing the main pipe in too many places;⁹ for when a supply of water from the aquæducts was first granted for private uses, each person obtained his quantum by inserting a branch pipe, as we do, into the main; which was probably the custom in the age of Vitruvius, as he makes no mention of private reservoirs. Indeed, in early times,¹⁰ all the water brought to Rome by the aquæducts was applied to

public purposes exclusively, it being forbidden to the citizens to divert any portion of it to their own use, except such as escaped by flaws in the ducts or pipes, which was termed *aqua caduca*.¹ But as even this permission opened a door for great abuses from the fraudulent conduct of the *aquarii*, who damaged the ducts for the purpose of selling the *aqua caduca*, a remedy was sought by the institution of *castella privata*, and the public were henceforward forbidden to collect the *aqua caduca*, unless permission was given by special favour (*beneficium*) of the emperor.² The right of water (*jus aquæ impetratæ*) did not follow the heir or purchaser of the property, but was renewed by grant upon every change in the possession.³

III. *CASTELLA DOMESTICA*, leaden cisterns, which each person had at his own house to receive the water laid on from the *castellum privatum*. These were, of course, private property.

The number of public and private *castella* in Rome at the time of Nerva was 247.⁴

All the water which entered the *castellum* was measured, at its ingress and egress, by the size of the tube through which it passed. The former was called *modulus acceptorius*, the latter *erogatorius*. To distribute the water was termed *erogare*; the distribution, *erogatio*; the size of the tube, *fistularum*, or *modulorum capacitas*, or *lumen*. The smaller pipes, which led from the main to the houses of private persons, were called *puncta*; those inserted by fraud into the duct itself, or into the main after it had left the *castellum*, *fistulæ illicitæ*.

The *erogatio* was regulated by a tube called *calix*, of the diameter required, attached to the extremity of each pipe where it entered the *castellum*; it was probably of lead in the time of Vitruvius, such only being mentioned by him; but was made of bronze (*æneus*) when Frontinus wrote, in order to check the rogery of the *aquarii*, who were able to increase or diminish the flow of water from the reservoir by compressing or extending the lead. Pipes which did not require any *calix* were termed *solutæ*.

The subjoined plans and elevation represent a ruin still remaining at Rome, commonly called the "Trophies of Marius," which is generally considered to have been the *castellum* of an aquæduct. It is now much dilapidated, but was sufficiently entire about the middle of the sixteenth century, as may be seen by the drawing published by Giamucci,⁵ from which this restoration is made. The trophies,

then remaining in their places, from which the monument derives its modern appellation, are now placed on the Capitol. The ground-plans are given

1. (H. P., iii., 8.)—2. (Ap. Athen., ii., 43.)—3. (Anab., v., 4, 18.)—4. (Adams, Appendix s. v.)—5. (Library of Ent. Knowledge, vol. ii., pt. I, p. 92.)—6. (Vitruv., viii., 7.)—7. (Festus, s. v.)—8. (Senatus consult., ap. Frontin., § 106.)—9. (Frontin., § 27.)—10. (Front., § 94.)

1. (Front., § 94.)—2. (Front., § 111.)—3. (Front., § 107.)—4. (Front., § 78.)—5. (Antichità di Roma, iii., p. 100.)

from an excavation made some years since by the students of the French Academy; they explain part of the internal construction, and show the arrangement adopted for disposing of the superfluous water of an aqueduct,¹ and how works of this nature were made to contribute to the embellishment and comforts of the city. The general stream of water is first divided by the round projecting buttress into two courses, which subdivide themselves into five minor streams, and finally fall into a reservoir in the manner directed by Vitruvius,² "*immissarium ad recipiendum aquam castello conjunctum*." Thus the structure affords also an example of that class of fountains designated by the Romans *emissaria*.

*CASTOR (κάστωρ), the Beaver, or *Castor Fiber*. It is also called *κύν ποτάμιος*. The *κάστωρ ορχίς*, or *κάστωριον*, is Castor, but this substance is not the testicles of the animal, as was generally supposed by the ancients, but a peculiar gland, placed in the groin of the beaver of both sexes. The ancients had a story prevalent among them, that the Beaver, when closely pursued, bit off its testicles, and, leaving these to the hunters, managed in this way to escape.³

*CASTOREUM. (*Vid.* CASTOR.)

CASTRA. The system of encampment among the Romans, during the later ages of the Republic, was one of singular regularity and order; but any attempt to trace accurately the steps by which it reached this excellence, would be an unprofitable task, in which we shall not engage. We may, however, observe, that in the earlier wars of Rome with the neighbouring petty states, the want of a regular camp would seldom be felt, and that the later form of encampment, which was based upon the constitution of the legion, would not have been applicable to the Roman army under the kings and in the first ages of the Republic, when it was arranged as a phalanx. We read, indeed, of *stativa castra*, or stationary camps, in the wars with the *Æqui* and *Volsci*, and of winter-quarters being constructed for the first time at the siege of Veii (B.C. 404-395*), and it is not improbable that the great Samnite war (B.C. 343-290) led to some regular system of encampment. This was followed by the campaigns against Pyrrhus (B.C. 280-275), whose superior tactics and arrangement of his forces were not likely to be lost upon the Romans. The epoch of the first Punic war (B.C. 264-241), in which Rome had to contend against various mercenary forces, was succeeded by the long struggle against the Cisalpine Gauls, and in both these contests the Romans found ample opportunities for improving themselves in the art of war. The second Punic war followed (B.C. 218-201), in which Hannibal was their adversary and teacher. After its conclusion, their military operations were no longer confined to Italy, but directed against more distant enemies, the Macedonian and Syrian kings (B.C. 200-192). These, of course, required a longer absence from home, and often exposed them to enemies of superior forces, so that it became necessary to protect themselves, both in the field and in the camp, by superiority in discipline and skill. Shortly after these times flourished Polybius, the historian of Megalopolis (a friend and companion of Scipio Africanus the younger), who expresses his admiration of the Roman system of encampment, and tells his readers that it is well worthy of their attention and study.⁴ His description of the Roman camp of his day is remarkably clear; we proceed to give it with the accompanying plan.

A, *prætorium*. B, tents of the tribunes. C, tents of the *præfecti sociorum*. D, street 100 feet wide. E, F, G, and H, streets 50 feet wide. L, select foot and volunteers. K, select horse and volunteers. M, extraordinary horse of the allies. N, extraordinary foot of the allies. O, reserved for occasional auxiliaries. Q, the street called *Quinana*, 50 feet wide. V., P., *Via Principalis*, 100 feet wide.

N.B. The position assigned to the *præfecti sociorum* is doubtful.

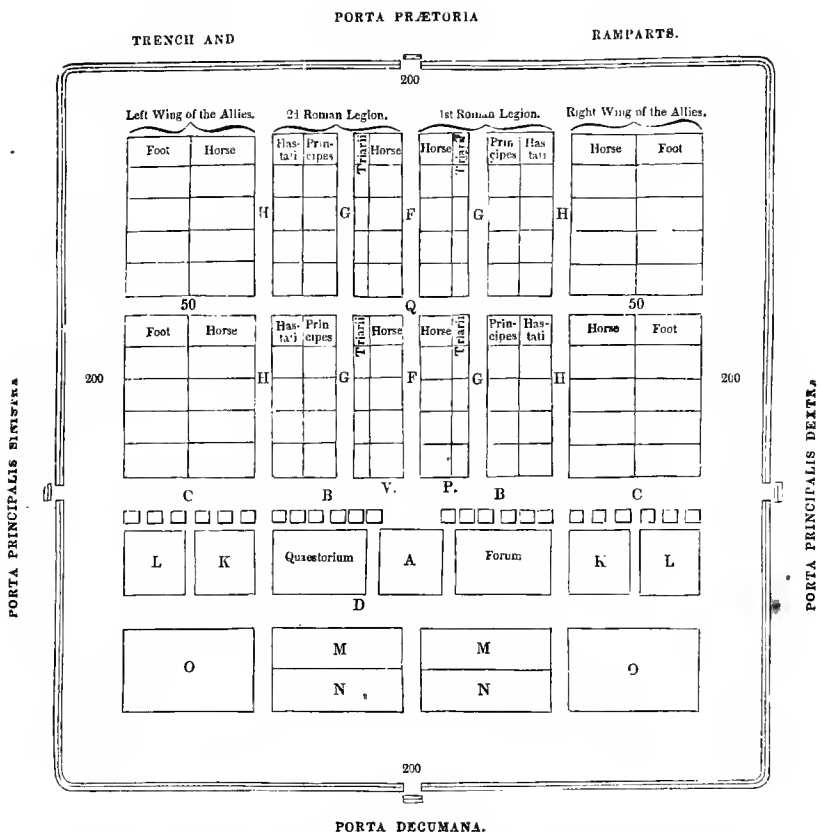

The duty of selecting a proper situation for the camp (*castra melari*) devolved upon one of the tribunes and a number of centurions who were specially appointed for that purpose, and sent in advance whenever the army was about to encamp; they were called *metatores*, from their office. After fixing on a proper locality, they then chose and distinguished with a white flag a place for the *prætorium* (A) or general's tent—*prætor* being the old name of the consul.⁵ This was fixed, if possible, on an elevation, so as to secure an extensive prospect, and afford every convenience for giving orders. About it was measured out a square, each side of which was 100 feet distant from the white flag, and therefore 200 feet in length, so that the whole area amounted to four plethra, or 40,000 square feet. (*Vid.* ARURA.) The two legions of the consular army were arranged on that side of the *prætorium* which commanded the best supply of forage and water, and which we may call the front, in the following manner:

Fifty feet distant from the line of the front side of the square just mentioned, and parallel to it, were arranged the tents (B) of the twelve tribunes of the two legions. The intermediate space of fifty feet in breadth was appropriated to their horses and baggage; and their tents were arranged at such intervals one from the other as to cover the line of the legions whose encampment they faced. On the right and left of, and in the same line with the tents of the tribunes, seem to have been placed those of the *præfecti sociorum* (C), covering and fronting the flank of the allies, as the former did that of the legions. The spaces lying immediately behind the tents of the tribunes, to the right and left of the *prætorium*, were occupied by the forum and *quæstorium*; the former a sort of market-place, the latter appropriated to the *quæstor* and the camp stores under his superintendence.

On the sides of, and facing the forum and *quæstorium*, were stationed select bodies of horse (K), taken from the extraordinaries (*ἐπιλεκτοὶ τῶν ἀπολέκτων*), with mounted volunteers, who served out of respect to the consul, and were stationed near him, not only in the camp, but also on the line of march and elsewhere, so that they were always ready to do any service for him as well as the *quæstor*.

Behind, and parallel to these, but facing the sides of the camp, were posted similar bodies of foot-soldiers (L). Again, parallel with the line of the tribunes' tents, and stretching behind the *prætorium*, the *quæstorium*, and the forum, ran a street or via (D), 100 feet broad, from one side of the camp to the other. Along the upper side of this street was ranged the main body of the "extraordinary" horse (M), parallel to and fronting the line of the tribunes' tents: they were separated into two equal parts by a street fifty feet broad (E), perpendicular to their front, and leading from the *prætorium* to the higher or back gate of the camp, the *Porta Decumana*. At the back of this body of cavalry was posted a similar body of infantry (N), selected from the allies, and facing the opposite way, i. e., towards the ram-

1. (Compare Plin., H. N., xxxvi., 24, 3.)—2. (viii., 7.)—3. (Arætot., H. A., viii., 7.—Adams, Append. s. v. *κύν ποτάμιος*.)—4. (Liv., iii., 2; v., 2.)—5. (Hist., vi., 24, ed. Gron.)

part of the camp. The vacant spaces (O) on each side of the camp were reserved for "foreigners" (*ἀλλόφυλοι*) and occasional auxiliaries.

The upper part of the camp, which we have just described, formed about a third of the whole, the remaining two thirds being appropriated to the main body of the forces, both legionary and allied, whose arrangement we now proceed to explain. The lower part of the camp was divided from the upper by a street, called the Via Principalis (V. P.), 100 feet broad, running parallel to and in front of the tribunes' tents: this was cut at right angles by another road (F), 50 feet broad, parallel to the length of the camp, and dividing the lower part into two equal spaces. On each side of this street (F) were ranged the horse of the two legions, the ten turmae of each being on different sides, and facing each other: the turma consisted of 30 men, and occupied a square whose side was 100 feet long. At the back of these turmae, and facing the contrary way, namely, towards the sides of the camp, stood the triarii, each maniple corresponding to a turma, and occupying a rectangle 100 feet in length by 50 in width. These dimensions would, of course, vary according to the component parts of the legion. Opposite to the two lines of triarii, but separated from them by a wide street (G), also 50 feet wide, stood the principes; they were double the triarii in number, and had a square, whose side was 100 feet, appropriated to each maniple. Behind these again, and in close contact with them, stood the ten maniples of the hastati, with their backs turned the opposite way, having the same space for each maniple as the principes. As the whole legion was divi-

ded into thirty maniples of foot, ten of each class, the whole arrangement was therefore perfectly symmetrical, the fifty-foot roads of which we have spoken commencing from the Via Principalis, and terminating in the open space by the ramparts. The whole legionary army thus formed a square, on each side of which were encamped the allies at a distance of 50 feet from the hastati, and presenting a front parallel to theirs. The allied infantry was equal in number to that of the legions, the cavalry twice as great: a portion of each (a third part of the latter and about a fifth of the former) was posted as "extraordinaries" in the upper part of the camp; so that, to make the line of the allies coterminous with that of the legion, it was necessary to give the former a greater depth of encampment. The cavalry of the allies faced the hastati, and the infantry at their back fronted the ramparts. The several front lines of the legionaries and allies were bisected by a road parallel to the Via Principalis, and called the Quintana (Q), from its dividing the ten maniples into two sets of five each: it was 50 feet in breadth.

Between the ramparts and the tents was left a vacant space of 200 feet on every side, which was useful for many purposes: thus it served for the reception of any booty that was taken, and facilitated the entrance and exit of the army. Besides this, it was a security against firebrands or missiles that might be thrown into the camp, as it placed the tents and the soldiers out of their reach.

From the description we have given, the reader will perceive that the camp was a square in form, divided into two parts by the Via Principalis, the

lower portion being cut lengthways by five streets, and crossways by one : so that, as Polybius remarks, the whole was not unlike a city, with rows of houses on each side of the streets.

The arrangements we have explained were adapted for a regular consular army ; but in case there was a greater number than usual of allies, they had assigned to them either the empty space about the prætorium, increased by uniting the forum and quæstorium, or an additional row of tents on the sides of the Roman legions, according as they were fresh comers, or had been in the camp from its first formation. If four legions or two consular armies were united and enclosed by the same ramparts, their two camps then formed an oblong rectangle, the back of each single camp being turned to the other, and joined at the parts where the "extraordinaries" were posted, so that the whole perimeter was three halves of, and the length twice that of, the single camp.

The camp had four gates, one at the top and bottom, and one at each of the sides ; the top or back gate (*ab tergo*, or *maxime aversa ab hoste*?) was called the Decuman ; the bottom or the front gate was the Prætorian ; the gates of the sides were the Porta Principalis Dextra and the Porta Principalis Sinistra. The whole camp was surrounded by a trench (*fossa*), generally nine feet deep and twelve broad, and a rampart (*vallum*) made of the earth that was thrown up (*agger*), with stakes (*valli*) fixed at the top of it. The labour of this work was so divided that the allies completed the two sides of the camp along which they were stationed, and the two Roman legions the rest ; the centurions and tribunes superintended the work performed by the Romans, the præfects of the allies seem to have done the same for them.

We will now speak of the discipline of the camp. After choosing the ground (*loca capere*), the proper officers marked, by flags and other signals, the principal points and quarters ; so that, as Polybius observes, the soldiers, on arriving at the place, proceeded to their respective stations like troops entering a well-known city, and passing through the streets to their several quarters. The tribunes then met, and administered to all, freemen as well as slaves, an oath to the effect "that they would steal nothing from the camp, and bring whatever they might find to the tribunes." After this, two maniples were chosen from the principes and hastati of each legion, to keep clean and in good order the Via Principalis, a place of general resort. The remaining eighteen maniples of the principes and hastati were assigned by lot, three to each of the six tribunes, and had to perform for them certain duties, such as raising their tents, levelling and paving the ground about them, and fencing in their baggage when necessary. These three maniples also supplied two regular guards of four men each, part of whom were posted in front of the tribunes' tents, part at the back by the horses. The triarii and velites were exempt from this duty ; but each maniple of the former had to supply a guard of men to the *turna* of horse that was at their back ; their chief duty was to look after the horses, though they also attended to other things. Moreover, each of the thirty maniples of foot kept guard in turn about the consul, both as a protection and a guard of honour. The general arrangements of the camp were under the direction of two of the tribunes, who were appointed by lot from each legion, and acted for two months. The præfects of the allies took their turn of authority in the same way, but, in all probability, over their own troops only.

We may now observe, that every morning at daybreak the centurions and horsemen presented themselves to the tribunes. The latter then went to the consul and received his orders, which were conveyed through the former to the soldiers. The watchword for the night, marked on a four-cornered piece of wood, and therefore called *tessera*, was given out in the following way : A soldier in every tenth maniple, posted farthest off from the tribune's tent, was exempted from guard duty, and presented himself at sunset before the tribune, from whom he received the *tessera* ; he returned with it to his own tent, and, in the presence of witnesses, gave it to the centurion of number nine ; it was passed on by him to the centurion of number eight, and so on, till it came back to the tribune. Besides the guards (*excubie*) of the tribunes, &c., which we have already mentioned, there were also several night-watches (*vigilie*) : thus there were generally three about the quæstorium, and two for each of the legati ; each division (*τάγμα*) also set a watch for itself. The velites were stationed by the walls of the rampart, and supplied the posts or pickets at the gates (*stationes ante portas agebant*).

We will now describe the arrangements for the inspection of the night-watches, first observing that the night was divided into four, each of three hours' length ; the arrangements were as follows : The soldiers of the watch-companies, supplied by the different maniples who were to furnish the guards during the first watch of the night, received from the tribune a number of small tablets (*εὐλήφια*) with certain marks upon them, and then went to their respective posts. The duty of visiting these posts, and making the nightly rounds of inspection, devolved upon the horsemen. Four of these, who were selected for this duty every day, according to a regular cycle, received from the tribune written instructions as to the time when they were to visit each post, and the number of posts to be visited : they were called *circitores* (*περίπολοι*), and, in the time of Vegetius, *circitores*. After receiving their orders, they went and posted themselves by the first maniple of the triarii, the centurion of which was required to see that the hours of the watch were properly given by the sound of the trumpet : then, when the time came, the circitor of the first watch proceeded on his rounds to all the posts ; if he found the guards awake and on duty, he took their tablets ; if he found them asleep, or any one absent from his post, he called upon the friends who accompanied him to witness the fact, and so passed on to the next post. The same was done by the circitores of the other watches. The next morning, all the inspectors appeared before the tribunes, and presented the tablets they had received ; any guard whose tablet was not produced, was required to account for it. If the fault lay with the circitor, he was liable to a stoning, which was generally fatal. A regular system of rewards and punishments was established in the camp, after describing which, Polybius gives the following comparison between the methods of encampment among the Romans and Greeks.

The latter, he says, endeavoured to avail themselves of the natural advantages afforded by any ground they could seize upon, thus avoiding the trouble of intrenchment, and securing, as they thought, greater safety than any artificial defence would have given them. The consequence of this was, that they had no regular form of camp, and the different divisions of an army had no fixed place to occupy.

In describing the Roman camp and its internal arrangements, we have confined ourselves to the information given by Polybius, which, of course, ap

plies only to his age, and to armies constituted like those he witnessed. When the practice of drawing up the army according to cohorts, ascribed to Marius or Cæsar (*vid. Army*, p. 104), had superseded the ancient division into maniples, and the distinction of triarii, &c., the internal arrangements of the camp must have been changed accordingly. So, also, was the outward form; for we learn from Vegetius, who lived in the reign of the Emperor Valentinian (A.D. 385), that camps were made square, round, or triangular, to suit the nature of the ground, and that the most approved form was the oblong, with the length one third greater than the breadth.¹ He also distinguishes between camps made only for a night or on a march, and those which were stativa, or built strongly for a stationary encampment. Another author also² alludes to places in the camp which Polybius does not mention, *e. g.*, the *valetudinarium*, or infirmary; the *veternarium*, or farriery; the *fabrica*, or forge;³ the *tabulinum*, or record-office. Besides this, we read of a great variety of troops under the emperors which did not exist under the Republic, and, of course, had their respective stations assigned them in the camp.

In closing this article, we will mention some points, a previous notice of which would have interrupted the order of description.

We learn from Tacitus⁴ that a part of the *prætorium* was called the *augurale*, the auguries being there taken by the general.

The *quæstorium*, in former times, seems to have been near the back gate, or *Porta Decumana*, hence called *quæstoria*.⁵ The same author⁶ tells us that the tribunes formerly inspected (*circumibant*) the night-watches. In the principia, or its immediate neighbourhood, was erected the tribunal of the general, from which he harangued the soldiers.⁷ The tribunes administered justice there.⁸ The principal standards, the altars of the gods, and the images of the emperors, were also placed there.⁹

From the stationary camps, or *castra stativa*, arose many towns in Europe;¹⁰ in England, especially those whose names end in *cester* or *chester*. Some of the most perfect of those which can be traced in the present day are at Ardoch and Strathern, in Scotland. Their form is generally oblong.

The castella of the Romans in England were places of very great strength, built for fixed stations. Burgh Castle in Suffolk, the ancient *Garanomium*, and Richborough Castle, the *Rutupiæ* of the Romans, near Sandwich in Kent, are still standing; they seem to have been built nearly on the model of the castra. For information on the Roman stations in this country, the reader is referred to General Roy's *Military Antiquities in Great Britain*.

CATAGRAPHA. (*Vid. PICTURA*.)

CATALOGIA. (*Vid. ANALOGIA*.)

CATALOGION. (*Vid. CAUFONNA*.)

CATAITYX. (*Vid. GALEA*.)

CATALOGOS, the catalogue of those persons in Athens who were liable to regular military service. At Athens, those persons alone who possessed a certain amount of property were allowed to serve in the regular infantry, while the lower class, the *thetes*, had not this privilege. (*Vid. CENSUS*.) Thus the former are called *οἱ ἐκ καταλόγου στρατεύοντες*, and the latter *οἱ ἔξω τοῦ καταλόγου*.¹¹ Those who were exempted by their age from military service are called by Demosthenes¹² *οἱ ὑπὲρ τὸν κατάλογον*. It appears to have been the duty of the generals

(*στρατηγοί*) to make out the list of persons liable to service (*vid. ΑΣΤΡΑΤΕΙΑΣ ΓΡΑΦΗ*), in which duty they were probably assisted by the demarchi, and sometimes by the *βουλευταί*.¹

ΚΑΤΑΛΥΨΕΩΣ ΤΟΥ ΔΗΜΟΥ ΓΡΑΦΗ (*Καταλύσεως τοῦ δήμου γραφή*) was an action brought against those persons who had altered, or attempted to alter, the democratical form of government at Athens. A person was also liable to this action who held any public office in the state after the democracy had been subverted.² This action is closely connected with the *προδοσίας γραφή* (*ἐπὶ προδοσίᾳ τῆς πόλεως, ἢ ἐπὶ καταλύσει τοῦ δήμου*), with which it appears in some cases to have been almost identical. The form of proceeding was the same in both cases, namely, by *εἰσαγγελία*. In the case of *καταλύσεως τοῦ δήμου*, the punishment was death; the property of the offender was confiscated to the state, and a tenth part dedicated to Athena.⁴

CATALUSIS. (*Vid. CAUFONNA*.)

*CATANANKE (*κατανάγκη*). "There are few plants in the *Materia Medica* of the ancients," observes Adams, "about which there is such a diversity of opinion. It will be sufficient to mention that Sprengel, upon the whole, inclines to the opinion that the first species is the *Ornithopus compressus*, and the other the *Astragalus magniformis*, Herit."

CATAPHRACTA. (*Vid. LORICA*.)

CATAPHRACTI (*κατάφρακτοι*). This word was used in two different significations:

I. It was the name of the heavy-armed cavalry, the horses of which were also covered with defensive armour,⁵ whence they are called by Pollux⁶ *περιπεφραγμένοι*. The armour of the horses consisted either of scale armour, or of plates of metal, which had different names, according to the parts of the body which they protected. Pollux⁷ speaks of the *προμετωπίδιον*, *παρώπιον*, *παρήμιον*, *προστερνίδιον*, *παραπλευρίδιον*, *παραμυρίδιον*, *παρακνημίδιον*. Among many of the Eastern nations, who placed their chief dependence upon their cavalry, we find horses protected in this manner; but among the Romans we do not read of any troops of this description till the later times of the Empire, when the discipline of the legions was destroyed, and the chief dependence began to be placed on the cavalry. When Postumus leaves Rome for the Eastern wars, Galla prays,

"*Neve tua Meda latentur cæde sagittæ,
Ferreus armato neu cataphractus equo.*"⁸

This species of troops was common among the Persians from the earliest times, from whom it was adopted by their Macedonian conquerors.⁹ In the army of Cyrus, Xenophon says¹⁰ that the horses were protected by coverings for the forehead and chest (*προμετωπίδιος καὶ προστερνίδιος*); and the same was the case with the army of Artaxerxes, when he fought with his younger brother¹¹. Troops of this description were called *clibanarii* by the Persians (*cataphracti equites, quos clibanarios dicunt Persæ*).¹² We first read of cataphracts in the Roman army in the time of Constantine.¹³

II. The term CATAPHRACTI was applied to ships which had decks, in opposition to *aphracts*. (*Vid. APHRACTUS*.)

CATAPIRATER (*καταπειρατηρία, βολίς*), the lead used in sounding, or fathoming the depth of water in navigation.

1. (Veget., iii., 8.)—2. (Hyginus, De Castramet.,) —3. (Cic., Ep. ad Fam., iii., 8.)—4. (Ann., ii., 13; xv., 30.)—5. (Liv., x., 32; xxvii., 47.)—6. (xxvii., 24.)—7. (Tacit., Ann., i., 67.—Hist., ii., 20.)—8. (Liv., xxviii., 24.)—9. (Tacit., Ann., i., 39; iv., 2.—Hist., i. c.)—10. (Cassaub. ad Sueton., Octav., 15.)—11. (Xen., Hellen., ii., 3, 20.)—12. (De Synt., p. 167, c. 2.)

1. (Demosth., c. Polycl., p. 1208.)—2. (Andoc., De Myst., 48.)—3. (Demosth., c. Timocr., 748.)—4. (Andoc., De Myst., 48.)—5. (Serv. ad Virg., Æn., xi., 771.)—6. (Onom., i., 140.)—7. (I. c.)—8. (Property, III., x., 11.)—9. (Liv., xxxv., 48; xxxvii., 40.)—10. (Cypri., vi., 4, 1.)—11. (Xen., Anab., i., 8, 7.)—12. (Amm. Marcell., xvi., 10.—Compare Lamprid., Alex. Sev., 56.)—13. (Amm. Marcell., i. c.)

The mode of employing this instrument appears to have undergone no change for more than two thousand years, and is described with exactness in the account of St. Paul's voyage and shipwreck at Melite.¹ A cylindrical piece of lead was attached to a long line, so as to admit of being thrown into the water in advance of the vessel, and to sink rapidly to the bottom, the line being marked with knots at each fathom to measure the depth.² By smearing the bottom of the lead with tallow (*unctum*), specimens of the ground were brought up, showing whether it was clay,³ gravel, or hard rock.

CATAPULTA. (*Vid.* TORMENTUM.)

CATARA'CTA (*καταράκτης*), a portcullis, so called, because it fell with great force and a loud noise.

According to Vegetius,⁴ it was an additional defence, suspended by iron rings and ropes before the gates of a city, in such a manner that, when the enemy had come up to the gates, the portcullis might be let down so as to shut them in, and to enable the besieged to assail them from above. In

¹ A accompanying plan of the principal entrance to

Pompeii, there are two sideways for foot-passengers, and a road between them, fourteen feet wide, for carriages. The gates were placed at A, A, turning on pivots (*vid.* CARDO), as is proved by the holes in the pavement, which still remain. This end of the road was nearest to the town; in the opposite direction, the road led into the country. The portcullis was at B, B, and was made to slide in grooves cut in the walls. The sideways, secured with smaller gates, were roofed in, whereas the portion of the main road between the gates (A, A) and the portcullis (B, B) was open to the sky. When, therefore, an attack was made, the assailants were either excluded by the portcullis, or, if they forced their way into the barbeican, and attempted to break down the gates, the citizens, surrounding and attacking them from above, had the greatest possible facilities for impeding and destroying them. Vegetius speaks of the "cataracta" as an ancient contrivance; and it appears to have been employed by the Jews at Jerusalem as early as the time of David.⁵

A sluice constructed in a watercourse, and made to rise and fall like a portcullis, was called by its name (*cataractis aqua cursum temperare*).⁶ Rutilius⁷ mentions the use of such sluices in salt-works. (*Vid.* SALINÆ.)

The term "cataractæ" was also applied to those natural channels which were obstructed by rocky barriers, producing a rapid and violent descent of the water, as in the celebrated "cataracts" of the Nile.

*CATARACTES (*καταράκτης*), the name of a bird mentioned by Aristotle.⁸ Schneider (who reads *καταβάκτης*) pronounces it, upon the authority of Edmann, to be the *Pelecanus bassanus*, L., or the Gannet. In Scotland it is known by the name of the Solan Goose.⁹

KATAΣΚΟΠΗΣ ΓΡΑΦΗ (*κατασκοπής γραφή*), an action brought against spies at Athens. (*Ἄν μὲν ἄρα πεπερή τις φέρη πρίμμενος, Στρεβλοῦν γράφουσι τοῦτον ὡς κατασκοπεύον.*)¹⁰ If a spy was discovered, he was put to the rack in order to obtain information from him, and afterward put to death.¹¹ It appears that foreigners only were liable to this action, since citizens who were guilty of this crime were liable to the *προδοσίας γραφή*.

CATEN'GYAN (*κατεγγυάν*). (*Vid.* ENGYE.)

CATEGORIA (*κατηγορία*). (*Vid.* GRAPHE.)

CATEL'A, a missile used in war by the Germans, Gauls, and some of the Italian nations,¹² supposed to resemble the *ACLES*.¹³ It probably had its name from *cutting*; and, if so, the Welsh terms *catel*, a weapon, *cateta*, to cut or mangle, and *catlau*, to fight, are nearly allied to it.

CATELLA. (*Vid.* CATENA.)

CATENA, dim. CATELLA (*ἀλυσίς*, dim. *ἀλυσιον*, *ἀλυσίδιον*), a chain.

Thucydides¹⁴ informs us that the Plataeans made use of "long iron chains" to suspend the beams which they let fall upon the battering-rams of their assailants. (*Vid.* ARIES.) Under the Romans, prisoners were chained in the following manner: The soldier who was appointed to guard a particular captive had the chain fastened to the wrist of his left hand, the right remaining at liberty. The prisoner, on the contrary, had the chain fastened to the wrist of his right hand. Hence *dextras insertare catenis* means to submit to captivity;¹⁵ *leviorem in sinistra catenam*.¹⁶ The prisoner and the soldier who had the care of him (*custos*) were said to be *tied* to one another (*alligati*;¹⁷ *latro et colligatus*).¹⁸ Sometimes, for greater security, the prisoner was chained to two soldiers, one on each side of him (*ἀλυσσεσθαι δυοῖ*).¹⁹ If he was found guiltless, they broke or cut asunder his chains (*πελέκεσι διέκοψε τὴν ἀλυσιν*).²⁰ Instead of the common materials, iron or bronze, Antony, having got into his power Artavasdes, king of the Armenians, paid him the pretended compliment of having him bound with chains of gold.²¹

Chains which were of superior value, either on account of the material or the workmanship, are commonly called *catellæ* (*ἀλυσία*), the diminutive expressing their fineness and delicacy as well as their minuteness. The specimens of ancient chains which we have in bronze lamps, in scales (*vid.* L-BRA), and in ornaments for the person, especially necklaces (*vid.* MONILE), show a great variety of elegant and ingenious patterns. Besides a plain cir-

1. (Acts, x-vii., 23.)—2. (Isid., Orig., xix., 4.—Eustath. in 1., v., 206.)—3. (Lucian, ap. Isid., l. c.)—4. (Herod., ii., 5.)—5. (De Re M., iv., 4.)—6. (Isid., xiv., 7, 9.—Compere Jer., xx., 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100.)

ele or oval, the separate link is often shaped like the figure 8, or is a bar with a circle at each end, or assumes other forms, some of which are here shown. The links are also found so closely entwined, that the chain resembles platted wire or thread, like the gold chains now manufactured at Venice. This is represented in the lowest figure of the woodcut.

These valuable chains were sometimes given as rewards to the soldiers;¹ but they were commonly worn by ladies, either on the neck (*περὶ τὸν τράχηλον ἀλυσίον*), or round the waist;² and were used to suspend pearls, or jewels set in gold, keys, lockets, and other trinkets.

CATERVARII. (Vid. GLADIATORES.)

CATHEDRA, a seat; but the term was more particularly applied to the soft seats used by women, whereas *sella* signified a seat common to both sexes (*inter femineas cathedras*).³ The cathedræ were, no doubt, of various forms and sizes; but they usually appear to have had backs to them, as is the case in the one represented in the annexed woodcut, which is taken from Sir William Hamilton's work on Greek vases. On the cathedra is seated a bride, who is being fanned by a female slave with a fan made of peacock's feathers.

Women were also accustomed to be carried abroad in these cathedræ instead of in lecticæ, which practice was sometimes adopted by effeminate persons of the other sex (*sexia cervice feratur cathedrâ*).⁴ The word cathedra was also applied to the chair or pulpit from which lectures were read.⁵

*CATOBLEPAS (*κατωβλέπας* or *τὸ κάτω βλέπων*) a wild animal dwelling in Æthiopia, near the sources of the Nile. Pliny⁷ describes it as of moderate size in every respect except the head, which is so heavy that the creature bears it with difficulty. Hence it holds the head always towards the ground; and from the circumstance of its thus always looking downward, it gets the name of Catoblepas (*κάτω*, "downward," and *βλέπω*, "to look"). It is well for the human race, it seems, that the animal has this downcast look, since otherwise it

would annihilate them all; for no one, says Pliny, can catch its eye without expiring on the spot! Ælian¹ makes the Catoblepas resemble a bull, but with a more fierce and terrible aspect. Its eyes, according to him, are red with blood, but are smaller than those of an ox, and surmounted by large and elevated eyebrows. Its mane rises on the summit of the head, descends on the forehead, and covers the face, giving an additional terror to its aspect. It feeds, the same authority informs us, on deadly herbs, which render its breath so poisonous, that all animals which inhale it, even men themselves, instantly perish. Modern naturalists have formed the *Genus Catoblepas*, in one of the species of which they place the *Gnu*, an animal that may possibly have given rise to some of these marvellous tales. Indeed, no other creature but the *Gnu* could well give rise to so many singular ideas. There is none that has an air so extraordinary, and, at the same time, so mournful, by reason, principally, of its long white eyebrows, and the hair, or, rather, mane on its snout, a characteristic not found in any other species of Antelope.²

*CATOCHITIS (*κατοχίτης λίθος*), a species of gem or stone found in Corsica, and adhering to the hand like gum. It is thought to have been either amber, or some variety of bitumen.³

CATRINOS (*κάτρινος*) is a genuine Greek word, with an exact and distinct signification, although it is found in no lexicon, and only in two authors, viz., Mr. Charles Fellows, as quoted in ARATUM, p. 79, who gives the figure of the agricultural implement which it denoted, with the name written over the implement, from a very ancient MS. of Hesiod's Works and Days.⁴ It is doubtful whether the *κάτρινος* had a Latin name; for Pliny⁵ describes it by a periphrasis: "Purget vomerem subinde *stimulus cuspidatus rallo*." But his remark proves that it was used in Italy as well as in Greece, and coincides with the accompanying representation, from a very ancient bronze of an Etruscan ploughman driving his yoke of oxen with the *κάτρινος* in his hand.⁶

It cannot be doubted that, if the traveller were to visit the remote valleys of Greece and Asia Minor and take time to study the language and habits of the people, he would find many other curious and instructive remains of classical antiquity, which are preserved in no other way.

*CATUS. (Vid. FELIS.)

*CAUCALIS, a species of plant mentioned by Dioscorides, Galen, and others. The account which they give of it answers very well to the characters of the *Caucalis*, L., or Hedge Parsley. Sprengel accordingly refers it to the *Caucalis maritima*, Lam. Sibthorp, however, prefers the *Tordylium officinale*, an opinion in which Billerbeck appears to coincide.⁷

•CAUDA EQUINA. (*Vid.* HIPPOURIS.)

CAVÆDIUM. (*Vid.* HOUSE.)

CAVEA. (*Vid.* THEATRUM.)

CAUPONA was used in two different significations :

1. It signified an inn, where travellers obtained food and lodging; in which sense it answered to the Greek words *πανδοκείον*, *καταγώγιον*, and *κατάλυσις*.

2. It signified a shop where wine and ready-dressed meat were sold, and thus corresponded to the Greek *καπηλείον*. The person who kept a caupona was called *caupo*.

It has been maintained by many writers that the Greeks and Romans had no inns for the accommodation of persons of any respectability, and that their *caupona* and *πανδοκεία* were mere houses of shelter for the lowest classes. That such, however, was not the case, an attentive perusal of the classical authors will sufficiently show; though it is, at the same time, very evident that their houses of public entertainment did not correspond, either in size or convenience, to similar places in modern times. It is also true that the hospitality of the ancients rendered such houses less necessary than in modern times; but they nevertheless appear to have been very numerous in Greece. The public ambassadors of Athens were sometimes obliged to avail themselves of the accommodation of such houses,¹ as well as private persons.² In addition to which, it may be remarked, that the great number of festivals which were celebrated in the different towns of Greece, besides the four great national festivals, to which persons flocked from all parts of Greece, must have required a considerable number of inns to accommodate strangers, not only in the places where the festivals were celebrated, but also on the oads leading to those places.

Among the Romans, the want of such houses of public entertainment would be less felt than among the Greeks; because, during the latter days of the Republic and under the emperors, most Romans of respectability had friends or connexions in the principal cities of Europe and Asia, who could accommodate them in their own houses. They were, however, frequently obliged to have recourse to the public inns.³

An inn was not only called *caupona*, but also *taberna* and *taberna diversoria*,⁴ or simply *diversorium* or *deversorium*.

It has been already remarked that *caupona* also signified a place where wine and ready-dressed provisions were sold,⁵ thus corresponding to the Greek *καπηλείον*. In Greek *κάπηλος* signifies, in general, a retail trader, who sold goods in small quantities, whence he is sometimes called *παλικάπηλος*, and his business *παλικαπηλεύειν*.⁶ The word *κάπηλος*, however, is more particularly applied to a person who sold ready-dressed provisions, and especially wine in small quantities, as plainly appears from a passage in Plato.⁷ When a retail dealer in other commodities is spoken of, the name of his trade is usually prefixed; thus we read of *προβατοκάπηλος*,⁸ *ὄπλων κάπηλος*,⁹ *ἀσπίδων κάπηλος*,¹⁰ *βιβλιοκάπηλος*, &c. In these *καπηλεία* only persons of the very lowest class were accustomed to eat and drink (*ἐν καπηλείῳ δὲ φαγεῖν ἢ πίνειν οὐδεὶς οὐδ' ἂν οἰκέτης ἐπικεικὴς ἐτόλμησε*¹¹).

In Rome itself there were, no doubt, inns to accommodate strangers; but these were probably only

frequented by the lower classes, since all persons in respectable society could easily find accommodation in the houses of their friends. There were, however, in all parts of the city, numerous houses where wine and ready-dressed provisions were sold. The houses where persons were allowed to eat and drink were usually called *popinae*, and not *caupona*; and the keepers of them, *popæ*. They were principally frequented by slaves and the lower classes,¹ and were, consequently, only furnished with stools to sit upon instead of couches, whence Martial² calls these places *sellariolas popinas*. This circumstance is illustrated by a painting found at Pompeii in a wine-shop, representing a drinking-scene. There are four persons sitting on stools round a tripod table. The dress of two of the figures is remarkable for the hoods, which resemble those of the capotes worn by the Italian sailors and fishermen of the present day. They use cups made of horn instead of glasses, and, from their whole appearance, evidently belong to the lower orders. Above them are different sorts of eatables hung upon a row of pegs.

The *thermopolia*, which are spoken of in the article CALIDA, appear to have been the same as the *popinae*. Many of these *popinae* seem to have been little better than the *lupanaria* or brothels; whence Horace³ calls them *immundas popinas*. The wine-shop at Pompeii, where the painting described above was found, seems to have been a house of this description; for behind the shop there is an inner chamber painted with every species of indecency.⁴ The *ganææ*, which are sometimes mentioned in connexion with the *popinae*,⁵ were brothels, whence they are often classed with the *lustra*.⁶ Under the emperors many attempts were made to regulate the *popinae*, but apparently with little success. Tiberius forbade all cooked provisions to be sold in these shops;⁷ and Claudius commanded them to be shut up altogether.⁸ They appear, however, to have been soon opened again, if they were ever closed; for Nero commanded that nothing should be sold in them but different kinds of cooked pulse or vegetables;⁹ and an edict to the same effect was also published by Vespasian.¹⁰

All persons who kept inns, or houses of public entertainment of any kind, were held in low estimation, both among the Greeks and Romans.¹¹ They appear to have fully deserved the bad reputation which they possessed; for they were accustomed to cheat their customers by false weights and measures, and by all the means in their power, whence Horace calls them *perfidus*¹² and *malignus*.¹³

CAUSÆ PROBATIO. (*Vid.* CIVITAS.)

CAUSIA (*καυσία*), a hat with a broad brim, which was made of felt, and worn by the Macedonian

kings.¹ Its form is seen in the annexed figures, which are taken from a fictile vase, and from a

medal of Alexander I. of Macedon. The Romans adopted it from the Macedonians,² and more especially the Emperor Caracalla, who used to imitate Alexander the Great in his costume.³

CAUTIO, CAVERE. These words are of frequent occurrence in the Roman classical writers and jurists, and have a great variety of significations, according to the matter to which they refer. Their general signification is that of security given by one person to another, or security which one person obtains by the advice or assistance of another. The general term (cautio) is distributed into its species according to the particular kind of the security, which may be by *satisfactio*, by a *fidejussio*, and in various other ways. The general sense of the word cautio is accordingly modified by its adjuncts, as cautio *fidejussoria*, *pignoratitia*, or *hypothecaria*, and so on. Cautio is used to express both the security which a magistratus or a *judex* may require one party to give to another, which applies to cases where there is a matter in dispute of which a court has already cognizance; and also the security which is a matter of contract between parties not in litigation. The words cautio and cave are more particularly used in the latter sense.

If a thing is made a security from one person to another, the cautio becomes a matter of *pignus* or of *hypotheca*; if the cautio is the engagement of a surety on behalf of a principal, it is a cautio *fidejussoria*.⁴

The cautio was most frequently a writing, which expressed the object of the parties to it; accordingly, the word cautio came to signify both the instrument (*chirographum* or *instrumentum*) and the object which it was the purpose of the instrument to secure.⁵ Cicero⁶ uses the expression *cautio chirographi mei*. The phrase *cavere aliquid alicui* expressed the fact of one person giving security to another as to some particular thing or act.⁷

Ulpian⁸ divides the *prætoriae* stipulationes into three species, *judiciales*, *cationales*, *communes*; and he defines the *cationales* to be those which are equivalent to an action, and are a good ground for a new action, as the stipulationes *de legatis*, *tutela*, *ratam rem habere*, and *damnum infectum*. Cautiones then, which were a branch of stipulationes, were such contracts as would be ground of actions. The following examples will explain the passage of Ulpian.

In many cases a heres could not safely pay legacies, unless the legatee gave security (*cautio*) to refund in case the will under which he claimed should turn out to be bad.⁹ The Cautio Muciana was the engagement by which the heres bound himself to fulfil the conditions of his testator's will, or to give up the inheritance. The heres was also, in some cases, bound to give security for the payment of

legacies, or the legatee was entitled to the *Bonorum Possessio*. Tutores and curatores were required to give security (*satisfactio*) for the due administration of the property intrusted to them, unless the tutor was appointed by testament, or unless the curator was a *curator legitimus*.¹ A procurator who sued in the name of an absent party might be required to give security that the absent party would consent to be concluded by the act of his procurator;² this security was a species *satisfactionis*, included under the genus cautio.³ In the case of *damnum infectum*, the owner of the land or property threatened with the mischief might call for security on the person threatening the mischief.⁴

If a vendor sold a thing, it was usual for him to declare that he had a good title to it, and that, if any person recovered it from the purchaser by a better title, he would make it good to the purchaser; and in some cases the cautio was for double the value of the thing.⁵ This was, in fact, a warranty.

The word cautio was also applied to the release which a debtor obtained from his creditor on satisfying his demand: in this sense cautio is equivalent to a modern receipt; it is the debtor's security against the same demand being made a second time.⁶ Thus *cavere ab aliquo* signifies to obtain this kind of security. A person to whom the *usus fructus* of a thing was given might be required to give security that he would enjoy and use it properly, and not waste it.⁷

Cavere is also applied to express the professional advice and assistance of a lawyer to his client for his conduct in any legal matter.⁸

The word cavere and its derivatives are also used to express the provisions of a law by which anything is forbidden or ordered, as in the phrase "*Cautum est lege, principalibus constitutionibus*," &c. It is also used to express the words in a will by which a testator declares his wish that certain things should be done after his death. The preparation of the instruments of cautio was, of course, the business of a lawyer.

It is unnecessary to particularize farther the species of cautio, as they belong to their several heads in the law.

CE'ADAS or CAI'ADAS (κεάδας or καιάδας) was a deep cavern or chasm, like the *βάρανρον* at Athens, into which the Spartans were accustomed to thrust persons condemned to death.⁹

*CEBLE'PYRIS (κεβλήπις), a species of bird, mentioned by Aristophanes. It is probably, according to Adams, the Red-pole, or *Fringilla Linaria*, L.¹⁰

CEDIT DIES. (Vid. LEGATUM.)

*CEDRUS (κέδρος and κεδρίς), the Cedar, as we commonly translate it. According to the best botanical writers, however, the κέδρος of the Greeks and Cedrus of the Romans was a species of Juniper. The Cedar of Lebanon seems to have been but little known to the Greek and Roman writers. Theophrastus, according to Martyn, appears to speak of it in the ninth chapter of the fifth book of his History of Plants, where he says that the cedars grow to a great size in Syria, so large, in fact, that three men cannot encompass them. These large Syrian trees are probably the Cedars of Lebanon, which Martyn believes Theophrastus had only heard of, and which he took to be the same with the Lycian cedars, only larger; for in the twelfth chapter of the third book, where he de-

1. (Val. Max., v., 1, 4.—Paus., ap. Eustath. ad Il., ii., 121.)—2. (Plaut., Mil. Glor., IV., iv., 42.—Pers., I., iii., 75.—Antip. Thess. in Brunckii Analect., ii., 111.)—3. (Herodian, IV., viii., 5.)—4. (Dig. 37, tit. 6, s. 1, § 9.)—5. (Dig. 47, tit. 2, s. 27.)—6. (Ep. ad Fam., vii., 18.)—7. (Dig. 29, tit. 2, s. 97.)—8. (Dig. 46, tit. 5.)—9. (Dig. 5, tit. 3, s. 17.)

1. (Gaius, i., 199.)—2. (Id., iv., 99.)—3. (Dig. 46, tit. 8, s. 3, 13, 18, &c.)—4. (Cic., Top., 4.—Gaius, iv., 31.—Dig. 43, tit. 8, s. 5.)—5. (Dig. 21, tit. 2, s. 60.)—6. (Cic., Brut., 5.—Dig. 46, tit. 3, s. 89, § 1.)—7. (Dig. 7, tit. 2, § 1.)—8. (Cic., Ep. ad Fam., iii., 1; vii., 6.—Pro Muræna, c. 10.)—9. (Theophr., i., 134.—Strab., viii., p. 367.—Paus., iv., 18, § 4.—Suidas, s. v. βάρανρον, Καιάδας, Κεάδας.)—10. (Aristoph., Aves, 301.—Adams, Append., s. v.)

scribes the Cedar particularly, he says the leaves are like those of Juniper, but more prickly; and adds that the berries are much alike. The cedar described by Theophrastus, therefore, cannot, as Martyn thinks, be that of Lebanon, which bears cones, and not berries. He takes it rather for a sort of Juniper, called *Juniperus major bacca rufescente* by Bauhin, *Oxycedrus* by Parkinson, and *Oxycedrus Phœnicea* by Gerard.¹ Dioscorides² describes two species, of which the first, or large Cedar, is referred by Sprengel to the *Juniperus Phœnicea*, and the smaller to the *Juniperus communis*. Stackhouse, on the other hand, refers the common *κέδρος* of Theophrastus to the *Juniperus Oxycedrus*, and the *κεδρίς* to the *Juniperus Sabina*, or Savin. The Cedar of Lebanon, so celebrated in Scripture, is a Pine, and is hence named *Pinus Cedrus* by modern botanists. The *κεδρίς* of the medical authors is, according to Adams, the resin of the Juniper. Nicander calls it *κέδροιο ἀκυνθίς*.³

*CELASTRUM (*κῆλαστρον*), a species of plant, about which the botanical writers are much divided in opinion. Sprengel marks it, in the first edition of his R. H. H., as the *Ligustrum vulgare*, or Privet, and in the second as the *Ilex Aquifolium*, or Holly. Stackhouse calls it the *Celastrus*. Clusius and Bauhin are in favour of the *Rhamnus alaternus*, or ever-green Privet, an opinion which Billerbeck also espouses, and which probably is the true one.⁴

CECYPH'ALOS (*κεκρόφαλος*). (Vid. CALANTICA.)

CELERES, according to Livy,⁵ were three hundred Roman knights whom Romulus established as a body-guard; their functions are expressly stated by Dionysius of Halicarnassus.⁶ There can be little doubt but that the *celeres*, or "horsemen" (like the Greek *κέληρες*),⁷ were the patricians or burghers of Rome, the number 300 referring to the number of the patrician houses; "for," as Niebuhr remarks,⁸ "since the tribunate of the *celeres* is said to have been a magistracy and a priestly office, it is palpably absurd to regard it as the captaincy of a body-guard. If the kings had any such body-guard, it must assuredly have been formed out of the numerous clients residing on their demesnes." We know that the patrician tribes were identical with the six equestrian centuries founded by L. Tarquinius,⁹ and that they were incorporated as such in the centuries.¹⁰ It is obvious, therefore, that these *horsemen*, as a class, were the patricians in general, so called because they could keep horses or fought on horseback, and thus the name is identical with the later Latin term *equites*, and with the Greek *ἵππες, ἱππόδαμοι, ἱππεῖστας*.¹¹

CELLA. In its primary sense *cella* means a storeroom of any kind: "*Ubi quid conditum esse volabant, a celando cellam appellarunt*."¹² Of these there were various descriptions, which took their distinguishing denominations from the articles they contained; and among these the most important were: 1. *Penuaria* or *penaria*, "*ubi penus*,"¹³ where all the stores requisite for the daily use and consumption of the household were kept; ¹⁴ hence it is called by Plautus *promptuaria*.¹⁵ 2. *Olearia*, a repository for oil, for the peculiar properties of which consult Vitruvius,¹⁶ Cato,¹⁷ Palladius,¹⁸ and Columella.¹⁹ 3. *Vinaria*, a wine-store, which was situ-

ate at the top of the house.¹ Our expression 's bring up' the wine, the Latin one is bring down.² The Romans had no such places as wine cellars, in the notion conveyed by our term, that is, underground cells; for when the wine had not sufficient body to be kept in the *cella vinaria*, it was put into casks or pig skins, which were buried in the ground itself.³ For an account of the *cella vinaria*, consult Pliny,⁴ Vitruvius,⁵ and Columella.⁶

The slave to whom the charge of these stores was intrusted was called *cellarius*,⁷ or *promus*,⁸ or *condus*, "*quia promit quod conditum est*,"⁹ and sometimes *promus-condus* and *procurator peni*.¹⁰ This answers to our butler and housekeeper.

Any number of small rooms clustered together like the cells of a honeycomb¹¹ were also termed *cella*; hence the dormitories of slaves and menials are called *cella*,¹² and *cella familiarica*,¹³ in distinction to a bedchamber, which was *cubiculum*. Thus a sleeping-room at a public house is also termed *cella*.¹⁴ For the same reason, the dens in a brothel are *cella*.¹⁵ Each female occupied one to herself,¹⁶ over which her name was inscribed;¹⁷ hence *cella inscripta* means a brothel.¹⁸ *Cella ostiarii*,¹⁹ or *janitoris*,²⁰ is the porter's lodge.

In the baths, the *cella caldaria*, *tepidaria*, and *frigidaria* were those which contained respectively the warm, tepid, and cold bath. (Vid. BATHS.)

The interior of a temple, that is, the part included within the outside shell, *σῆκος* (see the lower woodcut in ANTÆ), was also called *cella*. There was sometimes more than one *cella* within the same peristyle or under the same roof; in which case they were either turned back to back, as in the Temple of Rome and Venus, built by Hadrian on the Via Sacra, the remains of which are still visible, or parallel to each other, as in the Temple of Jupiter Optimus Maximus in the Capitol. In such instances, each cell took the name of the deity whose statue it contained, as *Cella Jovis*, *Cella Junonis*, *Cella Minervæ*. (Vid. CAPITOLIUM.)

CELLARIUS. (Vid. CELLA.)

*CENCHRIS (*κεγχρίς*), a species of Hawk, answering to the modern Kestrel, or *Falco tinnunculus*. (Vid. HIERAX.)

*CENCHROS (*κέγχρος*), I. A species of Grain, the same, according to the best authorities, with *Panicum miliaceum*, or Millet.²¹ — II. Called also CENCHRI'NES (*κεγχρίνης*), a species of Serpent, which some confound with the *ἀκοντίας*, but which Gesner regards as a different kind. "It is more probable, however," says Adams, "that both were mere varieties of the *Coluber berus*, or Viper. I may mention here, moreover, that the *C. berus* and the *C. prester* are the only venomous serpents which we have in Great Britain, and that many naturalists hold them to be varieties of the same species."²²

CENOTAPHIUM. A cenotaph (*κενός and τάφος*) was an empty or honorary tomb, erected as a memorial of a person whose body was buried elsewhere, or not found for burial at all.

Thus Virgil speaks of a "tumulus inanis" in honour of Hector, "*Mansque vocabat Hectorum ad tumulum, viridi quem cespitis inanem; Et geminas, causam lacrymis, sacraverat aras*."²³

Cenotaphia were considered as *religiosa*, and therefore *divini juris*, till a rescript of the emperors Antoninus and Verus, the *divi fratres*, pronounced them not to be so.¹

CENSORES, two magistrates of high rank in the Roman Republic. They were first created B.C. 442, and were a remarkable feature in the constitution then established. They were elected by the *curiæ* and confirmed by the centuries; and thus were not merely elected from, but also by the patricians. At first they held their office for five years; but Mamercus Æmilius, the dictator, passed a law in B.C. 433, by which the duration of the office was limited to 18 months, the election still taking place, as before, at intervals of five years, so that the office was vacant for three years and a half at a time. The censors were always patricians of consular rank till B.C. 350, when a plebeian, C. Marcus Rutilius, who had also been the first plebeian dictator, was elected to the office. Subsequently, the censors might be, both of them, plebeians, and even persons who had not filled the consulship or prætorship might be elected to this magistracy; but this was very uncommon,² and was put a stop to after the second Punic war. The censorship was merged in the imperial rank. The duties of the censors were, at the first, to register the citizens according to their orders, to take account of the property and revenues of the state and of the public works, and to keep the land-tax rolls. In fact, they constituted an exchequer-chamber and a board of works.³ It was the discretionary power with which they were invested that gave them their high dignity and influence. As they drew up the lists of Roman citizens, according to their distribution as senators, equites, members of tribes, and ærarians, and as their lists were the sole evidence of a man's position in the state, it of course rested with them to decide all questions relative to a man's political rank. And thus we find that, in effect, they could, if they saw just cause, strike a senator off the list, deprive an eques of his horse, or degrade a citizen to the rank of the ærarians. The offences which rendered a man liable to these degradations were, ill treatment of his family, extravagance, following a degrading profession, or not properly attending to his own, or having incurred a *judicium turpe*.⁴ The power of the censors even extended to a man's property. Every citizen was obliged to give in to the censors a minute and detailed account of his property, which was taken down in writing by the notaries, so that, as Niebuhr says, there must have been an enormous quantity of such documents and reports in the register-office.⁵ But the censors had unlimited power in estimating the value or fixing the taxable capital: thus cases are known in which they rated the taxable value of some articles of property, as high-priced slaves, at ten times the purchase-money.⁶ And they not only did that, but even fixed the rate to be levied upon it. The censors also managed the farming of the *vectigalia* or standing revenues, including the state monopoly on salt, the price of which was fixed by them.⁷ They also agreed with contractors for the necessary repairs of the public buildings and roads. The care of the temples, &c., devolved on the prætor urbanus when there was no censor; but there does not appear to be any reason for concluding, with Niebuhr,⁸ that the offices of prætor and censor were ever combined. The censor had all the ensigns of consular dignity except the lictors, and wore a robe entirely scarlet.⁹ If a censor died in office, he was

not replaced, and his colleague resigned.¹ A censor's funeral was always very magnificent.² (For farther details with regard to the censors, see Niebuhr, *Hist. Rom.*, ii., p. 324, &c., and Arnold, *Hist. Rom.*, i., p. 346, &c.)

CENSUS, or register of persons and property, constituted a man's actual claim to the rights of citizenship both in Greece and at Rome.

1. The CENSUS at Athens seems to date from the constitution of Solon. This legislator made four classes (*τιμήματα, τέλη*). 1. *Pentacosomedimni*, or those who received 500 measures, dry or liquid, from their lands. 2. *Knights*, who had an income of 300 measures. 3. *Zeugitæ*, whose income was 150 measures. 4. *Thetes*, or *capite censi*. The word *τίμημα*, as used in the orators, means the valuation of the property; i. e., not the capital itself, but the *taxable capital*.³ Now if the valuation of the *income* was that given in the distribution of the classes just mentioned, it is not difficult to get at the valuation of the capital implied. Solon reckoned the dry measure, or *medimnus*, at a drachma.⁴ Now it is probable that the income was reckoned at a twelfth part of the value of the land, on the same principle which originated the *unciarium fenus*, or 8½ per cent. at Rome;⁵ if so, the landed property of a *pentacosimedimnus* was reckoned at a talent, or 12×500=6000 drachmas; that of a *knight* at 12×300=3600 dr.; and that of a *zeugitæ* at 12×150=1800 drachmas. In the first class the whole estate was considered as taxable capital; but in the second only ½ths, or 3000 drachmas; and in the third, ¼ths, or 1000 drachmas; to which Pollux alludes when he says, in his blundering way, that the first class expended one talent on the public account; the second, 30 minas; the third, 10 minas; and the thetes, nothing. In order to settle in what class a man should be entered on the register (*ἀπογραφή*), he returned a valuation of his property, subject, perhaps, to the check of a counter-valuation (*ὑποτίμησις*). The valuation was made very frequently; in some states, every year; in others, every two or four years.⁶ The censors, who kept the register at Athens, were probably at first the *naucrari*, but afterward the *demarches* performed the office of censor. Although this institution of Solon's seems particularly calculated for the imposition of the property-tax (*εἰσφορά*), Thucydides,⁷ speaking of the year 428 B.C., says that it was then that the Athenians first raised a property-tax of 200 talents. It seems, however, that the amount of the tax constituted its singularity; for certainly property-taxes were common not only in Athens, but in the rest of Greece, before the Peloponnesian war,⁸ and Antipho expressly says that he contributed to *many* of them.⁹ In the archonship of Nausinicus (Olym. 100, 3; B.C. 378) a new valuation of property took place, and classes (*συμμορίαι*) were introduced expressly for the property-taxes. The nature of these classes, our knowledge of which principally depends on a note of Ulpian,¹⁰ is involved in considerable obscurity.¹¹ Thus much, however, may be stated, that they consisted of 1200 individuals, 120 from each of the ten tribes, who, by way of a sort of liturgy, advanced the money for others liable to the tax, and got it from them by the ordinary legal processes. In a similar manner classes were subsequently formed for the discharge of another and more serious liturgy, the trierarchy; and the strategæ, who nominated the trierarchs, had also to form

the symmoriae for the property taxes.¹ What we have here said of the census at Athens renders it unnecessary to speak of the similar registrations in other states of Greece. When the constitution essentially depended on this distribution according to property, it was called a timocracy, or aristocracy of property (τιμοκρατία, ἀπὸ τιμημάτων πολιτεία).

II. The Census at Rome took place every five years, and was attended by a general purification, whence this period of time got the name of a *lustrum*. The census was performed in the Campus, where the censors sat in their curule chairs, and cited the people to appear before them, and give an account of their property. When the census was finished, one of the censors offered an expiatory sacrifice (*lustrum condidit*) of swine, sheep, and bullocks (hence called *suovetaurilia*), by which the city was supposed to be purified. The census originated, like that of Athens, in a distribution of the citizens into classes at the comitia centuriata, which distribution is attributed to Servius Tullius. (*Vid. Comitium*.) But this old constitution was never completely established, was very soon overthrown, and only gradually and partially restored. There was a considerable difference between the modes of valuation at Rome and Athens. In the latter city, as we have seen, the whole property was valued; but the taxable capital seldom amounted to more than a part of it, being always much smaller in the case of the poorer classes. Whereas at Rome only *res mancipi* were taken into the account, estates in the public domains not being returned to the censors,² and some sorts of property were rated at many times their value; nor was any favour shown to the poorer classes when their property, however small, came within the limits of taxation. The numbers of persons included in the censuses which have come down to us, comprehend not only the Roman citizens, but also all the persons connected with Rome in the relation of isopolity; they refer, however, only to those of man's estate, or able to bear arms.³

*CENTAUREA or -EUM (κενταύριον and -ις), the herb Centaury, so called from the Centaur Chiron, who was fabled to have been thereby cured of a wound accidentally inflicted by an arrow of Hercules.⁴ It was also, from this circumstance, styled *Chironia* and *Χείρωνος ῥίζα*.⁵ There are two kinds of Centaury, the greater and the less, which have no other similitude than in the bitterness of their taste. The less is also called *λυμαίνιον*,⁶ from its loving moist grounds. "It grows wild in England," says Martyn, "in many places, and is the best known. The greater is cultivated in gardens."⁷ The *κενταύριον μέγα* is referred by Sprengel and Matthioli to the *Centaurea Centaureum*, L., and *κ. μικρόν* to the *Erythraea Centaureum*, Pers. Stackhouse makes the *κ.* of Theophrastus to be the *Centaurea Centaureum*.⁸ The less is called in Greece, at the present day, *Θερμόχορτον*. Sibthorp found it everywhere in Greece in the level country.⁹

*CENTRISCUS (κεντρίσκος), a species of fish mentioned by Theophrastus. According to Willoughby, it was a species of *Gasterosteus*, called in English Stickleback or Barnstickle.¹⁰

*CENTRITE (κεντρίτη), a species of fish mentioned by Ælian, and called *κεντρίνη* by Athenæus and Oppian. It is the *Squalus Centrina*, in Italian *Pesce porco*. Rondelet says it has some resemblance to a sow, and delights in filth.¹¹

*CENTROMYRRHINE (κεντρομυρρίνη), the *Ruscus Aculeatus*, common Knee-holly, or Butcher's Broom. The Greek name means "prickly myrtle." Another appellation is *Ozmyrsine* (ὄζυμυρσίνη), or "sharp-pointed myrtle." Dioscorides, again, describes this same plant under the name of *μυρσίνη ἄγρία*, or "wild myrtle." He says the leaves are like those of myrtle, but broader, pointed like a spear, and sharp. The fruit is round, growing on the middle of the leaf, red when ripe, and having a bony kernel. Many stalks rise from the same root, a cubit high, bending, hard to break, and full of leaves. The root is like that of dog's grass, of a sour taste, and bitterish. "The Butcher's Broom is so called," observes Martyn, "because our butchers make use of it to sweep their stalls. It grows in woods and bushy places. In Italy they frequently make brooms of it."¹²

CENTUMVIRI. The origin, constitution, and powers of the court of centumviri are exceedingly obscure, and it seems almost impossible to combine and reconcile the various passages of Roman writers, so as to present a satisfactory view of this subject. The essay of Hollweg, *Ueber die Competenz des Centumviralgerichts*,² and the essay of Tiggerström, *De Judicibus apud Romanos*, contain all the authorities on this matter; but these two essays by no means agree in all their conclusions.

The centumviri were judges, who resembled other judges in this respect, that they decided cases under the authority of a magistratus; but they differed from other judges in being a definite body or collegium. This collegium seems to have been divided into four parts, each of which sometimes sat by itself. The origin of the court is unknown; but it is certainly prior to the Lex Æbutia, which put an end to the legis actiones, except in the matter of *Damnum Infectum*, and in the causæ centumviraes.³ According to Festus,⁴ three were chosen out of each tribe, and, consequently, the whole number out of the 35 tribes would be 105, who in round numbers were called the hundred men; and as there were not 35 tribes till 241 B.C., it has been sometimes inferred that to this time we must assign the origin of the centumviri. But, as it has been remarked by Hollweg, we cannot altogether rely on the authority of Festus, and the conclusion so drawn from his statement is by no means necessary. If the centumviri were chosen from the tribes, this seems a strong presumption in favour of the high antiquity of the court.

The proceedings in this court, in civil matters, were per legis actionem, and by the sacramentum. The process here, as in the other judicia privata, consisted of two parts, *in jure*, or before the prætor, and *in judicio*, or before the centumviri. The prætor, however, did not instruct the centumviri by the formula, as in other cases, which is farther explained by the fact that the prætor presided in the judicia centumviralia.⁵

It seems pretty clear that the powers of the centumviri were limited to Rome, or, at any rate, to Italy. Hollweg maintains that their powers were also confined to civil matters; but it is impossible to reconcile this opinion with some passages,⁶ from which it appears that crimina came under their cognizance. The substitution of *aut* for *ut* in the passage of Quintilian,⁷ even if supported by good MSS., as Hollweg affirms, can hardly be defended.

The civil matters which came under the cognizance of this court are not completely ascertained.

1. (Dionosth., ad Boet., p. 907, l. 1.)—2. (Niebuhr, Hist. Rom., i., p. 446.)—3. (Vid. Niebuhr, Hist. Rom., ii., p. 76.)—4. (Plin., H. N., xxv., 6.)—5. (Nicand., Ther., 500.)—6. (Dioscor., iii., 8, 9.)—7. (ad Virg., Georg., iv., 270.)—8. (Adams, Append., s. v.)—9. (Billerbeck, Flora Classica, p. 52.)—10. (Adams, Append., s. v.)—11. (Ælian, N. A., i., 55; ii., 8.—Adams, Append., s. v.)

1. (Theophrast., H. P., iii., 17.—Martyn, ad Virg., Georg., ii., 413.)—2. (Zeitschrift, &c., v., 358.)—3. (Gaius, iv., 31.—Jell., xvi., 10.)—4. (s. v. Centumviralia Judicia.)—5. (Plin., Epist., v., 21.)—6. (Ovid, Trist., ii., 91.—Phædr., III., x., 35, &c.)—7. (Inst., iv., 1, 57.)

Many of them (though we have no reason for saying all of them) are enumerated by Cicero in a well-known passage.¹ Hollweg mentions that certain matters only came under their cognizance, and that other matters were not within their cognizance; and, farther, that such matters as were within their cognizance were also within the cognizance of a single judex. This writer farther asserts that actiones in rem, or vindicationes of the old civil law (with the exception, however, of actiones præjudiciales or status questiones), could alone be brought before the centumviri; and that neither a personal action, one arising from contract or delict, nor a status questio, is ever mentioned as a causa centumviralis. It was the practice to set up a spear in the place where the centumviri were sitting, and, accordingly, the word hasta, or hasta centumviralis, is sometimes used as equivalent to the words *judicium centumvirale*.² The spear was a symbol of quiritarian ownership: for "a man was considered to have the best title to that which he took in war, and, accordingly, a spear is set up in the centumviralia iudicia."³ Such was the explanation of the Roman jurists of the origin of an ancient custom, from which, it is argued, it may at least be inferred, that the centumviri had properly to decide matters relating to quiritarian ownership, and questions connected therewith.

It has been already said that the matters which belonged to the cognizance of the centumviri might also be brought before a judex; but it is conjectured by Hollweg that this was not the case till after the passing of the *Æbutia Lex*. He considers that the court of the centumviri was established in early times, for the special purpose of deciding questions of quiritarian ownership; and the importance of such questions is apparent, when we consider that the Roman citizens were rated according to their quiritarian property; that on their rating depended their class and century, and, consequently, their share of power in the public assemblies. No private judex could decide on a right which might thus indirectly affect the caput of a Roman citizen, but only a tribunal elected out of all the tribes. Consistently with this hypothesis, we find not only the rei vindicatio within the jurisdiction of the centumviri, but also the hereditatis petitio and actio confessoria. Hollweg is of opinion that, with the *Æbutia Lex*, a new epoch in the history of the centumviri commences; the legis actiones were abolished, and the formula (*vid. Actio*) was introduced, excepting, however, as to the *causa centumviralis*.⁴ The formula is in its nature adapted only to personal actions, but it appears that it was also adapted by a legal device to vindicationes; and Hollweg attributes this to the *Æbutia Lex*, by which he considers that the twofold process was introduced: 1. per legis actionem apud centumviro; 2. per formulam or per sponsionem before a judex. Thus two modes of procedure in the case of actiones in rem were established, and such actions were no longer exclusively within the jurisdiction of the centumviri.

Under Augustus, according to Hollweg, the functions of the centumviri were so far modified, that the more important vindicationes were put under the cognizance of the centumviri, and the less important were determined per sponsionem and before a judex. Under this emperor the court also resumed its former dignity and importance.⁵

The younger Pliny, who practised in this court,⁶ makes frequent allusions to it in his letters.

The foregoing notice is founded on Hollweg's ingenious essay; his opinions on some points, however, are hardly established by authorities. Those who desire to investigate this exceedingly obscure matter may compare the two essays cited at the head of this article.

CENTURIA. (*Vid. CENTURIO, COMITIUM.*)

CENTURIO, the commander of a company of infantry, varying in number with the legion. If Festus may be trusted, the earlier form was *centurionus*, like *decurio*, *decurionus*. Quintilian¹ tells us that the form *centurio* was found on ancient inscriptions, even in his own times.

The century was a military division, corresponding to the civil one *curia*; the *centurio* of the one answered to the *curio* of the other. From analogy, we are led to conclude that the century originally consisted of thirty men, and Niebuhr thinks that the influence of this favoured number may be traced in the ancient array of the Roman army. In later times the legion (not including the *velites*) was composed of thirty maniples or sixty centuries:² as its strength varied from about three to six thousand, the numbers of a century would vary in proportion from about fifty to a hundred.

The duties of the centurion were chiefly confined to the regulations of his own corps, and the care of the watch.³ He had the power of granting *vacationes munerum*, remission of service to the private soldiers, for a sum of money. The exactions on this plea were one cause of the sedition in the army of Blæsus, mentioned by Tacitus.⁴ The *vitis* was the badge of office with which the centurion punished his men.⁵ The short tunic, as Quintilian⁶ seems to imply, was another mark of distinction: he was also known by letters on the crest of the helmet.⁷ The following woodcut, taken from a bas-relief at Rome, represents a centurio with the *vitis* in one of his hands.

The centurions were usually elected by the military tribunes,⁸ subject, probably, to the confirmation of the consul. There was a time, according to Polybius,⁹ when desert was the only path to military rank; but, under the emperors, centurionships were given away almost entirely by interest or personal friendship. The father in Juvenal¹⁰ awakes his son with *Vilem posce libello*, "petition for the rank of centurion;" and Pliny¹¹ tells us that he had made a similar request for a friend of his own, "*Huic ego ordines impetraveram*."¹² Dio Cassius,¹³ when he makes Mæcenæ advise Augustus to fill up the senate, *ἐκ τῶν ἀπ' ἀρχῆς ἐκατονταρχήσαντων*, seems to imply that some were appointed to this

1. (*De Orat.*, i., 38.)—2. (*Suet.*, *Octav.*, 36.—*Quintil.*, *Inst.*, v., 2, § 1.)—3. (*Gaius*, iv., 16.)—4. (*Gaius*, iv., 30, 31.—*Gell.*, xvi., 10.)—5. (*Dial. De Caus. Corrupt. Elog.*, c. 38.)—6. (*Ep.*, ii., 14.)

1. (i., 5, 20.)—2. (*Tacit.*, *Ann.*, i., 32.)—3. (*Tacit.*, *Ann.*, xv, 30.)—4. (*Ann.*, i., 17.)—5. (*Juv.*, *Sat.*, viii., 247.—*Plin.*, *H. N.*, xiv., 1.)—6. (xi., 139.)—7. (*Veget.*, ii., 13.)—8. (*Liv.*, xlii., 24.)—9. (vi., 24.)—10. (*Sat.*, xiv., 193.)—11. (*Epist.*, vi., 25.)—12. (*Compare Vegetius*, ii., 3.)—13. (iii., p. 481, c.)

rank at once, without previously serving in a lower capacity.

Polybius, in the fragments of the 6th book, has left an accurate account of the election of centurions. "From each of the divisions of the legion," i. e., hastati, principes, triarii, "they elect ten men in order of merit to command in their own division. After this, a second election of a like number takes place, in all sixty, who are called centurions (*ραξι-αρχοι*, i. e., *ordinum ductores*). The centurions of the first election usually command the right of the maniple; but if either of the two is absent, the whole command of the maniple devolves on the other. All of them elect their own *uragi* (*optiones*), and two standard-bearers for each maniple.¹ He who is chosen first of all is admitted to the councils of the general (*primipilus*)."

From the above passage (which is abridged in the translation), it appears that the centurion was first chosen from his own division. He might, indeed, rise from commanding the left of the maniple to command the right, or to a higher maniple, and so on, from cohort to cohort, until the first centurion of the *principes* became *primipilus*;² but it was only extraordinary service which could raise him at once to the higher rank. Thus Livy,³ "*Hic me imperator dignum judicavit, cui primum hastatum prioris centuriæ assignaret*," i. e., "appointed me to be first centurion (*sc. of the right century*) in the first maniple of hastati."

The *optiones*, according to Festus, were originally called *accensi*: they were the lieutenants of the centurion (probably the same with the *secenturiones* of Livy); and, according to Vegetius,⁴ his deputies during illness or absence. Festus confirms the account of Polybius, that the *optiones* were appointed by their centurions, and says that the name was given them "ex quo tempore quem velint permissum est centurionibus optare."

The *primipilus* was the first centurion of the first maniple of the triarii, also called "princeps centurionum," *primi pili centurio*.⁵ He was intrusted with the care of the eagle,⁶ and had the right of attending the councils of the general.

"*Ut locupletem aquilam tibi sexagesimus annus Afferat*,"

says Juvenal, hyperbolically (for military service expired with the fiftieth year), intimating that the rewards were large for those who could wait for promotion. The *primipili* who were honourably discharged were called *primipilares*.

The pay of the centurion was double that of an ordinary soldier. In the time of Polybius,⁷ the latter was about ten denarii, or seven shillings and a penny per month, besides food and clothing. Under Domitian we find it increased above tenfold. Caligula cut down the pensions of retired centurions to six thousand sesterces, or 45l. 17s. 6d., probably about one half.⁸

*CEPA. (*Ἰδ. CΕΡΡΑ*.)

*CEPÆA (*κηπάλα*), a species of plant, which Stephens seeks to identify with the Water Purslain, but which Sprengel holds to be the same with the *Sedum Cepæa*, one of the Houseleek tribe. In this latter opinion Billerbeck coincides. Some, however, have supposed the Cepæa to be the *Anagallis aquatica* (*Veronica anagallis*), or Water Speedwell.⁹ The Cepæa is called *κρομμύον* by the modern Greeks.¹⁰

*CEPHALUS (*κέφαλος*), the Mullet. Linnæus and several of his successors have confounded all

the European mullets under a single species, then *Mugil Cephalus*. According to this view of the subject, the *χέλλων*, *νήστις*, *μύζινος*, and *φέρατος* of Athenæus¹ must have been merely varieties of it. Cuvier, however, admits several species, placing the *M. Cephalus*, or common Mullet, at the head. "The genus *Mugil*," observes Griffith, "is supposed to derive its name from the contraction of two Latin words signifying 'very agile' (*multum agilis*). The hearing of the common Mullet is very fine, as has been noticed by Aristotle. It appears to be of a stupid character, a fact which was known in the time of Pliny, since that author tells us that there is something ludicrous in the disposition of the mullets, for if they are afraid they conceal their heads, and thus imagine that they are entirely withdrawn from the observation of their enemies. The ancients had the flesh of the Mullet in great request, and the consumption of it is still very considerable in most of the countries of Europe. According to Athenæus, those mullets were formerly in very high esteem which were taken in the neighbourhood of Sinope and Abdera; while, as Paulus Jovius informs us, those were very little prized which had lived in the salt marsh of Orbitello, in Tuscany, in the lagoons of Ferrara and Venice, in those of Padua and Chiozzi, and such as came from the neighbourhood of Commachio and Ravenna. All these places, in fact, are marshy, and the streams by which they are watered are brackish, and communicate to the fish which they support the odour and the flavour of the mud."² The ancients believed the Mullet to be a very salacious kind of fish, which circumstance may, perhaps, have given rise to the custom alluded to by Juvenal.³

*CEPHEN (*κηφόν*), the Drone, or male Bee. The opinion that the male bee and drone were identical has been maintained by some of the ancient naturalists also, but was not generally received. For a full exposition of the ancient opinions on this subject, see Aldrovandus.⁴

*CEP'PHOS (*κέπφος*), a species of Bird. Erasmus and others take it for the Gull or Sea-mew; but, as Adams remarks, Aristotle distinguishes between it and the *λάρος*. It may, however, as the latter thinks, have been the species of Gull called Dunge-horn, or *Larus parasiticus*, L. Ray makes it the *Cataracta cephus*.⁵

*CERACHATES (*κηραχάτης*), an agate of the colour of wax (*κηρός*), mentioned by Pliny. (*Ἰδ. ΑCHATES*.)

*CERASTES (*κεραστής*), the Horned Serpent, so called, according to Isidorus, because it has horns on its head like those of a ram. Dr. Harris thinks that it was a serpent of the viper kind. It is the *Shephephen* of the Hebrews. "Sprengel," remarks Adams, "holds it to be the same as the Hæmorrius, referring both to the *Coluber Cerastes*, L.; and, from the resemblance of the effects produced by the sting of the Hæmorrius, and of the Cerastes, as described by Dioscorides, Aëtius, and Paulus Ægineta, I am disposed to adopt this opinion, although unsupported by the other authorities." (*Ἰδ. ΑRMORRHUS*.)⁶

*CERASUS (*κέρασος*), the Cherry-tree, or *Prunus Cerasus*, L. According to some authorities, it derived its name from the city of Cerasus in Pontus, where it grew very abundantly;⁷ while others make the city to have been called after the tree.⁸ Lucullus, the Roman commander, is said

1. (*Ἰδ. Liv.*, viii., 8.)—2. (*Veget.*, ii., 8.)—3. (*xl.*, 34.)—4. (*ii.*, 7.)—5. (*Liv.*, i., 27.)—6. (*Juv.*, Sat., xiv., 197.)—7. (*Polyb.*, vi., 37.)—8. (*Suet.*, Calig., 44.)—9. (*Dioscor.*, iii., 157.—Alston, *Mat. Med.*—Adams, *Append.*, s. v.)—10. (*Billerbeck*, *Flora Classica*, p. 115.)

1. (*vii.*, c. 77, seqq.)—2. (Griffith's Cuvier, vol. x., p. 365.)—3. (*Sat.*, x., 317.)—4. (Adams, *Append.*, s. v.)—5. (Aristot., *II.*, A., viii., 5.—Adams, *Append.*, s. v.)—6. (Isidor., *Orig.*, xii., 4, 18.—Harris, *Nat. Hist.* of Bible, p. 1.—Adams, *Append.*, s. v.)—7. (*Serv.* ad Virg., *Georg.*, ii., 18.—Isidor., *Orig.*, xvii., 7, 16.—Plin., *H. N.*, xv., 25.)—8. (Broukhus. ad Propert., iv., 2, 15.)

to have first brought the Cherry-tree into Italy,¹ and hence the terms *ccrasus* and *ccrasum* (the latter signifying the fruit) were introduced into the Roman tongue. Servius, indeed, says² that cherries were known before this in Italy; that they were of an inferior quality, and were called *corna*; and that, subsequently, this name was changed into *corna-cerasa*. Pliny, on the other hand, expressly denies that cherries were known in Italy before the time of Lucullus.³ In Greece, however, they were known at a much earlier period, having been described by Theophrastus⁴ and the Siphnian Diphylus.⁵ This latter writer, who is quoted by Athenæus, speaks of cherries as being stomachic, though not very nutritive. He makes the very red kind, and another called the Milesian, to have been the best, and to have been also good diuretics. Pliny enumerates various species of cherries, such as the Apronian, of a very red colour; the Lutatian, of a very dark hue; the round or Cæcilian; and the Junian, of an agreeable flavour, but so tender that they had to be eaten on the spot, not bearing transportation to any distance from the parent tree. The best kind of all, however, were the Duracinian, called in Campania the Plinian. The Cherry-tree could never be acclimated in Egypt.⁶ According to modern travellers, the hills near the site of ancient Cerasus are still covered with cherry-trees, growing wild.⁷

*CERATIA (κεράτια), the Carob-tree, or *Ceratonia siliqua*. "Horace," observes Adams, "speaks of Carob-nuts as being an inferior kind of food; and so also Juvenal and Persius. It has been conjectured that it was upon Carobs, and not upon Locusts, that John the Baptist fed in the wilderness. This point is discussed with great learning by Olaus Celsus, in his *Hierobotanicon*. To me it appears that the generally received opinion is the more probable one in this case."⁸

*CERAUNION (κεραύνιον), a variety of the Truffle, or *Tuber Cibarium*.⁹

*CERCIS (κερκίς), according to Stackhouse, the Judas-tree, or *Cercis siliquastrum*. Schneider, however, rather inclines to the Aspen-tree, or *Populus tremula*.¹⁰

*CERCOPITHECUS (κερκοπῖθηκος), a species of Monkey, with a long tail, from which circumstance the Greek name has originated (κερκος, "a tail," and πῖθηκος, "a monkey").¹¹ Pliny describes the animal as having a black head, a hairy covering resembling that of an ass, and a cry different from that of other apes. Hardouin refers it to the Marmot, but this is very improbable. Cuvier¹² states, that among the monkeys in India there are some with long tails, grayish hair, and the face black; as, for example, the *Simia entellus* and the *Simia faunus*. None, however, are found, according to him, in this same country with grayish hair, and the whole head black.¹³ On the other hand, Wilkinson¹⁴ states that Pliny's description of the Cercopithecus, with a black head, accords with one species of monkey still found in Ethiopia. The Cercopithecus was worshipped, according to Juvenal,¹⁵ in Thebes, the old Egyptian capital, and, as Wilkinson states, would seem to have been embalmed, not only in that city, but also in other places in Egypt. It was frequently represented as an ornament in necklaces, in common with other animals, flowers, and fanciful devices; and the neck of a bot-

tle was sometimes decorated with two sitting monkeys.

CEREA'LIA. This name was given to a festival celebrated at Rome in honour of Ceres, whose wanderings in search of her lost daughter Proserpine were represented by women, clothed in white, running about with lighted torches.¹ During its continuance, games were celebrated in the Circus Maximus,² the spectators of which appeared in white;³ but on any occasion of public mourning, the games and festivals were not celebrated at all, as the matrons could not appear at them except in white.⁴ The day of the Cerealia is doubtful; some think it was the ides, or 13th of April; others the 7th of the same month.⁵

CEREVISIA, CERVISIA (ζῆθος), ale or beer, was almost or altogether unknown to the ancient, as it is to the modern, inhabitants of Greece and Italy. But it was used very generally by the surrounding nations, whose soil and climate were less favourable to the growth of vines (*in Gallia, aliisque provinciis*).⁶ According to Herodotus,⁷ the Egyptians commonly drank "barley-wine," to which custom Æschylus alludes (*ἐκ κριθῶν μέθυ*).⁸ Pelusiæ *pocula zythi*.⁹ Diodorus Siculus¹⁰ says that the Egyptian beer was nearly equal to wine in strength and flavour. The Iberians, the Thracians, and the people in the north of Asia Minor, instead of drinking their ale or beer out of cups, placed it before them in a large bowl or vase (*κρατῆρ*), which was sometimes of gold or silver. This being full to the brim with the grains as well as the fermented liquor, the guests, when they pledged one another, drank together out of the same bowl by stooping down to it; although, when this token of friendship was not intended, they adopted the more refined method of sucking up the fluid through tubes of cane.¹¹ The Suevi, and other northern nations, offered to their gods libations of beer, and expected that to drink it in the presence of Odin would be among the delights of Valhalla.¹² Βρῦτον, one of the names for beer,¹³ seems to be an ancient passive participle, from the root signifying to *brev*.

"For an account of the ancient Ales," says Adams, "consult Zosimus Panopolita, *de Zythorum confectione* (Salisbech, 1814, ed. Gruner). The word ζῆθος is derived from ζῆω, *ferveo*. Ale is called οἶνος κριθίνος and οἶνος ἐκ κριθῶν by Herodotus and Athenæus; πίνων by Aristotle; βρῦτον by Theophrastus, Æschylus, Sophocles, &c.; φούκας by Symeon Seth; but its first and most ancient name was ζῆθος or ζῆθιον. Various kinds of Ale are mentioned by ancient authors: 1. The *Zythus Hordeaceus*, or Ale from barley; of which the πίνων, βρῦτον, the *Curmi*, *Curma*, *Corma*, and *Curmon*, mentioned by Sulpicius and Dioscorides; the *Cerevisia*, a term of Celtic origin, applied to an ale used by the Gauls (compare the Welsh *cru*); and the φούκας of Seth; the *Alfoca* and *Fuca* of the Arabs, noticed by Symeon Seth, Rhases, and Haly Abbas, are only varieties.—2. The *Zythus triticeus*, or Ale from wheat. To this belong the *Calia* or *Ceria* of Pliny, Florus, and Orosius, and the *Corma* of Athenæus.¹⁴—3. The *Zythus succedaneus*, prepared from grain of all kinds, oats, millet, rice, panic, and spelt; also from services.¹⁵—4. The *Zythus Dizythium*, or Double Beer, called by Symeon Seth φούκας σὺν ἄρτυ.

1. (Isid., l. c.—Serv., l. c.—Plin., l. c.)—2. (l. c.)—3. (l. c.)—4. (H. P., iii., 15.)—5. (ap. Athen., ii., p. 51, a.)—6. (Plin., l. c.)—7. (Tournafort, *Voyage du Levant*, vol. iii., p. 65.)—8. μασι (*Phucus compositus*). This was a stronger kind of Ale, the composition of which is unknown. It does not appear that the ancients were acquainted with the use of hops (*humulus lupulus*) in the composition of their ales."¹

*CERINTHA or -E (κρινθή), a plant, which Stackhouse and Sprengel agree in identifying with the Honey-wort, or *Cerinthæ aspera*. Virgil speaks of it as "*Cerinthæ ignobile gramen*,"² which Martyn explains by saying that it grows common in Italy. It is, in fact, met everywhere in Italy and Sicily. Philargyrius says it derives its name from Cerinthus, a city of Bœotia, where it grew, in ancient times, in great plenty; the better derivation, however, is that which deduces it from κριον, "a honey-comb," because the flower abounds with a sweet juice like honey. The bees were very fond of it.³ It must not be confounded, however, with the κρίνθος or ἐριθάκη mentioned by Aristotle, which is nothing more than *bees'-bread*, being composed of the pollen of vegetables kneaded with honey. Botanical writers speak of two kinds of Cerintha, the Greater and the Less, the latter of which is the τηλέφειον of Dioscorides. Sibthorp found this in Greece in the cultivated grounds, and particularly among the vines in the spring, according in this with the account given by Dioscorides.⁴

CERNERE HEREDITATEM. (*Vid. HERES.*)

CEROMA (κήρυμα) was the oil mixed with wax (κηρός) with which wrestlers were anointed. After they had been anointed with this oil, they were covered with dust or a soft sand; whence Seneca⁵ says, "*A ceromate nos haphc (ἀφῆ) exceptit in crypta Neapolitana.*"

Ceroma also signified the place where wrestlers were anointed (the *elaethesium*⁶), and also, in later times, the place where they wrestled. This word is often used in connexion with *palaestra*,⁷ but we do not know in what respect these places differed. Seneca⁸ speaks of the ceroma as a place which the idle were accustomed to frequent, in order to see the gymnastic sports of boys (*qui in ceromate spectator puerorum rixantium sedet*). Arnobius⁹ informs us that the ceroma was under the protection of Mercury.

CERTAMINA. (*Vid. ATHLETÆ.*)

CERTI, INCERTI ACTIO, is a name which has been given by some modern writers, perhaps without good reason, to those actions in which a determinate or indeterminate sum, as the case may be, is mentioned in the formula (*condemnatio certæ pecuniæ vel incertæ*¹⁰).

CERYKEION (κηρύκειον). (*Vid. CADUCEUS.*)

CERU'CHI (κεροῦχι), the ropes which supported the yard of a ship, passing from it to the top of the

mast. The woodcut, p. 62, shows a vessel with two ceruchi. In other ancient monuments we see four, as in the annexed woodcut, taken from one of the pictures in the MS. of Virgil, which was given by Fulvius Ursinus to the Vatican library. (*Vid. ANTENNA, CARCHESUM.*)

*CERVUS, the Stag. (*Vid. ELAPHUS.*)

*CERUSSA (ψευδών), White Lead, or *Plumbi sub-carbonas*. The ancient Ceruse, like the modern, was prepared by exposing lead to the vapours of vinegar. The ancient process is minutely described by Theophrastus: "Lead is placed in earthen vessels over sharp vinegar, and after it has acquired a sort of rust of some thickness, which it commonly does in ten days, they open the vessels, and scrape from it a kind of mould. They then place the lead over the vinegar again, repeating again and again the same method of scraping it till it is wholly dissolved. What has been scraped off they then beat to powder and boil for a long time; and what at last subsides to the bottom of the vessel is the ceruse." Similar processes are described by Dioscorides and Vitruvius. "The substance spoken of by Pliny," remarks Dr. Moore, "as a native ceruse, found at Smyrna on the farm of Theodotus; appears to have been that greenish earth mentioned by Vitruvius as occurring in many places, but the best near Smyrna and called by the Greeks *θεοδότειον*, from the name of the person, Theodotus, upon whose farm it was first discovered. From the fact that this greenish earth was regarded as a sort of ceruse, we might infer that the ceruse of the ancients was not always of a very pure white."¹

*CERYLUS (κήρυλος), a species of Bird; the same, according to Suidas and Tzetzes,² with the male King-fisher. Elian and Moschus, however, as Adams remarks, appear to consider it a different bird. Gesner and Schneider are undecided.⁴

CERYX (κήρυξ). (*Vid. CADUCEUS, FETIOLIS.*)

*CERYX (κήρυξ), "A genus of *Testacea*, now placed," remarks Adams, "in the *Mollusca* by naturalists. It is the *Murex* of the older authorities. The two principal species are the *Buccinum* and *Purpura*, which Sprengel refers to the *Buccinum harpa*, L., and *B. lapillus*. Dr. Coray remarks, that the Greek writers often make no distinction between the κήρυξ and the πορφύρα, but modern naturalists distinguish between the *Murex* and the *Purpura*." (*Vid. MUREX.*)⁵

CESSIO BONORUM. (*Vid. BONORUM CESSIO.*)

CESSIO IN JURE. (*Vid. IN JURE CESSIO.*)

CESTIUS PONS. (*Vid. BRIDGE*, p. 174.)

*CESTRUM (κέστρον), I. a species of Betony. Sprengel, in his R. H. H., was inclined to make it the *Betonica officinalis*; but in his edition of Dioscorides he adopts the opinion of Dalechamp, who proposed the *Betonica alopecurus*. Dioscorides describes it as growing in very cold places, and Sibthorp accordingly found the *B. alopecurus* growing plentifully on Parnassus, one of the coldest regions of Livadia.⁶—II. (*Vid. PICTURA.*)

CESTUS was used in two significations:

I. CESTUS signified the thongs or bands of leather which were tied round the hands of boxers in order to render their blows more powerful. These bands of leather, which were called *μάντες*, or *μάντες πυκτικοί*, in Greek, were also frequently tied round the arm as high as the elbow, as is shown in the following statue of a boxer, the original of which is in the Louvre at Paris.⁷

The cestus was used by boxers from the earliest times. When Epieus and Euryalus, in the *Iliad*,⁸

I. (Do Lapid., 101.)—2. (Anc. Mineral., 69.)—3. (ad Ly cophr., 749.)—4. (Adams, Append., s. v.)—5. (Aristot., II. A. iv., 2, v., 10.—Adams, Append., s. v.)—6. (Dioscor., iv., l.—Adams, Append., s. v.)—7. (*Vid. Clarac, Musée d. Sculpt. Ant. et Mod.*, vol. iii., pl. 327, n. 2042.)—8. (xxiii., 684.)

1. (Adams, Append., s. v.)—2. (Georg., iv., 63.)—3. (Martyn ad Virg., l. c.)—4. (Billerbeck, Flora Classica, p. 40.)—5. (Ep., 37.)—6. (Vitruv., v., 11.)—7. (Plin., H. N., xxxv., 2.)—8. (De Brev. Vit., 12.)—9. (Adv. Gent., iii., 23.)—10. (Gaius, iv., 49, &c.)

prepare themselves for boxing, they put on their hands thongs made of ox-hide (*ἰμάντας ἐνμήτους βοῶς ἀγραυλίου*); but it should be recollected that the cestus, in heroic times, appears to have consisted merely of thongs of leather, and differed materially from the frightful weapons, loaded with lead and iron, which were used in later times. The different kinds of cestus were called by the Greeks in later times *μελιχαι*, *σπείραι βοεῖαι*, *σφαῖραι*, and *μύρμηκες*: of which the *μελιχαι* gave the softest blows, and the *μύρμηκες* the most severe. The *μελιχαι*, which were the most ancient, are described by Pausanias¹ as made of raw ox-hide cut into thin pieces, and joined in an ancient manner; they were tied under the hollow or palm of the hand, leaving the fingers uncovered. The athlete in the palaestra at Olympia used the *μελιχαι* in practising for the public games (*ἰμάντων τῶν μαλακωτέρων*²); but in the games themselves they used those which gave the severest blows.

The cestus used in later times in the public games was, as has been already remarked, a most formidable weapon. It was frequently covered with knots and nails, and loaded with lead and iron; whence Virgil,³ in speaking of it, says,

"Ingentia septem
Terga boum plumbo insuto ferroque rigebant."

Statius⁴ also speaks of *nigrantia plumbo tegmina*. Such weapons, in the hands of a trained boxer, must have frequently occasioned death. The *μύρμηκες* were, in fact, sometimes called *γυιοτόροι*, or "limb-breakers." Lucilius⁵ speaks of a boxer whose head had been so battered by the *μύρμηκες* as to resemble a sieve.

Figures with the cestus frequently occur in ancient monuments. They appear to have been of various forms, as appears by the following specimens, taken from ancient monuments, of which drawings are given by Fabretti.⁶

1 (viii., 40, § 3.)—2. (Paus., vi., 23, § 3.)—3. (Æn., v., 405.)—4. (Theb., vi., 732.)—5. (Anth., xi., 78, vol. ii., p. 344, ed. Jac.)—6. (De Column. Traj., p. 261.)

II. CESTUS also signified a band or tie of any kind;¹ but the term was more particularly applied to the zone or girdle of Venus, on which was represented everything that could awaken love.² When Juno wished to win the affections of Jupiter, she borrowed this cestus from Venus;³ and Venus herself employed it to captivate Mars.⁴

The scholiast on Statius⁵ says that the cestus was also the name of the marriage-girdle, which was given by the newly-married wife to her husband; whence unlawful marriages were called *incestæ*. This statement is confirmed by an inscription quoted by Pitiscus,⁶ in which a *matrona* dedicates her cestus to Venus.

*CETE (*κήτη*), a plural term of the neuter gender, of Greek origin, and applied generally to any very large kind of fishes. Adams, in his remarks upon the word *κήτος*, observes as follows: "This term is applied in a very general sense to all fishes of a very large size, such as the Whale, the Balance-fish, the Dolphin, the Porpoise, the great Tunnies, all sorts of Sharks, and also the Crocodile, the Hippopotamus, and some others which cannot be satisfactorily determined. It is deserving of remark in this place, that, although the ancients ranked the *Cetacea* with *Fishes*, they were aware that Whales, Seals, Dolphins, and some others are viviparous, and respire air like the *Mammalia*. With regard to the *ἡγέμων τῶν κητῶν*, which is described in a very graphic style by Oppian, the most probable opinion is that it was the *Gasterosteus ductor*, L., or Pilot-fish."⁷

CETRA or CÆTRA (*καίτρα*⁸), a target, *i. e.*, a small round shield, made of the hide of a quadruped.⁹ It formed part of the defensive armour of the Oscii.¹⁰ (Vid. AELIS.) It was also worn by the people of Spain and Mauritania.¹¹ By the latter people it was sometimes made from the skin of the elephant.¹² From these accounts, and from the distinct assertion of Tacitus¹³ that it was used by the Britons, we may with confidence identify the cetra with the target of the Scottish Highlanders, of which many specimens of considerable antiquity are still in existence. It is seen "covering the left arms"¹⁴ of the two accompanying figures, which are copied from a MS. of Prudentius, probably written in this country, and as early as the ninth century.¹⁵

It does not appear that the Romans ever wore the cetra. But Livy compares it to the *pelta* of the Greeks and Macedonians, which was also a small light shield (*cetratos, quos peltastas vocant*¹⁶).

1. (Varro, De Re Rust., i. 8.)—2. (Il., xiv., 214.—Val. Flacc., vi., 470.)—3. (Il., i. c.)—4. (Mart., vi., 13; xiv., 206, 207.)—5. (Theb., ii., 283; v., 63.)—6. (s. v. Cestus.)—7. (Galen, De Alim. Facult.—Elian, N. A., ix., 49; ii., 13.—Adams, Append., s. v.)—8. (Hesych.)—9. (Isid., Orig., xvii., 12.—Q. Curtius, iii., 4.—Varro, ap. Nonium.)—10. (Virg., Æn., vii., 732.)—11. (Isid., i. c.—Servius in Virg., l. c.—Cæs., Bell. Civ., i., 39.)—12. (Strab., xvii., 3, 7.)—13. (Agric., 36.)—14. (Virgil, l. c.)—15. (Cod. Cotton. Cleop., c. 8.)—16. (xxxxi., 36.)

*CHALB'ANE (χαλβάνη) appears to have been the well-known Gum-resin, which exudes from the *Bubon Galbanum*. Pliny, in describing it, says, "Quod maxime laudant, cartilagosum, purum, ad similitudinem Hammoniaci."¹ In the Edinburgh Dispensary it is said that "Galbanum agrees in virtue with gum Ammoniacum." Hence Adams concludes that the ancient Galbanum was identical with the modern.²

*CHALCANTHUS (χάλκανθος), according to Pliny,³ the same with the "Atramentum sutorium" of the Romans, so called because used to blacken leather. The account of the Roman writer is as follows: "Græci cognationem æris nomine fecerunt et atramento sutorio, appellant enim Chalcantum. Color est cæruleus perquam spectabili nitore, vitrumque esse creditur." From this language of Pliny there can be no doubt that Hardouin was correct in making it to be Copperas, or Blue Vitriol (*chalcantus*, i. e., *flos æris*). "Yet," continues Adams, "both Sprengel, in his edition of Dioscorides,* and Dr. Milligan, in his Annotations on Celsus, call it a natural solution of sulphate of copper in water. The quotation from Pliny proves that it was a vitriol, the word vitriol being, in fact, formed from *vitrum*. And, farther, Dioscorides' description of its formation agrees very well with Jameson's account of the origin of copperas. The ancients, however, as Dr. Hill states, were also acquainted with a factitious vitriol, which they called *Pectum* and *Ephthum*, obtained by boiling some of the vitriolic ores in water."⁵

CHALKEIA (χαλκεία), a very ancient festival celebrated at Athens, which at different times seems to have had a different character, for at first it was solemnized in honour of Athena, surnamed Ergane, and by the whole people of Athens, whence it was called Ἀθήναια or Πάνδημος.⁶ At a later period, however, it was celebrated only by artisans, especially smiths, and in honour of Hephaestus, whence its name was changed into Χαλκεία.⁷ It was held on the 30th day of the month of Pyanepsion.⁸ Menander had written a comedy called Χαλκεία, a fragment of which is preserved in Athenæus.⁹

CHALCIDICUM. A variety of meanings have been attached in this word, which is not of unfrequent occurrence in inscriptions, and in the Greek and Latin writers.¹⁰

The meager epitome of Festus informs us merely that it was a sort of edifice (*genus adificii*), so called from the city of Chalcis, but what sort is not explained; neither do the inscriptions or passages cited below give any description from which a conclusion respecting the form, use, and locality of such buildings can be positively affirmed.

Chalcidica were certainly appurtenances to some *basilica*,¹¹ in reference to which the following attempts at identification have been suggested: 1. A mint attached to the basilica, from χαλκός and δίκη, which, though an ingenious conjecture, is not supported by sufficient classical authority. 2. That part of a basilica which lies across the front of the tribune, corresponding to the nave in a modern church, of which it was the original, where the lawyers stood, and thence termed *navis ciuicidica*.¹² 3. An apartment thrown out at the back of a basilica, either on the ground-floor or at the extremity

of the upper gallery, in the form of a balcony.¹ 4. Internal chambers on each side of the tribune for the convenience of the *iudices*, as in the basilica of Pompeii. (*Vid. BASILICA*, p. 141.)³ 5. The vestibule of a basilica, either in front or rear; which interpretation is founded upon an inscription discovered at Pompeii, in the building appropriated to the fullers of cloth (*fullonica*):

EUMACHIA. L. F. SACERD. PUB. * * * *

* * * * CHALCIDICUM. CRYPTAM PORTICUS

* * * SUA. PEQUNIA. FECIT. EADEMQUE. DEDICAVIT.

By comparing the plan of the building with this inscription, it is clear that the *chalcidicum* mentioned can only be referred to the vestibule. Its decorations likewise corresponded in richness and character with the vestibule of a basilica described by Procopius,³ which is twice designated by the term χαλκή.⁴ The vestibule of the basilica at Pompeii is shown upon the plan on page 141.

In another sense the word is used as a synonyme with *cænaculum*. "Scribuntur Dii vestri in tricliniis cælestibus atque in *chalcidiciis* aureis cenitare."⁵ These words, compared with Homer,

Γῆρξ δ' εἰς ὑπερῶν ἀνέβηστος καρχαλόσσα,⁶

and the translation of ὑπερῶν by Ausonius,⁷

"Chalcidicum gressu nutrix superabat anili,"

together with the known locality of the ancient *cænacula*, seem fully to authorize the interpretation given.⁸

Finally, the word seems also to have been used in the same sense as *manianum*, a balcony.⁹

CHALCIOE'CIA (χαλκιοείκια), an annual festival, with sacrifices, held at Sparta in honour of Athena, surnamed Χαλκίοικος, i. e., the goddess of the brazen-house.¹⁰ Young men marched on the occasion in full armour to the temple of the goddess; and the ephors, although not entering the temple, but remaining within its sacred precincts, were obliged to take part in the sacrifice.¹¹

*CHALCIS (χαλκίς), I. a species of Bird, described as inhabiting mountains, rarely seen, and of a copper colour (from which comes the name, or else from its shrill cry¹²). It was probably one of the Falcon tribe, and is considered by some identical with the πύργς, but it cannot be satisfactorily determined what kind of bird it really was. Another name for this bird is κύνιδος, in Homer and Ionic authors. Both names occur in the 14th book of the Iliad,¹³ where it is noted that χαλκίς is the older name. The cry of the bird is represented by κικκαβαῦ.¹⁴

II. A species of Lizard,¹⁵ so called from having copper-coloured streaks on the back. It is termed in Greek, not only χαλκίς, but also σαῦρα Χαλκιδική. Some of the ancient authorities call it σήψ,¹⁶ and the French naturalists describe it under the name of *Le Scps*, but, according to Buffon, improperly. It is the *Chalcis Vittatus*, L. Cuvier thinks it very probable that the ancients designated by this name the *Seps* with three toes of Italy and Greece. The Abbé Bonnetterre says of it, "I regard the lizard called *Chalcis* by Linnæus as forming a variety of the *Seps*." Buffon remarks, "It appears to bear a strong affinity to the viper, and, like that animal its bite may be dangerous." Dr. Brookes says,

"The Seps, or the Chalcidian Lizard of Aldrovandus, is rather a serpent than a lizard, though it has four small legs, and paws divided into feet."¹

III. A species of Fish,² incorrectly made by some to be the *Clupea Harengus*, L., or Herring. It is, in fact, the *Clupea finta*, Cuv., belonging, however, to the great Herring tribe. The ancients speak of their *Chalcis* as resembling the *Thryssa* and Sardines. According to them, it moved in large numbers, and inhabited not only the sea, but also fresh water. "We find nothing," observes Griffith, "in the writings of the Greeks and Romans, which appears to indicate that these nations were acquainted with the Herring. The fishes of the Mediterranean must, in fact, have been nearly the only species of the class which they could observe or procure with facility, and the Herrings are not among the number of these. This fish, therefore, is neither the *halec* or *halcx*, nor the *manis*, nor the *bucomanis*, nor the *genis* of Pliny. The *μαίνις*, of Aristotle, named *alec* by Gaza, and the *mana* of Pliny, belong to the *menides* of the animal kingdom."³

*CHALCITIS (χαλκίτις), called also *Sori* and *Misy* (σῶρι, μίσυ), a fossil substance impregnated with a salt of copper, and used by the ancients as a styptic application. Dioscorides says, "the best *Chalcitis* resembles copper, is brittle, free from stones, not old, and having oblong and shining veins." "Sprengel thinks," observes Adams, "that there is a difference between the *Chalcitis* of Pliny and that of Dioscorides. The latter he looks upon to be a sulphate of iron; the other an arseniate of copper. In his History of Medicine, he calls the *χάλκανθος*, Blue Vitriol; the *χαλκίτις*, Red Vitriol; and the *μίσυ*, Yellow Vitriol.⁴ The following account of these substances is from a person who appears to have been well acquainted with them. '*Chalcitis*, *Misy*, and *Sori* are fossil substances, very much resembling each other both in original and virtues. Galen says he found these things in the mines, lying in long strata upon each other, the lowest stratum being *Sori*, the middle the *Chalcitis*, and the uppermost the *Misy*. These fossil substances are now rarely found in apothecaries' shops, being to be had nowhere else but in Cyprus, Asia Minor, or Egypt."⁵ According to Dr. Hill, the *Chalcitis* is properly a mixed ore of cupreous and ferruginous vitriols, still very frequent in Turkey, where it is used as an astringent and styptic. The *Misy*, he says, differs from it in containing no cupreous vitriol, but only that of iron. The *Sori*, called *Rusma* by the moderns, he says, is an ore of vitriol of copper, and contains no iron.⁶

*CHALCOS (χαλκός), the same with the *Æs* of the Romans, and, therefore, a sort of Bronze. (*Vid. Æs*.) The term, however, is often applied to native copper.⁷ Dr. Watson has made it appear that the *Orichalcum* (ὀρείχαλκος) was brass, or a mixture of copper and zinc, made by the union of *as* and *Cadmia*.⁸ The *χαλκός κεκαυμένος* of Dioscorides, according to Geoffroy, is copper calcined in a reverberatory furnace. The *χαλκός σκυρπία*, *Squama aris*, or flakes of copper, he adds, is little else than the *as ustum*, being only the particles of burned copper which fly off when it is hammered. The *ἀνθος χαλκοῦ*, or *Flos aris*, was fine granulated copper.⁹ The following is Geoffroy's description of it, which, says Adams, is, in fact, little more than a translation of Dioscorides' account of the process. "It is nothing but copper reduced to small grains like millet-

seed, which is done by pouring cold water upon melting copper, which thereupon flies everywhere into grains." From this description of it, remarks Adams, it will appear that the following account of the *Flos aris*, given by Kidd, is inaccurate, and we give it merely to caution the reader not to be misled even by such a high authority: "In the spontaneous formation of sulphate of iron, the pyrites first loses its splendour, then swells and separates into numerous fissures. After this, its surface is partially covered with a white efflorescing powder, which is the *Flos aris* of Pliny."¹

*CHALCOPHONOS (χαλκόφωνος), a dark kind of stone, sounding, when struck, like brass. Trapezians were recommended to carry one. It was probably a species of clink-stone.²

*CHALCOSMARAGDUS (χαλκοσμάραγδος), according to Pliny, a species of Emerald, with veins of a coppery hue. It is supposed to have been *Dioptrase* (Achirite) in its gang of copper pyrites.³

*CHALYBS (χάλυψ), Steel, so called, because obtained of an excellent quality from the country of the Chalybes. "The Iodian Steel, mentioned by the author of the Periplus, was probably," observes Dr. Moore, "of the kind still brought from India under the name of *wootz*; and the *ferrum candidum*, of which Quintus Curtius says the Indians presented to Alexander a hundred talents, may have been the same; for *wootz*, when polished, has a silvery lustre. The Parthian Steel ranks next with Pliny, and these two kinds only '*vera acie temperantur*.' Daimachus, a writer contemporary with Alexander the Great, speaks of four different kinds of steel, and the purposes to which they were severally suited. These kinds were the Chalybdic, the Sinopic, the Lydian, and the Lacedæmonian. The Chalybdic was best for carpenters' tools; the Lacedæmonian for files, and drills, and gravers, and stone-chisels; the Lydian, also, was suited for files, and for knives, and razors, and rasps."⁴ According to Tychsen,⁵ nothing occurs in the Hebrew text of the Scriptures relative to the hardening of iron, and the quenching of it in water. Iron (*barzel*) often occurs, and in some passages, indeed, Steel may, he thinks, be understood under this name. For example, in Ezekiel,⁶ *ferrum sabrefactum*, or, according to Michaelis and others, sabre-blades from Usal (Sanaa in Yemen). A pretty clear indication of steel is given in Jeremiah,⁷ "Iron from the North," which is there described as the hardest. It appears that the Hebrews had no particular name for Steel, which they perhaps comprehended, as the same writer conjectures, under the term *barzel*, or distinguished it only by the epithet "Northern." Among the Greeks, Steel was used as early as the time of Homer, and, besides *Chalybs*, it was very commonly called *stomōma* (στόμωμα), which, however, did not so much denote Steel itself as the steeled part of the instrument. *Adamas*, also, was frequently used to indicate Steel. (*Vid. ADAMAS*.) "The Romans," observes Beckmann,⁸ "borrowed from the Greeks the word *chalybs*; and, in consequence of a passage in Pliny, many believe that they gave also to Steel the name of *acies*, from which the Italians made their *acciajo*, and the French their *acier*. The word *acies*, however, denoted properly the steeled or cutting part only of an instrument. From this, in later times, was formed *aciarium*, for the Steel which gave the instrument its sharpness, and also *aciare*, 'to steel.' The preparation by fusion, as practised by the Chalybes, has been twice described

wy Aristotle.¹ The Steel of the ancients, however, in consequence of not being cemented, suffered itself to be hammered, and was not nearly so brittle as the hardest steel with which we are acquainted at present. On the other hand, the singular method of preparing steel employed by the Celtiberians in Spain, deserves to be here described. According to the account of Diodorus² and Plutarch,³ the iron was buried in the earth, and left in that situation till the greater part of it was converted into rust. What remained without being oxydated was afterwards forged and made into weapons, and particularly swords, with which they could cut asunder bones, shields, and helmets. The art of hardening steel by immersing it suddenly, when red hot, into cold water, is very old; Homer says, that when Ulysses bored out the eye of Polyphemus with a burning stake, it hissed in the same manner as water, when the smith immerses in it a piece of red-hot iron in order to harden it.⁴ Sophocles uses the comparison of being hardened like immersed iron;⁵ and Salmasius⁶ quotes a work of some old Greek chemist, who treats of the method of hardening iron in India. It is also a very ancient opinion, that the hardening depends chiefly on the nature of the water. Many rivers and wells were therefore in great repute, so that steel-works were often erected near them, though at a considerable distance from the mines. The more delicate articles of iron were not quenched in water, but in oil.⁷

CHALKOUS. (*Vid. Æs.*)

*CHAMÆACTE (*χαμαικτήη*), the Dwarf-elder. (*Vid. Actæ.*)

*CHAMÆDRYS (*χαμαιδρύς*), the Wall German-der, or *Teucrium Chamædrys*. Apuleius makes the *Chamædrys* a synonyme of the *Teucrium*.⁸

*CHAMÆCERASUS (*χαμαικέρασος*), supposed by Sprengel to be the Lily of the Valley, or *Convallaria majalis*.⁹

*CHAMÆLEON (*χαμαιλέων*), I. a species of plant, so called from the changeable colour of its leaves. Gesner and Humelbergius, according to Adams, can only refer it in general terms to the Thistle tribe. Stephens, Schulze, and Stackhouse hold that the *χαμαιλέων λευκός* is the *Carlina acaulis*, and Adams thinks that the description of the *χαμαιλέων* by Dioscorides agrees very well with the Carline thistle. Yet Sprengel, although formerly an advocate of this opinion, and Dierbach, both incline to think it the *Acarna gummifera*, Willd. Sprengel and Stackhouse agree in referring the *χαμαιλέων μέλας* to the *Carthamus corymbosus*.¹⁰

II. The Chamæleon, or *Chamaleo Ægyptius*, L. The ancient naturalists describe this species of lizard accurately, and mention, in particular, its remarkable property of changing colour.¹¹ These colours, in fact, change with equal frequency and rapidity; but it is by no means true, as stated by Suidas and Philo, that the animal can assimilate its hue to that of any object it approaches. Neither is it true, as asserted by Ovid¹² and Theophrastus, that it lives upon air and dew, for it eats flies. In the Latin translation of Avicenna it is called *Alharbe*. "It was believed, in the time of Pliny, that no animal was so timid as the Chamæleon; and, in fact, not having any means of defence supplied by nature, and being unable to secure its safety by flight, it must frequently experience internal fears and agitations more or less considerable. Its epidermis is

transparent; its skin is yellow, and its blood of a lively violet blue. From this it results, that when any passion or impression causes a greater quantity of blood to pass from the heart to the surface of the skin, and to the extremities, the mixture of blue, violet, and yellow produces, more or less, a number of different shades. Accordingly, in its natural state, when it is free and experiences no disquietude, its colour is a fine green, with the exception of some parts, which present a shade of reddish brown or grayish white. When in anger its colour passes to a deep blue green, to a yellow green, and to a gray more or less blackish. If it is unwell, its colour becomes yellowish gray, or that sort of yellow which we see in dead leaves. Such is the colour of almost all the chamæleons which are brought into cold countries, and all of which speedily die. In general, the colours of the Chamæleons are much the more lively and variable as the weather is warmer, and as the sun shines with greater brilliancy. All these colours grow weaker during the night."¹³

*CHAMÆMELON (*χαμαιμήλον*), the herb Chamomile. The Greek name means "ground apple," from the peculiar apple-perfume of the flowers. The term comprehends the *Anthemis nobilis*, and probably some other species of Chamomile.¹⁴ In modern Cyprus this plant is called *παπαιν*. It is frequently met with in the islands, and flowers early in the spring, according to Sibthorp.¹⁵

*CHAMÆPITYS (*χαμαιπίτυς*), the herb Ground-pine. (*Vid. ABIGA.*)

*CHAMELÆA (*χαμήλαια*). "Dodonæus states correctly," observes Adams, "that Serapio and Avicenna confounded both the *Chamelæa* and *Chamæleon* together, under the name of *Macerion*; and it must be admitted, that the learned commentators on the Arabian medical authors have not been able entirely to remove this perplexity. According to Sibthorp, the *Daphne oleoides* is the species which has the best claim to be identified with the ancient *Chamelæa*. Matthioli, and the writer of the article on Botany in the *Encyclopédie Methodique*, refer it to the *Cneorum trioccon*."¹⁶

*CHARADRIUS (*χαράδριος*), the name of a sea bird described by Aristotle¹⁷ and Ælian.¹⁸ It is supposed to have been the Dalwilly, or Ring Plover, the *Charadrius hiaticula*, L. Mention is also made of it by Plato, Aristophanes, and Plutarch. The scholiast on Plato says that the sight of it was believed to cure the jaundice.¹⁹

*CHELIDONTIUM (*χελιδόνιον*), a plant of which two kinds are mentioned, the *Chelidonium majus*, or Greater Celandine, and the *C. minus*, or *Ranunculus ficaria*, the Figwort, popularly called the Lesser Celandine, under which name, says Adams, it has been celebrated by the muse of Wordsworth.²⁰

*CHELIDON (*χελιδών*), I. the Swallow. (*Vid. HIRUNDO.*) II. The Flying-fish, or *Trigla volitans*, L.²¹

*CHELOÏNE (*χελώνη*), the Tortoise. (*Vid. TESTUDO.*)

CHARIS'TIA. The charistia (from *χαρίζομαι*, to grant a favour or pardon) was a solemn feast, to which none but relatives and members of the same family were invited, in order that any quarrel or disagreement which had arisen among them might be made up, and a reconciliation effected.²² The day of celebration was the viii. Cal. Mart., or the 19th of February, and is thus spoken of by Ovid:

1. (Beckmann ad Aristot., Auscult. Mirab., c. 49, p. 94.)—2. (v. 33.)—3. (De Garrul., ed. Francof., 1620, ii., p. 510.)—4. (Od., ix., 301.)—5. (Alox., 720.)—6. (Djærcer., Plin., p. 763.)—7. (Adams, Append., s. v.)—8. (Beckmann, l. c.)—9. (Dioscor., iii., 102.)—Theophrast., II. P., ix., 9.)—10. (Adams, Append., s. v.)—11. (Dioscor., iii., 10.)—Theophrast., H. P., vi., 4.)—11. (Aristot., H. A., ii., 7.)—12. (Met., xv., 411.)

1. (Griffith's Cuvier, vol. ix., p. 235.)—2. (Dioscor., iii., 144.)—Adams, Append., s. v.)—3. (Billerbeck, Flora Græca, p. 220.)—4. (Dioscor., iii., 109.)—P. Ægin., vii., 3.—Adams, Append., s. v.)—5. (H. A., viii., 5.)—6. (N. A., xvii., 12.)—7. (Adams, Append., s. v.)—8. (Theophr., H. P., vii., 15.)—Dioscor., ii., 211.—Adams, Append., s. v.)—9. (Aristot., H. A., iv., 9.)—Ælian N. A., ii., 56; xii., 59.—Adams, Append., s. v.)—10. (Vat. Max. ii., 1, § 8.—Mart. ix., 55.)

"*Proxima cognati dixere charistia cari,
Et venit ad socias turba propinqua dapes.*"¹

CHEIRONOMIA (χειρονομία), a mimetic movement of the hands, which formed a part of the art of dancing among the Greeks and Romans. The word is also used in a wider sense, both for the art of dancing in general, and for any signs made with the hands in order to convey ideas. In gymnastics it was applied to a certain kind of pugilistic combat.²

CHEIROTONEN, CHEIROTONIA (χειροτονεῖν, χειροτονία). In the Athenian assemblies two modes of voting were practised, the one by pebbles (*vid. PSEPHIZESTHAI*), the other by a show of hands (*χειροτονεῖν*). The latter was employed in the election of those magistrates who were chosen in the public assemblies (*vid. ARCHAIRESIAS*), and who were hence called *χειροτονητοί*, in voting upon laws, and in some kinds of trials on matters which concerned the people, as upon *προδοαί* and *εισαγγελία*. We frequently find, however, the word *ψηφίζεσθαι* used where the votes were really given by show of hands.³

The manner of voting by a show of hands is said by Suidas⁴ to have been as follows: The herald said, "Whoever thinks that Midias is guilty, let him lift up his hand." Then those who thought so stretched forth their hands. Then the herald said again, "Whoever thinks that Midias is not guilty, let him lift up his hand;" and those who were of this opinion stretched forth their hands. The number of hands was counted each time by the herald; and the president, upon the herald's report, declared on which side the majority voted (*ἀναγορεύει τὰς χειροτονίας*).⁵

It is important to understand clearly the compounds of this word. A vote condemning an accused person is *καταχειροτονία*; one acquitting him, *ἀποχειροτονία*; *ἐπχειροτονεῖν* is to confirm by a majority of votes; *ἐπχειροτονία τῶν νομῶν* was a revision of the laws, which took place at the beginning of every year; *ἐπχειροτονία τῶν ἀρχῶν* was a vote taken in the first assembly of each prytania on the conduct of the magistrates; in these cases, those who voted for the confirmation of the law, or for the continuance in office of the magistrate, were said *ἐπχειροτονεῖν*, those on the other side, *ἀποχειροτονεῖν*.⁶ *διαχειροτονία* is a vote for one of two alternatives;⁷ *ἀντιχειροτονεῖν*, to vote against a proposition. The compounds of *ψηφίζεσθαι* have similar meanings.¹⁰

CHEIROTONETOI. (*Vid. ARCHAIRESIAS*).

CHELIDONIA (χελιδνία), a custom observed in the island of Rhodes in the month of Boëdromion, the time when the swallows returned. During that season, boys, called *χελιδονιστῆς*, went from house to house collecting little gifts, ostensibly for the returning swallows (*χελιδονίζειν*), and singing a song which is still extant.¹¹ It is said to have been introduced by Cleobulus of Lindus at some period when the town was in great distress. The chelidonia, which have sometimes been called a festival, seem to have been nothing but a peculiar mode of begging, which, on the occasion of the return of the swallows, was carried on by boys in the manner stated above. Many analogies may still be observed in various countries at the various seasons of the year.

CHEME (χήμη), a Greek liquid measure, the capa-

city of which (as is the ease with most of the smaller measures) is differently stated by different authorities. There was a small cheme, which contained two coehlearia or two drachmæ, and was the seventy-second part of the eotyle, = 0.068 of a pint English.¹ The large cheme was to the small in the proportion of 3 to 2. Other sizes of the cheme are mentioned, but they differ so much that we cannot tell with certainty what they really were.²

*CHENALOP'EX (χηνάλωψ), a species of aquatic fowl. (*Vid. ANAS*.)

CHENYSCUS (χηνύσκος) was a name sometimes given to the *ἀκροστόλιον* of a ship, because it was made in the form of the head and neck of a goose (*χην*) or other aquatic bird. This ornament was probably adopted as suitable to a vessel which was intended to pursue its course, like such an animal, over the surface of the water.³ We are informed that a ship was sometimes named "The Swan" (*κύκνος*), having a swan carved upon the prow.⁴ Though commonly fixed to the prow, the chenisus sometimes adorned the stern of a ship. It was often gilt.⁵ A chenisus of bronze is preserved in the Royal Library at Paris.⁶ Not unfrequently we find the chenisus represented in the paintings found at Herculeum, and on antique gems. Examples are seen in the annexed woodcut, and in that at p. 62

*CHENOPODIUM (χηνόποδιον) and CHENOPUS (χηνόπους), a species of plant, commonly called the Goosefoot. Dioscorides⁷ and Pliny⁸ mention two kinds, the wild and domestic (*sylvestre* and *sativum*), the former of which is the same with the *ἀτράφαξις* or *ἀτράφαξ*, the latter the *Atriplex hortensis*, or Orach (*the χρυσολάχανον* of Theophrastus⁹). The modern Greeks use the *Chenopodium* as a good remedy for wounds, and call it *πανάκια*.¹⁰ The *Chenopodium botrys* has a balsamic perfume, and yields an essential oil, which renders it tonic and antiscorbutic. Sibthorp found it between Smyrna and Brousa, on the banks of the streams.¹¹ The seed resembles a cluster of grapes, and has a vinous smell, whence the name *botrys* (*βότρυς*, "a cluster"). The most important property possessed by the Goosefoot tribe is the production of soda, which some of them yield in immense quantities.¹²

CHERNIPS, CHERNIBON (χέρνιψ, χέρνιβον, from *χείρ* and *νίπτω*), signifies the water used for ablution and purification, or the vessel which contained it.¹³

A marble vase containing lustral water was placed at the door of both Greek and Roman temples, which was applied to several purposes. The priest stood at the door with a branch of laurel¹⁴ or olive

tree¹ in his hand, which he dipped into the water, and sprinkled as a purification over all who entered. Instead of these branches, the Romans used an instrument called *aspergillum* for the purpose, the form of which is frequently met with upon medals and bas-reliefs.

Another Greek rite was performed by the priest taking a burning torch from the altar, which he dipped into the lustral water (*χέρνυψ*), and then sprinkled it over the by-standers.² Water was also sprinkled over the head of the victim as an initiation to the sacrifice; hence the expression *χέρνυψος νέμειν*,³ "to perform a sacrifice," and *χαίτην ἀμφὶ σὺν χέρνυψοι*.⁴

The vessel which the Romans used was of the kind called *labrum*,⁵ resembling those still employed for a somewhat similar purpose in the Roman churches, one of which is shown in the Laconicum at Pompeii. (*Vid.* BATHS, p. 150.)

But the word, as its etymology indicates, is of a more domestic origin; and, in reference to the custom, common to both nations, of washing their hands before meals, is used with the same double meaning above mentioned.⁶ In the first passage cited from Homer, *χέρνυψ* is put for the water itself; in the second, *χέρνυψον* is used for the vessel which receives it. In both instances the water is poured out of a jug (*πρόχοος*), and the two together correspond with our term a basin and ewer.

*CHERNITES (*χερνίτης*), a species of Stone, which Pliny,⁷ after Theophrastus,⁸ says was very like ivory, and in a coffin of which the body of Darius lay. The French commentators on Pliny make it and the *porus*, mentioned by the same writers as resembling in colour and hardness, Parian marble, to have been varieties of calcareous tufa ("carbonate de chaux sédimentaire, ou craie grossière et compacte, chloriteuse, renfermant des silex blonds et des gryphites").⁹

CHEROS'TAL. (*Vid.* HERES.)

*CHERSYDRUS (*χέρσυνδρος*), a species of Snake, living, as the name imports, both on land and in the water (*χέρσος*, "land," *ὕδωρ*, "water"). A good description of its form and nature is given by Virgil.¹⁰ According to the poet, it was marked with large spots on the belly. Under the head of *Chersydrus*, at the present day, Cuvier ranks the *Oularlimpé* (*Acrochordus Fasciatus*, Sh.), a very venomous serpent which inhabits the bottoms of the rivers of Java.

*CHIA TERRA (*Χία γῆ*), a species of Earth obtained from the island of Chios. The ancients used it internally as an astringent; but its chief use was as a cosmetic, it being highly valued for cleansing the skin and removing wrinkles. Galen says it was an earth of a white colour, but not a bright, clear white, and that it was brought in flat pieces; and Dioscorides says it was whitish, but tending to ash colour.¹¹ "Like the Selisian and Phnigitic earths," observes Adams, "it is an argil more or less pure."

CHIRAMAXIUM (*χειραμάξιον*, from *χειρ* and *ἄμαξα*, a sort of easy-chair or "go-cart," used for invalids and children.¹² It differed from the *sella gestatoria*, which answers to our sedan-chair, in which the person was carried by his slaves or servants, since it went upon wheels, though moved by men instead of animals. Doubts are entertained whether this small vehicle was drawn or propelled,

as it is observed that men draw from the neck and shoulders,¹ and push with their hands, which latter method is clearly the one intended by Aurelian,² "*vehiculo manibus acto*."

CHIRIDOTA (*χειριδωτός*, from *χειρίς*, *manica*), a tunic with sleeves. The tunic of the Egyptians, Greeks, and Romans was originally without sleeves (*vid.* EXOMIS), or they only came a little way down the arm. On the other hand, the Asiatic and Celtic nations wore long sleeves sewed to their tunics, together with trousers as the clothing of their lower extremities, so that these parts of attire are often mentioned together.³ (Woodcuts, pages 15, 171.) The Greeks also allowed tunics with sleeves to females (woodcut, p. 188), although it was considered by the Latins indecorous when they were worn by men.⁴ Cicero mentions it as a great reproach to Catiline and his associates that they wore long shirts with sleeves (*manicatis et talaribus tunicis*).⁵ Caligula, nevertheless, wore sleeves, together with other feminine ornaments (*manuleatus*). Sleeves were worn on the stage by tragic actors (*χειριδές*?); and they were used by shepherds and labourers, who had no upper garment, as a protection against the severities of the weather (*pellibus manicatis*).⁶ (*Vid.* woodcuts, p. 112, 132.)

All the woodcuts already referred to show the sleeves of the tunic coming down to the wrist. We now insert from an Etruscan vase the figure of a woman, whose sleeves reach only to the elbow, and who wears the *capistrum* to assist her in blowing the *tibia pates*.⁷ (*Vid.* MANICA, TUNICA.)

CHIROGRAPHUM (*χειρόγραφον*) meant first, as its derivation implies, a handwriting or autograph. In this its simple sense, *χειρ* in Greek and *manus* in Latin are often substituted for it.

Like similar words in all languages, it acquired several technical senses. From its first meaning was easily derived that of a signature to a will or other instrument, especially a note of hand given by a debtor to his creditor. In this latter case it did not constitute the legal obligation (for the debt might be proved in some other way); it was only a proof of the obligation.

According to Aconius,¹⁰ *chirographum*, in the sense of a note of hand, was distinguished from *syngrapha*; the former was always given for money actually lent, the latter might be a mere sham agreement (something like a bill of accommodation.

1. (Virg., *Æn.*, vi., 230.)—2. (Athen., ix., 76.—Eurip., *Herc. Fur.*, 931.)—3. (Soph., *Œd. T.*, 210.)—4. (Eurip., *Iph. Taur.*, 622.)—5. (Liv., xxxvii., 3.)—6. though with a different object) to pay a debt which had never been actually incurred. The *chirographum* was kept by the creditor, and had only the debtor's signature; the *syngrapha*, on the contrary, was signed and kept by both parties.

In the Latin of the middle ages,¹ *chirographum* was used to signify tribute collected under the sign-manual of a person in authority, similar to the briefs and benevolences of former times in our own country. It was also used,² till very lately, in the English law for an indenture. Duplicates of deeds were written on one piece of parchment, with the word *chirographum* between them, which was cut in two in a straight or wavy line, and the parts given to the care of the persons concerned. By the Canonists, Blackstone remarks, the word *syngrapha* or *syngraphus* was employed in the same way, and hence gave its name to these kinds of writing.

CHIRURGIA (*χειρουργία*). The practice of surgery was for a long time considered by the ancients to be merely a part of a physician's duty; but, as it is now almost universally allowed to be a separate branch of the profession, it will perhaps be more convenient to treat of it under a separate head. It will not be necessary to touch upon the disputed questions, which is the *more ancient*, or which is the *more honourable* branch of the profession; nor even to try to give such a definition of the word *chirurgia* as would be likely to satisfy both the physicians and surgeons of the present day; it will be sufficient to determine the sense in which the word was used by the ancients; and then, adhering closely to that meaning, to give an account of this division of the science and art of medicine, as practised among the Greeks and Romans, referring to the article *MEDICINA* for farther particulars.

The word *chirurgia* is derived from *χειρ*, the hand, and *εργον*, a work, and is explained by Celsus³ to mean that part of medicine *quæ manu curat*, "which cures diseases by means of the hand;" in Diogenes Laërtius⁴ it is said to cure *διὰ τοῦ τέμνειν καὶ καίειν*, "by cutting and burning;" nor (as far as the writer is aware) is it ever used by ancient authors in any other sense. Omitting the fabulous and mythological personages, Apollo, Æsculapius, Chiron, &c., the only certain traditions respecting the state of surgery before the establishment of the republics of Greece, and even until the time of the Peloponnesian war, are to be found in the *Iliad* and *Odyssey*. There it appears that surgery was almost entirely confined to the treatment of wounds; and the imaginary power of enchantment was joined with the use of topical applications.⁵ The Greeks received surgery, together with the other branches of medicine, from the Egyptians; and, from some observations made by the men of science who accompanied the French expedition to Egypt in 1798, it appears that there are documents fully proving that in very remote times this extraordinary people had made a degree of progress of which few of the moderns have any conception: upon the ceilings and walls of the temples at Tenytira, Karnac, Luxor, &c., basso-reliefs are seen, representing limbs that have been cut off with instruments very analogous to those which are employed at the present day for amputations. The same instruments are again observed in the hieroglyphics, and vestiges of other surgical operations may be traced, which afford convincing proofs of the skill of the ancient Egyptians in this branch of medical science.⁶

The earliest remaining surgical writings are those

of Hippocrates, who was born, according to Clinton,¹ Ol. 80, 1, B.C. 460, and died Ol. 105, 4, B.C. 357. Among his reputed works there are ten treatises on this subject, viz.: 1. *Κατ' Ἱητρείων, De Officina Medici*; 2. *Περὶ Ἀγμάτων, De Fracturis*; 3. *Περὶ Ἀρθρῶν, De Articulis*; 4. *Μογλικός, Vectarius*; 5. *Περὶ Ἑλκῶν, De Ulceribus*; 6. *Περὶ Σπρίγγων, De Fistulis*; 7. *Περὶ Ἀιμορροῖδων, De Hæmorrhoidibus*; 8. *Περὶ τῶν ἐν Κεφαλῇ Τραυμάτων, De Capitis Vulneribus*; 9. *Περὶ Ἐγκατατομῆς Ἐμβρύου, De Resectione Fætus*; and, 10. *Περὶ Ἀνατομῆς, De Corporum Resectione*. Of these it should be remarked, that only the eighth is considered undoubtedly genuine; though the first, second, third, and fourth, if not written by Hippocrates himself, appear to belong to a very early age.² Hippocrates far surpassed all his predecessors (and, indeed, most of his successors) in the boldness and success of his operations; and, though the scanty knowledge of anatomy possessed in those times prevented his attaining any very great perfection, still we should rather admire his genius, which enabled him to do so much, than blame him because, with his deficient information, he was able to do no more. The scientific skill in reducing fractures and luxations displayed in his works, *De Fracturis, De Articulis*, excites the admiration of Haller,³ and he was most probably the inventor of the *ambe*, an old chirological machine for dislocations of the shoulder, which, though now fallen into disuse, for a long time enjoyed a great reputation. In his work *De Capitis Vulneribus* he gives minute directions about the time and mode of using the trephine, and warns the operator against the probability of his being deceived by the sutures of the cranium, as he confesses happened to himself.⁴ On this Celsus remarks: "*More scilicet magnorum virorum, et fiduciam magnarum rerum habentium. Nam levia ingenia, quia nihil habent, nihil sibi detrahunt: magno ingenio, multaque nihilominus habituro, conuenit etiam simplex veri, erroris confessio; præcipueque in eo ministerio, quod utilitatis causa posteris traditur; ne qui decipiantur eadem ratione, qua quis ante deceptus est.*"⁵ The author of the *Oath*, commonly attributed to Hippocrates, binds his pupils not to perform the operation of lithotomy, but to leave it to persons accustomed to it (*ἐργάσθαι ἀνδράσι πρῆξως ᾔσθε*); from which it would appear as if certain persons confined themselves to particular operations. Avenzoar also, in his work entitled *Teiser*, "*Rectificatio Regiminis*," refused to perform this operation; but in his case it was from religious motives, and because, being a Jew, he thought it unlawful to look upon another's nakedness.

The names of several persons are preserved who practised surgery as well as medicine in the times immediately succeeding those of Hippocrates; but, with the exception of some fragments inserted in the writings of Galen, Oribasius, Aëtius, &c., all their writings have perished. Archagathus deserves to be mentioned, as he is said to have been the first foreign surgeon that settled at Rome, A.U.C. 535, B.C. 219.⁶ He was at first very well received, the *jus Quiritium* was conferred upon him, a shop was bought for him at the public expense, and he received the honourable title of *Vulnerarius*. This, however, on account of his frequent use of the knife and cautery, was soon changed by the Romans (who were unused to such a mode of practice) into that of *Carnifex*. Asclepiades, who lived about the middle of the seventh century A.U.C., is said to have been the first person who proposed the

operation of bronchotomy, though he himself never performed it;¹ and Ammonius of Alexandria, surnamed *Αιθορώμος*, who is supposed to have lived rather later, is celebrated in the annals of surgery for having been the first to propose and to perform the operation of *Lithotripsy*, or breaking a calculus in the bladder, when found to be too large for safe extraction. Celsus has minutely described his mode of operating,² which very much resembles that lately introduced by Civiale and Heurteloup, and which proves that, however much credit they may deserve for bringing it again out of oblivion into public notice, the praise of having originally thought of it belongs to the ancients. "A hook," says Celsus, "is to be so insinuated behind the stone as to resist and prevent its receding into the bladder, even when struck; then an iron instrument is used, of moderate thickness, flattened towards the end, thin, but blunt; which, being placed against the stone, and struck on the farther end, cleaves it; great care being taken, at the same time, that neither the bladder itself be injured by the instruments, nor the fragments of the stone fall back into it." Avenzoar also mentions this mode of getting rid of a calculus, though he does not describe the operation so minutely as Celsus. The next surgical writer after Hippocrates, whose works are still extant, is Celsus, who lived at the beginning of the first century A.D., and who has given up the last four books of his work, *De Medicina*, and especially the seventh and eighth, entirely to surgical matters. It appears plainly from reading Celsus, that, since the time of Hippocrates, surgery had made very great progress, and had, indeed, reached a high degree of perfection. He is the first author who gives directions for the operation of lithotomy,⁴ and the method described by him (called the *apparatus minor*, or *Celsus's method*) continued to be practised till the commencement of the sixteenth century. It was performed at Paris, Bordeaux, and other places in France, upon patients of all ages, even as late as a hundred and fifty years ago; and a modern author⁵ recommends it always to be preferred on boys under fourteen.⁶ He describes⁷ the operation of *Infibulation*, which was so commonly performed by the ancients upon singers, &c., and is often alluded to in classical authors.⁸ He also describes⁹ the operation alluded to by St. Paul,¹⁰ περιτεμνόμενος τις ἐκλήθη: μη ἐπισπάσθω. Compare Paulus Ægineta,¹¹ who transcribes from Antyllus a second method of performing the operation. See also Parkhurst's *Lexicon*, and the references there given.

The following description, given by Celsus, of the necessary qualifications of a surgeon, deserves to be quoted: "A surgeon," says he,¹² "ought to be young, or, at any rate, not very old; his hand should be firm and steady, and never shake; he should be able to use his left hand with as much dexterity as his right; his eyesight should be acute and clear; his mind intrepid, and so far subject to pity as to make him desirous of the recovery of his patient, but not so far as to suffer himself to be moved by his cries; he should neither hurry the operation more than the case requires, nor cut less than is necessary, but do everything just as if the other's screams made no impression upon him." The reading of Targa's edition, *misericors*, has been

followed in this passage of Celsus, though *immitericors* will also admit of a very good sense; for, as Richerand has observed,¹ Celsus did not mean by it that a surgeon ought to be quite insensible to pity; but that, during the performance of an operation, this passion ought not to influence him, as all emotion would then be weakness.

Perhaps the only surgical remark worth quoting from Aretæus, who lived in the first century A.D., is, that he condemns the operation of bronchotomy, and thinks "that the wound would endanger an inflammation, cough, and strangling; and that, if the danger of being choked could be avoided by this method, yet the parts would not heal, as being cartilaginous."²

Omitting Scribonius Largus, Moschion, and Soranus, the next author of importance is Cælius Aurelianus, who is supposed to have lived about the beginning of the second century A.D., and in whose works there is a good deal relating to surgery, though nothing that can be called original. He rejected as absurd the operation of bronchotomy.³ He mentions a case of ascites that was cured by paracentesis,⁴ and also a person who recovered after being shot through the lungs by an arrow.⁵

Galen, the most voluminous, and, at the same time, the most valuable medical writer of antiquity, is less celebrated as a surgeon than as an anatomist and physician. He appears to have practised surgery at Pergamus; but, upon his removal to Rome (A.D. 165), he confined himself entirely to medicine, following, as he says himself,⁶ the custom of the place. This would seem also to have been the custom among the Arabians, as Avenzoar says⁷ that a physician ought to be able to perform operations, but should not do so except in cases of necessity. Galen's writings prove, however, that he did not entirely abandon surgery. His Commentaries on the Treatise of Hippocrates, *De Officiis Medici*, and his treatise *Περὶ τῶν Ἐπιδόμων, De Fasciis*, show that he was well versed even in the minor details of the art. He appears also to have been a skilful operator, though no great surgical inventions are attributed to him. His other surgical writings consist of Commentaries on Hippocrates, *De Fracturis* and *De Articulis*; besides a good deal of the matter of his larger works, *De Methodo Medendi* and *De Compositione Medicamentorum*.

Antyllus, who lived some time between Galen and Oribasius, is the earliest writer whose directions for performing bronchotomy are still extant, though the operation (as was stated above) was proposed by Asclepiades about three hundred years before. Only a few fragments of the writings of Antyllus remain, and among them the following passage is preserved by Paulus Ægineta:⁸ "Our best surgeons have described this operation, Antyllus particularly, thus: 'We think this practice useless, and not to be attempted where all the arteries and the lungs are affected (by the word *ἀρτηριαι* here, he means the *bronchia*, or ramifications of the *trachea*. *Vid. ARTERIA*); but when the inflammation lies chiefly about the throat, the chin, and the tonsils which cover the top of the windpipe, and the artery is unaffected, this experiment is very rational, to prevent the danger of suffocation. When we proceed to perform it, we must cut through some part of the windpipe, below the larynx, about the third or fourth ring; for to cut quite through would be dangerous. This place is the most commodious, because it is not covered with any flesh, and because it has no vessels near it. Therefore, beo-

ing the head of the patient backward so that the windpipe may come more forward to the view, we make a transverse section between two of the rings, so that in this case, not the cartilage, but the membrane which encloses and unites the cartilages together, is divided. If the operator be a little fearful, he may first divide the skin, extended by a hook; then, proceeding to the windpipe, and separating the vessels, if any are in the way, he must make the incision.' Thus far Antyllus, who thought of this way of cutting, by observing (when it was, I suppose, cut by chance) that the air rushed through it with great violence, and that the voice was interrupted. When the danger of suffocation is over, the lips of the wound must be united by suture, that is, by sewing the skin, and not the cartilage; then proper vulnerary medicines are to be applied. If these do not agglutinate, an incarnant must be used. The same method must be used with those who cut their throat with a design of committing suicide." This operation appears to have been very seldom, if ever, performed by the ancients upon a human being. Avenzoar¹ tried it upon a goat, and found it might be done without much danger or difficulty; but he says he should not like to be the first to try it upon a man.

Oribasius, physician to the Emperor Julian (A.D. 361), professes to be merely a compiler; and though there is in his great work, entitled *Συναγωγαὶ ἱατρικαί*, *Collecta Medicinalia*, much surgical matter, there is nothing original. The same may be said of Aëtius and Alexander Trallianus, both of whom lived towards the end of the sixth century A.D. and are not famous for any surgical inventions. Paulus Ægineta has given up the fifth and sixth books of his work, *De Re Medica*, entirely to surgery, and has inserted in them much useful matter, the fruits chiefly of his own observation and experience. He was particularly celebrated for his skill in midwifery and female diseases, and was called on that account, by the Arabians, *Al-Kawabehi*, "the Accoucheur."² Two pamphlets were published in 1768 at Göttingen, 4to, by Rud. Aug. Vogel, entitled *De Pauli Ægineta Meritis in Medicinam, imprimisque Chirurgiam*. Paulus Ægineta lived probably towards the end of the seventh century A.D., and is the last of the ancient Greek and Latin medical writers whose surgical works remain. The names of several others are recorded, but they are not of sufficient eminence to require any notice here. For farther information on the subject both of medicine and surgery, see *MEDICINA*; and for the legal qualifications, social rank, &c., both of physicians and surgeons, among the ancient Greeks and Romans, see *MEDICUS*.

The surgical instruments, from which the accompanying engravings are made, were found by a physician of Petersburg, Dr. Savenko, in 1819, at Pompeii, in Via Consularis (*Strada Consulare*), in a house which is supposed to have belonged to a surgeon. They are now preserved in the museum at Portici. The engravings, with an account of them by Dr. Savenko, were originally published in the *Revue Médicale* for 1821, vol. iii., p. 427, &c. They were afterward inserted in Friepier's *Notizen aus dem Gebiete der Natur-und-Heilkunde* for 1822, vol. ii., n. 26, p. 57, &c. The plate containing these instruments is wanting in the copy of the *Revue Médicale* in the library of the College of Surgeons, so that the accompanying figures are copied from the German work, in which some of them appear to be drawn very badly. Their authenticity was at first doubted by Kühn,³ who thought they

were the same that had been described by Bayard⁴ in his *Catal. Antig. Monument. Herculan. effos.*, Nap., 1754, fol., n. 236-294; when, however, his dissertation was afterward republished,⁵ he acknowledged himself to be completely satisfied on this point, and has given, in the tract referred to, a learned and ingenious description of the instruments and their supposed uses, from which the following account is chiefly abridged. It will, however, be seen at once that the form of most of them is so simple, and their uses so obvious, that very little explanation is necessary.

1, 2. Two probes (*specillum*, *μήλη*) made of iron; the larger six inches long, the smaller four and a half. 3. A cautery (*καυτήριον*) made of iron, rather more than four inches long. 4, 5. Two lancets (*scalpelum*, *σπίλη*), made of copper, the former two inches and a half long, the other three inches. It seems doubtful whether they were used for blood-letting, or for opening abscesses, &c. 6. A knife, apparently made of copper, the blade of which is two inches and a half long, and in the broadest part one inch in breadth; the back is straight and thick, and the edge much curved; the handle is so short that Savenko thinks it must have been broken. It is uncertain for what particular purpose it was used: Kühn conjectures that (if it be a surgical instrument at all) it may have been made with such a curved edge, and such a straight thick back, that it might be struck with a hammer, and so amputate fingers, toes, &c. 7. Another knife, apparently made of copper, the blade of which is of a triangular shape, two inches long, and in the broadest part eight lines in breadth; the back is straight and one line broad, and this breadth continues all the way to the point, which, therefore, is not sharp, but guarded by a sort of button. Kühn thinks it may have been used for enlarging wounds, &c., for which it would be particularly fitted by its blunt point and broad back. 8. A needle, about three inches long, made of iron. 9. An elevator (or instrument for raising depressed portions of the skull), made of iron, five inches long, and very much resembling those made use of at the present day. 10-14. (*vid. next cut*) Different kinds of forceps (*vulsella*). No. 10 has the two sides separated from each other, and is five inches long. No. 11 is also five inches long. No. 12 is three inches and a half long. The sides are narrow at the point of union, and become broader by degrees towards the other end, where, when closed, they form a kind of arch. It should be noticed that it is furnished with a movable ring, exactly like the tenaculum forceps employed at the present day. No. 13 was used for

1. (p. 15.)—2. (Abulpharaj, *Hist. Dynast.*, p. 181, ed. Pococke.)—3. (De Instrum. Chirurg., *Veteribus cognitit, et nuper effossis*, Lips., 1823, 4to.)

1. (Opusc. Academ. Med. et Philolol., Lips., 1827, 1828, 8vo, vol. ii., p. 309.)—2. (De Med., vii., 26, § 1, p. 429.)

pulling out hairs by the roots (*τριχολαβίς*). No. 14 is six inches long, and is bent in the middle. It was probably used for extracting foreign bodies that had stuck in the œsophagus (or gullet), or in the bottom of a wound. 15. A male catheter (*ænea fistula*), nine inches in length. The shape is remarkable, from its having the double curve like the letter S, which is the form that was reinvented in the last century by the celebrated French surgeon, J. L. Petit. 16. Probably a female catheter, four inches in length. Celsus thus describes both male and female catheters:¹ "The surgeon should have three male catheters (*æneas fistulas*), of which the longest should be fifteen, the next twelve, and the shortest nine inches in length; and he should have two female catheters, the one nine inches long, the other six. Both sorts should be a little curved, but especially the male; they should be perfectly smooth, and neither too thick nor too thin." 17. Supposed by Froriep to be an instrument for extracting teeth (*ὀδοντάγρα*); but Kübn, with much more probability, conjectures it to be an instrument used in amputating part of an enlarged uvula, and quotes Celsus,³ who says that "no method of operating is more convenient than to take hold of the uvula with the forceps, and then to cut off below it as much as is necessary." 18, 19. Probably two spatulæ.

CHITON (*χιτών*). (Vid. TUNICA.)

CHITONIA (*χιτώνια*), a festival celebrated in the Attic town of Chitone in honour of Artemis, surnamed Chitona or Chitonía.⁴ The Syracusans also celebrated a festival of the same name, and in honour of the same deity, which was distinguished by a peculiar kind of dance, and a playing on the flute.⁵

*CHIMUM MARMOR (*Χίος λίθος*), a species of Marble obtained from the island of Chios. Hül describes it as "a very fine and elegantly-smooth stone, of a close, compact texture, very heavy, and of a fine glossy black, perfectly smooth where broken, but dull and absolutely destitute of splendour." It is capable, according to the same authority, of receiving the highest polish of perhaps any of the marbles. It was famous among the ancients for making reflecting mirrors, for which the high polish

of which it is susceptible rendered it peculiarly proper. The Chian marble would appear to have been of the Obsidian kind, and it is, in fact, sometimes called "*Lapis Obsidianus Antiquorum*."¹ The name *Obsidianus* would seem to have been a corruption from *Opsianus* (*ὀψιανός*, ἀπὸ τῆς ὀψέως).²

*CHIMUM VINUM (*Χίος οἶνος*), Chian Wine, a Greek wine made in the island of Chios (the modern Scio). It is described by some writers as a thick, luscious wine; and that which grew on the craggy heights of Ariusium, extending three hundred stadia along the coast, is extolled by Strabo as the best of all Greek wines. From Athenæus we learn that the produce of the Ariusian vineyards was usually divided into three distinct species: a dry wine, a sweetish wine, and a third sort of a peculiar quality, thence termed *ἀντόκρατον*. All of them seem to have been excellent of their kind, and they are frequently alluded to in terms of the highest commendation. The Phanean, which is extolled by Virgil as the king of wines, was also the product of the same island. The Sappian wine, so remarkable for its exquisite aroma, was probably Chian matured by great age.³

CHLAINA (*χλαῖνα*). (Vid. LÆNA.)

CHLAMYS (*χλαμύς*, dim. *χλαμύδιον*), a scarf. This term, being Greek, denoted an article of the *amictus*, or outer raiment, which was, in general, characteristic of the Greeks, and of the Oriental races with which they were connected, although both in its form and in its application it approached very much to the *lacerna* and *paludamentum* of the Romans, and was itself, to some extent, adopted by the Romans under the emperors. It was for the most part woollen; and it differed from the blanket (*ιμάτιον*), the usual amictus of the male sex, in these respects, that it was much smaller; also finer, thinner, more variegated in colour, and more susceptible of ornament. It moreover differed in being oblong instead of square, its length being generally about twice its breadth. To the regular oblong, *a*, *b*, *c*, *d* (see woodcut), gores were added, either in the form of a right-angled triangle, *a*, *e*, *f*, producing the modification *a*, *e*, *g*, *d*, which is exemplified in the annexed figure of Mercury, or of an obtuse-angled

triangle, *a*, *e*, *b*, producing the modification *a*, *e*, *b*, *c*, *g*, *d*, which is exemplified in the figure of a youth from the Panathenaic frieze in the British Museum. These gores were called *περύγες*, *wings*, and the scarf with these additions was distinguished by the epithet of Thessalian or Macedonian.⁴ Hence the ancient geographers compared the form of the inhabited earth (*ἡ οἰκουμένη*) to that of a *chlamys*.⁵

The scarf does not appear to have been much worn by children, although one was given, with its brooch, to Tiberius Cæsar in his infancy.⁶ It was generally assumed on reaching adolescence, and was worn by the *ephebi* from about seventeen to

twenty years of age.¹ It was also worn by the military, especially of high rank, over their body-armour (woodcut, p. 133²), and by hunters and travellers, more particularly on horseback.³

The scarfs worn by youths, by soldiers, and by hunters differed in colour and fineness, according to their destination, and the age and rank of the wearer. The *χλαμὶς ἐφηβική* was probably yellow or saffron-coloured, and the *χλαμὶς στρατιωτική*, scarlet. On the other hand, the hunter commonly went out in a scarf of a dull, unobscure colour, as best adapted to escape the notice of wild animals.⁴ The more ornamental scarfs, being designed for females, were tastefully decorated with a border (*limbus*,⁵ *mæander*⁶); and those worn by Phenicians, Trojans, Phrygians, and other Asiatics were also embroidered, or interwoven with gold.⁷ Actors had their chlamys ornamented with gold.⁸ Demetrius, the son of Antigonus, imitating the utmost splendour of the Asiatics, wore a scarf in which were represented in gold thread the stars and the twelve signs of the zodiac.⁹

The usual mode of wearing the scarf was to pass one of its shorter sides (*a*, *d*) round the neck, and to fasten it by means of a brooch (*fibula*), either over the breast (woodcuts, p. 47 186), in which case it hung down the back, reaching to the calves of the legs, as in the preceding figure of the young Athenian, or even to the heels;¹⁰ or over the right shoulder, so as to cover the left arm, as is seen in the preceding figure of Mercury, in the woodcut to CAUSIA, and in the well-known example of the Belvidere Apollo. In other instances it was made to depend gracefully from the left shoulder, of which the bronze Apollo in the British Museum (see the annexed woodcut) presents an example (*puer nudus, nisi quod ephebeia chlamyde sinistram tegebat humerum*); or it was thrown lightly behind the back,

and passed over either one arm or shoulder, or over both (see the second figure in the last woodcut, taken from Hamilton's Vases, i., 2); or, lastly, it was laid upon the throat, carried behind the neck, and crossed so as to hang down the back, as in the figure of Achilles (p. 133), and sometimes its extremities were again brought forward over the arms or shoulders. In short, the remains of ancient art of every description show in how high a degree the scarf contributed, by its endless diversity of arrangement, to the display of the human form in its greatest beauty; and Ovid has told us how sensible the ephēbi were of its advantages in the following account of the care bestowed upon this part of his attire by Mercury:

1. (Philemon, p. 367, ed. Meineke.—“*Ephebeia chlamyde*.” Apuleius, Met., x.—Heliod., Æth., i.—Plutarch, De Mul. Virt. —Pollux, Onom., x., 164.)—2. (Ælian, V. H., xiv., 10.—Theophrast., Orat., x.—Plaut., Pseud., II., iv., 45.—Epid., III., iii., 55.)—3. (Plaut., Pæn., III., iii., 6, 31.)—4. (Pollux, Onom., v., 18.)—5. (Virg., Æn., iv., 137.)—6. (Virg., Æn., v., 251.)—7. (Virg., Il. cc., iii., 483, 484; xi., 775.—Ovid, Met., v., 51.—Val. Flacc., vi., 228.)—8. (Pollux, Onom., iv., 116.)—9. (Ælian, xii., p. 535 F.; 536, A.)—10. (Apuleius, Met., xi.)—11. (Apuleius, x.)

“*Chlamydemque, ut pendat apte, Collocat: ut limbus, totumque appareat aurum.*”¹

The aptitude of the scarf to be turned in every possible form round the body, made it useful even for defence. The hunter used to wrap his chlamys about his left arm when pursuing wild animals, and preparing to fight with them.² Alcibiades died fighting with his scarf rolled round his left hand instead of a shield.³ The annexed woodcut exhibits a fig

ure of Neptune armed with the trident in his right hand, and having a chlamys to protect the left. It is taken from a medal which was struck in commemoration of a naval victory obtained by Demetrius Poliorcetes, and was evidently designed to express his sense of Neptune's succour in the conflict. When Diana goes to the chase, as she does not require her scarf for purposes of defence, she draws it from behind over her shoulders, and twists it round her waist, so that the belt of her quiver passes across it, as shown in the statues of the goddess in the Vatican (see woodcut), and described by Nemesianus. (Vid. BALTEUS.)

It appears from the bas-reliefs on marble vases that dancers took hold of one another by the chlamys, as the modern Greeks still do by their scarfs or handkerchiefs, instead of taking one another's hands. In like manner, Mercury, when he is conducting Pluto in the dark, bids him to take hold of his chlamys in order to follow his steps.⁴ The scarf admitted also of being used to recline upon. Thus Endymion is represented, both in ancient paintings and sculptures, and in the description of Lucian,⁵ sleeping on his chlamys, which is spread upon a rock. (Vid. PILEUS.)

Among the Romans, the scarf came more into use under the emperors. Caligula wore one enriched with gold.⁶ Alexander Severus, when he was in the country or on an expedition, wore a scarf dyed with the coccus (*chlamyde coccinea*).⁷

CHLOEIA or CHLOIA (Χλόεια or Χλοία), a festival celebrated at Athens in honour of Demeter Chloë, or simply Chloë, whose temple stood near the Acropolis.⁸ It was solemnized in spring, on the sixth of Thargelion, when the blossoms began to appear (hence the names *χλόη* and *χλόεια*), with the sacrifice of a ram, and much mirth and rejoicing.⁹

*CHLOREUS or CHLORTON (χλωρεὺς, χλωρίων), two names belonging, probably, to one and the same bird, the Golden Oriole, or *Oriolus galbula*, L. Ælian errs when he calls the female *χλωρίς* and the male *χλωρίων*, and his error is supposed to have arisen from his copying Aristotle carelessly.¹⁰

1. (Met., ii., 735.)—2. (Pollux, Onom., v., 18.—*περιελθάντα θ' ἀμύχεται περί τήν χεῖρα*: Xen., Cynege., vi., 17.)—3. (Plut., Alcib.)—4. (Lucian, Timon, 30.)—5. (Dial., vol. i., p. 232, ed. Hemsterh.)—6. (Suet., Calig., 19.)—7. (Lamprid., Al. Scr., 40.—Compare Matt., xxvii., 28, 31.—8. (Hesych., s. v. Χλοία.—Athen., xiv., p. 618.—Sophocl., Ed. *CHLORIS (χλωρίς) the name of a Bird described by Aristotle. Gesner, upon the authority of Turner, holds it to be the Greenfinch, or *Fringilla chloris*, Temminck.¹

CHOES (Χόες). (Vid. DIONYSIA.)

CHŒNIX (χοῖνιξ), a Greek measure of capacity, the size of which is differently given; it was probably of different sizes in the several states. Pollux,² Suidas, Cleopatra, and the fragments of Galen,³ make it equal to three cotylæ (=1.4866 pints English); another fragment of Galen⁴ and other authorities⁵ make it equal to four cotylæ (=1.9821 pints English); Rhemnius Fannius⁶ and another fragment of Galen⁷ make it eight cotylæ (=3.9641 pints English).⁸

*ΧΟΙΡΟΣ ΠΟΤΑΜΙΟΣ (χοῖρος ποτάμιος), a species of Fish, probably the Ruffe, or *Perca cernua*, L. It is a small fish, of good flavour; rather olive, and spotted with brown.⁹

CHORAGUS, a person who had to bear the expenses of the choragía, one of the regularly-recurring state burdens (ἐγκύκλιοι λειτουργίαι) at Athens. Originally (as is shown in the article CHORUS) the chorus consisted of all the inhabitants in the state. With the improvement of the arts of music and dancing, the distinction of spectators and performers arose; it became more a matter of art to sing and dance in the chorus; paid performers were employed; and at last the duties of this branch of worship devolved upon one person, selected by the state to be their representative, who defrayed all the expenses which were incurred on the different occasions. This person was the choragus. It was the duty of the managers of a tribe (ἐπιμεληταὶ φυλῆς) to which a choragía had come round, to provide a person to perform the duties of it; and the person appointed by them had to meet the expenses of the chorus in all plays, tragic or comic (τραγῳδοῖς, κωμῳδοῖς), and satirical; and of the lyric choruses of men and boys, the pyrrhichistæ, cecilian dancers, and flute-players (χορηγεῖν ἀνδράσι, or ἀνδρικοῖς χοροῖς, παιδικοῖς χοροῖς, πυρρῆχισταῖς, κυκλίῃ χορῶ, αὐληταῖς ἀνδράσιν), &c. He had first to collect his chorus, and then to procure a teacher (χοροδιδάσκαλος), whom he paid for instructing the choreutæ. The choragi drew lots for the first choice of teachers; for as their credit depended upon the success of their chorus in the dramatic or lyric contests, it was of great importance to them whose assistance they secured.¹⁰ When the chorus was composed of boys, the choragus was occasionally allowed to press children for it, in case their parents were refractory.¹¹ The chorus were generally maintained, during the period of their instruction, at the expense of the choragus, and he had also to provide such meat and drink as would contribute to strengthen the voice of the singers (Οἱ δὲ χορηγοὶ τοῖς χορευταῖς ἐγγέλεια καὶ θριδύκτια καὶ σκελλίδας καὶ μυελὸν παρατίθεντες, εὐόχουν ἐπὶ πολλὸν χρόνον, φωσασκόμενους καὶ τρυφώντας¹²). The expenses of the different choruses are given by Lysias¹³ as follow: Chorus of men, 20 minæ; with the tripod, 50 minæ; pyrrhic chorus, 8 minæ; pyrrhic chorus of boys, 7 minæ; tragic chorus, 30 minæ; comic, 16 minæ; cecilian chorus, 300 minæ. According to Demosthenes,¹⁴ the chorus of flute-players cost a great deal more than the tragic chorus. The choragus who exhibited the best musical or theatrical entertainment, received as a prize a tripod, which he had

the expense of consecrating, and sometimes he had also to build the monument on which it was placed. There was a whole street at Athens formed by the line of these tripod-temples, and called "The Street of the Tripods." The laws of Solon prescribed 40 as the proper age for the choragus, but this law was not long in force.

On the subject of the choragía, see Böckh's *Publ. Econ. of Athens*, ii., p. 207, &c.

CHOREGIA (χορηγία). (Vid. CHORAGUS.)

ΧΩΡΙΟΥ ΑΙΚΗ (χωρίου αἰκή), a suit to recover land, was a diadicasia within the jurisdiction of the thesmothetæ. The parties to a suit of this kind were necessarily either Athenian citizens, or such favoured aliens as had had the power of acquiring real property in Attica (γῆς καὶ οὐκίας ἐγκτήσις) bestowed upon them by special grant of the people. Of the speeches of Isæus and Lysias in causes of this kind, the names are all that survive.

CHORUS (χορός), a band of singers and dancers, engaged in the public worship of some divinity. This is, however, only the secondary meaning of the Greek word. The word χορός, which is connected with χώρος, χώρα,¹ properly denoted the market-place, where the chorus met. Thus Homer calls the dancing-place the χορός; λείψαν δὲ χορόν: πέπληγον δὲ χορόν θεῖον ποσσίν: ὅθι τ' Ἡοῦς ἡριγενίης οἰκία καὶ χοροὶ εἰσι: ἔνθα δ' ἔσαν Νυμφῶν καλοὶ χοροὶ ἦδ' ὁδοῖκοι.² Now the dancing-place for the public chorus in a Greek town would naturally be the largest space which they had, i. e., the market-place, which was called by the more general name of "the place" or "the space" (χορός). Thus the αγορά at Sparta was called the χορός.³ And ἐνρῆχος is a common epithet of a large city: thus Sparta⁴ and Athens⁵ are both called ἐνρῆχος, which either meant "having a wide chorus or market," or, generally, "extensive" (ἐνρῆχος), as when it is applied as an epithet to Ἀσία in Pindar.⁶ Thus, also, the king says to the chorus, in the *Supplices* of Æschylus, λαὸν ἐν χώρῳ τῶσσεσθε.

This explanation of the word χορός is important, from its connexion with the idea of a primitive chorus. In the oldest times the chorus consisted of the whole population of the city, who met in the public place to offer up thanksgivings to their country's god, by singing hymns and performing corresponding dances. The hymn, however, was not sung by the chorus, but some poet or musician sang or played the hymn, and the dancers, who formed the chorus, only allowed their movements to be guided by the poem or the tune. The poet, therefore, was said to "lead off the dance" (ἐξάρχειν μολπῆς), and this was said not merely of the poet,⁷ but also of the principal dancers;⁸ and even the leader of a game at ball is said ἀρχεσθαι μολπῆς. From this it will be seen that the words μέλπεσθαι and μολπῆ, when used in speaking of the old chorus, imply the regular, graceful movements of the dancers;⁹ and the *cumalpidæ* were not singers of hymns, but dancers in the chorus of Demeter and Dionysus. This old chorus, or the chorus proper, was always accompanied by the *cithara*, the *lyre*, or the *phorminx*, which were different kinds of stringed instruments; when the accompaniment was the *flute*, it was not a chorus, but an ἀγλαία or a κῶμος, a much more riotous affair, which was always rather of the nature of a procession than of a dance, and in which there was often no *cæxarchus*, but every one joined into the song or cry of joy at his pleasure. Such a

omus was the hymenæal or bridal procession, though this seems to have been a mixture of the *chorus* and the *comus*, for the harp and a chorus of damsels are mentioned in the descriptions of it by Homer and Hesiod. The former merely says,¹ "A loud *hymenæus* arose; young men skilled in the dance moved onward; and among them flutes and harps resounded" (*αὐλοὶ, φόρμιγγες τε*). Hesiod's description is much more elaborate:² "The inhabitants (of the fortified city which he is describing) were enjoying themselves with festivities and dances (*ἀγλαίαι τε χοροὶς τε*): the men, (i. e., the *kṓmos*) were conducting the bride to her husband on the well-wheeled mule-car; and a loud *hymenæus* arose; from afar was seen the gleam of burning torches carried in the hand of slaves; the damsels (i. e., the *chorós*) were moving forward in all joy and festivity (*ἀγλαῇ τεθαλύναι*); and they were both attended by sportive choruses. The one chorus, consisting of men (the *kṓmos*), were singing with youthful voices to the shrill sound of the pipe (i. e., *σύριγξ*); the other, consisting of the damsels (the *chorós*), were leading up the cheerful chorus (i. e., were dancing) to the notes of the harp (*φόρμιγξ*)." This account of the *hymenæus* is immediately followed by a description of the *comus* proper, i. e., a riotous procession after a banquet. "On another side, some young men were moving on in the *comus* (*ἐκμῶζον*) to the sound of the flute; some were amusing themselves with singing and dancing; others moved on laughing, each of them accompanied by a flute-player (*ὅπ' αὐλητῆρι ἑκαστος*). The whole city was filled with joy, and choruses, and festivity" (*θαλαίαι τε χοροὶ τε ἀγλαίαι τε*).

The chorus received its first full development in the Doric states, and in them it was particularly connected with their military organization. The Dorian chorus was composed of the same persons who formed their battle-array: the best dancers and the best fighters were called by the same name (*πυρρίες*); the back rows in each were called "unequipped" (*ψιλῆες*), and the figures of the dance were called by the same name as the evolutions of the army.³ The Doric deity was Apollo; consequently, we find the Doric chorus, which was properly accompanied by the lyre, and of which the lyric poetry of the Greeks was the legitimate offspring, immediately connected with the worship of Apollo, the inventor of the lyre. The three principal Doric choruses were the *pyrrhic*, the *gymnopædic*, and the *hyporchæmatic*. These were afterward transferred to the worship of Bacchus, and appear as the three varieties of the dramatic chorus, which celebrated the worship of that divinity: the *emmeleia*, or tragic dance, corresponded to the *gymnopædic*, the comic dance to the *hyporchæmatic*, and the *satyric* to the *pyrrhic*. All these dances were much cultivated and improved by Thaletas, who introduced a combination of the song and dance for the whole chorus, of which Lucian speaks when he says, by way of contrast to the pantomimic dancers of more modern times:⁴ *Πάλαι μὲν γὰρ οἱ αὐτοὶ καὶ ᾄδον καὶ ὀρχοῦντο*, "in older times the same performers both sang and danced." This extension of the song of the *exarchus* to the whole chorus seems to have given rise almost naturally to the division of the chorus into strophes and antistrophes, which Stesichorus farther improved by the addition of an epode, thus breaking through the monotonous alternation of strophe and antistrophe by the insertion of a stanza of a different measure. This improvement is referred to in the proverb, *Οὐδὲ τὰ τρία Στήσιχον γινώσκεις*. The choruses of Stesichorus

consisted of combinations of rows of eight dancers, and, from his partiality to the number 8, we have another proverb, the *πάντα ὅκτω* of the grammarians.

The most important event in the history of Greek choral poetry was the adaptation of the dithyramb, or old Bacchic song, to the system of Doric choruses; for it was to this that we owe the Attic drama. The dithyramb was originally of the nature of a *kṓmos*: it was sung by a band of revellers to a flute accompaniment; and in the time of Archilochus had its leader, for that poet says that "he knows how to lead off the dithyramb, the beautiful song of Dionysus, when his mind is inflamed with wine."¹

*"Ὡς Διωνυσσοῦ ἄνακτος καλὸν ἐξάρξαι μέλος
οἷσα διθύραμβον οἶνον συγκεραννώθεις φρένας."*

Arion, the celebrated player on the cithara, was the first to practise a regular chorus in the dithyramb, and to adapt it to the cithara. This he did at Corinth, a Doric city; and therefore we may suppose that he subjected his dithyramb to all the conditions of Doric choral poetry. The dithyramb was danced round a blazing altar by a chorus of 50 men or boys; hence it was called a *circular chorus* (*κύκλιος χορός*); the dithyrambic poet was called *κυκλιόδισκος*, and Arion is said to have been the son of *Cycleus*.

Aristotle tells us that tragedy arose from the recitations of the leaders of the dithyramb (*ἀπὸ τῶν ἐξαρχόντων τῶν διθύραμβων*); and we know from Suidas that Arion was the inventor of the tragic style (*τραγικῷ τρόπῳ εὐρετής*).² This latter statement seems to refer to the fact that Arion introduced satyrs into the dithyramb; for the satyrs were also called *τράγοι*,³ so that *τραγῳδία*, "the song of the satyrs," is the same as "the satyric drama." This tragic or satyric drama arose from the leaders of the dithyrambic chorus, as arranged by Arion. If we examine the use made of this dithyrambic chorus by Æschylus, we shall easily see what is the meaning of Aristotle's statement. In the tragic trilogies of Æschylus we find a chorus and two actors. As tragedy arose from the leaders of the dithyramb, the first beginning would be when the poet Thespis, as leader of his dithyrambic chorus, either made long Epic or narrative speeches, or conversed with his chorus. The improvement of Æschylus, then, was to introduce a dialogue between two of the *exarchi*, who would thus become actors. Consequently, we should expect that in the time of Æschylus the dithyrambic chorus of 50 would be succeeded by a tragic chorus of 48, and two actors. And this we find to be the case. If we examine the extant trilogy—the *Orestea*—we find that the *Agamemnon* has a chorus of 12 old men; the *Choëphoræ*, a chorus of either 12 or 15 women; and the *Eumenides*, a chorus of 15 furies: this would leave 9 or 6 for the chorus of the satyric drama appended to the trilogy, according as we take the smaller or greater number for the chorus in the *Choëphoræ*. It seems more probable that we should take the larger number; for it is probable that, in most cases, Æschylus would divide the main chorus of 48 into four subchoruses of 12; for 24 was the number of the comic chorus, and as comedies were acted in single plays, it is not unlikely that they would assign to a comic poet double the chorus used by the tragedian in his single plays, or half his whole chorus. If so, the satyric drama might, as less important, be contented with half the ordinary tragic chorus, when the exigencies of the piece rendered it desirable to increase the chorus from 12 to 15 in one or more of the individual plays.

1. (U. xviii., 492.)—2. (Scut. Herc., 270.)—3. (Müller's *Do-*
s. iii., 12, § 10; iv. 6, § 4.)—4. (De Saltat., c. 30.)

1. (Athenæus, p. 628, A.)—2. (Poet., 4.)—3. (Compara He-
rod., i., 23.)—4. (Hesych., s v Τράγους.)

Besides, if the chorus of Stesichorus, which was antistrophic, and therefore quadrangular, consisted of 48, as it is not improbable, and this chorus of 48 was divided into rows of eight (as in *πάντα ὅκτω*), six would be an element of the regular chorus, and, therefore, a fit number to represent its least important part. See on this subject Müller,¹ from whose view the account here given differs in some particulars.

The tragic chorus, though quadrangular, still mustered around the *thymele*, or altar of Bacchus in the theatre, thereby showing some last traces of its dithyrambic origin; and though the lyre was its general accompaniment, it did not by any means repudiate the flute, the old accompaniment of the dithyramb. When the chorus consisted of 15, it entered the orchestra either in ranks three abreast, or in files five abreast; in the former case it was said to be divided *κατὰ ζυγά*, in the latter *κατὰ σολίχους*. No doubt a similar distinction was made in the case of the chorus of 12.

The expense of the chorus, as it is stated in the article CHORAGUS, was defrayed by the choragus, who was assigned to the poet by the archon. In the case of a dramatic chorus, the poet, if he intended to represent at the Lenææ, applied to the king archon; if at the great Dionysia, to the chief archon, who "gave him a chorus" if his play was thought to deserve it; hence *χορὸν δίδοναι* signifies "to praise or approve a poet."² The successful poet was said to "receive the chorus."³ The comic dance was not at first thought worthy of a public chorus, but the chorus in that species of drama was at first performed by amateurs (*ἐθελονταί*), as was also the case with the dithyramb in later times.⁴

CHOUS or CHOEUΣ (*χοῦς*, or *χοεύς*), a Greek measure of liquids, which is stated by all the authorities to be equal to the Roman congius, and to contain six ἔσται or sextarii (=5.9471 pints English). Suidas alone makes a distinction between the *χοῦς* and the *χοεύς*, making the former equal to two sextarii, and the latter equal to six. Now when we remember that the *χοῦς* was commonly used as a drinking vessel at Athenian entertainments;⁵ that, on the day of the *χόες* (*vid.* DIONYSIA), a prize was given to the person who first drank off his *χοῦς*; and that Milo of Croton is said to have drunk three *χόες* of wine at a draught,⁷ it is incredible that, in these cases, the large *χοῦς* mentioned above could be meant. It seems, therefore, probable that there was also a smaller measure of the same name, containing, as Suidas states, two sextarii, =1.9823 pints English. At first it was most likely the common name for a drinking vessel. According to Crates,⁸ the *χοῦς* had originally a similar form to the Panathenaic amphore, and was also called *πελίκη*.⁹

XPEOYΣ ΔΙΚΗ (*χρέους δίκη*), a simple action for debt, was, like most of the other cases arising upon an alleged breach of contract, referred to the jurisdiction of the thesmothetæ when the sum in question amounted to more than ten drachmæ. If otherwise, it fell under the cognizance of those itinerant magistrates, who were originally thirty in number, and styled, accordingly, *οἱ τριάκοντα*: but afterward, in consequence of the odium attached to this name, which had also served to designate the oligarchic tyrants, received an accession of ten colleagues and a corresponding change of title.¹⁰ If the cause could be classed among the *ἐμμενοὶ δίκαι*,

as, for instance, when the debt arose upon a mercantile transaction, the thesmothetæ would still have jurisdiction in it, though one of the parties to the suit were an alien; otherwise it seems that when such a person was the defendant, it was brought into the court of the polemarch.¹ If the cause were treated as a *δίκη ἑμπορικὴ*, as above mentioned, the plaintiff would forfeit a sixth part of the sum contested upon failing to obtain one fifth of the votes of the dicasts;² but we are not informed whether this regulation was applicable, under similar circumstances, in all prosecutions for debt. The speech of Demosthenes against Timotheus was made in a cause of this kind.

*CHROMIS or CHREMPS (*χρόμις*, *χρώμις*, or *χρέψις*), a species of fish, the same with the *Sparus Chromis*, L., and called in French *Marron*. Rondelet says it is a small fish, and little esteemed. According to Cuvier, it is a chestnut-brown fish, taken by thousands in the Mediterranean. The fishermen on the coast of Genoa call it *Castagno*, on account of its chestnut colour. The *Chromis Nilotica*, on the other hand, is of an agreeable flavour, and is considered the best fish in the Nile.³

*CHRYSA LIS or CHRYSA LLIS, a name applied to the first apparent change of the eruca, or maggot, of any species of insect. In a special sense, it denotes the "tomb of the caterpillar and the cradle of the butterfly." The name has reference to the golden colour (*χρυσός*, "gold") which the chrysalis generally assumes.⁴

*CHRYSA NTHEMUM (*χρυσάνθεμον*), the Corn Marygold, or *Chrysanthemum coronarium*. The Greek name has reference to its golden-hued flowers. Another appellation is *βούφθαλλον*, though this in strictness belongs to the Ox-eyed Daisy, or *Chrysanthemum leucanthemum*. Fée thinks that Virgil means the *C. coronarium* by the *Chrysanthus* of which he speaks in the *Culex*.⁵ The modern Greeks call this plant *Τσιτζιμόδα*, and in the Archipelago, *Μανταλίνα*. Sibthorp found it among the villages, and by the margins of roads.⁶

*CHRYSELECTRUM (*χρυσήλεκτρον*), a variety of Amber. Fourcroy calls it "transparent amber of a golden yellow colour."⁷

*CHRYSELECTRUS (*χρυσήλεκτρος*), a name applied to the Indian Chrysoliths (Yellow Sapphire, or Oriental Topaz), having a foil of brass laid under them, and hence approaching in their colour to amber, or electrum.⁸

CHRYSE NDETA, costly dishes used by the Romans at their entertainments. They are mentioned several times by Martial,⁹ and, from the epithet *flava* which he applies to them, as well as from the analogy of the name, they appear to have been of silver, with golden ornaments. Cicero¹⁰ mentions vessels of this kind. He calls their golden ornaments in general *sigilla*, but again distinguishes them as *crusta* and *emblemata*;¹¹ the former were probably embossed figures or chasings fixed on to the silver, and the latter inlaid or wrought into it.¹² The embossed work appears to be referred to by Paulus (*cymbia argenteis crustis illigata*), and the inlaid ornaments by Seneca (*argentum, in quod solidi auri calatura descenderit*).¹³

*CHRYSI LAPIS (*χρυσίτης*), another name for the Basanites lapis, or Touchstone, from its use in testing gold.¹⁴

*CHRYSI'TIS (*χρυσίτης*), supposed to have been the yellow oxide of lead, used as a pigment by the ancients, and forming one of the three varieties of litharge (*λίθουργος*) described by Dioscorides¹ and Pliny.² Its name was, in all likelihood, derived from its yellow and shining colour, resembling that of gold.³

*CHRYSOCO'LLA (*χρυσόκωλλα*). "The ancients," remarks Adams, "applied this term to two distinct substances: First, to a mineral called *Chrysocolla* by Aiken, *Malachite* by Kidd, and *Copper Green* by Jameson and Cleaveland. It consists almost entirely of oxide of copper and silice. —Second, to a factitious substance prepared from soda and copper in the manner described by Pliny.⁴ It is often confounded with the *Borax*, or *Soda Boras* of the moderns, from its being used like *Borax* in soldering gold. There is much misapprehension in the descriptions of the ancient *Chrysocolla* given by Matthioli, Agricola, Milligan, and most of the modern commentators, which it is proper to caution the student of ancient science not to be misled by."⁵

*CHRYSOCOME (*χρυσόκομη*), a species of Toadflax, the *Linaria Linosyris* of Bauhin, which is the same with the *Chrysocome Linosyris*, L. Pliny says it wants a proper appellation in the Latin language. Anguillara and Matthioli were unable to determine what kind of plant it was.⁶

*CHRYSO'LITHUS (*χρυσόλιθος*), a Precious Stone, the same with the modern Topaz. Its prevailing colour is yellow, whence the ancient appellation. The *ψευδοχρυσόλιθος* was stained crystal.⁷ "The name *Chrysolithus*," remarks Dr. Moore, "appears to have been applied somewhat loosely by the ancients, as the modern term is, to a great variety of minerals. The Chrysolites obtained from Ethiopia were '*aureo fulgore translucentes*;' but to these were preferred the Indian, which may have been the yellow sapphire, or Oriental topaz. The best were set open. Underneath others a foil of brass was laid. These were called *chryselectri*, whose colour approached to that of amber (electrum). Those of Pontus might be distinguished by their lightness. They were, perhaps, yellow quartz, the Bohemian topaz; or yellow floor spar, the false topaz, whose specific gravities are to that of the Oriental topaz as three and four respectively to five. The Chrysolite obtained in Spain, from the same locality with rock-crystal, we may suppose was yellow quartz. Such as had a white vein running through them, called hence *leucochrysi*, were probably agate; yellow quartz with a vein of chalcedony; and the *capnia* we may translate smoke-topaz. Some resembled glass of a bright saffron colour; and those made of glass could not be distinguished by the sight, but might be detected by the touch (of the tongue, no doubt), as being warmer."⁸

*CHRYSOME'LUM (*χρυσόμυλον*), according to Billerbeck, the sweet Orange, and not a species of Quince, as it is sometimes styled. It is a variety of the *Citrus Aurantium*, L.⁹

*CHRYSO'PIS (*χρυσωπίς*), a species of Precious Stone, having, according to Pliny, the appearance of gold. Dalecamp takes it for Hyacinth.¹⁰

*CHRY'SOPH RY S (*χρυσόφρυς*), a large species of Fish, answering to the Gilt Head or Gilt Poll, the *Sparus aurata*, L. The Greek name, which means "golden eyebrow," was given to it on account of a crescent-shaped band of a golden hue extending from one eye to the other. Du Hamel says its flesh is delicate, but rather dry; according to Xenocrates, it is firm and nutritious. "With the ex-

ception of the bright band between the eyes, we can find nothing in the Chrysophrys of the ancients," observes Griffith, "that is absolutely characteristic of the modern fish of the same name; though, at the same time, we find nothing which can give rise to exclusion. According to Aristotle, the chrysophrys has two pairs of fins; its pyloric appendages are few in number; it remains close to the coasts, and in salt marshes or pools; it spawns in summer, and deposits its eggs at the mouths of rivers; the great heats oblige it to conceal itself; the cold also causes it to suffer; it is carnivorous, and the fishermen take it by striking it with a trident while asleep. Ælian tells us that it is the most timid of fishes: some branches of poplar, implanted in the sand during a reflux, so terrified the chrysophrys which were brought back by the flood, that on the succeeding reflux they did not dare to move, and suffered themselves to be taken by the hand. That the *Aurata* of the Latins was the same fish as the Chrysophrys of the Greeks, is evident from a passage in Pliny, which is manifestly taken from Aristotle, and where the first word is put as a translation of the second. Columella tells us that the *Aurata* was of the number of those fishes which the Romans brought up in their *vinaria*; and even the inventor of *vinaria*, Sergius Orata, appears to have derived from this fish the surname which he bore, and which he left to his branch of the family. It was, above all, the *Aurata* of the Lucrine lake that the Romans esteemed; and Sergius, who obtained nearly entire possession of that lake, in all probability introduced the species there."¹¹

*CHRYSOPRASTUS LAPIS (*χρυσόπρασος*), the Chrysoprase, a precious stone, resembling in colour the juice of the leek (*πράσον*), but with somewhat of a golden tinge (*χρυσός*, "gold"), whence the name given it. What is now called Chrysoprase, however, by Jameson and Aiken, could hardly, as Adams thinks, have been known to the ancients, since it is found only in Lower Silesia. It is composed almost entirely of silice, with a small admixture of nickel, to which it owes its colour. The Chrysoprase of the ancients, on the other hand, was most probably a variety of the Prassus.¹²

C H T H O N I A (*Χθόνια*), a festival celebrated at Hermione in honour of Demeter, surnamed Chthonia. The following is the description of it given by Pausanias:¹³ "The inhabitants of Hermione celebrate the Chthonia every year, in summer, in this manner: They form a procession, headed by the priests and magistrates of the year, who are followed by men and women. Even for children it is customary to pay homage to the goddess by joining the procession. They wear white garments, and on their heads they have chaplets of flowers, which they call *κομποσάνδαλοι*, which, however, from their size and colour, as well as from the letters inscribed on them, recording the premature death of Hyacinthus, seem to me to be hyacinths. Behind the procession there follow persons leading by strings an untamed heifer, just taken from the herd, and drag it into the temple, where four old women perform the sacrifice, one of them cutting the animal's throat with a scythe. The doors of the temple, which during this sacrifice had been shut, are thrown open, and persons especially appointed for the purpose lead in a second heifer, then a third and a fourth, all of which are sacrificed by the matrons in the manner described. A curious circumstance in this solemnity is, that all the heifers must fall on the same side on which the first fell." The splendour and rich offerings of this festival are also mentioned

1. (v., 102.)—2. (H. N., xxxiii., 35.)—3. (Moore's *Anc. Mineralogy*, p. 61.)—4. (H. N., xxxiii., 29.)—5. (Adams, *Append.*, s. v.)—6. (Dioscor., i., 55.—Adams, *Append.*, s. v.)—7. (Hod. *Sic.*, ii., 61.)—8. (A. v. C. Mineral., p. 170.)—9. (Billerbeck, *Flora Classica*, p. 132.)—10. (Plin., II. N., xxxvii., 10.)

1. (Aristot., H. N., i., 5.—Ælian, N. A., xiii., 28.—Cuvier, *An. King.*, vol. x., p. 163, 312, ed. Griffith.)—2. (Adams, *Append.*, s. v.)—3. (II., 35, § 4.)

by Ælian,¹ who, however, makes no mention of the matrons of whom Pausanias speaks, but says that the sacrifice of the heifers was performed by the priestess of Demeter.

The Lacedæmonians adopted the worship of Demeter Chthonia from the Hermioneans, some of whose kinsmen had settled in Messenia;² hence we may infer that they celebrated either the same festival as that of the Hermioneans, or one similar to it.

CHYTRA (χύτρα), an earthen vessel for common use, especially for cooking. It was commonly left unpainted, and hence all unprofitable labour was described by the proverb *χύτραν ποικίλλειν*.³

*CICA'DA (τέττις), a species of Insect, frequently mentioned by the classical writers. According to Dodwell,⁴ it is formed like a large fly, with long transparent wings, a dark brown back, and a yellow belly. It is originally a caterpillar, then a chrysalis, and is converted into a fly late in the spring. Its song is much louder and shriller than that of the grasshopper, as Dodwell terms the latter. This writer says that nothing is so piercing as their note; nothing, at the same time, so tiresome and inharmonious; and yet the ancient writers, and especially the poets, praise the sweetness of their song; and Plutarch⁵ says they were sacred to the Muses. According to Ælian,⁶ only the male Cicada sings, and that in the hottest weather. This is confirmed by the discoveries of modern naturalists. The Cicada is extremely common in the south of Italy. It is found also in the United States, being called in some parts "the Harvest-fly," and in others, very erroneously, "the Locust." The Cicada has a sucker instead of a mouth, by which it lives entirely on liquids, such as dew and the juices of plants. The song of the Cicada, as it has been called, is made by the males for the purpose of calling to their females in the season of reproduction, and it is made by the action of certain muscles upon two membranes, turned in the form of a kettle-drum, and lodged in the cavity of the belly. Several species of *Cicada* are described by Aristotle,⁷ Suidas, and Ælian,⁸ but more especially two, namely, *οἱ μεγάλοι τέττιγες*, *οἱ ῥόδοντες*, called also *ἀγραι*, and *οἱ μικροί*, called also *τεττιγονία*. The former would appear to be the *Cicada plebeia*, the latter the *Cicada orni*. This insect is called *Cicale* in Italian, and *Cigale* in French. "The Tettix," observes Kirby, "seems to have been the favourite of every Grecian bard, from Homer and Hesiod to Theocritus. Supposed to be perfectly harmless, and to live only on the dew, they were addressed by the most endearing epithets, and were regarded as all but divine. So attached, indeed, were the Athenians to these insects, that they were accustomed to fasten golden images of them in their hair, implying, at the same time, a boast, that they themselves, as well as the Cicada, were 'terra filii,' or children of the earth."⁹ Anacreon, in one of his odes,¹⁰ says of the Tettix, that old age wastes it not away. In this he has reference to the fable of Tithonus, the favourite of Aurora, who, having wished for immortality, without having asked, at the same time, for perpetual youth, became so decrepit, that Aurora, out of compassion, changed him into a tettix, because this insect, as the ancients believed, laid aside its skin every summer, and thus renewed its youth. The truth is, the Tettix or Cicada, like all the other species of the

Gryllus, though existing but for a single season, since it dies at the close of the summer, casts its skin in the same manner as the caterpillar, and deposits in the fields a membrane so accurately true to its entire shape, that it is often mistaken, at first sight, for the Tettix itself. The belief that this insect was indigenous, or, in other words, sprang from the very earth, appears to have arisen from the circumstance of large numbers being seen immediately after showers, though not visible previously.

*CICER. (Vid. EREBINTHUS.)

*CICHORIUM. (Vid. INTYBUM.)

*CICI (κίκι), a plant, the same as the *Pama Christi* or *Ricinus communis*. "This plant," observes Woodville, speaking of the Palma Christi, "appears to be the *kiki*, or *κρότων* of Dioscorides, who observes that the seeds are powerfully cathartic: it is also mentioned by Aëtius, Paulus Ægineta, and Pliny."¹¹

*CICONIA, the Stork. (Vid. PELARGOS.)

*CICUTA, Hemlock. (Vid. CONEION.)

*CIDARIS. (Vid. TIARA.)

CILICIUM (δέρις), a Haircloth. The material of which the Greeks and Romans almost universally made this kind of cloth, was the hair of goats. The Asiatics made it of camel's-hair. Goats were bred for this purpose in the greatest abundance, and with the longest hair, in Cilicia; and from this country the Latin name of such cloth was derived. Lycia, Phrygia, Spain, and Libya also produced the same article. The cloth obtained by spinning and weaving goat's-hair was nearly black, and was used for the coarse habits which sailors and fishermen wore, as it was the least subject to be destroyed by being wet; also for horse-cloths, tents, sacks, and bags to hold workmen's tools (*fabrilia vasa*), and for the purpose of covering military engines, and the walls and towers of besieged cities, so as to deaden the force of the ram (vid. ARIES), and to preserve the woodwork from being set on fire.¹²

Among the Orientals, sackcloth, which was with them always haircloth, was worn to express mortification and grief. After the decline of the Roman power, it passed from its other uses to be so employed in Europe also. Monks and anchorites almost universally adopted the cilicium as fit to be worn for the sake of humiliation, and they supposed their end to be more completely attained if this part of their raiment was never washed. Hence Jerome,¹³ describing the life of the monk Hilarion, says of his hair shirt, "*Saccum, quo semel fuerat indutus, nunquam lavans, et superfium esse dicens, munditias in cilicio querere*."

*CIMEX (κόρις), the Bug, under which name many species are included by the ancients, which modern naturalists have distinguished from one another. Aristotle makes the *κόρις* to be engendered by the vapory secretions from the skins of animals. Pliny,¹⁴ after calling the *Cimex* "*animal fadissimum, et dictu quoque fastidicndum*" (where he evidently alludes to the *Cimex lectularius*, or bedbug), goes on to state some marvellous uses of this insect in the healing art. It was considered an excellent remedy against the bite of serpents and especially of asps: fumigations made with *cimex* caused leeches to loosen their hold; and if any animal had swallowed leeches in drinking, *cimex*, taken internally, served as a cure. They were good for weak eyes when mixed with salt and the milk of a female, and for complaints of the ears

when mingled with honey and oil of roses. Numerous other medical virtues were ascribed to them, which, like the preceding, were purely fabulous, although Guettard, in modern times, recommends them in hysterical cases.¹

*CIMOLIA TERRA (Κιμολία γῆ), Cimolian Earth, so called from the island Cimolus, one of the Cyclades, whence it was principally obtained, although found also in other of the adjacent islands, particularly Siphnos. It was used by the ancients in cleaning their clothes, pretty much in the same way as fuller's earth is now employed. The ancients used it likewise in medicine: Galen speaks of it as good in St. Anthony's fire;² and Dioscorides³ highly commends it, mixed with vinegar, in swellings, inflammations, and many other external affections. The ancient writers mention two kinds of Cimolian Earth, a white and a purplish. Galen says that the white kind was dry, and the purple fattish, and that the purple was accounted the better of the two. Dioscorides says that the purple kind was cold to the touch, a particular very observable in seatites. "Many authors," remarks Sir John Hill, "have ranked Cimolian Earth among the clays, and Tournefort makes it a chalk; but it appears to me to have been neither of these, but properly and distinctly a marl. Many have imagined our fuller's earth to have been the Cimolian of the ancients, but erroneously; the substance which comes nearest it of all the now known fossils, is the seatite of the soap rock of Cornwall."⁴

*CIN'ARA (κινάρα), the Artichoke. The *Cinara scolymus*, our common artichoke, is described in distinct terms in Columella, and he is the only ancient author that has done so.⁵

CINCIA LEX, or MUNERATIJS. This lex was a plebiscitum passed in the time of the tribune M. Cincius Alimentus (B.C. 204), and entitled *De Donis et Muneribus*.⁶ One provision of this law, which forbade a person to take anything for his pains in pleading a cause, is recorded by Tacitus,⁷ "*Ne quis ob causam orandam pecuniam donum accipiat*." In the time of Augustus, the lex Cincia was confirmed by a senatus consultum,⁸ and a penalty of four times the sum received was imposed on the advocate. This fact of confirmation will explain a passage in Tacitus.⁹ The law was so far modified in the time of Claudius, that an advocate was allowed to receive ten sestertia; if he took any sum beyond that, he was liable to be prosecuted for repetition (*repetitionum tenebatur*).¹⁰ (Vid. REPETUNDÆ.) It appears that this permission was so far restricted in Trajan's time, that the fee could not be paid till the work was done.¹¹

So far the Cincian law presents no difficulty; but it appears that the provisions of the law were not limited to the case already stated. They applied, also, to gifts in general; or, at least, there were enactments which did limit the amount of what a person could give, and also required gifts to be accompanied with certain formalities; and it does not seem possible to refer these enactments to any other than the Cincian law. The numerous contradictions and difficulties which perplex this subject are, perhaps, satisfactorily reconciled and removed by the following conjecture of Savigny:¹² "Gifts which exceeded a certain amount were only valid when made by *mancipatio*, in *jure cesso*, or by tradition: small gifts, consequently, were left to a person's free choice, as before; but large gifts (ex-

cept in the case of near relatives) were to be accompanied with certain formalities." The object of the law, according to Savigny, was to prevent foolish and hasty gifts to a large amount, and, consequently, was intended, among other things, to prevent fraud. This was effected by declaring that certain forms were necessary to make the gift valid, such as *mancipatio* and in *jure cesso*, both of which required some time and ceremony, and so allowed the giver opportunity to reflect on what he was doing. These forms, also, could not be observed, except in the presence of other persons, which was an additional security against fraud. It is true that this advantage was not secured by the law in the case of the most valuable of things, *nec mancipi*, namely, money, for the transferring of which bare tradition was sufficient; but, on the other hand, a gift of a large sum of ready money is one that people of all gifts are least likely to make. The lex, however, was a complete protection against simple stipulations; that is, mere promises to give without an actual completion of the promise at the time.

Savigny concludes, and principally from a passage in Pliny's letters,¹ that the Cincian law originally contained no exception in favour of relatives, but that all gifts above a certain amount required the formalities already mentioned. The Emperor Antoninus Pius introduced an exception in favour of parents and children, and also of collateral kinsmen. It appears that this exception was subsequently abolished,² but was restored by Constantine (A.D. 319) so far as it was in favour of parents and children; and so it continued as long as the provisions of the Cincian law were in force.

As to the amount beyond which the law forbade a gift to be made, except in conformity to its provisions, see Savigny, *Zeitschrift*, &c., iv., p. 36.

The matter of the lex Cincia is also discussed in an elaborate essay by Hasse,³ which, together with the essay of Savigny, will furnish the reader with all the necessary references and materials for investigating this obscure subject. Anything farther on the matter would be out of place here.

In every system of jurisprudence, some provisions seem necessary on the subject of gifts. In our own system gifts are valid as against the giver; and though the general rule be that an agreement to give cannot be enforced, this rule is subject to exceptions in the case of persons standing in a certain relation to the giver.

It might be conjectured that one object of the Cincian law was to prevent debtors from cheating their creditors by gifts of their property, or by pretended gifts; but perhaps it would be difficult to establish this point satisfactorily in the present state of our knowledge on this subject.

CINCTUS GABRI'NUS. (Vid. TOGA.)

CINERES. (Vid. FUNUS.)

CINIFLO. (Vid. CALAMISTRUM.)

*CINNABARIS (κιννάβαρις, or -τι), Cinnabar. Martyn⁴ writes thus concerning it: "*Minium* is the native Cinnabar, or ore out of which the quicksilver is drawn. *Minium* is now commonly used to designate red lead; but we learn from Pliny that the *Minium* of the Romans was the *Miltos* or *Cinnabari* of the Greeks." Woodville says of it, "the Cinnabaris and Sanguis Draconis seem to have signified the same thing with the Greeks." Adams thinks that the ancients had three kinds of Cinnabar: 1st, the Vegetable Cinnabar, or Sanguis Draconis, being the resin of the tree called *Draconis Draco*; 2d, the Native Cinnabar, or Sulphuret of Quicksilver; and, 3d,

the *Sil Atticum*, or *Factitious Cinnabar*, which was very different from ours, being a preparation of a shining arenaceous substance.¹

•CINNAMOMUM (κιννάμωμος), the Cinnamon-tree, and also Cinnamon itself.² It is supposed by many that the κιννάμωμος of the ancients was the *Laurus Cinnamomum*. The only objection to this opinion, as Adams remarks, is, that the latter is a native of Ceylon (the ancient Taprobane), and that it is scarcely to be believed that they could have been so familiar with a production of that island, as it appears they were with their own Cinnamon. Yet, notwithstanding this, many of the authorities, as, for example, Sprengel and Dierbach, hold it to be the *Laurus Cinnamomum*. It is probable, however, that the *Laurus Cassia* was often confounded with it.³ Various kinds of cinnamon are mentioned by ancient writers, such as the μόνυλον, which was the best, of a dark wine colour, sometimes of a dark gray, the bark smooth, the branches small and slender, and having many knots; pungent in taste, and, when warmed, somewhat saltish: the δρεϊνόν, or mountain Cinnamon; the μέλαν, or "black;" the λευκόν, or "white;" the ὑπόκίρρον, or "yellowish;" to which some add the xylo-cinnamomum and the pseudo-cinnamomum. The main difference between the κιννάμωμος and κασσία appears to have been, that the former far surpassed the latter in odour and taste; and, in fact, Galen remarks that the highest kind of cassia did not differ much from the lowest kind of cinnamon. The best cinnamon was obtained from the nest of a species of thrush (*Turdus Zeilonicus*), which always built with it, and hence was called κινναμολόγος, or "cinnamon-collector."⁴ (Vid. CASIA.)

CIPPUS was a low column, sometimes round, but more frequently rectangular. Cippi were used for various purposes; the decrees of the senate were sometimes inscribed upon them; and, with distances engraved upon them, they also served as milestones. They were, however, more frequently employed as sepulchral monuments.⁵ Several of such cippi are in the Townly collection in the British Museum, one of which is given in the woodcut annexed. The inscription is to the memory of

Viria Primitiva, the wife of Lucius Virius Helius,

who died at the age of eighteen years, one month, and twenty-four days. Below the tablet, a festoon of fruits and flowers is suspended from two rams' heads at the corners; and at the lower corners are two sphinxes, with a head of Pan in the area between them.

On several cippi we find the letters S. T. T. L., that is, *Sit tibi terra levis*, whence Persius, in the passage already referred to, says, "*Non levior cippus nunc imprimit ossa.*"

It was also usual to place at one corner of the burying-ground a cippus, on which the extent of the burying-ground was marked, towards the road (*in fronte*), and backward to the fields (*in agrum*).

CIRCE'NSES LUDI. (Vid. CIRCUS.)

CIRCINUS (διαθήκη), a Compass. The compass used by statuary, architects, masons, and carpenters, is often represented on the tombs of such artificers, together with the other instruments of their profession or trade. The annexed woodcut is cop-

ied from a tomb found at Rome.² It exhibits two kinds of compasses, viz., the common kind used for drawing circles and measuring distances, and one with curved legs, probably intended to measure the thickness of columns, cylindrical pieces of wood, or similar objects. The common kind is described by the scholiast on Aristophanes,³ who compares its form to that of the letter A. The mythologists supposed this instrument to have been invented by Perdix, who was the nephew of Dædalus, and, through envy, thrown by him over the precipice of the Athenian acropolis.⁴ Compasses of various forms were discovered in a statuary's house at Pompeii

CIRCUTO'RES. (Vid. CASTRA, p. 222.)

CIRCUS. When Tarquinius Priscus had taken the town of Apiolæ from the Latins, as related in the early Roman legends, he commemorated his success by an exhibition of races and pugilistic contests in the Murcian valley, between the Palatine and Aventine Hills; around which a number of temporary platforms were erected by the patres and equites, called *spectacula*, *fori*, or *foruli*, from their resemblance to the deck of a ship; each one raising a stage for himself, upon which he stood to view the games.⁵ This course, with its surrounding scaffoldings, was termed *circus*; either because the spectators stood round to see the shows, or because the procession and races went round in a circuit.⁶ Previously, however, to the death of Tarquin, a permanent building was constructed for the purpose, with regular tiers of seats, in the form of a theatre.⁷ To this the name of *Circus Maximus* was subsequently given, as a distinction from the Flaminian and other similar buildings, which it surpassed in extent and splendour; and hence, like the *Campus Martius*, it is often spoken of as *the Circus*, without any distinguishing epithet.

Of the *Circus Maximus* scarcely a vestige now

1. (Dioscor., v. 109.—Paris, Pharm., vol. i., p. 72.—Adams, Append., s. v.)—2. (Dioscor., i., 13.—Galen, De Simpl., vii.—Theophr., iv., 4.)—3. (Adams, Append., s. v.)—4. (Plin., H. 1. (Hor., Sat., i., viii., 12.)—2. (Gruter, Corp. Inscript., t. i., part ii., p. 644.)—3. (Nub., 178.)—4. (Ovid, Met., viii., 241–251.)—5. (Liv., i., 35.—Festus, s. v. Forum.—Dionys., iii., p. 192 &c.)—6. (Varro, De Ling. Lat., v., 153, 154, ed. Müller.)—7. (Compare Liv. and Dionys., II. cc.)

remains beyond the palpable evidence of the site it occupied, and a few masses of rubble-work in a circular form, which may be seen under the walls of some houses in the *Via de' Cerchi*, and which retain traces of having supported the stone seats¹ for the spectators. This loss is, fortunately, supplied by the remains of a small circus on the Via Appia, commonly called the Circus of Caracalla, the

ground-plan of which, together with much of the superstructure, remains in a state of considerable preservation. The ground-plan of the circus in question is represented in the annexed woodcut; and may be safely taken as a model of all others, since it agrees in every main feature, both of general outline and individual parts, with the description of the Circus Maximus given by Dionysius.¹

Around the double lines (A, A) were arranged the seats (*gradus*, *sedilia*, *subsellia*), as in a theatre, termed, collectively, the *cavea*, the lowest of which were separated from the ground by a *podium*, and the whole divided longitudinally by *præcinctiones*, and diagonally into *cunei*, with their vomitoria attached to each. Towards the extremity of the upper branch of the *cavea*, the general outline is broken by an outwork (B), which was probably the *pulvinar*, or station for the emperor, as it is placed in the best situation for seeing both the commencement and end of the course, and in the most prom-

inent part of the circus.² In the opposite branch is observed another interruption to the uniform line of seats (C), betokening also, from its construction, a place of distinction, which might have been assigned to the person at whose expense the games were given (*editor spectaculorum*).

In the centre of the area was a low wall (D), running lengthways down the course, which, from its resemblance to the position of the dorsal bone in the human frame, was termed *spina*.³ It is represented in the woodcut subjoined, taken from an ancient bas-relief.

At each extremity of the *spina* were placed, upon a base (E, E), three wooden cylinders, of a conical shape, like cypress-trees (*metasque imitata cupressus*), which were called *metæ*—the goals. Their situation is distinctly seen in the preceding woodcut, but their form is more fully developed in the

one annexed, copied from a marble in the British Museum.⁴

The most remarkable object upon the *spina* were two columns (F) supporting seven conical balls, which, from their resemblance to eggs, were called *ova*.⁵ These are seen in the woodcut representing the *spina*. Their use was to enable the spectators to count the number of rounds which had been run; for which purpose they are said to have been first introduced by Agrippa,⁶ though Livy speaks of them long before.⁷ They are, therefore, seven in number, such being the number of the circuits made in each race; and, as each round was run, one of the *ova* was put up⁸ or taken down, according to Varro.⁹ An egg was adopted for this purpose in honour of Castor and Pollux.¹⁰ At the other extremity of the *spina* were two similar columns (G), represented also in the woodcut over the second chariot, sustaining seven dolphins, termed *delphinae*, or *delphinorum columnæ*,¹¹ which do not appear to have been intended to be removed, but only placed there as corresponding ornaments to the *ova*; and the figure of the dolphin was selected in honour of Neptune.¹² In the Lyons mosaic, subsequently to be noticed, the *delphinae* are represented as fountains spouting

water; but in a bas-relief of the Palazzo Barberini,¹ a ladder is placed against the columns which support the dolphins, apparently for the purpose of ascending to take them up and down. Some writers suppose the columns which supported the *ova* and *delphina* to be the *phala* or *fala* which Juvenal mentions.² But the *phala* were not columns, but towers, erected, as circumstances required, between the *meta* and *curipus*, or extreme circuit of the area, when sham-fights were represented in the circus.³ Besides these, the *spina* was decorated with many other objects, such as obelisks, statues, altars, and temples, which do not appear to have had any fixed locality.

It will be observed in the ground-plan that there is a passage between the *meta* and *spina*, the extreme ends of the latter of which are hollowed out into a circular recess: and several of the ancient sculptures afford similar examples. This might have been for performing the sacrifice, or other offices of religious worship, with which the games commenced; particularly as small chapels can still be seen under the *meta*, in which the statues of some divinities must have been placed. It was probably under the first of these spaces that the altar of the god *Consus* was concealed,⁴ which was excavated upon each occasion of these games.⁵

At the extremity of the circus in which the two horns of the *cavca* terminate, were placed the stalls for the horses and chariots (H, H), commonly called *carceres* at, and subsequently to, the age of Varro; but more anciently the whole line of buildings which confined this end of the circus was termed *oppidum*, because, with its gates and towers, it resembled the walls of a town,⁶ which is forcibly illustrated by the circus under consideration, where the two towers (I, I) at each end of the *carceres* are still standing. The number of *carceres* is supposed to have been usually twelve,⁷ as they are in this plan; but in the mosaic discovered at Lyons, and published by Artaud,⁸ there are only eight. This mosaic has several peculiarities. Most of the objects are double. There is a double set of *ova* and *delphina*, one of each sort at each end of the *spina*; and eight chariots, that is, a double set for each colour, are inserted. They were vaults, closed in front by gates of open woodwork (*cancelli*), which were opened simultaneously upon the signal being given,⁹ by removing a rope (*δσπληγγς*¹⁰) attached to pilasters of the kind called *Hermæ*, placed for that purpose between each stall; upon which the gates were immediately thrown open by a number of men, probably the *armementarii*, as represented in the following woodcut, taken from a very curious marble in the Museo Borgiano at Velletri; which also represents most of the other peculiarities above mentioned as appertaining to the *carceres*.

In the mosaic of Lyons the man is represented

apparently in the act of letting go the rope (*δσπληγγς*) in the manner described by Dionysius.¹ The cut below, which is from a marble in the British Museum,² represents a set of four *carceres*, with their *Hermæ* and *cancelli* open, as left after the chariots

had started, in which the gates are made to open inward.

The preceding account and woodcuts will be sufficient to explain the meaning of the various words by which the *carceres* were designated in poetical language, namely, *claustra*,³ *crypta*,⁴ *fauces*,⁵ *ostia*,⁶ *fores carceris*,⁷ *repagula*,⁸ *limina equorum*.⁹

It will not fail to be observed that the line of the *carceres* is not at a right angle with the *spina*, but forms the segment of a circle, the centre of which is a point on the right hand of the arena; the reason for which is obviously that all the chariots might have, as nearly as possible, an equal distance to pass over between the *carceres* and mouth of the course. Moreover, the two sides of the circus are not parallel to each other, nor the *spina* to either of them; but they are so planned that the course diminishes gradually from the mouth at (J), until it reaches the corresponding line at the opposite side of the *spina* (K), where it is narrower by thirty-two feet. This might have proceeded from economy, or be necessary in the present instance on account of the limited extent of the circus; for as all the four or six chariots would enter the mouth of the course nearly at once, the greatest width would be required at that spot; but as they got down the course, and one or more took the lead, the same width would be no longer necessary.

The *carceres* were divided into two sets of six each, accurately described by Cassiodorus¹⁰ as *bis-sena ostia*, by an entrance in the centre (L), called *Porta Pompæ*; because it was the one through which the Circensian procession entered, and which, it is inferred from a passage in Ausonius,¹¹ was always open, forming a thoroughfare through the circus. Besides this entrance, there were four others, two at the termination of the seats between the *cavca* and the *oppidum* (M, M), another at (N), and the fourth at (O), under the vault of which the fresco decorations are still visible. This is supposed to be the *Porta Triumphalis*, to which its situation seems adapted. One of the others was the *Porta Libitinaensis*,¹² so called because it was the one through which the dead bodies of those killed in the games were carried out.¹³

Such were the general features of a circus, as far as regards the interior of the fabric. The area had also its divisions appropriated to particular purposes, with a nomenclature of its own attached to each. The space immediately before the *oppidum* was termed *circus primus*; that near the *meta prima*, *circus interior* or *intimus*,¹⁴ which latter spot, in the *Circus Maximus*, was also termed *ad Murcem* or *ad*

Murciam, from the altar of Venus Murtia or Murcia, placed there.¹ The term *arena* belongs to an amphitheatre; and it is therefore probable that it was applied in the circus to the large open space between the *carceres* and *prima meta*, when the circus was used for the exhibition of athletic games, for which the locality seems best adapted; but in *Silvius Italicus*² it is put for the part down the *spina*. When the circus was used for racing, the course was termed *spatium*³ or *spatia*, because the match included more than one circuit.⁴ It is also called *campus*,⁵ and poetically *æquor*.⁶

At the entrance of the course, exactly in the direction of the line (J, K), were two small pedestals (*hermuli*) on each side of the *podium*, to which was attached a chalked rope (*alba linea*), for the purpose of making the start fair, precisely as is practised at Rome for the horse-races during Carnival. Thus, when the doors of the *carceres* were thrown open, if any of the horses rushed out before the others, they were brought up by this rope until the whole were fairly abreast, when it was loosened from one side, and all poured into the course at once. In the Lyons mosaic the *alba linea* is distinctly traced at the spot just mentioned, and one of the chariots is observed to be upset at the very place, while the others pursue their course. A second *alba linea* is also drawn across the course, exactly half way down the *spina*, the object of which has not been explained by the publisher of the mosaic. It has been observed that this is a double race; and as the circus represented was probably too narrow to admit of eight chariots starting abreast, it became necessary that an *alba linea* should be drawn for each set; and, consequently, one in advance of the other. The writer has often seen the accident alluded to above happen at Rome, when an over-eager horse rushes against the rope and gets thrown down. This line, for an obvious reason,⁸ was also called *calx* and *creta*,⁹ from whence comes the allusion of Persius,¹⁰ *cretata ambitio*. The *meta* served only to regulate the turnings of the course; the *alba linea* answered to the starting and winning post of modern days: "peracto legitimo cursu ad cretam steterunt."¹¹ Hence the metaphor of Cicero,¹² "quasi decurso spatio ad carceres a calce revocari;" and of Horace,¹³ "mors ultima linea rerum."¹⁴

From this description the Circus Maximus differed little, except in size and magnificence of embellishment. But as it was used for hunting wild beasts, Julius Cæsar drew a canal, called Euripus, ten feet wide, around the bottom of the *podium*, to protect the spectators who sat there,¹⁵ which was removed by Nero,¹⁶ but subsequently restored by other princes.¹⁷ It possessed also another variety in three open galleries or balconies, at the circular end, called *meniana* or *maniana*.¹⁸ The numbers which the Circus Maximus was capable of containing are computed at 150,000 by Dionysius,¹⁹ 260,000 by Pliny,²⁰ and 385,000 by P. Victor,²¹ all of which are probably correct, but have reference to different periods of its history. Its very great extent is indicated by Juvenal.²² Its length in the time of Julius Cæsar was three stadia, the width one, and the

depth of the buildings occupied half a stadium, which is included in the measurements given by Dionysius,² and thus exactly accounts for the variation in his computation.

When the Circus Maximus was permanently formed by Tarquinius Priscus, each of the thirty curiæ had a particular place assigned to it;³ which separation of the orders is considered by Niebuhr to account for the origin and purpose of the Circus Flaminius, which he thinks was designed for the games of the commonalty, who in early times chose their tribunes there, on the Flaminian Field.⁴ Be that as it may, in the latter days of the Republic these invidious distinctions were lost, and all classes sat promiscuously in the circus.⁵ The seats were then marked off at intervals by a line or groove drawn across them (*linea*), so that the space included between the two lines afforded sitting-room for a certain number of spectators. Hence the allusion of Ovid:⁶

"Quid frustra refugis? cogit nos linea jungi."

As the seats were hard and high, the women made use of a cushion (*pulvinus*) and a footstool (*scamnum*, *scabellum*), for which purpose the railing which ran along the upper edge of each *præcinctio* was used by those who sat immediately above it.⁷ But under the emperors, when it became necessary to give an adventitious rank to the upper classes by privileges and distinctions, Augustus first, then Claudius, and finally Nero and Domitian, again separated the senators and equites from the commons.⁸ The seat of the emperor, *pulvinar*,¹⁰ *cubiculum*,¹¹ was most likely in the same situation in the Circus Maximus as in the one above described. It was generally upon the *podium*, unless when he presided himself, which was not always the case;¹² but then he occupied the elevated tribunal of the president (*suggestus*), over the *Porta Pompa*. The consuls and other dignitaries sat above the *carceres*,¹³ indications of which seats are seen in the first woodcut on page 254. The rest of the *oppidum* was probably occupied by the musicians and persons who formed part of the *pompa*.

The exterior of the Circus Maximus was surrounded by a portico one story high, above which were shops for those who sold refreshments.¹⁴ Within the portico were ranges of dark vaults, which supported the seats of the *cavea*. These were let out to women of the town.¹⁵

The Circensian games (*Ludi Circenses*) were first instituted by Romulus, according to the legends, when he wished to attract the Sabine population to Rome, for the purpose of furnishing his own people with wives,¹⁶ and were celebrated in honour of the god Consus, or Neptunus Equestris, from whom they were styled *Consuales*.¹⁷ But after the construction of the Circus Maximus they were called indiscriminately *Circenses*,¹⁸ *Romani*, or *Magni*.¹⁹ They embraced six kinds of games: I. CURSUS; II. LUDUS TROJÆ; III. PUGNA EQUESTRI; IV. CERTAMEN GYMNICUM; V. VENATIO; VI. NAUMACHIA. The last two were not peculiar to the circus, but were exhibited also in the amphitheatre, or in buildings appropriated for them.

The games commenced with a grand procession (*Pompa Circensis*), in which all those who were about to exhibit in the circus, as well as persons of

distinction, bore a part. The statues of the gods formed the most conspicuous feature in the show, and were paraded upon wooden platforms, called *fercula* and *thensa*.¹ The former were borne upon the shoulders, as the statues of saints are carried in modern processions;² the latter drawn along upon wheels, and hence the *thensa* which bore the statue of Jupiter is termed *Jovis plaustrum* by Tertullian,³ and *Διὸς ὄχος* by Dion Cassius.⁴ The former were for painted images, or those of light material, the latter for the heavy statues. The whole procession is minutely described by Dionysius.⁵

I. CURSUS, the races. The carriage usually employed in the circus was drawn by two or four horses (*biga*, *quadriga*). (*Vid.* BIGA, BIGATUS.)

The usual number of chariots which started for each race was four. The drivers (*auriga*, *agitatores*) were also divided into four companies, each distinguished by a different colour, to represent the four seasons of the year, and called a *factio*:⁶ thus *factio prasina*, the green, represented the spring, whence⁷ "Eventum viridis quo colligo panni;" *factio russata*, red, the summer; *factio veneta*, azure, the autumn; and *factio alba* or *albata*, white, the winter.⁸ Originally there were but two factions, *albata* and *russata*,⁹ and, consequently, only two chariots started at each race. Domitian subsequently increased the whole number to six, by the addition of two new factions, *aurata* and *purpurea*;¹⁰ but this appears to have been an exception to the usual practice, and not in general use. The driver stood in his car within the reins, which went round his back. This enabled him to throw all his weight against the horses, by leaning backward; but it greatly enhanced his danger in case of an upset, and caused the death of Hippolytus.¹¹ To avoid this peril, a sort of knife or bill-hook was carried at the waist for the purpose of cutting the reins in a case of emergency, as is seen in some of the ancient reliefs, and is more clearly illustrated in the annexed woodcut,

copied from a fragment formerly belonging to the Villa Negroni, which also affords a specimen of the dress of an *auriga*. The torso only remains of this statue, but the head is supplied from another antique, representing an *auriga*, in the Villa Albani.

(Juv., *Sat.*, xi., 196.)—8. (Tertull., *De Spectac.*, 9.—Compare authorities quoted by Ruperth, ad Juv., vii., 112.)—9. (Tertull., l. c.)—10. (Suet., Dom., 7.)—11. (Euriop., Hippol., 1230, ed. Monk.—Compare Ovid, *Met.*, xv., 524.)

When all was ready, the doors of the carceres were flung open, and the chariots were formed abreast of the *alba linea* by men called *moratores*, from their duty; the signal for the start was then given by the person who presided at the games, sometimes by sound of trumpet,¹ or more usually by letting fall a napkin,² whence the Circensian games are called *spectacula mappæ*.³ The origin of this custom is founded on a story that Nero, while at dinner, hearing the shouts of the people, who were clamorous for the course to begin, threw down his napkin as the signal.⁴ The *alba linea* was then cast off, and the race commenced, the extent of which was seven times round the *spina*,⁵ keeping it always on the left.⁶ A course of seven circuits was termed *unus missus*, and twenty-five was the number of races run in each day, the last of which was called *missus ararius*, because in early times the expense of it was defrayed by a collection of money (*as*) made among the people.⁷ Upon one occasion Domitian reduced the number of circuits from seven to five, in order to exhibit 100 *missus* in one day.⁸ The victor descended from his car at the conclusion of the race, and ascended the *spina*, where he received his reward (*bravium*, from the Greek *βραβεῖον*): this consisted of a considerable sum of money,⁹ and accounts for the great wealth of the charioteers to which Juvenal alludes, and the truth of which is testified by many sepulchral inscriptions.

A single horseman, answering to the *κέλης* of the Greeks, attended each chariot, the object of which seems to have been twofold; to assist his companion by urging on the horses, when his hands were occupied in managing the reins, and, if necessary, to ride forward and clear the course, as seen in the cut from the British Museum representing the *meta*, which duty Cassiodorus¹¹ assigns to him, with the title of *equus desultorius*. Other writers apply that term to those who practised feats of horsemanship in the circus, leaping from one to another when at their speed.¹² In other respects, the horse-racing followed the same rules as the chariots.

The enthusiasm of the Romans for these races exceeded all bounds. Lists of the horses (*libella*), with their names and colours, and those of the drivers, were handed about, and heavy bets made upon each faction;¹³ and sometimes the contests between two parties broke out into open violence and bloody quarrels, until at last the disputes which originated in the circus had nearly lost the Emperor Justinian his crown.¹⁴

II. LUDUS TROJÆ, a sort of sham-fight, said to have been invented by Æneas, performed by young men of rank on horseback,¹⁵ often exhibited by Augustus and succeeding emperors,¹⁶ which is described by Virgil.¹⁷

III. PUGNA EQUESTRIIS ET PEDESTRIIS, a representation of a battle, upon which occasions a camp was formed in the circus.¹⁸

other games of the circus by the Goths (A.D. 410); but the chariot races continued at Constantinople until that city was besieged by the Venetians (A.D. 1204).¹

CIRCUMVALLATIO. (Vid. VALLUM.)

*CIRIS, a species of Lark, according to some, while others think it is a solitary bird with a purple crest, which continually haunts the rocks and shores of the sea. The poets fabled that Scylla, daughter of Nisus, was changed into this bird.²

*CIRSIIUM (κίρσιον). Sprengel, upon the whole, inclines to the opinion that this is the Slender Thistle, or *Carduus tenuiflorus*.³ (Vid., however, *CARDUS*.)

*CIS (κίς), an insect mentioned by Theophrastus⁴ as injurious to grain. Aldrovandus decides that it is the same with the *Curculio*, which infests wheat and barley, meaning, no doubt, the *Curculio granarius*, L., or Weevil. The τρώς was a species of *Curculio* which infests pulse: Scaliger remarks that it is also called μύδας by Theophrastus.⁵

CISIUM, a gig, i. e., a light open carriage with two wheels, adapted to carry two persons rapidly from place to place. Its form is sculptured on the monumental column at Igel, near Treves (see woodcut). It had a box or case, probably under the seat.⁶ The cisia were quickly drawn by mules (*cisi volantis*). Cicero mentions the case of a messenger who travelled 56 miles in 10 hours in such vehicles, which were kept for hire at the stations along the great roads; a proof that the ancients considered six Roman miles per hour as an extraordinary speed.⁷ The conductors of these hired gigs were called *cisiarii*, and were subject to penalties for careless or dangerous driving.⁸

*CISSA or CITTA (κίσα, κίττα), a species of Bird, which Hardouin and most of the earlier commentators hold to be the Magpie, or *Corvus Pica*, L. Schneider, however, thinks the Jay, or *Corvus glandularius*, more applicable to the κίσα of Aristotle. The latter is certainly the bird described by Pliny under this name.¹⁰

*CISSE'RIIS (κίσσηρις), Pumice. Theophrastus¹¹ was well aware that Pumice is formed by the action of fire. He speaks of various kinds, specifying particularly the pumices of Nisyros and Melos; the former of which, however, are not genuine pumices, according to Hill, but Tophi. The island of Melos has always been known to abound with pumices, and those of the very finest kind. This appears to have been the case even in the time of Theophrastus, as appears by his description of their being light and sandy, or easily rubbed into powder.¹²

*CYSOS or CITTOS (κίσος, κίτρος), the common Ivy, or *Hedera helix*. The three species of it described by Dioscorides¹³ and other ancient writers are now looked upon as mere varieties. Theophrastus,¹⁴ for example, says that the three principal sorts are the white, the black, and that which is called *helix* (ἑλίς). The black is our common ivy, and the *helix* seems to be only the same plant before it has become capable of bearing fruit. "That the *helix* is the ivy in its barren state," observes Martyn, "is plain from the account which Theophrastus gives of it: he says the leaves are angular, and more neat than those of ivy, which has

them rounder and more simple. He adds, moreover, that it is barren. As for the white ivy, it seems to be unknown to us. Some, indeed, imagine it to be that variety of which the leaves are variegated with white. But Theophrastus expressly mentions the whiteness of the fruit. Pliny¹ has confounded the ivy with the *cistus*, being deceived by the similarity of the two names, that of ivy being κίσος or κίτρος, and that of the *cistus*, κίτρος." Fée² thinks that the white ivy is the *Azarina* of the Middle Ages; in other words, the *Antirrhinum asarinum*, L. Sprengel, on the other hand, makes it the same with the helix; "*sciet enim*," he observes, "*quandoque folia habere nervis albis pallentia*."—The botanists of the Middle Ages established as a species of Ivy, under the name of *arbores*, a variety which the moderns merely distinguish by the epithet "*corymbosa*." It is the same with that of which Virgil speaks in the third Eclogue, and in the second book of the Georgics,³ and which is also described with as much elegance as precision in a passage of the Culex.⁴ The *Hedera nigra* of the seventh and eighth Eclogues⁵ is the same which the ancients termed "*Diomysia*," from its being sacred to Bacchus. It is the *Hedera poetica* of Bauhin. The epithet *nigra* has reference to the dark hue of the berries and the deep green colour of the leaves.⁶ Sibthorp, speaking of the *Hedera helix*, as found at the present day in Greece, remarks, "This tree hangs as a curtain in the picturesque scenery of the marble caves of Pendeli. The leaves are used for issues."⁷

CISTA (κίστη) was a small box or chest, in which anything might be placed; but the term was more particularly applied, especially among the Greeks, to the small boxes which were carried in procession in the festivals of Demeter and Dionysus. These boxes, which were always kept closed in the public processions, contained sacred things connected with the worship of these deities.⁸

In the representations of the Dionysian processions, which frequently form the subject of paintings on ancient vases, women carrying cistæ are

constantly introduced. From one of these paintings, given by Millin in his *Peintures de Vases Antiques*, the preceding woodcut is taken; and a similar figure from the same work is given on page 188.

*CISTHUS or CISTUS (κίσθος, κίστος). The common *κίσθος* of the Greeks was either the *Cistus Creticus* or *C. ladaniferus*. This is the tree which produces the famous gum Ladanum. (Vid. LADANUM.) Sibthorp makes the *κίστος* ὀθῆλος of Dioscorides to be the *Cistus salvifolius*.¹

CISTOPHORUS (κιστοφόρος), a silver coin, which is supposed to belong to Rhodes, and which was in general circulation in Asia Minor at the time of the conquest of that country by the Romans.² It took its name from the device upon it, which was either the sacred chest (*cista*) of Bacchus, or, more probably, a flower called *κιστός*. Its value is extremely uncertain, as the only information we possess on the subject is in two passages of Festus, which are at variance with each other, and of which certainly one, and probably the other, is corrupt.³ Mr. Hussey (p. 74, 75), from existing coins which he takes for cistophori, determines it to be about $\frac{1}{4}$ of the later Attic drachma, or Roman denarius of the Republic, and worth in our money about 7½d.

CITHARA. (Vid. LYRA.)

*CITRUS (κίτριά or κίτρεά), the Citron-tree. For a long period, as Féé remarks,⁴ the Citron was without any specific name among both the Greeks and Romans. Theophrastus merely calls it *μηλέα Μηδική ἢ Περσική*. Pliny⁵ styles it the Median or Assyrian Apple-tree, "*Malus Medica sive Assyriaca*." At a later period, *μηλέα Περσική* became a name appropriated to the Peach-tree, while "*malus Assyriaca*" ceased to be used at all: the designation of the Citron-tree then became more precise, under the appellation of *malus Medica* or *Citrus* (*μηλέα Μηδική, κίτρεά*). Of all the species of "*Citrus*," that which botanists term, *par excellence*, the Citron-tree of Media, was probably the first known in the West. Virgil⁶ gives a beautiful description of it, styling the fruit "*felix malum*." This epithet *felix* is meant to indicate the "happy" employment of the fruit as a means of cure in cases of poisoning, as well as on other occasions; while the *tristes succi* indicate, according to Féé, the bitter savour of the rind, for it is of the rind that the poet here points out, as he thinks, the medical use: he makes no allusion to the refreshing effects of the citron, but only to its tonic action; and this latter could not refer to the juice, the properties of which were not as yet well known. Some commentators think that, when Josephus speaks of the apple of Persia, which in his time served as "*hadar*," he means the citron. This, however, cannot be correct. It would seem that he merely refers to a remarkable and choice kind of fruit, which was to be an offering to the Lord; so that *hadar* cannot be the Hebrew for the citron-tree or its produce.⁷ Neither is there any ground for the belief that the Jews in the time of Moses were acquainted with this tree.⁸—Virgil⁹ says that the fruit of the citron was a specific against poison, and also that the Medes chewed it as a corrective of fetid breaths, and as a remedy for the asthma. Athenæus¹⁰ relates a remarkable story of the use of citrons against poison, which he had from a friend of his who was governor of Egypt. This governor had condemned two malefactors to death by the bite of serpents. As they were being led to execution, a person, taking compassion on them, gave them a citron to eat. The consequence of this was, that though they were exposed to the bite of the most venomous serpents, they received no injury. The governor, being surprised at this extraor-

inary result, inquired of the soldier who guarded them what they had eaten or drunk that day, and being informed that they had only eaten a citron, he ordered that the next day one of them should eat citron and the other not. He who had not tasted the citron died presently after he was bitten; the other remained unhurt!—Palladius¹ seems to have been the first who cultivated the citron with any success in Italy. He has a whole chapter on the subject of this tree. It seems, by his account, that the fruit was acrid, which confirms what Theophrastus and Pliny have said of it, that it was not esculent. It may have been meliorated by culture since his time.²

CIVILE JUS. (Vid. JUS CIVILE.)

CIVILIS ACTIO. (Vid. ACTIO, p. 17.)

CIVIS. (Vid. CIVITAS.)

CIVITAS (GREEK) (Πολιτεία). In the third book of the Politics, Aristotle commences his inquiry into the nature of states with the question, "What constitutes a citizen?" (πολίτης). He defines a citizen to be one who is a partner in the legislative and judicial power (μέτοχος κρίσεως καὶ ἀρχῆς). No definition will equally apply to all the different states of Greece, or to any single state at different times; the above seems to comprehend more or less properly all those whom the common use of language entitled to the name.

A state in the heroic ages was the government of a prince; the citizens were his subjects, and deprived all their privileges, civil as well as religious, from their nobles and princes. Nothing could have been farther from the notions of those times than the ideas respecting the natural equality of freemen which were considered self-evident axioms in the democracies of an after period. In the early governments there were no formal stipulations; the kings were amenable to the gods alone. The shadows of a council and assembly were already in existence, but their business was to obey. Community of language, of religion, and of legal rights, as far as they then existed, was the bond of union; and their privileges, such as they were, were readily granted to naturalized strangers. Upon the whole, as Wachsmuth has well observed, the notion of citizenship in the heroic age only existed so far as the condition of aliens or of domestic slaves was its negative.

The rise of a dominant class gradually overthrew the monarchies of ancient Greece. Of such a class, the chief characteristics were good birth and the hereditary transmission of privileges, the possession of land, and the performance of military service. To these characters the names γάμοροι, ἱππεῖς, ἐκπαίδαι, &c., severally correspond. Strictly speaking, these were the only citizens; yet the lower class were quite distinct from bondmen or slaves. It commonly happened that the nobility occupied the fortified towns, while the δῆμος lived in the country and followed agricultural pursuits: whenever the latter were gathered within the walls, and became seamen or handicraftsmen, the difference of ranks was soon lost, and wealth made the only standard. The quarrels of the nobility among themselves, and the admixture of population arising from immigrations, all tended to raise the lower orders from their political subjection. It must be remembered, too, that the possession of domestic slaves, if it placed them in no new relation to the governing body, at any rate gave them leisure to attend to the higher duties of a citizen, and thus served to increase their political efficiency.

During the convulsions which followed the heroic ages, naturalization was readily granted to all who desired it; as the value of citizenship increased, it

was, of course, more sparingly bestowed. The ties of hospitality descended from the prince to the state, and the friendly relations of the Homeric heroes were exchanged for the *προξενία* of a later period. In political intercourse, the importance of these last soon began to be felt, and the *πρόξενος* at Athens, in after times, obtained rights only inferior to actual citizenship. (*Vid.* *PROXENOS*.) The isopolite relation existed, however, on a much more extended scale. Sometimes particular privileges were granted: as *ἐπιγαμία*, the right of intermarriage; *ἐγκτήσις*, the right of acquiring landed property; *ἀτέλεια*, immunity from taxation, especially *ἀτέλεια μετοικίου*, from the tax imposed on resident aliens. All these privileges were included under the general term *ισοτέλεια* or *ισοπολίτεια*, and the class who obtained them were called *ισοτέλεις*. They bore the same burdens with the citizens, and could plead in the courts or transact business with the people without the intervention of a *προστάτης*.¹ If the right of citizenship was conferred for services done to the state, the rank termed *προεδρία* or *ἐργεσία* might be added. Naturalized citizens, even of the highest grade, were not precisely in the same condition with the citizen by birth, although it is not agreed in what the difference consisted. Some think that they were excluded from the assembly,² others that they were only ineligible to offices, or, at any rate, to the archonship.

The candidate on whom the citizenship was to be conferred was proposed in two successive assemblies, at the second of which at least six thousand citizens voted for him by ballot: even if he succeeded, his admission, like every other decree, was liable during a whole year to a *γραφὴ παρανόμων*. He was registered in a phyle and deme, but not enrolled in the phratría and genos; and hence it has been argued that he was ineligible to the office of archon or priest, because unable to participate in the sacred rites of *Ἀπόλλων Πατῶρος* or *Ζεὺς Ἐρκετός*.

The object of the phratría (which were retained in the constitution of Cleisthenes, when their number no longer corresponded to that of the tribes) was to preserve purity and legitimacy of descent among the citizens. Aristotle says³ that for practical purposes it was sufficient to define a citizen as the son or grandson of a citizen, and the register of the phratría was kept chiefly as a record of the citizenship of the parents. If any one's claim was disputed, this register was at hand, and gave an answer to all doubts about the rights of his parents or his own identity. Every newly-married woman, herself a citizen, was enrolled in the phratría of her husband, and every infant registered in the phratría and genos of its father. All who were thus registered must have been born in lawful wedlock, of parents who were themselves citizens; indeed, so far was this carried, that the omission of any of the requisite formalities in the marriage of the parents, if it did not wholly take away the rights of citizenship, might place the offspring under serious disabilities. This, however, was only carried out in its utmost rigour at the time when Athenian citizenship was most valuable. In Solon's time, it is not certain that the offspring of a citizen and of a foreign woman incurred any civil disadvantage; and even the law of Pericles,⁴ which exacted citizenship on the mother's side, appears to have become obsolete very soon afterward, as we find it re-enacted by Aristophanes in the archonship of Euclides, B.C. 403.⁵

It is evident, then, from the very object of the phratría, why the newly-admitted citizen was not enrolled in them. As the same reason did not apply to the children, these, if born of women who were citizens, were enrolled in the phratría of their maternal grandfather.¹ Still an additional safeguard was provided by the registry of the deme. At the age of sixteen, the son of a citizen was required to devote two years to the exercises of the gymnasia, at the expiration of which term he was enrolled in his deme; and, after taking the oath of a citizen, was armed in the presence of the assembly. He was then of age, and might marry; but was required to spend two years more as a *περίπολος* in frontier service before he was admitted to take part in the assembly of the people. The admission into the phratría and deme were alike attended with oaths and other solemn formalities: when a *δοκιμασία* or general scrutiny of the claims of citizens took place, it was intrusted to both of them; indeed, the registry of the deme was the only check upon the naturalized citizen.

These privileges, however, were only enjoyed while the citizen was *ἐπίτιμος*: in other words, did not incur any sort of *ἀτιμία*. *Ἀτιμία* was of two sorts, either partial or total. In the former case, the rights of citizenship were forfeited for a time or in a particular case; as when public debtors, for instance, were debarred from the assembly and courts until the debt was paid;² or when a plaintiff was subjected to *ἀτιμία*, and debarred from instituting certain public suits if he did not obtain a fifth part of the votes.³ Total *ἀτιμία* was incurred for the worse sort of crimes, such as bribery, embezzlement, perjury, neglect of parents, &c.⁴ It did not affect the property of the delinquent, but only deprived him of his political rights: perhaps it did not contain any idea even of dishonour, except in so far as it was the punishment of an offence. The punishment did not necessarily extend to the family of the offender, although in particular cases it may have done so.⁵

Recurring, then, to Aristotle's definition, we find the essential properties of Athenian citizenship to have consisted in the share possessed by every citizen in the legislature, in the election of magistrates, in the *δοκιμασία*, and in the courts of justice.

The lowest unity under which the citizen was contained was the *γένος* or clan; its members were termed *γεννήται* or *ομογάλακτες*. Thirty *γένη* formed a *φαστρία*, which latter division, as was observed above, continued to subsist long after the four tribes, to which the twelve phratries anciently corresponded, had been done away by the constitution of Cleisthenes. There is no reason to suppose that these divisions originated in the common descent of the persons who were included in them, as they certainly did not imply any such idea in later times. Rather they are to be considered as mere political unions, yet formed in imitation of the natural ties of the patriarchal system.

If we would picture to ourselves the true notion which the Greeks imbibed in the word *πόλις*, we must lay aside all modern ideas respecting the nature and object of a state. With us, practically, if not in theory, the essential object of a state hardly embraces more than the protection of life and property. The Greeks, on the other hand, had the most vivid conception of the state as a whole, every part of which was to co-operate to some great end, to which all other duties were considered as subordinate. Thus the aim of democracy was said to be liberty; wealth, of oligarchy; and education, of ar-

1. (Isæus, *De Apol. Hæred.*, c. 15.)—2. (Hermann, *Manual*, § 124.)—3. (Böckh, *Publ. Econ. of Athens*, ii., p. 111.)—4. (Arist., *doc.*, p. 10, 22.)—5. (Demosth., c. *Myl.*, c. 32.)

istocracy. In all governments the endeavour was to draw the social union as close as possible, and it seems to have been with this view that Aristotle laid down a principle which answered well enough to the accidental circumstances of the Grecian states, that a πόλις must be of a certain size (Ὁὐ γὰρ ἐκ δέκα μυριάδων πόλις ἐτι ἐστίν¹).

This unity of purpose was nowhere so fully carried out as in the government of Sparta; and, if Sparta is to be looked upon as the model of a Dorian state, we may add, in the other Dorian governments. Whether Spartan institutions in their essential parts were the creation of a single master-mind, or the result of circumstances modified only by the genius of Lycurgus, their design was evidently to unite the governing body among themselves against the superior numbers of the subject population. The division of lands, the *syssitia*, the education of their youth, all tended to this great object. The most important thing, next to union among themselves, was to divide the subject class, and, accordingly, we find the government conferring some of the rights of citizenship on the Helots. Properly speaking, the Helots cannot be said to have had any political rights; yet, being serfs of the soil, they were not absolutely under the control of their masters, and were never sold out of the country even by the state itself. Their condition was not one of hopeless servitude; a legal way was open to them, by which, through many intermediate stages, they might attain to liberty and citizenship.² Those who followed their masters to war were deemed worthy of especial confidence; indeed, when they served among the heavy-armed, it seems to have been usual to give them their liberty. The *δεσποιοῦνται*, by whom the Spartan fleet was almost entirely manned, were freedmen, who were allowed to dwell where they pleased, and probably had a portion of land allotted them by the state. After they had been in possession of their liberty for some time, they appear to have been called *νεοδαμῶντες*,³ the number of whom soon came near to that of the citizens. The *μύθωνες* or *μύθακες* (as their name implies) were also emancipated Helots; their descendants, too, must have received the rights of citizenship, as Callicratidas, Lysander, and Gylippus were of Mthacian origin.⁴ We cannot suppose that they passed necessarily and of course into the full Spartan franchise; it is much more probable that at Sparta, as at Athens, intermarriage with citizens might at last entirely obliterate the badge of former servitude.

The *perioeci* are not to be considered as a subject class, but rather as a distinct people, separated by their customs as well as by their origin from the genuine Spartans. It seems unlikely that they were admitted to vote in the Spartan assembly; yet they undoubtedly possessed civil rights in the communities to which they belonged,⁵ and which would hardly have been called πόλεις unless they had been in some sense independent bodies. In the army they commonly served as hoplites, and we find the command at sea intrusted to one of this class.⁶ In respect of political rights, the *perioeci* were in the same condition with the plebeians in the early history of Rome, although in every other respect far better off, as they participated in the division of lands, and enjoyed the exclusive privilege of engaging in trade and commerce.

What confirms the view here taken is the fact that, as far as we know, no individual of this class was ever raised to participate in Spartan privileges.

Nothing, however, can be more erroneous than

to look upon them as an oppressed race. Even their exclusion from the assembly cannot be viewed in this light; for, had they possessed the privilege, their residence in the country would have barred them from its exercise. It only remains to consider in what the superiority of the genuine Spartan may have consisted. In the first place, besides the right of voting in the assembly and becoming a candidate for the magistracies, he was possessed of lands and slaves, and was thus exempt from all care about the necessities of life; secondly, on the field of battle he always served among the hoplites; thirdly, he participated in the Spartan education, and in all other Dorian institutions, both civil and religious. The reluctance which Sparta showed to admit foreigners was proportioned to the value of these privileges: indeed, Herodotus¹ says that Sparta had only conferred the full franchise in two instances. In legal rights all Spartans were equal; but there were yet several gradations, which, when once formed, retained their hold on the aristocratic feelings of the people.² First, as we should naturally expect, there was the dignity of the Heracidae families; and, connected with this, a certain pre-eminence of the Hyllean tribe. Another distinction was that between the *δμαιοι* and *ὑπομεινονες*, which in later times appears to have been considerable. The latter term probably comprehended those citizens who, from degeneracy of manners or other causes, had undergone some kind of civil degradation. To these the *δμαιοι* were opposed, although it is not certain in what the precise difference consisted. It need hardly be added, that at Sparta, as elsewhere, the union of wealth with birth always gave a sort of adventitious rank to its possessor.

All the Spartan citizens were included in the three tribes, Hylleans, Dymanes or Dymanatæ, and Pamphilians, each of which were divided into ten *obes* or *phratries*. Under these *obes* there must undoubtedly have been contained some lesser subdivision, which Müller, with great probability, supposes to have been termed *τριακάς*. The citizens of Sparta, as of most oligarchical states, were land-owners, although this does not seem to have been looked upon as an essential of citizenship.

It would exceed the limits of this work to give an account of the Grecian constitutions, except so far as may illustrate the rights of citizenship. What perversions in the form of government, according to Greek ideas, were sufficient to destroy the essential notion of a citizen, is a question which, following Aristotle's example,³ we may be content to leave undecided. He who, being personally free, enjoyed the fullest political privileges, participated in the assembly and courts of judicature, was eligible to the highest offices, and received all this by inheritance from his ancestors, most entirely satisfied the idea which the Greeks expressed in the word *πολίτης*.

CIVITAS (ROMAN). *Civitas* means the whole body of *cives* or members of any given state. It is defined by Cicero⁴ to be "*concilium cœtusque hominum jure sociati*." A *civitas* is, therefore, properly a political community, sovereign and independent. The word *civitas* is frequently used by the Roman writers to express the rights of a Roman citizen, as distinguished from those of other persons not Roman citizens, as in the phrases *dare civitatem*, *donare civitate*, *usurpare civitatem*.

If we attempt to distinguish the members of any given *civitas* from all other people in the world, we can only do it by enumerating all the rights and duties of a member of this *civitas*, which are not

1. (Pol., vii., 4.—Nic. Eth., ix., 10.)—2. (Müller, Dorians, iii., 3, § 5.)—3. (Thucyd., vii., 58.)—4. (Müller, Dorians, ii., 3, § 6.)—5. (Müller, Dorians, iii., 2, § 4.)—6. (Thucyd., viii., 22.)

1. (ix., 35.)—2. (Müller, Dorians, iii e 5, § 7.)—3. (Pol., iii., 5.)—4. (Sonn. Scip., c. 3.)

rights and duties of a person who is not a member of this civitas. If any rights and duties which belong to a member of this civitas, and do not belong to any person not a member of this civitas, are omitted in the enumeration, it is an incomplete enumeration; for the rights and duties not expressly included must be assumed as common to the members of this civitas and to all the world. Having enumerated all the characteristics of the members of any given civitas, we have then to show how a man acquires them, and the notion of a member of such civitas is then complete.

Some members of a political community (*cives*) may have more political rights than others; a principle by the aid of which Savigny¹ has expressed briefly and clearly the distinction between the two great classes of Roman citizens under the Republic: "In the free Republic there were two classes of Roman citizens, one that had, and another that had not, a share in the sovereign power (*optimo jure, non optimo jure cives*). That which peculiarly distinguished the higher class was the right to vote in a tribe, and the capacity of enjoying magistracy (*suffragium et honores*)." According to this view, the *jus civitatis* comprehended that which the Romans called *jus publicum*, and also, and most particularly, that which they called *jus privatum*. The *jus privatum* comprehended the *jus connubii* and *jus commercii*, and those who had not these had no citizenship. Those who had the *jus suffragiorum* and *jus honorum* had the complete citizenship, or, in other words, they were *optimo jure cives*. Those who had the *privatum*, but not the *publicum jus*, were citizens, though citizens of an inferior class. The *jus privatum* seems to be equivalent to the *jus Quiritium*, and the civitas Romana to the *jus publicum*. Accordingly, we sometimes find the *jus Quiritium* contrasted with the *Romana civitas*.² Livy³ says that, until B.C. 188, the Formiani, Fundani, and Arpinates had the civitas without the suffragium.

Ulpian⁴ has stated, with great clearness, a distinction, as existing in his time among the free persons who were within the political limits of the Roman state, which it is of great importance to apprehend clearly. The distinction probably existed in an early period of the Roman state, and certainly obtained in the time of Cicero. There were three classes of such persons, namely, *cives*, *Latini*, and *peregrini*. Gaius⁵ points to the same division where he says that a slave, when made free, might become a *civis Romanus* or a *Latinus*, or might be in the number of the *peregrini dediticii*, according to circumstances. *Civis*, according to Ulpian, is he who possesses the complete rights of a Roman citizen. *Peregrinus* was incapable of exercising the rights of commercium and connubium, which were the characteristic rights of a Roman citizen; but he had a capacity for making all kinds of contracts which were allowable by the *jus gentium*. The *Latinus* was in an intermediate state; he had not the connubium, and, consequently, had not the *patria potestas*, nor rights of agnatio; but he had the commercium, or the right of acquiring quiritarian ownership, and he had also a capacity for all acts incident to quiritarian ownership, as vindicatio, in *jure cessio*, mancipatio, and testamenti factio, which last comprises the power of making a will in Roman form, and of becoming heres under a will. These were the general capacities of a *Latinus* and *peregrinus*; but a *Latinus* or a *peregrinus* might obtain by special favour certain rights which he had not by virtue of his condition only. The *legitima*

hereditas was not included in the *testamenti factio*, for the *legitima hereditas* presupposed agnatio, and agnatio presupposed connubium.

According to Savigny, the notion of *civis* and *civitas* had its origin in the union of the *patricii* and the *plebes* as one state. The *peregrinitas*, in the sense above stated, originated in the conquest of a state by the Romans, when the conquered state did not obtain the *civitas*; and he conjectures that the notion of *peregrinitas* was applied originally to all citizens of foreign states who had a *fœdus* with Rome.

The rights of a Roman citizen were acquired in several ways, but most commonly by a person being born of parents who were Roman citizens. A *pater familias*, a *filius familias*, a *mater familias*, and *filia familias*, were all Roman citizens, though the first only was *sui juris*, and the rest were not. If a Roman citizen married a *Latina* or a *peregrina*, believing her to be a Roman citizen, and begot a child, this child was not in the power of his father, because it was not a Roman citizen; but the child was either a *Latinus* or a *peregrinus*, according to the condition of his mother; and no child followed the condition of his father unless there was connubium between his father and mother. By a *senatus consultum*, the parents were allowed to prove their mistake (*causam erroris probare*); and, on this being done, both the mother and the child became Roman citizens, and, as a consequence, the son was in the power of the father.¹ Other cases relating to the matter, called *causæ probatio*, are stated by Gaius,² from which it appears that the facilities for obtaining the Roman *civitas* were gradually extended.³

A slave might obtain the *civitas* by manumission (*vindicta*), by the census, and by a *testamentum*, if there was no legal impediment; but it depended on circumstances, as already stated, whether he became a *civis Romanus*, a *Latinus*, or in the number of the *peregrini dediticii*. (*Vid. MANUMISSIO.*)

The *civitas* could be conferred on a foreigner by a *lex*, as in the case of Archias, who was a *civis* of Heraclea, a *civitas* which had a *fœdus* with Rome, and who claimed the *civitas Romana* under the provisions of a *lex* of Silvanus and Carbo, B.C. 89.⁴ By the provisions of this *lex*, the person who chose to take the benefit of it was required, within sixty days after the passing of the *lex*, to signify to the prætor his wish and consent to accept the *civitas* (*profiteri*). Cicero⁵ speaks of the *civitas* being given to all the *Neapolitani*; and in the oration *Pro Balbo*⁶ he alludes to the *Julian lex* (B.C. 90), by which the *civitas* was given to the *socii* and *Latini*; and he remarks that a great number of the people of Heraclea and Neapolis made opposition to this measure, preferring their former relation to Rome as *civitates federatæ* (*fœderis sui libertatem*) to the *Romana civitas*. The *lex* of Silvanus and Carbo seems to have been intended to supply a defect in the *Julia lex*, and to give the *civitas*, under certain limitations, to foreigners who were citizens of federate states (*federatis civitatibus adscripti*). Thus the great mass of the Italians obtained the *civitas*, and the privileges of the former *civitates federatæ* were extended to the provinces, first to part of Gaul, and then to Sicily, under the name of *Jus Latii* or *Latinitas*. This *Latinitas* gave a man the right of acquiring the Roman citizenship by having exercised a magistratus in his own *civitas*; a privilege which belonged to the *federatæ civitates* of Italy before they obtained the Roman

1. (Gaius, i., 67.)—2. (ii., 29, &c.; i., 66, &c.)—3. (See also Ulpian, Fragm., tit. 3, "De Latinis.")—4. (Cic., Pro Arch. 4.)—5. (Ep. ad Fam., xiii., 30.)—6. (c. 7.)

civitas. It probably also included the Latinitas of Ulpian, that is, the commercium or individual privilege.¹

With the establishment of the imperial power, the political rights of Roman citizens became insignificant, and the commercium and the more easy acquisition of the rights of citizenship were the only parts of the civitas that were valuable. The constitution of Antoninus Caracalla, which gave the civitas to all the Roman world, applied only to communities, and not to individuals; its effect was to make all the cities in the empire municipia, and all Latini into cives. The distinction of cives and Latini, from this time forward, only applied to individuals, namely, to freedmen and their children. The peregrinitas, in like manner, ceased to be applicable to communities, and only existed in the dedecitii as a class of individuals. The legislation of Justinian finally put an end to what remained of this ancient division into classes, and the only division of persons was into subjects of the Cæsar and slaves.

The origin of the Latinitas of Ulpian is referred by Savigny, by an ingenious conjecture, to the year B.C. 209, when eighteen of the thirty Latin colonies remained true to Rome in their struggle against Hannibal, while twelve refused their aid. The disloyal colonies were punished; and it is a conjecture of Savigny, and, though only a conjecture, one supported by strong reasons, that the eighteen loyal colonies received the commercium as the reward of their loyalty, and that they are the origin of the Latinitas of Ulpian. This conjecture renders intelligible the passage in Cicero's oration,² in which he speaks of nexum and hereditas as the rights of the twelve (eighteen?) colonies.

The word civitas is often used by the Roman writers to express any political community, as Civitas Antiochiensium, &c.

(Savigny, *Zeitschrift*, v., &c., *Ueber die Entstehung, &c., der Latinität*; Heinece, *Syntagma*, ed. Haubold, *Epicrisis*; Rosshirt, *Grundlinien des Röm. Rechts, Einleitung*; and *vid.* BANISHMENT, and CAPUT.)

CLAVARIUM. (*Vid.* CLAVUS.)

CLAVIS (κλεις, *dim.* κλειδών), a Key. The key was used in very early times, and was probably introduced into Greece from Egypt; although Eustathius³ states that in early times all fastenings were made by chains, and that keys were comparatively of a much later invention, which invention he attributes to the Laconians. Pliny⁴ records the name of Theodorus of Samos as the inventor, the person to whom the art of fusing bronze and iron is ascribed by Pausanias. (*Vid.* BRONZE, p. 178.)

We have no evidence regarding the materials of which the Greeks made their keys, but among the Romans the larger and coarser sort were made of iron. Those discovered at Pompeii and elsewhere are mostly of bronze, which we may assume to be of a better description, such as were kept by the mistress (*matrona*) of the household. In ages still later, gold and even wood are mentioned as materials from which keys were made.⁵

Among the Romans the key of the house was consigned to the porter (*janitor*⁶), and the keys of the other departments in the household to the slave upon whom the care of each department devolved,⁷

upon a knowledge of which custom the point of the epigram in Martial¹ turns.

When a Roman woman first entered her husband's house after marriage, the keys of the stores were consigned to her. Hence, when a wife was divorced, the keys were taken from her;² and when she separated from her husband, she sent him back the keys.³ The keys of the wine-cellar were, however, not given to the wife, according to Pliny,⁴ who relates a story, upon the authority of Fabius Pictor, of a married woman being starved to death by her relatives for having picked the lock of the closet in which the keys of the cellar were kept.

The annexed woodcut represents a key found at Pompeii, and now preserved in the Museum at Naples, the size of which indicates that it was used as a door-key. The tongue, with an eye in it, which projects from the extremity of the handle, served to suspend it from the porter's waist.

The expression *sub clavi esse*⁵ corresponds with the English one, "to be under lock and key;" but *clavis* is sometimes used by the Latin authors to signify the bolt it shoots.⁶

The city gates were locked by keys,⁷ like those of our own towns during the Middle Ages.

Another sort of key, or, rather, a key fitting an other sort of lock, which Plautus calls *clavis Laconica*,⁸ is supposed to have been used with locks which could only be opened from the inside, such as are stated to have been originally in use among the Egyptians and Laconians (ὁ γὰρ, ὡς νῦν, ἐκτὸς ἦσαν αἱ κλειδες, ἀλλ' ἐνθον τὸ παλαιὸν παρ' Αἰγυπτίους, καὶ Λάκωνσι⁹). These are termed κλειδία κρυπτά by Aristophanes,¹⁰ because they were not visible on the outside, and in the singular, *clausa clavis*, by Virgil;¹¹ but the reading in this passage is very doubtful.¹² Other writers consider the κλειδία κρυπτά and *clavis Laconica* to be false keys, such as we now call "skeletons," and the Romans, in familiar language, *adulterina*,¹³ wherein consists the wit of the allusion in Ovid,

"*Nomine cum doceat, quid agamus, adultera clavis.*"¹⁴

The next woodcut represents one of two similarly formed keys, which were discovered in Holland, and published by Lipsius.¹⁵ It has no handle to act as a lever, and, therefore, could not have been made

for a lock with wards, which cannot be turned without a certain application of force; but, by inserting the thumb or forefinger into the ring, it would be amply sufficient to raise a latch or push back a bolt: and thus one sort, at least, of the keys termed κρυπτά seems to be identified with the "latch-keys" in use among us; for, when placed in the keyhole (*clavi immittenda foramen*¹⁶), it would be almost en-

tirely ouried in it, the ring only, which lies at right angles to the wards, and that scarcely, being visible without.

CLAVUS (ῥλος, γόμφος), a Nail. In the subterranean chamber at Mycenæ,¹ supposed to be the treasury of Atreus, a view of which is given in Sir W. Gell's *Itinerary of Greece* (plate vi.), the stones of which the cylindrical dome is constructed are perforated by regular series of bronze nails, running in perpendicular rows, and at equal distances, from the top to the bottom of the vault. It is supposed that they served to attach thin plates of the same metal to the masonry, as a coating for the interior of the chamber; and hence it is that these subterranean works, which served for prisons as well as treasuries, like the one in which Danaë is said to have been confined, were called by the poets brazen chambers.² Two of these nails are represented in the annexed woodcut, of two thirds the real size; they consist of 88 parts of copper to 12 of tin.

The writer was present at the opening of an Etruscan tomb at Cære, in the year 1836, which had never been entered since the day it was closed up. The masonry of which it was constructed was studded with nails exactly similar in make and material to those given above, upon which were hung valuable ornaments in gold and silver, entombed, according to custom, with their deceased owner.

Nails of this description were termed *trabales* and *tabulares*³ by the Romans, because they were used, in building, to join the larger beams (*trabes*) together. Hence the allusion of Cicero,⁴ "Ut hoc beneficium *clavo trabali* figeret;" and Horace arms *Necessitas* with a nail of the same kind,⁵ or of adamant,⁶ wherewith to rivet, as it were, irrevocably the decrees of Fortune. Thus Atropos is represented in the subjoined woodcut, taken from a cup found at

Perugia, upon which the story of Meleager and Atalanta is imbodied,⁷ with a hammer in her right

1. (Paus., ii., 16, § 5.)—2. (Hor. Carm., III., xvi., 1.)—3. (Petron., 75.)—4. (Verr., vi., 21.)—5. (Carm., I., xxxv., 18.)—6. *id.*, III., xxiv., 5.)—7. (Vernigholi, *Antic. Inscriz. di Perugia*, *tab. v.*, p. 43.)

hand, driving a nail which she holds against the wall with her left.

The next cut represents a nail of Roman workmanship,¹ which is highly ornamented and very curious. Two of its faces are given, but the pattern varies on each of the four.

It is difficult to say to what use this nail was applied. The ornamented head shows that it was never intended to be driven by the hammer; nor would any part but the mere point, which alone is plain and round, have been inserted into any extraneous material. It might possibly have been used for the hair, in the manner represented in the woodcut on page 21.

Bronze nails were used in ship-building,² and to ornament doors, as exhibited in those of the Pantheon at Rome; in which case the head of the nail was called *bulla*, and richly ornamented, of which specimens are given at page 181.

The soles of the shoes worn by the Roman soldier were also studded with nails, thence called "*clavi caligarii*." (*Vid. CALIGA*). These do not appear to have been hob-nails, for the purpose of making the sole durable, but sharp-pointed ones, in order to give the wearer a firmer footing on the ground; for so they are described by Josephus,³ Ἰσδομήματα πεπαιγμένα πυκνοῖς καὶ ὀξεῖν ῥλοῖς. The men received a donative for the purpose of providing themselves with these necessities, which was thence called *clavarium*.⁴

CLAVUS ANNA'LIS. In the early ages of Rome, when letters were yet scarcely in use, the Romans kept a reckoning of their years by driving a nail, on the ides of each September, into the side wall of the temple of Jupiter Optimus Maximus, which ceremony was performed by the prætor Maximus.⁵ In after ages this practice fell into disuse, though the ignorant peasantry seem to have retained the custom, as a method of marking dates, down to a very late period.⁶ Upon some occasions a dictator was created to drive the nail; but then it was not for the mere purpose of marking the year, but from a superstitious feeling that any great calamity, which happened at the time to afflict the city, would be stayed if the usual ceremony was performed by another than the usual officer.⁷

CLAVUS GUBERNA'CULI, the handle or shaft of a rudder,⁸ which Vitruvius⁹ appropriately terms "*ansa gubernaculi, quod οὐζα ἡ Græcis appellatur*." The rudder itself is *gubernaculum*; in Greek, πηδάλιον. Both the words are accurately distinguished by Virgil,¹⁰

"*Ipse gubernaculo rector subit, ipse magister, Hortaturque viros, clavumque ad littora torquet*," and by Cicero.¹¹ But it is sometimes used for the rudder itself, as, for instance, by Ennius:

"*Ut clavum rectum teneam, navemque gubernem*."¹²

Οὐζα is also used in both senses, and in the same way.¹³ The true meaning of the word will be understood by referring to the woodcut at page 58 in which a ship with its rudder is represented: the

1. (Caylus, *Recueil d'Antiq.*, tom. v., pl. 96.)—2. (Veget., iv., 34.)—3. (Bell. Jud., VI., i., 7.)—4. (Tacit., Hist., iiii., 50.)—5. (Festus, s. v. *Clav. Annal.*—Liv., vii., 3.—Cic. ad Att., v., 15.)—6. (Petron., c. 135.)—7. (Liv., vii., 3; viii., 18; ix., 28.)—8. (Serv. ad Virg., Æn., v., 177.)—9. (x., 8.)—10. (Æn., v., 176.)—11. (Pro Sext., 9.)—12. (Compare Cic. ad Fam., ix. 15.)—13. (Thomas Magist., s. v.)

pole by which it is fastened to the ship's side is the *clavus*. (Vid. GUBERNACULUM.)

CLAVUS LATUS, CLAVUS ANGUSTUS. The meaning of these words has given rise to much difference of opinion among modern writers. Scalliger¹ considered the *clavus* to have been an ornament detached from the dress, and worn round the neck like a *bullæ*. (Vid. BULLÆ.) Ferrarius supposed it to be a scarf or band thrown over the shoulders, the ends of which hung down in front. Some writers consider it to have been a round boss or buckle, resembling the head of a nail, fastened to the front part of the tunic which covered the chest; others the hem of the dress, either at the edges or at the bottom; and others, again, the dress itself checkered with stripes of purple, or with ornaments resembling nails, either sewn on to, or woven in, the fabric, such as in modern language would be termed figured.²

It is a remarkable circumstance, that not one of the ancient statues, representing persons of senatorian, consular, or equestrian rank, contain the slightest trace in their draperies of anything resembling the accessories above enumerated; some indications of which would not have been constantly omitted, if the *clavus* had been a thing of substance either affixed to the dress or person. But if it formed only a distinction of colour, without producing any alteration in the form or mass of the material wherewith the garment was made, such as a mere streak of purple interwoven in the fabric, or embroidered or sewed on it, it will be evident to any person conversant with the principles of art, that the sculptor, who attends only to form and mass, would never attempt to express the mere accidents of colour; and, consequently, that such a *clavus* would not be represented in sculpture. But in painting, which long survived the sister art, we do find examples in some works executed at a very late period, some of which are subsequently inserted, in which an ornament like the *clavus*, such as it is implied to be by the words of Horace,³ *latum demisit pectore clavum*, seems evidently to have been represented.

The most satisfactory conclusion, therefore, seems to be, that the *clavus* was merely a band of purple colour,⁴ hence called *lumen purpure*,⁵ either sewed to the dress⁶ or interwoven in the fabric.⁷

CLAVUS LATUS. The *clavus* worn by the Romans was of two fashions, one broad and the other narrow, denominated respectively *clavus latus* and *clavus angustus*.⁸ The vest which it distinguished properly and originally was the tunic (vid. TUNICA), called therefore *tunica laticlavata* and *tunica angusticlavata*;⁹ and hence the word *clavus* is sometimes used separately to express the garment itself.¹⁰ The former was a distinctive badge of the senatorian order,¹¹ and hence it is used to signify the senatorial dignity,¹² and *laticlavus* for the person who enjoys it.¹³ It consisted in a single broad band of purple colour, extending perpendicularly from the neck down the centre of the tunic, in the manner represented in the annexed woodcut, which is copied from a painting of Rome personified, formerly belonging to the Barberini family, the execution of which is of a very late period.

The position of the band in the centre of the chest is identified with the *latus clavus*, because *μεσοτόρι-*

φύρα,¹ in the Septuagint, is translated in the Vulgate *tunica clavatata purpurea*; and the converse, *χιτώνα πορφύρεον μεσόλευκον*,² is thus interpreted by Quintus Curtius,³ "*Purpurea tunica medium album intertextum erat*." In distinction to the *angustus clavus*, it is termed *purpura major*,⁴ *purpura latior*,⁵ and the garment it decorated, *tunica potens*,⁶ or *χιτών πλατυστόμος*.⁷

The *tunica laticlavata* was not fastened round the waist like the common tunic which is worn by the centurion (p. 231), but left loose, in order that the *clavus* might lie flat and conspicuously over the chest,⁸ which accounts for the allusion of Sylla, when he termed Julius Cæsar *male præcinctum purpureum*; for we are informed by Suetonius⁹ that he was the only person ever known to wear a girdle to his *laticlavata*.

It seems to be generally admitted that the *latus clavus* was not worn in childhood, that is, with the *toga prætexta*; but it is not so clear whether, during the earlier ages of the Republic, it was assumed with the *toga virilis*, or only upon admission into the senate. Probably the practice was different at different periods.¹⁰

The right of wearing the *latus clavus* was also given to the children of equestrians,¹¹ at least in the time of Augustus, as a prelude to entering the senate-house. This, however, was a matter of personal indulgence, and not of individual right; for it was granted only to persons of very ancient family and corresponding wealth,¹² and then by special favour of the emperor.¹³ In such cases the *latus clavus* was assumed with the *toga virilis*, and worn until the age arrived at which the young equestrian was admissible into the senate, when it was relinquished and the *angustus clavus* resumed, if a disinclination on his part, or any other circumstances, prevented him from entering the senate, as was the case with Ovid:¹⁴

"Curia restabat; clavi mensura coacta est;
Majus erat nostris viribus illud opus."

But it seems that the *latus clavus* could be again resumed if the same individual subsequently wished to become a senator,¹⁵ and hence a fickle character is designated as one who is always changing his *clavus*:¹⁶

"*Vixit inæqualis, clavum mutabat in horas.*"

The latus clavus was also worn by the priests of Saturn at Carnhage,¹ and by the priests of Hercules at Cadiz;² and napkins were sometimes so decorated,³ as well as table-cloths, and coverlets (*toralia*) for the couches upon which the ancients reclined at their meals.⁴

The latus clavus is said to have been introduced at Rome by Tullus Hostilius, and to have been adopted by him after his conquest of the Etruscans;⁵ nor does it appear to have been confined to any particular class during the earlier periods, but to have been worn by all ranks promiscuously.⁶ It was laid aside in public mourning.⁷

CLAVUS ANGUSTUS. This ornament is not found, any more than the latus clavus, upon any of the works executed before the decline of the arts; and therefore the same difficulties occur in attempting to define its form and fashion. That it was narrower than the other is evident from the name alone, as well as from other epithets bestowed upon it—"pauper clavus,"⁸ "*arctum purpuræ lumen*;"⁹ and that it was of a purple colour, attached to a tunic girt at the waist, is also evident from the passages of Statius and Quintilian¹⁰ already cited. There is, moreover, reason for supposing that the angustus clavus consisted in two narrow stripes instead of one broad one; for it is observed that the word clavus is always used in the singular number when the tunica laticlavata is referred to, whereas the plural number (*clavi*) is often met with in reference to the angusticlavata; as in the passage of Quintilian just mentioned, *purpura* is applied to the former, and *purpura* to the latter of these garments. It seems, therefore, probable that the angusticlave was distinguished by two narrow purple stripes, running parallel to each other from the top to the bottom of the tunic, one from each shoulder, in the manner represented by the three figures introduced below, all of which are taken from sepulchral paintings executed subsequently to the introduction of Christianity at Rome. The female figure on the left hand, which is copied from Buonarrotti,¹¹ represents the goddess Moneta, and she wears a regular tunic. The one on the right hand is from a cemetery on the Via Salara Nova, and represents Priscilla, an early martyr; it is introduced to show the whole extent of the clavi; but the dress she wears is not the common tunic, but of the kind called *Dalmatica*, the sleeves of which are also clavatae.

The next figure is selected from three of a similar kind, representing Shadrach, Meshach, and

Abednego, from the tomb of Pope Callisto on the Via Appia; all three wear the ordinary tunic girt at the waist, as indicated by Quintilian, but with long sleeves, as was customary under the Empire, and the stripes are painted in purple; so that we may fairly consider it to afford a correct example of the tunica angusticlavata.

This decoration belonged properly to the equestrian order;¹ for, though the children of equestrians, as has been stated, were sometimes honoured by permission to wear the latus clavus at an early age, they were obliged to lay it aside if they did not enter the senate when the appointed time arrived, which obligation appears to have been lost sight of for some time after the Augustan period; for it is stated by Lampridius² that Alexander Severus distinguished the equites from the senatores by the character of their clavus, which must be taken as a recurrence to the ancient practice, and not an innovation then first adopted.

*CLEMATIS or CLEMATIS (κληματίς, κληματίς), a species of plant, commonly identified with the Winter-green or Periwinkle. Dioscorides³ mentions two kinds: the first of these Sprengel refers to the Periwinkle, namely, *Vinca major* or *minor*; the other, which is properly called *κληματίς*, he is disposed to follow Sibthorp in referring to the *Clematis cirrhosa*. The term *κληματίς* is derived from *κλῆμα*, "a tendril" or "clasper," and has reference to the climbing habits of the plant. The epithets *δαφνοειδής* ("laurel-like") and *σφυροειδής* ("myrrh-like") are sometimes given to the *κληματίς*, as well as that of *πολύγονοειδής*, "resembling *πολύγονον*, or Knot-grass."⁴ Pliny derives the Latin name *vinca* from *vincere*, "to bind" or "encompass," in allusion to the Winter-green's encircling or twining around trees.⁵ The same writer alludes to various medical uses of this plant, in cases of dysentery, fluxions of the eyes, hæmorrhoids, the bite of serpents, &c. It is found sometimes with white flowers, less frequently with red or purple ones.⁶ The name of this plant in modern Greece is *ἀγριολίτσα*. Sibthorp found it in Elis and Argolis.⁷

CLEPSYDRA. (Vid. HOROLOGIUM.)

CLERUCHI (κληρούχοι). Athenian citizens who occupied conquered lands were termed *κληρούχοι*, and their possession *κληρουχία*. The earliest example to which the term, in its strict sense, is applicable, is the occupation of the domains of the Chalcedonian knights (*ἱπποβόται*) by four thousand Athenian citizens, B.C. 506.⁸

In assigning a date to the commencement of this system of colonization, we must remember that the principle of a division of conquered land had existed from time immemorial in the Grecian states. Nature herself seemed to intend that the Greek should rule and the barbarian obey; and hence, in the case of the barbarian, it wore no appearance of

harshness. Such a system, however, was more rare between Greek and Greek. Yet the Dorians, in their conquest of the Peloponnese, and still more remarkably in the subjugation of Messenia, had set an example. In what, then, did the Athenian *κληρουχίαι* differ from this division of territory, or from the ancient colonies? In the first place, the name, in its technical sense, was of later date, and the Greek would not have spoken of the *κληρουχίαι* of Iycurgus, any more than the Roman of the "Agrarian laws" of Romulus or Ancus. Secondly, we should remember that the term was always used with a reference to the original allotment: as the lands were devised or transferred, and the idea of the first division lost sight of, it would gradually cease to be applied. The distinction, however, between *κληροῦχοι* and *ἀποικοί* was not merely one of words, but of things. The only object of the earlier colonies was to relieve surplus population, or to provide a home for those whom internal quarrels had exiled from their country. Most usually they originated in private enterprise, and became independent of, and lost their interest in, the parent state. On the other hand, it was essential to the very notion of a *κληρουχία* that it should be a public enterprise, and should always retain a connexion more or less intimate with Athens herself. The word *κληρουχία*, as Wachsmuth has well observed, conveys the notion of property to be expected and formally appropriated; whereas the *ἀποικοί* of ancient times went out to conquer lands for themselves, not to divide those which were already conquered.

The connexion with the parent state subsisted, as has just been hinted, in all degrees. Sometimes, as in the case of Lesbos,¹ the holders of land did not reside upon their estates, but let them to the original inhabitants, while themselves remained at Athens. The condition of these *κληροῦχοι* did not differ from that of Athenian citizens who had estates in Attica. All their political rights they not only retained, but exercised as Athenians; in the capacity of landholders of Lesbos they could scarcely have been recognised by the state, or have borne any corporate relation to it. Another case was where the *κληροῦχοι* resided on their estates, and either with or without the old inhabitants, formed a new community. These still retained the rights of Athenian citizens, which distance only precluded them from exercising: they used the Athenian courts; and if they or their children wished to return to Athens, naturally and of course they regained the exercise of their former privileges. Of this we have the most positive proof:² as the sole object of these *κληρουχίαι* was to form outposts for the defence of Athenian commerce, it was the interest of the parent state to unite them by a tie as kindly as possible; and it cannot be supposed that individuals would have been found to risk, in a doubtful enterprise, the rights of Athenian citizens.

Sometimes, however, the connexion might gradually dissolve, and the *κληροῦχοι* sink into the condition of mere allies, or separate wholly from the mother-country. In Ægina, Scione, Potidæa, and other places, where the original community was done away, the colonists were most completely under the control of Athens. Where the old inhabitants were left unmolested, we may conceive their admixture to have had a twofold effect: either the new-comers would make common cause with them, and thus would arise the alienation alluded to above, or jealousy and dread of the ancient inhabitants might make the colonists more entirely

dependant on the mother state. It seems impossible to define accurately when the isopolite relation with Athens may have ceased, although such cases undoubtedly occurred.

A question has been raised as to whether the *κληροῦχοι* were among the Athenian tributaries. Probably this depended a good deal upon the prosperity of the colony. We cannot conceive that colonies which were established as military outposts, in otherwise unfavourable situations, would bear such a burden: at the same time, it seems improbable that the state would unnecessarily forego the tribute which it had previously received, where the lands had formerly belonged to tributary allies.

It was to Pericles Athens was chiefly indebted for the extension and permanence of her colonial settlements. His principal object was to provide for the redundancies of population, and raise the poorer citizens to a fortune becoming the dignity of Athenian citizens. It was of this class of persons the settlers were chiefly composed; the state provided them with arms, and defrayed the expenses of their journey. The principle of division doubtless was, that all who wished to partake in the adventure applied voluntarily; it was then determined by lot who should or should not receive a share. Sometimes they had a leader appointed, who, after death, received all the honours of the founder of a colony (*οἰκιστής*).

The Cleruchæ were lost by the battle of Ægos-potami, but partially restored on the revival of Athenian power. For a full account of them, see Wachsmuth, *Historical Antiquities*, § 56, 6; Böckh, *Public Econ. of Athens*, iii., 18; and the references in Herman's *Manual*, vi., 117.

CLETERES or CLET'ORES (*κλητήρες* or *κλήτορες*). The Athenian summoners were not official persons, but merely witnesses to the prosecutor that he had served the defendant with a notice of the action brought against him, and the day upon which it would be requisite for him to appear before the proper magistrate, in order that the first examination of the case might commence.¹ In Aristophanes² we read of one summoner only being employed, but two are generally mentioned by the orators as the usual number.³ The names of the summoners were subscribed to the declaration or bill of the prosecutor, and were, of course, essential to the validity of all proceedings founded upon it. What has been hitherto stated applies in general to all causes, whether *δίκαι* or *γραφαί*: but in some which commenced with an information laid before magistrates, and an arrest of the accused in consequence (as in the case of an *ἐνδείξις* or *εἰσαγγελία*), there would be no occasion for a summons, nor, of course, witnesses to its service. In the *εὐθύναι* and *δοκιμασίαι* also, when held at the regular times, no summons was issued, as the persons whose character might be affected by an accusation were necessarily present, or presumed to be so; but if the prosecutor had let the proper day pass, and proposed to hold a special *εὐθύνη* at any other time during the year in which the defendant was liable to be called to account for his conduct in office (*ὑπεύθυνος*), the agency of summoners was as requisite as in any other case. Of the *δοκιμασίαι*, that of the orators alone had no fixed time; but the first step in the cause was not the usual legal summons (*πρόσκλησις*), but an announcement from the prosecutor to the accused in the assembly of the people.⁴

In the event of persons subscribing themselves falsely as summoners, they exposed themselves to

an action (*ψευδοκλητείας*) at the suit of the party aggrieved.

*CLETHRA (*κλήθρα*), the Alder. (*Vid. ALNUS.*)
CLIBANA'RII. (*Vid. CATAPHRACTI.*)

CLIENS is said to contain the same element as the verb *clucere*, to "hear" or "obey," and is accordingly compared by Niebuhr with the German word *hoeriger*, "a dependant."

In the time of Cicero, we find patronus in the sense of adviser, advocate, or defender, opposed to cliens in the sense of the person defended, or the consultor; and this use of the word must be referred, as we shall see, to the original character of the patronus.¹ The relation of a master to his liberated slave (*libertus*) was expressed by the word patronus, and the libertus was the cliens of his patronus. Any Roman citizen who wanted a protector might attach himself to a patronus, and would thenceforward be a cliens. Distinguished Romans were also sometimes the patroni of states and cities, which were in a certain relation of subjection or friendship to Rome; and in this respect they may be compared to colonial agents, or persons among us who are employed to look after the interests of the mother-country, except that among the Romans such services were never remunerated directly, though there might be an indirect remuneration.² This relationship between patronus and cliens was indicated by the word *clientela*,³ which also expressed the whole body of a man's cliens.⁴ In the Greek writers on Roman history, patronus is represented by *προστάτης*, and cliens by *πελάτης*.

The *clientela*, but in a different form, existed as far back as the records or traditions of Roman history extend; and the following is a brief notice of its origin and character, as stated by Dionysius,⁵ in which the writer's terms are kept:

Romulus gave to the *εὐπατρίδαι* the care of religion, the honores (*ἄρχαι*), the administration of justice, and the administration of the state. The *δημοτικοί* (whom, in the preceding chapter, he has explained to be the *πληβεῖοι*) had none of these privileges, and they were also poor; husbandry and the necessary arts of life were their occupation. Romulus thus intrusted the *δημοτικοί* to the safe keeping of the *πατρίκιοι* (who are the *εὐπατρίδαι*), and permitted each of them to choose his patron. This relationship between the patron and the client was called, says Dionysius, *patronia*.⁶

The relative rights and duties of patrons and cliens were, according to Dionysius, the following:

The patron was the legal adviser of the cliens; he was the client's guardian and protector, as he was the guardian and protector of his own children; he maintained the client's suit when he was wronged, and defended him when another complained of being wronged by him: in a word, the patron was the guardian of the client's interests, both private and public. The client contributed to the marriage portion of the patron's daughter, if the patron was poor, and to his ransom, or that of his children, if they were taken prisoners; he paid the costs and damages of a suit which the patron lost, and of any penalty in which he was condemned; he bore a part of the patron's expenses incurred by his discharging public duties, or filling the honourable places in the state. Neither party could accuse the other, or bear testimony against the other, or give his vote against the other. This relationship between patron and client subsisted for many generations, and resembled in all respects the relationship by blood. It was the glory of illustrious fami-

lies to have many clients, and to add to the number transmitted to them by their ancestors. But the cliens were not limited to the *δημοτικοί*: the colonies, and the states connected with Rome by alliance and friendship, and the conquered states, had their patrons at Rome; and the senate frequently referred the disputes between such states to their patrons, and abided by their decision.

The value of this passage consists in its containing a tolerably intelligible statement, whether true or false, of the relation of a patron and client. What persons actually composed the body of cliens, or what was the real historical origin of the *clientela*, is immaterial for the purpose of understanding what it was. It is clear that Dionysius understood the Roman state as originally consisting of *patricii* and *plebei*, and he has said that the cliens were the *plebs*. Now it appears, from his own writings and from Livy, that there were *clientes* who were not the *plebs*, or, in other words, *clientes* and *plebs* were not convertible terms. This passage, then, may have little historical value as explaining the origin of the cliens; and the statement of the *clientela* being voluntary is improbable. Still something may be extracted from the passage, though it is impossible to reconcile it altogether with all other evidence. The cliens were not *servi*: they had property of their own, and freedom (*libertas*). Consistently with this passage, they might be Roman citizens, enjoying only the *commercium* and *connubium*, but not the *suffragium* and honores, which belonged to their *patroni*. (*Vid. CIVITAS.*) It would also be consistent with the statement of Dionysius, that there were free men in the state who were not *patricii*, and did not choose to be *clientes*; but if such persons existed in the earliest period of the Roman state, they must have laboured under great civil disabilities, and this, also, is not inconsistent with the testimony of history, nor is it improbable. Such a body, if it existed, must have been powerless; but such a body might in various ways increase in numbers and wealth, and grow up into an estate, such as the *plebs* afterward was. The body of *clientes* might include freedmen, as it certainly did: but it seems an assumption of what requires proof to infer (as Niebuhr does) that, because a patronus could put his freedman to death, he could do the same to a client; for this involves a tacit assumption that the cliens were originally slaves; and this may be true, but it is not known. Besides, it cannot be true that a patron had the power of life and death over his freedman, who had obtained the *civitas*, any more than he had over an emancipated son. The body of *clientes* might, consistently with all that we know, contain *peregrini*, who had no privileges at all; and it might contain that class of persons who had the *commercium*, if the *commercium* existed in the early ages of the state. (*Vid. CIVITAS.*) The latter class of persons would require a patronus, to whom they might attach themselves for the protection of their property, and who might sue and defend them in all suits, on account of the (here assumed) inability of such persons to sue in their own name in the early ages of Rome. (*Vid. BANISHMENT.*)

The relation of the patronus to the cliens, as represented by Dionysius, has an analogy to the *patria potestas*, and the form of the word patronus is consistent with this.

It is stated by Niebuhr, that "if a client died without heirs, his patron inherited; and this law extended to the case of freedmen; the power of the patron over whom must certainly have been founded originally on the general patronal-right." This statement, if it be correct, would be consistent with the quasi *patria potestas* of the patronus.

1. (Ovid, *Art. Am.*, i., 88.—*Hor.*, *Sat.*, i., 1., 10.—*Epist.*, i., v., 31; ii., i., 104.)—2. (*Cic.*, *Div.*, 20.—*Pro Sulla*, c. 21.—*Tacit.*, *Or.*, 36.)—3. (*Cic.* ad *Att.*, xiv., 12.)—4. (*Tacit.*, *Ann.*, xiv., 61.)—5. (*Antiq. Rom.*, ii., 9.)—6. (*Compare Cic.*, *Rep.*, ii., 9.)

But if a *clien*s died *with* heirs, could he make a will? and if he died *without* heirs, could he not dispose of his property by will? and if he could not make, or did not make a will, and had heirs, who must they be? must they be *sui heredes*? had he a familia, and, consequently, agnati? (*vid. COGNATI*) had he, in fact, that connubium, by virtue of which he could acquire the patria potestas? He might have all this consistently with the statement of Dionysius, and yet be a citizen *non optimo jure*; for he had not the honores and the other distinguishing privileges of the patricii, and, consistently with the statement of Dionysius, he could not vote in the comitia curiata. It is not possible to prove that a *clien*s had all this, and it seems equally impossible, from existing evidence, to show what his rights really were. So far as our extant ancient authorities show, the origin of the *clien*tela, and its true character, were unknown to them. This seems certain; there was a body in the Roman state, at an early period of its existence, which was neither patrician nor client, and a body which once did not, but ultimately did, participate in the sovereign power: but our knowledge of the true status of the ancient *clien*ts must remain inexact, for the want of sufficient evidence in amount, and sufficiently trustworthy.

It is stated by Livy¹ that the *clien*tes had votes in the comitia of the centuries: they were therefore registered in the censors' books, and could have quiritarian ownership. (*Vid. CENTUMVIRI*.) They had, therefore, the commercium, possibly the connubium, and certainly the suffragium. It may be doubted whether Dionysius understood them to have the suffragium at the comitia centuriata; but, if such was the legal status of a *clien*s, it is impossible that the exposition of their relation to the patricians, as given by some modern writers, can be altogether correct.

It would appear, from what has been stated, that patronus and patricius were originally convertible terms, at least until the plebs obtained the honores. From that time, many of the reasons for a person being a *clien*s of a patricius would cease; for the plebeians had acquired political importance, had become acquainted with the laws and the legal forms, and were fully competent to advise their *clien*ts. This change must have contributed to the destruction of the strict old *clien*tela, and was the transition to the *clien*tela of the later ages of the Republic.²

Admitting a distinction between the plebs and the old *clien*tes to be fully established, there is still room for careful investigation as to the real status of the *clien*tes, and of the composition of the Roman state before the estate of the plebs was made equal to that of the patricians.

This question is involved in almost inextricable perplexity, and elements must enter into the investigation which have hitherto hardly been noticed. Any attempt to discuss this question must be pre-faced or followed by an apology.

CLIENTELA. (*Vid. CLIENS*.)

CLIMAX. (*Vid. TORQUEMENT*.)

*CLINOPIDIUM (*κλινοπίδιον*), a plant deriving its name from the resemblance which its round flower bears to the foot of a couch (*κλίνη*, "a couch," and *πούς*, "δός," "a foot.") It is most probably the *Clinopodium vulgare*, or Field Basil, as Bauhin and others think. According to Prosper Alpinus, however, it is the same as the *Satureia Græca*. Sibthorp found it on the mountains of Greece and in the island of Crete.³

CLIPUS (*ἄσπις*), the large shield worn by the

Greeks and Romans, which was originally of a circular form, and is said to have been first used by Prætus and Acrisius of Argos,¹ and therefore is called *clipeus Argolicus*,² and likened to the sun (*Compare, also, ἄσπις πάντοσ' ἔστην, ἄσπίδας ἐν κύκλῳ.*⁴) But the *clipeus* is often represented in Roman sculpture of an oblong oval, which makes the distinction between the common buckler and that of Argos.

It was sometimes made of osiers twisted together,⁵ and therefore is called *ἱτέα*,⁶ or of wood. The wood or wicker was then covered over with ox-hides of several folds deep,⁷ and finally bound round the edge with metal.⁸

The outer rim is termed *ἀντοξ*,⁹ *ἱνυς*,¹⁰ *περιφέρεια*, or *κύκλος* (*vid. ΑΝΤΥΧ*).¹¹ In the centre was a projection called *ὀμφαλός* or *μεσομφάλιον*, *umbo*, which served as a sort of weapon by itself (*cunctos umbone repellit*),¹² or caused the missiles of the enemy to glance off from the shield. It is seen in the next woodcut, from the column of Trajan. A spike, or some other prominent excrescence, was sometimes placed upon the *ὀμφαλός*, which was called the *επομφάλιον*.

In the Homeric times the Greeks used a belt to support the shield; but this custom was subsequently discontinued in consequence of its great inconvenience (*vid. BALTEUS*, p. 133), and the following method was adopted in its stead: A band of metal, wood, or leather, termed *κανών*, was placed across the inside from rim to rim, like the diameter of a circle, to which were affixed a number of small iron bars, crossing each other somewhat in the form of the letter X, which met the arm below the inner bend of the elbow joint, and served to steady the orb. This apparatus, which is said to have been invented by the Carians,¹³ was termed *ὄχανον* or *ὄχανη*. Around the inner edge ran a leather thong (*πόρτρας*), fixed by nails at certain distances, so that it formed a succession of loops all round, which the soldier grasped with his hand (*ἐμβαλὼν πόρπακι γενναίαν χερά*).¹⁴ The annexed woodcut, which shows the whole apparatus, will render this account intelligible. It is taken from one of the terra cotta vases published by Tischbein.¹⁵

1. (Paus., ii., 25, 6.)—2. (Virg., Æn., iii., 637.)—3. (Hom., Il., iii., 347; v., 453.)—4. (Il., xiv., 428.)—5. (Virg., Æn., vii., 632; viii., 625.)—6. (Eurip., Supp., 697.—Troas, 1201.—Cyclops, 7.)—7. (Virg., Æn., xii., 925.)—8. (Hom., Il., xii., 295.—Liv., xiv., 33.)—9. (Il., xviii., 479.)—10. (Eurip., Troas, 1205.)—11. (Il., xi., 33.)—12. 1. (ii., 56.)—2. (Hugo, Lehrbuch, &c., i., 458.)—3. (Dioscor., ii., 99.—Billerbeck, Flora Classica, p. 154.)

At the close of a war it was customary for the Greeks to suspend their shields in the temples, when the *πύρρακες* were taken off, in order to render them unserviceable in case of any sudden or popular outbreak; which custom accounts for the alarm of Demosthenes, in the Knights of Aristophanes,¹ when he saw them hanging up with their handles on.

According to Livy,² when the census was instituted by Servius Tullius, the first class only used the *clipeus*, and the second were armed with the *scutum* (*vid. Scutum*); but after the Roman soldier received pay, the *clipeus* was discontinued altogether for the Sabine *scutum*.³ Diodorus Siculus⁴ asserts that the original form of the Roman shield was square, and that it was subsequently changed for that of the Tyrrhenians, which was round.

The Roman shields were emblazoned with various devices, the origin of armorial bearings, such as the heroic feats of their ancestors;⁵ or with their portraits,⁶ which custom is illustrated by the preceding beautiful gem from the antique, in which the figure of Victory is represented inscribing upon a *clipeus* the name or merits of some deceased hero.

Each soldier had also his own name inscribed upon his shield, in order that he might readily find

his own, when the order was given to unpile arms;¹ and sometimes the name of the commander under whom he fought.²

The *clipeus* was also used to regulate the temperature of the vapour bath. (*Vid. BATHS*, p. 150.)

CLITELLÆ, a pair of panniers, and therefore only used in the plural number.³ In Italy they were commonly used with mules or asses,⁴ but in other countries they were also applied to horses, of which an instance is given in the annexed woodcut from the column of Trajan; and Plautus⁵ figuratively describes a man upon whose shoulders a load of any kind, either moral or physical, is charged, as *homo clitellarius*.

A particular spot in the city of Rome, and certain parts of the Via Flaminia, which, from their undulations in hill and valley, were thought to resemble the flowing line of a pair of panniers, were also termed *clitellæ*.⁶

CLOACA. The term cloaca is generally used by the historians in reference only to those spacious subterranean vaults, either of stone or brick, through which the foul waters of the city, as well as all the streams brought to Rome by the aquæducts, finally discharged themselves into the Tiber; but it also includes within its meaning any smaller drain, either wooden pipes or clay tubes,⁷ with which almost every house in the city was furnished, to carry off its impurities into the main conduit.⁸ The whole city was thus intersected by subterranean passages, and is therefore designated by Pliny⁹ as *urbs pensilis*.

The most celebrated of these drains was the *Cloaca Maxima*, the construction of which is ascribed to Tarquinius Priscus,¹⁰ and which was formed to carry off the waters brought down from the adjacent hills into the Velabrum and valley of the Forum. The stone of which it is built is a mark of the great antiquity of the work; it is not the peperino of Gabii and the Alban Hills, which was the common building-stone in the time of the Commonwealth; but it is the "tufa litoide" of Brocchi, one of the volcanic formations which is found in many places in Rome, and which was afterward supplanted in public buildings by the finer quality of the peperino.¹¹ This cloaca was formed by three tiers of arches, one within the other, the innermost of which is a semicircular vault of 18 Roman palms, about 14 feet in diameter, each of the hevn blocks being 7½ palms long and 4½ high, and joined together without cement. The manner of construction is shown in the annexed woodcut, taken on the spot, where a part of it is uncovered near the arch of Janus Quadrifrons.

The mouth where it reaches the Tiber, nearly opposite to one extremity of the *insula Tiberina*,

(Ulpian, Dig. 43, tit. 23, s. 1.)—8. (Strab., v. 8, p. 167, ed. Seubeck.)—9. (H. N., xxxvi. 24, 3.)—10. (Liv., i. 38.—Plin.—Dionys.—) 11. (Arnold, Hist. Rom., vol. i., p. 52.)

still remains in the state referred to by Pliny.¹ It is represented in the annexed woodcut, with the adjacent buildings as they still exist, the modern fabrics only which encumber the site being left out.

The passages in Strabo and Pliny which state that a cart (*ὑψαφα*, *vehes*) loaded with hay could pass down the *Cloaca Maxima*, will no longer appear incredible from the dimensions given of this stupendous work; but it must still be borne in mind that the vehicles of the Romans were much smaller than our own. Dion Cassius also states² that Agrippa, when he cleansed the sewers, passed through them in a boat, to which Pliny³ probably alludes in the expression *urbs subter navigata*; and their extraordinary dimensions, as well as those of the embouchures through which the waters poured into them (*vid. CANALIS*), are still farther testified by the exploits of Nero, who threw down the sewers the unfortunate victims of his nightly riots.⁴

The *Cloaca Maxima* formed by Tarquin extended only from the Forum to the river, but was subsequently continued as far up as the Subura, of which branch some vestiges were discovered in the year 1742.⁵ This was the *crypta Suburæ* to which Juvenal refers.⁶

The expense of cleansing and repairing these *cloacæ* was, of course, very great, and was defrayed partly by the treasury, and partly by an assessment called *cloacarium*.⁷ Under the Republic, the administration of the sewers was intrusted to the censors; but under the Empire, particular officers were appointed for that purpose, *cloacarum curatores*, mention of whom is found in inscriptions,⁸ who employed condemned criminals in the task.⁹

ΚΑΘΗΓΕ ΔΙΚΗ (*κλῶπις δίκη*), the civil action for theft, was brought in the usual manner before a *diætetes* or a court, the latter of which Meier¹⁰ in-

ters to have been under the presidency of the *thesmothetæ*, whether the prosecutor preferred his accusation by way of *γραφή* or *δίκη*. We learn from the law quoted by Demosthenes,¹ that the criminal, upon conviction, was obliged to pay twice the value of the theft to the plaintiff if the latter recovered the specific thing stolen; that, failing of this, he was bound to reimburse him tenfold, that the court might inflict an additional penalty, and that the criminal might be confined in the stocks (*ποδοκάκκη*) five days and as many nights. In some cases, a person that had been robbed was permitted by the Attic law to enter the house in which he suspected his property was concealed, and institute a search for it (*φωρεῖν*);² but we are not informed what powers he was supplied with to enforce this right. Besides the above-mentioned action, a prosecutor might proceed by way of *γραφή*, and, when the delinquent was detected in the act, by *ἀπαγωγή* or *ἐφήγησις*. To these, however, a penalty of 1000 drachmæ was attached in case the prosecutor failed in establishing his case; so that a diffident plaintiff would often consider them as less eligible means of obtaining redress.³ In the aggravated cases of stealing in the daytime property of greater amount than 50 drachmæ, or by night anything whatsoever (and upon this occasion the owner was permitted to wound, and even kill the depredator in his flight), the most trifling article from a gymnasium, or anything worth 10 drachmæ from the ports or public baths, the law expressly directed an *ἀπαγωγή* to the Eleven, and, upon conviction, the death of the offender.⁴ If the *γραφή* were adopted, it is probable that the punishment was fixed by the court; but both in this case, and in that of conviction in a *δίκη*, besides restitution of the stolen property, the disfranchisement (*ἀτμία*) of the criminal would be a necessary incident of conviction.⁵

*CLYMENON (*κλύμενον*), a plant, about which the authorities are much at variance. Sprengel, in his edition of Dioscorides, adheres to the opinion of Fabius Columna, who held it to be the *Scorpiurus vermiculatus*. Sibthorp, however, contends for the *Umbellulus scpium*, or Great Bindweed.⁶

*CLUPEA, a very small species of Fish, found, according to Pliny,⁷ in the Po, and which, as he informs us, destroys a large kind of fish named *Attilus* (a species of sturgeon), by attaching itself to a vein in the throat of the latter. Pliny very probably refers to one of those numerous parasitical animals which attach themselves to the branchiæ of other fishes, and suck their blood; perhaps to a species of small lamprey.⁸ In modern ichthyology, the name *Clupea* has been assigned by Linnæus to the whole herring family.⁹

CNAPHOS (*κνᾶφος*). (*Vid. TORMENTUM*.)

*CNEORUM (*κνέωρον*), according to Stackhouse and Sprengel, the *Daphne Cneorum*. Galen makes it the same with the *κνήστορον* of Hippocrates. Two kinds are mentioned by the ancient writers, the white and black, of which the former was the more remarkable for its perfume. The *Cneorum* is the *Casia* spoken of in the Georgics of Virgil among the food for bees. The whole question is fully discussed by Martyn.¹⁰

*CNICUS or CNECUS (*κνίκος*, *κνήκος*), a species of plant, which some have taken for the *Carduus Benedictus*, but which the commentator on Mesue, the translator of Avicenna, Dodonæus, Aliston, and

Sprengel, concur in setting down for the *Carthamus tinctorius*, or Bastard Saffron.¹

*CNIDE (κνίδη). (Vid. ACALPHE.)

*CNIPS or SCNIPS (κνήψ, σκνήψ), a numerous genus of insects, which prey upon the leaves of trees. They form the *Aphis*, L. The Cnips is often confounded with the κώνωψ.²

*CNIPOL'OGUS (κνιπολόγος), the name of a bird briefly noticed by Aristotle.³ According to Gesner, it is the white Wagtail, or *Motacilla alba*. Aristotle describes it as of an ashy colour (σποδοειδής), and marked with spots (κατάστικτος), and as having a little cry (φωνεῖ δὲ μικρὸν). This account suits very well the *Motacilla A.*, and its cry of *gnit*. It is ranked by the Greek naturalists among the σκνιποβάγα, and the *Motacilla*, it is well known, makes as much havoc among flies, gnats, and smaller insects as either the fly-catchers or swallows.⁴

COA VESTIS, the Coan robe, is mentioned by various Latin authors, but most frequently and distinctly by the poets of the Augustan age.⁵ From their expressions we learn that it had a great degree of transparency, that it was remarkably fine, that it was chiefly worn by women of loose reputation, and that it was sometimes dyed purple and enriched with stripes of gold. It has been supposed to have been made of silk, because in Cos silk was spun and woven at a very early period, so as to obtain a high celebrity for the manufactures of that island.⁶ The annexed woodcut is from a painting

discovered at Pompeii.⁷ It represents a lady wearing a tunic of almost perfect transparency, so as to correspond to the description of the Coa vestis. Her headdress is of the kind called κεκρύφαλος in Greek, and *reticulum* in Latin, which also occurs in a figure on page 187.

COA'CTOR. This name was applied to collectors of various sorts, e. g., to the servants of the publicani, or farmers of the public taxes, who collected the revenues for them;⁸ also to those who collected the money from the purchasers of things sold at a public auction. Horace⁹ informs us that his father was a coactor of this kind. Moreover, the servants of the money-changers were so called, from collecting their debts for them.¹⁰ The "coactores agminis" were the soldiers who brought up the rear of a line of march.

*COC'ALIS (κόκαλις τοῦ σίτου), the *Agrostemma*

Githago. Its English name, Corn-Cockle, is evidently derived from the ancient appellation, as Adams remarks.¹

*COCCUM, or COCCI GRANUM, a name given by the ancients to what they conceived to be a species of grain, producing a bright scarlet or crimson colour, but which modern naturalists have discovered to be a kind of insect (kermes). The *Quercus coccifera* is the tree that principally engenders them, and it is from their name (*coccum*, *coccus*) that the term *coccineal* has been derived. The *coccus* of the ancients came from Portugal, Sardinia, Asia Minor, and Africa.²

*COCCYGEA (κοκκυγέα), a species of plant mentioned by Theophrastus, and which, according to Schneider, has been generally taken for the *Rhus cotinus*, L. It appears from Sibthorp that the modern Greeks make a flame-red colour from it.³

*COCCYME'LEA (κοκκυμλήα), a kind of Plum. Isidorus says, "*Coccymela, quam Latini ob colorem prunum vocant, cujus generis Damascena melior.*" Sprengel refers that of Dioscorides to the *Prunus insiticia*, or Bullace-tree, a well-known species of plum. Sibthorp's authority is in favour of the *Prunus domestica*. The Damask plums, or τὰ κατὰ τὴν Δαμασκηνὸν, of Galen, are much commended by ancient authors.⁴

*COCCYX (κόκκυξ). I. The Cuckoo, or *Cuculus canorus*. Its history is correctly given by Aristotle.⁵ "If we consult the ancients, and even some modern naturalists," observes Griffith, "we shall find stories of the greatest absurdity connected with the name of the cuckoo. It would seem that everything the most monstrous in fable, or the most odious and criminal in the history of mankind, had been carefully sought out, and attributed to these inoffensive birds: and this, because men could not discover the secret springs which Nature has employed to give to this species manners, habits, and a model of life altogether opposite to those of others, and the union of which fixes on the cuckoos a distinguishing character from all other known animals."⁶ The ancients held the flesh of the cuckoo in high estimation, as do also the modern Italians.

*II. A species of Fish, the same with the *Trigla Cuculus*, L. It is the Red Gurned, or Rotchet; in French, *Rouget* or *Refait*.⁷

*COCCO'NES (κόκκωνες), the seed of the *Punica granata*, or Pomegranate.⁸

*COCH'LEA (κοχλίαις), the Snail, a genus of Mollusca. Of snails there are three sorts, the Sea, the River, and the Land. The last are the *Helices*, one of which, the *Helix pomatia*, or edible snail, was much used by the Greeks and Romans as an article of food. The ancients, as Adams remarks, must have been also well acquainted with the *Helix fruticum* and the *H. arbustorum*.⁹ "The uses of the *Helices*, or Snails," observes Griffith, "are not very numerous. It appears, however, that the larger species, and especially the garden-snails (*H. pomatia*, L.), serve for the aliment of man in many countries. The Romans, according to Pliny,¹⁰ consumed great quantities of them; and they must have been in great estimation for the table, since that author has thought fit to give, in his Natural History, the name of him who first turned his attention to the rearing of these animals in sorts of parks or depôts, and of fattening them with particular substances. The best came from the island of Astypalæa,

A., x., 11.—Adams, Append., s. v.)—8. (Harpocr., Morb. Mulier., 1.)—9. (Adams, Append., s. v.)—10. (H. N., ix., 56)

one of the Cyclades; the smallest from Reate, in the Sabine territory, and the largest from Illyria. The Romans also greatly esteemed the snails of Sicily, of the Balearic Isles, and of the island of Caprea. They shut them up in sorts of warrens, and fattened them there with cooked meat, flour, &c. It was Fulvius Hirpinus who first conceived the idea of this, a short time previous to the civil war between Pompey and Cæsar. He carefully separated each species, and succeeded in obtaining individuals whose shells contained *octoginta quadrantes*, about ten quarts. All this history is taken from Pliny; but there would appear to be some confusion in it, especially with regard to the size produced by education; for Varro,¹ after whom he writes, says the same only concerning the African species, which naturally attained to these dimensions. It does not appear that this mode of educating snails was practised for any great length of time, for Macrobius says nothing about it."²

COCHLEA (*κοχλίας*), which properly means a snail, was also used in several other significations.

I. It signified a screw, one of the mechanical powers, so named from its spiral form, which resembles the worming of a shell. The woodcut annexed represents a clothes-press, from a painting

on the wall of the Chalcidicum of Eumachia, at Pompeii, which is worked by two upright screws (*cochleæ*) precisely in the same manner as our own linen presses.

A screw of the same description was also used in oil and wine presses.³ The thread of the screw, for which the Latin language has no appropriate term, is called *περικόχλιον* in Greek.

II. COCHLEA was also the name of a spiral pump for raising water, invented by Archimedes,⁴ from whom it has ever since been called the Archimædæan screw. It is described at length by Vitruvius.⁵

A pump of this kind was used for discharging the bilge-water in the ship of Hiero, which was built under the directions of Archimedes.⁶

III. COCHLEA was also the name of a peculiar kind of door, through which the wild beasts passed from their dens into the arena of the amphitheatre.⁷ It consisted of a circular cage, open on one side like a lantern, which worked upon a pivot and within a shell, like the machines used in the convents and foundling hospitals of Italy, termed *rote*, so that any particular beast could be removed from its den into the arena merely by turning it round, and without the possibility of more than one escaping at the

same time; and therefore it is recommended by Varro¹ as peculiarly adapted for an aviary, so that the person could go in and out without affording the birds an opportunity of flying away. Schneider,² however, maintains that the *cochleæ* in question was nothing more than a porticulis (*cataphracta*) raised by a screw, which interpretation does not appear so probable as the one given above.

COCHLEAR (*κοχλίδιον*) was a kind of spoon which appears to have terminated with a point at one end, and at the other was broad and hollow like our own spoons. The pointed end was used for drawing snails (*cochleæ*) out of their shells, and eating them, whence it derived its name; and the broader part for eating eggs, &c. Martial³ mentions both these uses of the cochlear:

"*Sum cochleis habilis nec sum minus utilis ovīs.*"⁴

Cochlear was also the name given to a small measure like our spoonful. According to Rhemnius Fannius, it was $\frac{1}{4}$ of the cyathus.

CODEX is identical with *caudex*, as *Claudius* and *Clodius*, *claustrum* and *clostrum*, *cauda* and *coda*. Cato⁵ still used the form *caudex* in the same sense in which afterward *codex* was used exclusively.⁶ The word originally signified the trunk or stem of a tree,⁷ and was also applied to designate anything composed of large pieces of wood, whence the small fishing or ferry boats on the Tiber, which may originally have been like the Indian canoes, or were constructed of several roughly-hewn planks nailed together in a rude and simple manner, were called *naues caudicariæ*, or *codicariæ*, or *caudiceæ*.⁸ The surname of Caudex given to Appius Claudius must be traced to this signification. But the name *codex* was especially applied to wooden tablets bound together and lined with a coat of wax, for the purpose of writing upon them; and when, at a later age, parchment, or paper, or other materials were substituted for wood, and put together in the shape of a book, the name of *codex* was still applied to them.⁹ In the time of Cicero we find it also applied to the tablet on which a bill was written; and the tribune Cornelius, when one of his colleagues forbade his bill to be read by the herald or scribe, read it himself (*legit codicem suum*).¹⁰ At a still later period, during the time of the emperors, the word was used to express any collection of laws or constitutions of the emperors, whether made by private individuals or by public authority. See the following articles.

CODEX GREGORIANUS and HERMOGENIANUS. It does not appear quite certain if this title denotes one collection or two collections. The general opinion, however, is, that there were two codices, compiled respectively by Gregorianus and Hermogenianus, who are sometimes, though, as it seems, incorrectly, called Gregorius and Hermogenes. The *codex* of Gregorianus consisted of thirteen books at least, which were divided into titles. The fragments of this *codex* begin with constitutions of Septimius Severus, and end with Diocletian and Maximian. The *codex* of Hermogenianus, so far as we know it, is only quoted by titles, and it also contains constitutions of Diocletian and Maximian; it may, perhaps, have consisted of one book only, and it may have been a kind of supplement or continuation to, or an abridgment of, the other. The name Hermogenianus is always placed after that of Gregorianus when this *code* is quoted. According

to the Consultationes, the Codex of Hermogenianus also contained constitutions of Valens and Valentinian II., which, if true, would bring down the compiler to a time some years later than the reign of Constantine the Great, under whom it is generally assumed that he wrote. These codices were not made by imperial authority, so far as we know: they were the work of private individuals, but apparently soon came to be considered as authority in courts of justice, as is shown indirectly by the fact of the Theodosian and Justinian Codes being formed on the model of the Codex Gregorianus and Hermogenianus.¹

CODEx JUSTINIANEUS. In February of the year A.D. 528, Justinian appointed a commission, consisting of ten persons, to make a new collection of imperial constitutions. Among these ten were Tribonianus, who was afterward employed on the Digesta and the Institutiones, and Theophilus, a teacher of law at Constantinople. The commission was directed to compile one code from those of Gregorianus, Hermogenianus, and Theodosius, and also from the constitutions of Theodosius made subsequently to his code, from those of his successors, and from the constitutions of Justinian himself. The instructions given to the commissioners empowered them to omit unnecessary preambles, repetitions, contradictions, and obsolete matter; to express the laws to be derived from the sources above mentioned in brief language, and to place them under appropriate titles; to add to, take from, or vary the words of the old constitutions, when it might be necessary, but to retain the order of time in the several constitutions, by preserving the dates and the consuls' names, and also by arranging them under their several titles in the order of time. The collection was to include rescripts and edicts, as well as constitutiones properly so called. Fourteen months after the date of the commission, the code was completed and declared to be law, under the title of the Justinianus Codex; and it was declared that the sources from which this code was derived were no longer to have any binding force, and that the new code alone should be referred to as of legal authority.²

The Digest or Pandect, and the Institutiones, were compiled after the publication of this code, subsequently to which, fifty decisiones and some new constitutiones also were promulgated by the emperor. This rendered a revision of the Code necessary; and, accordingly, a commission for that purpose was given to Tribonianus Dorotheus, a distinguished teacher of law at Berytus in Phœnicia, and three others. The new code was promulgated at Constantinople on the 16th of November, 534, and the use of the decisiones, the new constitutiones, and of the first edition of the Justinianus Codex, was forbidden. The second edition (*secunda editio, repetita prælectio, Codex repetita prælectio*) is the code that we now possess, in twelve books, each of which is divided into titles. It is not known how many books the first edition contained. The constitutiones are arranged under their several titles, in the order of time and with the names of the emperors by whom they were respectively made, and their dates.

The constitutiones in this code do not go farther back than those of Hadrian, and those of the immediate successors of Hadrian are few in number; a circumstance owing, in part, to the use made of the earlier codes in the compilation of the Justinian

Code, and also to the fact of many of their earlier constitutiones being incorporated in the writings of the jurists, from which alone any knowledge of many of them could be derived.¹

The constitutiones, as they appear in this code, have been in many cases altered by the compilers, and, consequently, in an historical point of view, the Code is not always trustworthy. This fact appears from a comparison of this code with the Theodosian code and the Novellæ. The order of the subject matter in this Code corresponds, in a certain way, with that in the Digest. Thus the seven parts into which the fifty books of the Digest are distributed, correspond to the first nine books of the Code. The matter of the last three books of the Code is hardly treated of in the Digest. The matter of the first book of the Digest is placed in the first book of the Code, after the law relating to ecclesiastical matters, which, of course, is not contained in the Digest; and the three following books of the first part of the Digest correspond to the second book of the Code. The following books of the Code, the ninth included, correspond respectively, in a general way, to the following parts of the Digest. Some of the constitutiones which were in the first edition of the Code, and are referred to in the Institutiones, have been omitted in the second edition.² Several constitutiones, which have also been lost in the course of time, have been restored by Charondas, Cujacius, and Contius, from the Greek version of them. For the editions of the Code, see *CORPUS JURIS*.³

CODEx THEODOSIANUS. In the year 429, Theodosius II., commonly called Theodosius the Younger, appointed a commission, consisting of eight persons, to form into a code all the edicts and leges generales from the time of Constantine, and according to the model of the Codex Gregorianus and Hermogenianus (*ad similitudinem Gregoriani et Hermogeniani Codicis*). In 435, the instructions were renewed or repeated; but the commissioners were now sixteen in number. Antiochus was at the head of both commissions. It seems, however, to have been originally the design of the emperor, not only to make a code which should be supplementary to, and a continuation of, the Codex Gregorianus and Hermogenianus, but also to complete a work on Roman law from the classical jurists, and the constitutiones prior to those of Constantine. However this may be, the first commission did not accomplish this, and what we now have is the code which was compiled by the second commission. This code was completed, and promulgated as law in the Eastern Empire in 438, and declared to be the substitute for all the constitutiones made since the time of Constantine. In the same year (438) the Code was forwarded to Valentinian III., the son-in-law of Theodosius, by whom it was laid before the Roman senate, and confirmed as law in the Western Empire. Nine years later, Theodosius forwarded to Valentinian his new constitutiones (*novellæ constitutiones*), which had been made since the publication of the Code; and these, also, were in the next year (448) promulgated as law in the Western Empire. So long as a connexion existed between the Eastern and Western Empires, that is, till the overthrow of the latter, the name Novellæ was given to the constitutiones subsequent to the Code of Theodosius. The latest of these Novellæ that has come down to us is one of the time of Leo and Anthemius, De Bonis Vacantibus, A.D. 468.

The Codex Theodosianus consists of sixteen books, the greater part of which, as well as his No-

1. (Zimmern, Geschichte des Römischen Privatrechts, Heidelberg, 1826.—Hugo, Lehrbuch der Geschichte des Röm. Rechts, Berlin, 1832.—Frag. Cod. Greg. et Hermog. in Schulting's Jurisprudentia Vet., &c., and in the Jus Civile Antiquum, Berol., 1815.)—2. (Constit. de Justin. Cod. Confirmando.)

1. (Constit. de Emendatione Cod. Dom. Justin.)—2. (Instit. 2, tit. 20, s. 27; 4, tit. 6, s. 24.)—3. (Zimmern, &c.—Hugo, Lehrbuch der Geschichte des Röm. Rechts, &c.)

vellæ, exist in their genuine state. The books are divided into titles, and the titles are subdivided into sections or laws. The valuable edition of J. Gothofredus (6 vols. fol., Lugd., 1665, re-edited by Ritter, Lips., 1736-1745, fol.) contains the Code in its complete form, except the first five books and the beginning of the sixth, for which it was necessary to use the epitome contained in the Breviarium (*vid. Breviarium*). This is also the case with the edition of this code contained in the *Jus Civile Antejustinianum*. But the recent discovery of a MS. of the Breviarium at Milan by Clossius, and of a Palimpsest of the Theodosian Code at Turin by Peyron, has contributed largely both to the critical knowledge of the other parts of this code, and has added numerous genuine constitutions to the first five books, particularly to the first. Hänel's discoveries, also, have added to our knowledge of the later books.

The extract or epitome of the first five books in the Breviarium is very scanty; 262 laws, or fragments of laws, were omitted, which the discoveries of Clossius and Peyron have reduced to 200.

The Novellæ Constitutiones anterior to the time of Justinian are collected in six books in the *Jus Civile Antejustinianum*.

The commission of Theodosius was empowered to arrange the constitutions according to their subject, and under each subject according to the order of time; to separate those which contained different matter, and to omit what was not essential or superfluous. The arrangement of the Theodosian Code differs in the main from that of the Code of Justinian, which treats of *jus ecclesiasticum* in the beginning, while that of Theodosius in the first book treats chiefly of offices; and the second, third, fourth, and beginning of the fifth book treat of *jus privatum*. The order here observed, as well as in the Code which it professed to follow as a model, was the order of the prætorian edict, and of the writers on the edict. The eighth book contains the laws as to gifts, the penalties of celibacy, and that relating to the *jus liberorum*. The ninth book begins with crimes. The laws relating to the Christian Church are contained in the sixteenth and last book. It is obvious, from the circumstances under which the Theodosian and Justinian Codes were compiled, and from a comparison of them, that the latter was greatly indebted to the former. The Theodosian Code was also the basis of the edict of Theodoric, king of the Ostrogoths; it was epitomized, with an interpretation, in the Visigothic *Lex Romana* (*vid. Breviarium*); and the Burgundian *Lex Romana*, commonly called *Papii Liber Responsorum*, was founded upon it.

CODICILLUS. (*Vid. TESTAMENTUM*.)

COEMPTIO. (*Vid. MARRIAGE*.)

CÆNA. As the Roman meals are not always clearly distinguished, it will be convenient to treat of all under the most important one. The following article is designed to give a short account of the familiar day of the Romans. No one who remembers the changes which custom has brought about in our own country during the last century, will expect the same description of domestic manners to apply to any considerable period of time. It will suffice to take the ordinary life of the middle ranks of society in the Augustal age, noticing incidentally the most remarkable deviations, either on the side of primitive simplicity or of late refinement.

The meal with which the Roman sometimes began the day was the *jentaculum*, a word derived, as Isidore would have us believe, a *jejunio solvendo*, and answering to the Greek ἀσπαρτμός. Festus tells us that it was also called *prandicula* or *silatum*. Though by no means uncommon, it does not appear

to have been usual, except in the case of children, or sick persons, or the luxurious, or, as Nonius adds,¹ of labouring men. An irregular meal (if we may so express it) was not likely to have any very regular time: two epigrams of Martial, however, seem to fix the hour at about three or four o'clock in the morning.² Bread, as we learn from the epigram just quoted, formed the substantial part of this early breakfast, to which cheese,³ or dried fruit, as dates and raisins,⁴ was sometimes added. The *jentaculum* of Vitellius⁵ was doubtless of a more solid character; but this was a case of monstrous luxury.

Next followed the *prandium* or luncheon, with persons of simple habits a frugal meal:

"Quantum interpellat inani
Ventre dicam durare."⁶

As Horace himself describes it in another place,⁷

"Cum sale panis

Latrantem stomachum bene leniet,"

agreeably with Seneca's account,⁸ "*Panis deinde siccus et sine mensa prandium, post quod non sunt lavandæ manus.*" From the latter passage we learn incidentally that it was a hasty meal, such as sailors⁹ and soldiers¹⁰ partook of when on duty, without sitting down. The *prandium* seems to have originated in these military meals, and a doubt has been entertained whether in their ordinary life the Romans took food more than once in the day. Pliny¹¹ speaks of Aufidius Bassus as following the ancient custom in taking luncheon; but again,¹² in describing the manners of an old-fashioned person, he mentions no other meal but the *cæna*. The following references¹³ seem to prove that luncheon was a usual meal, although it cannot be supposed that there were many who, like Vitellius, could avail themselves of all the various times which the different fashions of the day allowed ("*epulas trifariam semper, interdum quadrifariam dispertiebat, in jentacula et prandia, et cænas, comissationesque; facile omnibus sufficiens, vomitandi consuetudine*"¹⁴). It would evidently be absurd, however, to lay down uniform rules for matters of individual caprice, or of fashion at best.

The *prandium*, called by Suetonius¹⁵ *cibus meridianus*, was usually taken about twelve or one o'clock.¹⁶ For the luxurious palate, as we gather incidentally from Horace's Satires, very different provision was made from what was described above as his own simple repast. Fish was a requisite of the table:¹⁷

"Foris est promus, et atrum
Defendens pisces hyemat mare;"

to which the choicest wines, sweetened with the finest honey, were to be added:

"Nisi Hymettia mella Falerno
Ne biberis diluta;"

which latter practice is condemned by the learned gastronomer,¹⁸ who recommends a weaker mixture,

"Leni præcordia mulso
Prohuc melius,"

and gravely advises to finish with mulberries fresh gathered in the morning.¹⁹

The words of Festus, "*cæna apud antiquos dicebatur quod nunc prandium*," have given much trouble

to the critics, perhaps needlessly, when we remember the change of hours in our own country. If we translate *cæna*, as, according to our notions, we ought to do, by "dinner," they describe exactly the alteration of our own manners during the last century. The analogy of the Greek word *deipnon*, which, according to Athenæus, was used in a similar way for *ὑπνον*, also affords assistance. Another meal, termed *merenda*, is mentioned by Isidore and Festus, for which several refined distinctions are proposed; but it is not certain that it really differed from the *prandium*.

The table, which was made of citron, maple-wood, or even of ivory,¹ was covered with a *mantel*, and each of the different courses, sometimes amounting to seven,² served upon a *ferculum* or waiter. In the "munda supellex" of Horace, great care was taken.

"Ne turpe toral, ne sordida mappa
Corruget naves; ne non et cantharus et lanx
Ostendat tibi le."³

And on the same occasion, the whole dinner, which consisted of vegetables, was served up on a single platter.⁴

To return to our description, the dinner usually consisted of three courses: first, the *promulsis* or *antecæna*,⁵ called also *gustatio*,⁶ made up of all sorts of stimulants to the appetite, such as those described by Horace,

"Rapula, lactuca, radices, qualia lassum
Pervellunt stomachum, siser, alec, facula Coa."⁷

Eggs also⁸ were so indispensable to the first course that they almost gave a name to it (*ab ovo Usque ad mala*). In the *promulsis* of Trimalchio's supper⁹—probably designed as a satire on the Emperor Nero—an ass of Corinthian brass is introduced, bearing two panniers, one of white, the other of black olives, covered with two large dishes inscribed with Trimalchio's name. Next come dormice (*glires*) on small bridges sprinkled with poppy-seed and honey, and hot sausages (*tomacula*) on a silver gridiron (*craticula*), with Syrian prunes and pomegranate berries underneath. These, however, were imperial luxuries; the frugality of Martial only allowed of lettuce and Sicilian olives; indeed, he himself tells us that the *promulsis* was a refinement of modern luxury.¹⁰ Macrobius¹¹ has left an authentic record of a *cæna pontificum*,¹² given by Lentulus on his election to the office of flamen, in which the first course alone was made up of the following dishes: Several kinds of shell-fish (*echini, ostræa crudæ, pelorides, spondyli, glycomarides, murices purpureæ, balani albi et nigri*), thrushes, asparagus, a fatted hen (*gallina altilis*), beccaficoes (*ficedulæ*), nettles (*urticæ*), the haunches of a goat and wild boar (*lumbi capragini, aprugni*), rich meats made into pasties (*altilia ex farina involuta*), many of which are twice repeated in the inventory.

It would far exceed the limits of this work even to mention all the dishes which formed the second course of a Roman dinner, which, whoever likes, may find minutely described in Bulengerus.¹³ Of birds, the Guinea-hen (*Afra avis*), the pheasant (*Phasianæ*, so called from Phasis, a river of Colchis), and the thrush, were most in repute; the liver of a capon, steeped in milk (Pliny), and beccaficoes (*ficedulæ*) dressed with pepper, were held a delicacy.¹⁴ The peacock, according to Macrobius,¹⁵ was first introduced by Hortensius the orator, at an inaugural

supper, and acquired such repute among the Roman gourmands as to be commonly sold for fifty denarii. Other birds are mentioned, as the duck (*anas*), especially its head and breast; the woodcock (*attagen*), the turtle, and flamingo (*phœnicopterus*), the tongue of which, Martial tells us, especially commended itself to the delicate palate. Of fish, the variety was perhaps still greater: the charr (*scaurus*), the turbot (*rhombus*), the sturgeon (*acipenser*), the mullet (*mullus*), were highly prized, and dressed in the most various fashions. In the banquet of Nasidienus, an eel is brought, garnished with prawns swimming in the sauce.³ Of solid meat, pork seems to have been the favourite dish, especially sucking-pig;⁴ the paps of a sow served up in milk (*sumen*), the flitch of bacon (*petasus*), the womb of a sow (*ulva*), are all mentioned by Martial. Boar's flesh and venison were also in high repute, especially the former, described by Juvenal⁵ as *animal propter convivia natum*. Condiments were added to most of these dishes: such were the *muria*, a kind of pickle made from the tunny-fish;⁶ the *garum sociorum*, made from the intestines of the mackerel (*scomber*), so called because brought from abroad; *alec*, a sort of brine; *fax*, the sediment of wine, &c., for the receipts of which we must again refer the reader to Cati's learned instructor.¹⁰ Several kinds of fungi¹¹ are mentioned, truffles (*bolcti*), mushrooms (*tuberes*), which either made dishes by themselves, or formed the garniture for larger dishes.

It must not be supposed that the *artistes* of imperial Rome were at all behind ourselves in the preparation and arrangements of the table. In a large household, the functionaries to whom this important part of domestic economy was intrusted were four, the butler (*promus*), the cook (*archimagirus*), the arranger of the dishes (*structor*), and the carver (*carptor* or *scissor*). Carving was taught as an art, and, according to Petronius,¹² performed to the sound of music, with appropriate gesticulations,

"Neque enim minimo discrimine refert
Quo cultu lepores et quo gallina secetur."¹³

In the supper of Petronius, a large round tray (*ferculum, repasitorium*) is brought in, with the signs of the zodiac figured all round it, upon each of which the *artiste* (*structor*) had placed some appropriate viand: a goose on Aquarius; a pair of scales, with tarts (*scribitæ*) and cheesecakes (*placentæ*) in each scale, on Libra, &c. In the middle was placed a hive supported by delicate herbage. Presently four slaves come forward, dancing to the sound of music, and take away the upper part of the dish; beneath appear all kinds of dressed meats: a hare with wings, to imitate Pegasus, in the middle; and four figures of Marsyas at the corners, pouring hot sauce (*garum piperatum*) over the fish that were swimming in the Euripus below. So entirely had the Romans lost all shame of luxury, since the days when Cincius, in supporting the Fannian law, charged his own age with the enormity of introducing the *parcus Trojanus* (a sort of pudding stuffed with the flesh of other animals).¹⁴

The bellaria or dessert, to which Horace alludes when he says of Tigellius *ab ovo Usque ad mala citaret*, consisted of fruits (which the Romans usually ate uncooked), such as almonds (*amygdalæ*), dried grapes (*uvæ passæ*), dates (*palmula, laryota, dactyli*); of sweetmeats and confections, called *edulia melbita, dulciaria*, such as cheesecakes (*cupedia, crustula, liba, placentæ, artologani*), almond-cakes (*coptæ*), tarts

(*scribitæ*), whence the maker of them was called *pistor dulciarius, placentarius, libarius, &c.*

We will now suppose the table spread and the guests assembled, each with his *mapa* or napkin,¹ and in his dinner-dress, called *cenatoria* or *cubitoria*, usually of a bright colour,² and variegated with flowers. First they took off their shoes for fear of soiling the couch,³ which was often inlaid with ivory or tortoise-shell, and covered with cloth of gold. Next they lay down to eat,⁴ the head resting on the left elbow, and supported by cushions.⁵ There were usually, but not always, three on the same couch,⁶ the middle place being esteemed the most honourable. Around the tables stood the servants (*ministri*), clothed in a tunic,⁷ and girt with napkins,⁸ some removed the dishes and wiped the tables with a rough cloth (*gausape*)⁹; others gave the guests water for their hands, or cooled the room with fans.¹⁰ Here stood an Eastern youth¹¹ behind his master's couch, ready to answer the noise of the fingers (*digiti crepitus*)¹², while others bore a large platter (*mazonomum*) of different kinds of meat to the guests.¹³

Whatever changes of fashion had taken place since primitive times, the *cæna* in Cicero's day¹⁴ was at all events an evening meal. It was usual to bathe about two o'clock and dine at three, hours which seem to have been observed, at least by the higher classes, long after the Augustan age.¹⁵ When Juvenal mentions two o'clock as a dinner hour, he evidently means a censure on the luxury of the person named.¹⁶

"*Exul ab octava Marius bibit.*"

In the banquet of Nasidienus, about the same hour is intended when Horace says to Fundanius,

"*Nam mihi quæranti convivam dictus here illic De medio potare dic.*"

Horace and Mæcenas used to dine at a late hour, about sunset.¹⁷ Perhaps the various statements of classical authors upon this subject can only be reconciled by supposing that with the Romans, as with ourselves, there was a great variety of hours in the different ranks of society.

Dinner was set out in a room called *cenatio* or *diæta* (which two words perhaps conveyed to a Roman ear nearly the same distinction as our dining-room and parlour). The *cenatio*, in rich men's houses, was fitted up with great magnificence.¹⁸ Suetonius¹⁹ mentions a supper-room in the Golden Palace of Nero, constructed like a theatre, with shifting scenes to change with every course. The garret of the poor man was termed *canaculum*.²⁰ In the midst of the *cenatio* were set three couches (*triclinia*), answering in shape to the square, as the long semicircular couches (*sigmata*) did to the oval tables. An account of the disposition of the couches, and of the place which each guest occupied, is given in the article *TRICLINIUM*.

The Greeks and Romans were accustomed, in later times, to recline at their meals; though this practice could not have been of great antiquity in Greece, since Homer never describes persons as reclining, but always as sitting at their meals. Isidore of Seville²¹ also attributes the same practice to the ancient Romans. Even in the time of the early Roman emperors, children in families of the highest rank used to sit together at an inferior table, while

their fathers and elders reclined on couches at the upper part of the room.¹

Roman ladies continued the practice of sitting at table, even after the recumbent position had become common with the other sex.² It appears to have been considered more decent, and more agreeable to the severity and purity of ancient manners, for women to sit, more especially if many persons were present. But, on the other hand, we find cases of women reclining, where there was conceived to be nothing bold or indelicate in their posture. In some of the bas-reliefs, representing the visit of Bacchus to Icarus, Erigone, instead of sitting on the couch, reclines upon it in the bosom of her father. In Juvenal³ a bride reclines at the marriage-supper on the bosom of her husband, which is illustrated by the following woodcut, taken from Montfaucon.⁴

It seems intended to represent a scene of perfect matrimonial felicity. The husband and wife recline on a sofa of rich materials. A three-legged table is spread with viands before them. Their two sons are in front of the sofa, one of them sitting, in the manner above described, on a low stool, and playing with the dog. Several females and a boy are performing a piece of music for the entertainment of the married pair.

Before lying down, the shoes or sandals were taken off, and this was commonly done by the attendants.⁵ In all the ancient paintings and bas-reliefs illustrative of this subject, we see the guests reclining with naked feet; and in those which contain the favourite subject of the visit of Bacchus to Icarus, we observe a faun performing for Bacchus this office. The following woodcut, taken from a terra

cotta in the British Museum, representing this subject, both shows the naked feet of Icarus, who has partly raised himself from his couch to welcome his

COENA'CULUM. (*Vid. COENA.*)

COENA'TIO. (*Vid. COENA.*)

COGNA'TI. The following passage of Ulpian¹ will serve as the best introduction to the meaning of this term, while it shows on what occasions questions involving cognatio and agnatio arose:

"The hereditates of intestate ingenui belong in the first place to their sui heredes, that is, children who are in the power of the parent, and those who are in the place of children (as grandchildren, for instance); if there are no sui heredes, it belongs to the consanguinei, that is, brothers and sisters by the same father (it was not necessary that they should be by the same mother); if there are no consanguinei, it belongs to the remaining and nearest agnati, that is, to the cognati of the male sex, who trace their descent through males, and are of the same familia. And this is provided by the following law of the Twelve Tables: '*Si intestato moritur cui suus heres nec escit, agnatus proximus familiam habeto.*'"

The foundation of cognatio is a legal marriage. The term cognatus (with some exceptions) comprehends agnatus: an agnatus may be a cognatus, but a cognatus is only an agnatus when his relationship by blood is traced through males.

The following will give a correct notion of agnatus and cognatus. Familia means all those free persons who are in the power of the same paterfamilias, or head of a familia; and in this sense familia signifies all the agnati, or all those who are united in one body by the common bond of the patria potestas. The cognatio, as already said, was the relationship of blood which existed between those who were sprung from a common pair, and it therefore (with some exceptions) contained the agnatio. But legitimate grandchildren of sons who were not emancipated were also in the patria potestas, consequently formed part of the familia, and were agnati. Adopted children were also in the father's power, and, consequently, were agnati, though they were not cognati. The paterfamilias maintained his power over his familia so long as he lived, except over those who were emancipated, or passed into another familia, or in any way sustained a deminutio capitis. On his death, the common bond of the patria potestas was dissolved, and his sons became respectively heads of families; that is, of persons who were in their power, or, with respect to one another, were agnati. But all these persons continued to be members of the same familia; that is, they were still agnati, and, consequently, the agnatio subsisted among persons so long as they could trace back their descent through males to one common paterfamilias.

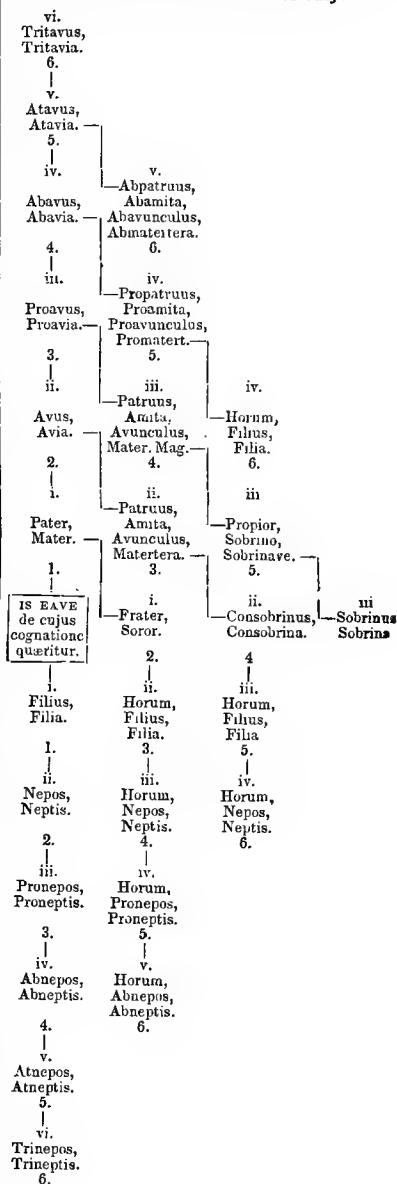

Agnati, then, are those "who would be in the patria potestas, or *in jus*, as a wife in *manus viri*, or in the manus of a son who is in the father's power, if the paterfamilias were alive; and this is true whether such persons ever were actually so or not."²

We must suppose, then, in order to obtain a clear notion of agnatio, that if the person from whom the agnati claim a common descent were alive, and they were all in his power, or in his manus, or in the manus of those who are in his power, they would all be agnati. In order, then, that agnatio may subsist between persons, the person from whom the descent is claimed must have lost his patria potestas by death only, and not by any capitis deminutio, and, consequently, not by any of his children passing into any other patria potestas, or into the

manus viri, which would, in effect, be passing into another agnatio; for a person could not at the same time be an agnatus of two altogether different families. Accordingly, adoption destroyed agnatio, and the emancipation of a son by his father took away all his rights of agnatio, and his former agnati lost all their rights against him.

"The patricians, as *gentiles*, gained what others lost as agnati, and they kept as gentiles what they themselves lost as agnati; and this strict doctrine of the complete loss of the agnatio appears, therefore, to have originated with them."³

Persons of the same blood by both parents were sometimes called *germani*; and *consanguinei* were those who had a common father only, and *uterini* those who had a common mother only.

¹ (*Frag.*, tit. 26, § 1.)—² (*Hugo, Lehrbuch, &c.*)

³ (*Hugo, Lehrbuch, &c.*)

This table shows all the degrees of cognatio in the Roman law, and, of course, also the degrees of agnatio. The degree of relationship of any given person in this stemma, to the person with respect to whom the relationship is inquired after (*is eave*, &c.), is indicated by the figures attached to the several words. The Roman numerals denote the degree of cognatio in the canon law, and the Arabic numerals the degrees in the Roman or civil law. The latter mode of reckoning is adopted in England, in ascertaining the persons who are entitled as next of kin to the personal estate of an intestate. It will be observed, that in the canon law, the number which expresses the collateral degree is always the greater of the two numbers (when they are different) which express the distance of the two parties from the common ancestor; but in the civil law, the degree of relationship is ascertained by counting from either of the two persons to the other through the common ancestor. All those words on which the same Roman or the same Arabic numerals occur, represent persons who are in the same degree of cognatio, according to these respective laws, to the person *is eave*, &c.¹

COGNITOR. (*Vid. ACTIO.*)

COGNOMEN. (*Vid. NOMEN.*)

COHORS. (*Vid. ARMY, ROMAN, p. 104.*)

*COIX (*κρίξ*), a species of Egyptian Palm-tree, of the leaves of which matting and baskets were made. Stackhouse sets it down for the *Coix lachryma Jobi*. Bauhin mentions that some had taken it for a species of *Lithospermum*. The term *κρίξ* in Theophrastus, out of which some would make the *Cycas revoluta*, or Japanese Sago-palm, is merely the accusative plural for *κρίκας*, from *κρίξ*, just as some read *cycas* for *coicas* in Pliny.²

*COLCHICUM (*κολχικόν*), the Meadow Saffron, or *Colchicum Autumnale*. Pliny³ merely mentions it as a poisonous plant, but Alexander of Tralles, a physician of the sixth century, prescribes it in cases of gout, in which, as also in the rheumatism and neuralgic affections, it is still found a valuable medicine at the present day. The celebrated specific for gout, known by the name of *Eau Medicinale d'Hyssop*, is said to be the vinous infusion of Colchicum. Indeed, the vinous infusion of this plant has been recommended in cases of gout by Sir Everard Home. It very rarely fails in such complaints to break up the paroxysm, sometimes acting on the bowels, at other times on the kidneys and skin, and often without any apparent accompanying effect. It is but right to state, however, that the most judicious writers on gout consider it a dangerous medicine ultimately.⁴ (*Vid. EPHEMERON and HERMODACTYLUS.*)

COLLATIO BONORUM. (*Vid. BONORUM COLLATIO.*)

COLLEGIUM. The persons who formed a collegium were called *collegæ* or *sodales*. The word collegium properly expressed the notion of several persons being united in any office or for any common purpose;⁵ it afterward came to signify a body of persons, and the union which bound them together. The collegium was the *ἐταιρία* of the Greeks.

The legal notion of a collegium was as follows: A collegium or corpus, as it was also called, must consist of three persons at least.⁶ Persons who legally formed such an association were said *corpus habere*, which is equivalent to our phrase of being incorporated; and in later times they were said to be *corporati*, and the body was called a *corporatio*.

Those who farmed the public revenues, *mines*, or salt-works (*salinæ*) might have a corpus. The power of forming such a collegium or societas (for this term also was used) was limited by various leges, senatus consulta, and imperial constitutions.¹ Associations of individuals, who were entitled to have a corpus, could hold property in common; they could hold it, as the Roman jurists remark, just as the state held property (*res communes*). These collegia had a common chest, and could sue and be sued by their syndicus or actor. Such a body, which was sometimes also called a *universitas*, was a legal unity. That which was due to the body was not due to the individuals of it, and that which the body owed was not the debt of the individuals. The common property of the body was liable to be seized and sold for the debts of the body. The collegium or universitas was governed by its own regulations, which might be any regulations that the body agreed upon, provided they were not contrary to law: this provision, as Gaius conjectures,² was derived from a law of Solon, which he quotes. The collegium still subsisted, though all the original members were changed: it had, as our law expresses it, perpetual succession. Thus it appears that the notion of a collegium is precisely that of our modern incorporations, the origin of which is clearly traceable to these Roman institutions.

A lawfully constituted collegium was *legitimum*. Associations of individuals, which affected to act as collegia, but were forbidden by law, were called *illicita*.

It does not appear how collegia were formed, except that some were specially established³ by legal authority.⁴ Other collegia were probably formed by voluntary associations of individuals, under the provisions of some general legal authority, such as those of the publicani. This supposition would account for the fact of a great number of collegia being formed in the course of time, and many of them being occasionally suppressed as not legitimate.

Some of these corporate bodies resembled our companies or guilds; such were the *fabrorum*, *pistorum*, &c., collegia. Others were of a religious character; such as the pontificum, augurum, fratrum arvialium collegia. Others were bodies concerned about government and administration; as *tribunorum plebis*,⁵ *quæstorum*, *decurionum* collegia. The titles of numerous other collegia may be collected from the Roman writers and from inscriptions.

According to the definition of a collegium, the consuls, being only two in number, were not a collegium, though each was called *collega* with respect to the other, and their union in office was called collegium. It does not appear that the Romans ever called the individual who, for the time, filled an office of perpetual continuance, a *universitas* or collegium: a kind of contradiction in terms, which it has been reserved for modern times to introduce, under the name of a corporation sole. But the notion of a person succeeding to all the property and legal rights of a predecessor was familiar to the Romans in the case of a heres, who was said to take *per universitatem*, and the same notion, no doubt, always existed with respect to individuals who held any office in perpetual succession.

According to Ulpian, a *universitas*, though reduced to a single member, was still considered a *universitas*; for the individual possessed all the rights which once belonged to the body, and the name by which it was distinguished.

When a new member was taken into a collegi-

N., xiii., 4.—Billerbeck, Flora Classica, p. 228.)—3. (H. N., xxviii., 9.)—4. (Macaulay, Med. Dict., p. 137.)—5. (Liv., x., 13, 22.—Tacit. Ann., iii., 31.)—6. (Dig. 50, tit. 16, s. 85.)

1. (Dig. 3, tit. 4.)—2. (Dig. 47, tit. 22.)—3. (Liv., v., 50, 52.)—4. (Liv., v., 50, 52.—Suet., Iul., 42.—Octav., 32.—Dig. 3, ut 4, s. 1.)—5. (Liv., 42, 32.)

am, he was said *co-optari*, and the old members were said with respect to him, *recipere in collegium*. The mode of filling up vacancies would vary in different collegia. The statement of their rules belongs to the several heads of *Αγορά*, &c., which are treated of in this work.

Civitates, and *res publicæ* (civil communities), and municipia (in the later sense of the term) were viewed, in a manner, as corporations, though they were not so called: they could have property in common, and in some respects act as corporations; but they do not seem ever to have been legally considered as corporations, because they consisted of an indeterminate number of individuals.

According to Pliny,¹ *res publicæ* and municipia could not take as heres; and the reason given is, that they were a *corpus incertum*, and so could not *cernere hereditatem*; that is, do those acts which a heres must do in order to show that he consents to be a heres. Universitates, generally, are also considered by modern writers to be within this rule, though they are clearly not within the reason of it; for a collegium, which consisted of a determined number of individuals, was no more a *corpus incertum* than any other number of ascertained individuals, and all that could possibly be required of them would be the consent of all. Municipia could, however, acquire property by means of other persons, whether bond or free;² and they could take fideicommissa under the *senatus consultum* *Apronianum* which was passed in the time of Hadrian, and extended to *licita collegia* in the time of M. Aurelius.³ By another *senatus consultum*, the liberti of municipia might make the municipes their heredes. The gods could not be made heredes, except such deities as possessed this capacity by special *senatus consulta* or imperial constitutions, such as Jupiter Tarpeius, &c.⁴ By a constitution of Leo,⁵ civitates could take property as heredes. In the time of Paulus (who wrote between the time of Caracalla and Alexander Severus), civitates could take legacies of particular kinds.

Though civitates within the Roman Empire could not receive gifts by will, yet independent states could receive gifts in that way, a case⁶ which furnishes no objections to the statement above made by Pliny and Ulpian. In the same way, the Roman state accepted the inheritance of Attalus, king of Pergamus, a gift which came to them from a foreigner. The Roman lawyers considered such a gift to be accepted by the *jus gentium*.

*COLOCASIA and -IUM (*κολοκασία* and -ιον), the edible root of the Egyptian Bean (*κίναρος ὁ Αἰγύπτιος*). It grew, according to Dioscorides,⁷ chiefly in Egypt, but was found also in the lakes of Asia. "It has leaves," says the same authority, "as large as a petasus; a stalk a cubit in length, and of the thickness of a finger; a rosaceous flower twice as large as a poppy. When the flower goes off, it bears husks like little bags, in which a small bean appears beyond the lid, in the form of a bottle, which is called *ciborion* or *cibotion* (*κιβώριον ἢ κιβότιον*), i. e., a little coffee or ark, because the bean is sown on the moist earth, and so sinks into the water. The root is thicker than a reed; it is eaten both raw and boiled, and is called *Colocasias*. The bean is eaten green, and when it is dried it turns black, and is larger than the Greek Bean."⁸ Theophrastus, in the account which he gives of the Egyptian Bean, does not in the least hint, as Martyn remarks, that any part of the plant was called *Colocasias*; Pliny,⁹ however, agrees with Dioscorides in making them

the same. He mentions the stalk as the part that is eaten; says the Egyptians used the leaves to drink out of; and adds, that in his time it was planted in Italy. "Prosper Alpinius, in his work *De Plantis Ægypti*, assures us that the modern Ægyptian name of this plant is *Culcas*, which the Greek writers might easily change to the more agreeable sound of Colocasias. He says no plant is better known, or is in more use among them, the root of it being eaten as commonly as turnips among us. The Colocasias began to be planted in Italy in Virgil's time; and when the fourth Eclogue of that poet (in which mention is made of it) was written, it was a rarity newly brought from Ægypt, and therefore the Mantuan bard speaks of its growing commonly in Italy as one of the glories of the golden age which was now expected to return."¹¹ For farther information respecting the Colocasias, the reader is referred to Fée's *Flora de Virgile*. According to this last-mentioned writer, the ancients frequently confounded the *Nymphaea Lotus* and the *Arum Colocasias* under the common name of *Colocasium*.

*COLOCYNTHÉ (*κολοκύνθη*, -θα, and -τη), the Gourd. "Even in the days of Athenæus,"¹² says Adams, "the *savans* complained of the difficulty of distinguishing the summer fruits from one another, owing to the confusion of names which had taken place among the authors who had treated of them. Thus Nicander applied the term *σκῆνα* to what was the *κολοκύνθη* of later writers; and it is farther deserving of remark, that Galen applies the term *σίκυος* to the *κολοκύνθη* of Dioscorides, i. e., to the *Cucumis sativus*, or common Cucumber, and, consequently, his (Galen's) *κολοκύνθη* was the *Cucurbita*, or Gourd. In this sense I am inclined to think the terms *σίκυος* and *κολοκύνθη* are generally used by the writers on Dietetics, namely, the former is the Cucumber, and the latter the Gourd of English gardeners.³ Theophrastus did not define accurately the character of his *κολοκύνθη*, and, indeed, according to Athenæus, he described several species of it. I can scarcely believe, however, that he generally applied it to the *Cucumis Colocynthis*, i. e., the Coloquintida, or Bitter Apple, as Stackhouse represents."¹⁵

*COLOCYNTHIS (*κολοκύνθης*), I. The Bitter Apple (Coloquintida), or *Cucumis Colocynthis*.⁵—II. The common Cucumber, or *Cucumis sativus*.⁶

*COLIAS (*κολίας*), the name of a small Fish, mentioned by Pollux, Aristotle, Athenæus, and Ælian. It would appear to have been a variety of the Mackerel, or *Scomber scomber*.⁷

*COLOIOS (*κολοίος*). (Vid. GRACULUS.)

COLO'NI. (Vid. PRÆDIUM.)

COLONIA. This word contains the same element as the verb *colere*, "to cultivate," and as the word *colonus*, which probably originally signified a "tiller of the earth." The English word colony, which is derived from the Latin, perhaps expresses the notion contained in this word more nearly than is generally the case in such adopted terms.

A kind of colonization seems to have existed among the oldest Italian nations, who, on certain occasions, sent out their superfluous male population, with arms in their hands (*ἐπὶ νεότητι*), to seek for a new home.⁸ But these were, apparently, mere bands of adventurers, and such colonies rather resembled the old Greek colonies than those by which Rome extended her dominion and her name.

Colonies were established by the Romans as far back as the annals or traditions of the city extend,

and the practice was continued, without intermission, during the Republic and under the Empire. Sigonius¹ enumerates six main causes or reasons which, from time to time, induced the Romans to send out colonies; and these causes are connected with many memorable events in Roman history. Colonies were intended to keep in check a conquered people, and also to repress hostile incursions, as in the case of the colony of Narnia,² which was founded to check the Umbri; and Minturnæ and Sinuessa,³ Cremona and Placentia,⁴ which were founded for similar purposes. Cicero⁵ calls the old Italian colonies the "propugnacula imperii;" and in another passage⁶ he calls Narbo Martius (Narbonne), which was in the provincia Gallia, "Colonia nostrorum civium, specula populi Romani et propugnaculum." Another object was to increase the power of Rome by increasing the population.⁷ Sometimes the immediate object of a colony was to carry off a number of turbulent and discontented persons. Colonies were also established for the purpose of providing for veteran soldiers, a practice which was begun by Sulla, and continued under the emperors: these coloniae were called milites.

It is remarked by Strabo,⁸ when speaking of the Roman colonies in the north of Italy, that the ancient names of the places were retained, and that, though the people in his time were all Roman, they were called by the names of the previous occupiers of the soil. This fact is in accordance with the character of the old Roman colonies, which were in the nature of garrisons planted in conquered towns, and the colonists had a portion of the conquered territory (usually a third part) assigned to them. The inhabitants retained the rest of their lands, and lived together with the new settlers, who alone composed the proper colony.⁹ The conquered people must at first have been quite a distinct class from, and inferior to, the colonists. The definition of a colonia by Gellius¹⁰ will appear, from what has been said, to be sufficiently exact: "*Ex civitate quasi propagata—populi Romani quasi effigies parva simulacra.*"

No colonia was established without a lex, plebiscitum, or senatus consultum; a fact which shows that a Roman colony was never a mere body of adventurers, but had a regular organization by the parent state. According to an ancient definition quoted by Niebuhr,¹¹ a colony is a body of citizens, or socii, sent out to possess a commonwealth, with the approbation of their own state, or by a public act of that people to whom they belong; and it is added, those are colonies which are founded by public act, not by any secession. Many of the laws which relate to the establishment of coloniae were leges agrariae, or laws for the division and assignment of public lands, of which Sigonius has given a list in his work already referred to.

When a law was passed for founding a colony, persons were appointed to superintend its formation (*coloniam deducere*). These persons varied in number, but three was a common number (*triumviri ad colonos deducendos*)¹². We also read of *dumviri*, *quinqueviri*, *vigintiviri* for the same purpose. The law fixed the quantity of land that was to be distributed, and how much was to be assigned to each person. No Roman could be sent out as a colonist without his free consent, and when the colony was not an inviting one, it was difficult to fill up the number of volunteers.¹³

Roman citizens who were willing to go out as members of a colony gave in their names at Rome. Cicero¹⁴ says that Roman citizens who chose to become members of a Latin colony must go voluntarily (*auctores facti*), for this was a *capitis deminutio*; and in another passage¹⁵ he adleges the fact of Roman citizens going out in Latin colonies as a proof that loss of civitas must be a voluntary act. It is true that a member of a Roman colony would sustain no *capitis deminutio*, but in this case, also, there seems no reason for supposing that he ever joined such a colony without his consent.

The colonia proceeded to its place of destination in the form of an army (*sub vexillo*), which is indicated on the coins of some coloniae. An *urbs*, if one did not already exist, was a necessary part of a new colony, and its limits were marked out by a plough, which is also indicated on ancient coins. The colonia had also a territory, which, whether marked out by the plough or not,¹⁶ was at least marked out by metes and bounds. Thus the *urbs* and territory of the colonia respectively corresponded to the *urbs* Roma and its territory. Religious ceremonies always accompanied the foundation of the colony, and the anniversary was after ward observed. It is stated that a colony could not be sent out to the same place to which a colony had already been sent in due form (*auspicato deducta*). This merely means that, so long as the colony maintained its existence, there could be no new colony in the same place; a doctrine that would hardly need proof, for a new colony implied a new assignment of lands; but new settlers (*novi adscripti*) might be sent to occupy colonial lands not already assigned.¹⁷ Indeed, it was not unusual for a colony to receive additions;¹⁸ and a colony might be re-established, if it seemed necessary from any cause; and under the emperors such re-establishment might be entirely arbitrary, and done to gratify personal vanity, or from any other motive.¹⁹

The commissioners appointed to conduct the colony had apparently a profitable office, and the establishment of a new settlement gave employment to numerous functionaries, among whom Cicero enumerates apparitores, scribes, librarii, praecones, architecti. The foundation of a colony might then, in many cases, not only be a mere party measure, carried for the purpose of gaining popularity, but it would give those in power an opportunity of providing places for many of their friends.

A colonia was a part of the Roman state, and it had a *respublica*; but its relation to the parent state might vary. In Livy²⁰ the question was, whether Aquileia should be a colonia civium Romanorum or a Latina colonia; a question that had no reference to the persons who should form the colony, but to their political rights with respect to Rome as members of the colony. The members of a Roman colony (*colonia civium Romanorum*) must, as the term itself implies, have always had the same rights, which, as citizens, they would have had at Rome. They were, as Niebuhr remarks, in the old Roman colonies, "the *populus*; the old inhabitants, the *commonalty*." These two bodies may, in course of time, have frequently formed one; but there could be no political union between them till the old inhabitants obtained the *commercium* and *connubium*, in other words, the *civitas*; and it is probable that, among the various causes which weakened the old colonies, and rendered new supplies of colonists necessary, we should enumerate the want of Roman women; for the children of a Roman were

not Roman citizens unless his wife was a Roman, or unless she belonged to a people with which there was connubium.

It is important to form a precise notion of the relation of an ancient Roman colonia to Rome. That the colonists, as already observed, had all the rights of Roman citizens, is a fact capable of perfect demonstration; though most writers, following Sigonius, have supposed that Roman citizens, by becoming members of a Roman colony, lost the suffragium and honores, and did not obtain them till after the passing of the Julian law. Such an opinion is inconsistent with the notion of Roman citizenship, which was a personal, not a local right; and it is also inconsistent with the very principle of Roman polity apparent in the establishment of Roman colonies. Farther, the loss of the suffragium and honores would have been a species of capitis deminutio; and it is clear, from what Cicero says of the consequences of a Roman voluntarily joining a Latin colony, that no such consequences resulted from becoming a member of a Roman colony. If a Roman ever became a member of a Roman colony without his consent, it must have been in the early ages of the state, when the colonies still retained their garrison character, and to join a colony was a kind of military service; but such a duty to protect the state, instead of implying any loss of privilege, justifies quite a different conclusion.

It is somewhat more difficult to state what was the condition of those conquered people among whom the Romans sent their colonists. They were not Roman citizens, nor yet were they socii; still they were, in a sense, a part of the Roman state, and in a sense they were cives, though certainly they had not the suffragium, and, perhaps, originally not the connubium. It is probable that they had the commercium, but even this is not certain. They might be a part of the Roman civitas without being cives, and the difficulty of ascertaining their precise condition is increased by the circumstance of the word civitas being used loosely by the Roman writers. If they were cives in a sense, this word imported no privilege; for it is certain that, by being incorporated in the Roman state as a conquered people, they lost all power of administering their own affairs, and obtained no share in the administration of the Roman state; they had not the honourable rank of socii, and they were subject to military service and taxation. They lost all jurisdiction, and it is probable that they were brought entirely within the rules and procedure of the Roman law, so far as that was practicable. Even the commercium and connubium with the people of their own stock were sometimes taken from them,¹ and thus they were disunited from their own nation, and made a part of the Roman state. So far, then, was the civitas (without the suffragium) from being always a desirable condition, as some writers have supposed, that it was, in fact, the badge of servitude; and some states even preferred their former relation to Rome to being incorporated with it as complete citizens. It appears that, in some cases at least, a prefectus juri dicundo was sent from Rome to administer justice among the conquered people, and between them and the coloni. It appears, also, to be clearly proved, by numerous instances, that the condition of the conquered people among whom a colony was sent was not originally always the same; something depended on the resistance of the people, and the temper of the Romans at the time of the conquest or surrender. Thus the conquered Italian towns might originally have the civitas in different degrees, until they finally obtained the complete civitas by receiv-

ing the suffragium; some of them obtained it before the social war, and others by the Julian law.

The nature of a Latin colony will appear sufficiently from what is said here, and in the article CIVITAS.

Besides these coloniae there were coloniae Italici juris, as some writers term them; but which, in fact, were not colonies. Sigonius, and most subsequent writers, have considered the jus Italicum as a personal right, like the civitas and Latinitas; but Savigny has shown it to be quite a different thing. The jus Italicum was granted to favoured provincial cities; it was a grant to the community, not to the individuals composing it. This right consisted in quiritarian ownership of the soil (commercium), and its appurtenant capacity of mancipatio, usucapion, and vindicatio, together with freedom from taxes; and also in a municipal constitution, after the fashion of the Italian towns, with duumviri, quinquennales, ædiles, and a jurisdiction. Many provincial towns, which possessed the jus Italicum, have on their coins the figure of a standing Silenus,

IMP. M. IVL. PHILIPP.
Philip, A.D. 243-249.

ÆL. MNICIP. CO.
Cæla or Cælos (Plin.,
iv, 11, 12) in the Thracian Chersonesus.

with the hand raised, which was the peculiar symbol of municipal liberty. Pliny¹ has mentioned several towns that had the jus Italicum; and Lugdunum, Vienna (in Dauphiné), and colonia Agrippinensis had this privilege. It follows, from the nature of this privilege, that towns which had the Latinitas or the civitas, which was a personal privilege, might not have the jus Italicum; but the towns which had the jus Italicum could hardly be any other than those which had the civitas or Latinitas, and we cannot conceive that it was ever given to a town of Peregrini.

The colonial system of Rome, which originated in the earliest ages, was peculiarly well adapted to strengthen and extend her power: "By the colonies the empire was consolidated, the decay of population checked, the unity of the nation and of the language diffused."² The countries which the Romans conquered within the limits of Italy were inhabited by nations that cultivated the soil and had cities. To destroy such a population was not possible nor politic; but it was a wise policy to take part of their lands, and to plant bodies of Roman citizens, and also Latinæ coloniae, among the conquered people. The power of Rome over her colonies was derived, as Niebuhr has well remarked, "from the supremacy of the parent state, to which the colonies of Rome, like sons in a Roman family, even after they had grown to maturity, continued unalterably subject." In fact, the notion of the patria potestas will be found to lie at the foundation of the institutions of Rome.

The difficulty which the Republic had in maintaining her colonies, especially in the north of Italy, appears from numerous passages; and the difficulty was not always to protect them against hostile aggression, but to preserve their allegiance to the Roman state. The reasons of this difficulty will sufficiently appear from what has been said.

1. (Liv., ix., 43; viii., 14.)

1. (iii., 3 and 21.)—2. (Machiavelli, quoted by Niebuhr.)

The principles of the system of colonization were fully established in the early ages of Rome; but the colonies had a more purely military character, that is, were composed of soldiers, in the latter part of the Republic and under the earlier emperors, at which time, also, colonies began to be established beyond the limits of Italy, as in the case of Narbonne, already mentioned, and in the case of Nemausus (Nîmes), which was made a colony by Augustus, an event which is commemorated by medals,¹ and an extant inscription at Nîmes. In addition to the evidence from written books of the numerous colonies established by the Romans in Italy, and subsequently in all parts of the Empire, we have the testimony of medals and inscriptions,

in which COL, the abbreviation of colonia, indicates this fact. The prodigious activity of Rome in settling colonies in Italy is apparent from the list given by Frontinus,² most of which appear to have been old towns, which were either walled when the colony was founded, or strengthened by new defences.

Colonies were sometimes established under the Empire with circumstances of great oppression, and the lands were assigned to the veterans without strict regard to existing rights.

Under the emperors, all legislative authority being then virtually in them, the foundation of a colony was an act of imperial grace, and often merely a title of honour conferred on some favoured spot. Thus M. Aurelius raised to the rank of colonia the small town (vicus) of Halale, at the foot of Taurus, where his wife Faustina died.³ The old military colonies were composed of whole legions, with their tribunes and centurions, who, being united by mutual affection, composed a political body (*respublica*); and it was a complaint in the time of Nero, that soldiers, who were strangers to one another, without any head, without any bond of union, were suddenly brought together on one spot, "*numerus magis quam colonia*."⁴ And on the occasion of the mutiny of the legions in Pannonia, upon the accession of Tiberius, it was one ground of complaint, that the soldiers, after serving thirty or forty years, were separated, and dispersed in remote parts; where they received, under the name of a grant of lands (*per nomen agrorum*), swampy tracts and barren mountains.⁵

It remains briefly to state what was the internal constitution of a colonia.

In the later times of the Republic, the Roman state consisted of two distinct organized parts, Italy and the Provinces. "Italy consisted of a great number of republics (in the Roman sense of the term), whose citizens, after the Italian war, became members of the sovereign people. The communities of these citizens were subjects of the Roman people, yet the internal administration of the communities belonged to themselves. This free municipal constitution was the fundamental characteristic of Italy; and the same remark will apply to both principal classes of such constitutions, municipia and colonie. That distinction which made

a place into a *præfectura* is mentioned afterward, and *fora*, *conciliabula*, *castella*, are merely smaller communities, with an incomplete organization."¹ As in Rome, so in the colonies, the popular assembly had originally the sovereign power; they chose the magistrates, and could even make laws.² When the popular assemblies became a mere form in Rome, and the elections were transferred by Tiberius to the senate, the same thing happened in the colonies, whose senates then possessed whatever power had once belonged to the community.

The common name of this senate was *ordo decurionum*; in later times, simply *ordo* and *curia*; the members of it were *decuriones* or *curiales*. Thus, in the later ages, *curia* is opposed to *senatus*, the former being the senate of a colony, and the latter the senate of Rome. But the terms *senatus* and *senator* were also applied to the senate and members of the senate of a colony, both by historians, in inscriptions, and in public records; as, for instance, in the Heracleotic Tablet, which contained a Roman lex. After the decline of the popular assemblies, the senate had the whole internal administration of a city, conjointly with the magistratus; but only a *decurio* could be a magistratus, and the choice was made by the *decuriones*. Augustus seems to have laid the foundation for this practical change in the constitution of the colonies in Italy. All the citizens had the right of voting at Rome, but such a privilege would be useless to most of the citizens, on account of their distance from Rome. Augustus³ devised a new method of voting: the *decuriones* sent the votes in writing, and under seal, to Rome; but the *decuriones* only voted. Though this was a matter of no importance after Tiberius had transferred the elections at Rome from the popular assemblies to the senate, this measure of Augustus would clearly prepare the way for the pre-eminence of the *decuriones*, and the decline of the popular power.

The highest magistratus of a colonia were the *duumviri** or *quattuorviri*, so called, as the number might vary, whose functions may be compared with those of the consulate at Rome before the establishment of the prætorship. The name *duumviri* seems to have been the most common. Their principal duties were the administration of justice, and, accordingly, we find on inscriptions "*Duumviri J. D.*" (*juri dicundo*), "*Quattuorviri J. D.*" They were styled magistratus pre-eminently, though the name magistratus was properly and originally the most general name for all persons who filled similar situations. The name consul also occurs in inscriptions to denote this chief magistracy; and even dictator and prætor occur under the Empire and under the Republic. The office of the *duumviri* lasted a year. Savigny shows that under the Republic the jurisdiction of the *duumviri* in civil matters was unlimited, and that it was only under the Empire that it was restricted in the manner which appears from the extant Roman law.

In some Italian towns there was a *præfectus juri dicundo*; he was in the place of, and not coexistent with, *duumviri*. The *duumviri* were, as we have seen, originally chosen by the people; but the *præfectus* was appointed annually in Rome,⁴ and sent to the town called a *præfectura*, which might be either a municipium or a colonia, for it was only in the matter of the *præfectus* that a town called a *præfectura* differed from other Italian towns. Arpinum is called both a municipium and a *præfectura*;⁵ and Cicero, a native of this place, obtained the highest honours that Rome could confer.

1. (Rasche, *Lexicon Rei Numaricæ*.)—2. (De *Coloniis*.)—3. (Jul. Capitol., *M. Ant. Philus*, c. 26.)—4. (Tacit., *Ann.*, xiv, 27.)—5. (Tacit., *Ann.*, i, 17.)

1. (Savigny.)—2. (Cic., *De Leg.*, iii., 16.)—3. (Sueton., c. 46.)—4. (Cic., *Agr. Leg.*, ii., 34.)—5. (Liv., xxvi., 16.)—6. (Cic., *Ep. ad Fam.*, xiii., 11.—Festus, s. v. *Præfectura*.)

The censor, curator, or quinquennalis, all which names denote the same functionary, was also a municipal magistrate, and corresponded to the censor at Rome, and in some cases, perhaps, to the *quaestor* also. Censors are mentioned in Livy¹ as magistrates of the twelve Latin colonies. The quinquennales were sometimes *duumviri*, sometimes *quattuorviri*; but they are always carefully distinguished from the *duumviri* and *quattuorviri* J. D.; and their functions are clearly shown by Savigny to have been those of censors. They held their office for one year, and during the four intermediate years the functions were not exercised. The office of censor or quinquennalis was higher in rank than that of the *duumviri* J. D., and it could only be filled by those who had discharged the other offices of the municipality.

For a more complete account of the organization of these municipalities, and of their fate under the Empire, the reader is referred to an admirable chapter in Savigny,² from which the above brief notice is taken.

The terms *municipium* and *municipes* require explanation in connexion with the present subject, and the explanation of them will render the nature of a *præfectura* still clearer. One kind of *municipium* was a body of persons who *were not*³ Roman citizens, but possessed all the rights of Roman citizens except the *suffragium* and the honores. But the communities enumerated as examples of this kind of *municipium* are the *Fundani*, *Formiani*, *Cumani*, *Acerrani*, *Lanuvini*, and *Tusculani*, which were conquered states,⁴ and received the *civitas* without the *suffragium*; and all these places received the complete *civitas* before the social war, or, as Festus expresses it, "*Post aliquot annos cives Romani effecti sunt.*" It is singular that another ancient definition of this class of *municipia* says, that the persons who had the rights of Roman citizens, except the honores, *were* *cives*; and among such communities are enumerated the *Cumani*, *Acerrani*, and *Atellani*. This discrepancy merely shows that the later Roman writers used the word *civis* in a very loose sense, which we cannot be surprised at, as they wrote at a time when these distinctions had ceased. Another kind of *municipium* was, when a *civitas* was completely incorporated with the Roman state; as in the case of the *Anagnini*,⁵ *Cærites*, and *Aricini*, who completely lost all internal administration of their cities; while the *Tusculani* and *Lanuvini* retained their internal constitution, and their magistrate called a dictator. A third class of *municipia* was those whose inhabitants possessed the full privileges of Roman citizens, and also the internal administration of their own cities, as the *Tiburtes*, *Prænestini*, *Pisani*, *Urbinate*, *Nolani*, *Boionenses*, *Placentini*, *Nepesini*, *Sutirni*, and *Lucrinenses* (*Lucenses*?). The first five of these were *civitates sociorum*, and the second five *coloniæ Latinae*; they all became *municipia*, but only by the effect of the *Julia Lex*, B.C. 90.

It has also been already said that a *præfectura* was so called from the circumstance of a *præfectus* J. D. being sent there from Rome. Those towns in Italy were called *præfecturæ*, says Festus, "*In quibus et jus dicebatur et nundinae agebantur, et erat quædam earum respublica, neque tamen magistratus suos habebant; in quas legibus præfecti mittebantur quotannis, qui jus dicerent.*" Thus a *præfectura* had a *respublica*, but no magistratus. He then makes two divisions of *præfecturæ*. To the first division were sent four *præfecti* chosen at Rome (*populi suffragio*); and he enumerates ten

places in Campania to which these *quattuorviri* were sent, and among them *Cumæ* and *Acerra*, which were *municipia*; and *Volturnum*, *Liternum*, and *Puteoli*, which were Roman colonies established after the second Punic war. The second division of *præfecturæ* comprised those places to which the *prætor urbanus* sent a *præfectus* every year, namely, *Fundi*, *Formiæ*, *Cære*, *Venafrum*, *Allifæ*, *Privernum*, *Anagnia*, *Fusinus*, *Reate*, *Saturnia*, *Nursia*, *Arpinum*, *Aliaque complura*. Only one of them, *Saturnia*, was a colony of Roman citizens;¹ the rest are *municipia*. It is the conclusion of Zumpt, that all the *municipia* of the older period, that is, up to the time when the complete *civitas* was given to the *Latini* and the *socii*, were *præfecturæ*, and that some of the colonies of Roman citizens were also *præfecturæ*. Now as the *præfectus* was appointed for the purpose of administering justice (*juri dicundo*), and was annually sent from Rome, it appears that this was one among the many admirable parts of the Roman polity for maintaining harmony in the whole political system by a uniformity of law and procedure. The name *præfectura* continued after the year B.C. 90; but it seems that, in some places at least, this functionary ceased to be sent from Rome, and various *præfecturæ* acquired the privilege of having magistrates of their own choosing, as in the case of *Puteoli*, B.C. 63.² The first class or kind of *præfecti*, the *quattuorviri* who were sent into Campania, was abolished by Augustus, in conformity with the general tenour of his policy, B.C. 13. After the passing of the *Julia Lex de Civitate*, the cities of the *socii* which received the Roman *civitas* still retained their internal constitution; but, with respect to Rome, were all included under the name of *municipia*: thus *Tibur* and *Præneste*, which were *Latinae civitates*, then became Roman *municipia*. On the other hand, *Bononia* and *Luca*, which were originally *Latinae coloniæ*, also became Roman *municipia* in consequence of receiving the Roman *civitas*, though they retained their old colonial constitution and the name of *colonia*. Thus *Cicero*³ could with propriety call *Placentia* a *municipium*, though in its origin it was a *Latin colonia*; and in the oration *Pro Sexto*,⁴ he enumerates *municipia*, *coloniæ*, and *præfecturæ* as the three kinds of towns or communities under which were comprehended all the towns of Italy. The testimony of the *Heracleotic tablet* is to the like effect; for it speaks of *municipia*, *coloniæ*, and *præfecturæ* as the three kinds of places which had a magistratus of some kind, to which enumeration it adds *fora* and *conciabula*, as comprehending all the kinds of places in which bodies of Roman citizens dwelt.

It thus appears that the name *municipium*, which originally had the meanings already given, acquired a narrower import after B.C. 90, and in this narrower import signified the *civitates sociorum* and *coloniæ Latinae*, which then became complete members of the Roman state. Thus there was then really no difference between these *municipia* and the *coloniæ*, except in their historical origin, and in their original internal constitution. The Roman law prevailed in both.

The following recapitulation may be useful: The old Roman colonies (*civium Romanorum*) were placed in conquered towns, and the colonists continued to be Roman citizens. These colonies were near Rome, and few in number. Probably some of the old *Latinae coloniæ* were established by the Romans in conjunction with other Latin states (*Antium*). After the conquest of *Latium*, *Latinae coloniæ* were established by the Romans in various parts of Italy.

1. (xxix., 15.).—2. (Geschichte des Röm. Rechts, &c., i., 16, &c.)—3. (Festus, s. v. *Municipium*).—4. (Liv., viii., 14.)—5 (Liv., ix., 23.)

1. (Liv., xxxix., 55.).—2. (Cic., De Leg. Agr., ii., c. 31.).—3. (in Pis., c. 23.).—4. (c. 14.)

These colonies should be distinguished from the colonies civium Romanorum, inasmuch as they are sometimes called *coloniæ populi Romani*, though they were not *coloniæ civium Romanorum*.¹ Roman citizens who chose to join such colonies, gave up their civic rights for the more solid advantage of a grant of land.

When Latin colonies began to be established, few Roman colonies were founded until after the close of the second Punic war (B.C. 201), and these few were chiefly maritime colonies (*Ansur*, &c.). These Latin colonies were subject to and part of the Roman state; but they had not the *civitas*: they had no political bond among themselves; but they had the administration of their internal affairs. As to the origin of the commercium, Savigny's conjecture has been already stated. (*Vid. Civitas*.) The colonies of the Gracchi were Roman colonies; but their object, like that of subsequent Agrarian laws, was merely to provide for the poorer citizens: the old Roman and the Latin colonies had for their object the extension and conservation of the Roman Empire in Italy. After the passing of the *Lex Julia*, which gave the *civitas* to the socii and the Latin colonies, the object of establishing Roman and Latin colonies ceased; and military colonies were thenceforward settled in Italy, and, under the emperors, in the provinces. These military colonies had the *civitas*, such as it then was; but their internal organization might be various.

It would require more space than is consistent with the limits of this work to attempt to present anything like a complete view of this interesting subject. The following references, in addition to those already given, will direct the reader to abundant sources of information: Sigonius, *De Jure Antiquo*, &c.; Niebuhr, *Roman History*; Savigny, *Ueber das Jus Italicum*, *Zeitschr.*, vol. v.; *Tabula Heracleenses*. Mazochi, Neap., 1754; Savigny, *Der Römische Volksschluss der Tafel von Heraclea*; and Rudorff, *Ueber die Lex Mamilia de Colonis*, *Zeitschr.*, vol. ix.; Rudorff, *Das Ackergesetz von Sp. Thorius*, and Puchta, *Ueber den Inhalt der Lex Rubria de Galia Cisalpina*, *Zeitschr.*, vol. x.

Since this article was written, and after part of it was printed, the author has had the opportunity of reading two excellent essays: *De Jure et Conditione Coloniarum Populi Romani Quæstio historica*, Madvigii *Opuscula*, *Havnia*, 1834; and *Ueber den Unterschied den Benennungen Municipium, Colonia, Praefectura*, Zumpt, Berlin, 1840. With the help of these essays, he has been enabled to make some important additions. But the subject is incapable of a full exposition within narrow limits, as the historical order is to a certain extent necessary, in order to present a connected view of the Roman colonial system. The essay of Madvig has established beyond all dispute several most important elements in this inquiry; and, by correcting the errors of several distinguished writers, he has laid the foundation of a much more exact knowledge of this part of the Roman polity.

GREEK COLONIES. The usual Greek words for a colony are *ἀποικία* and *κληρονομία*. The latter word, which signified a division of conquered lands among Athenian citizens, and which corresponds in some respects to the Roman *colonia* and our notions of a modern colony, is explained in the article *ΚΛΗΡΟΥΣΙΑ*.

The earlier Greek colonies, called *ἀποικίαι*, were usually composed of mere bands of adventurers, who left their native country, with their families and property, to seek a new home for themselves. Some of the colonies, which arose in consequence of foreign invasion or civil wars, were undertaken

without any formal consent from the rest of the community; but usually a colony was sent out with the approbation of the mother-country, and under the management of a leader (*οἰκιστής*) appointed by it. But whatever may have been the origin of the colony, it was always considered, in a political point of view, independent of the mother-country (called by the Greeks *μητρόπολις*), and entirely emancipated from its control. At the same time, though a colony was in no political subjection to its parent state, it was united to it by the ties of filial affection; and, according to the generally received opinions of the Greeks, its duties to the parent state corresponded to those of a daughter to her mother.¹ Hence, in all matters of common interest, the colony gave precedence to the mother state; and the founder of the colony (*οἰκιστής*), who might be considered as the representative of the parent state, was usually worshipped, after his death, as a hero.² Also, when the colony became in its turn a parent, it usually sought a leader for the colony which it intended to found from the original mother-country;³ and the same feeling of respect was manifested by embassies which were sent to honour the principal festivals of the parent state,⁴ and also by bestowing places of honour and other marks of respect upon the ambassadors and other members of the parent state, when they visited the colony at festivals and similar occasions.⁵ The colonists also worshipped in their new settlement the same deities as they had been accustomed to honour in their native country; the sacred fire, which was constantly kept burning on their public hearth, was taken from the Prytæneum of the parent city; and, according to one account, the priests who ministered to the gods in the colony were brought from the parent state.⁶ In the same spirit, it was considered a violation of sacred ties for a mother-country and a colony to make war upon one another.⁷

The preceding account of the relations between the Greek colonies and the mother-country is supported by the history which Thucydides gives us of the quarrel between Corcyra and Corinth. Corcyra was a colony of Corinth, and Epidamnus a colony of Corcyra; but the leader (*οἰκιστής*) of Epidamnus was a Corinthian, who was invited from the metropolis Corinth. In course of time, in consequence of civil dissensions and attacks from the neighbouring barbarians, the Epidamnians apply for aid to Corcyra, but their request is rejected. They next apply to the Corinthians, who took Epidamnus under their protection, thinking, says Thucydides, that the colony was no less theirs than the Corcyraeans'; and also induced to do so through hatred of the Corcyraeans, because they neglected them though they were colonists; for they did not give to the Corinthians the customary honours and deference in the public solemnities and sacrifices that the other colonies were wont to pay to the mother-country. The Corcyraeans, who had become very powerful by sea, took offence at the Corinthians receiving Epidamnus under their protection, and the result was a war between Corcyra and Corinth. The Corcyraeans sent ambassadors to Athens to ask assistance; and in reply to the objection that they were a colony of Corinth, they said "that every colony, as long as it is treated kindly, respects the mother-country; but when it is injured, is alienated from it; for colonists are not sent out as subjects, but that they may have equal rights with those that remain at home."⁸

1. (Dionys. Hal., Ant. Rom., iii., 7.—Polyb., xii., 10, § 3.—2. (Herod., vi., 38—Thucyd., v., 11.—Diod. Sic., xi., 66; xi., 102.)—3. (Thucyd., i., 24.)—4. (Diod. Sic., xii., 30.—Wesseling, ad loc.)—5. (Thucyd., i., 25.)—6. (Schol. ad Thucyd., i., 25.—Compare Tacit., Ann., ii., 54.)—7. (Herod., viii., 22.—Thucyd., i., 38.)—8. (Thucyd., i., 34.)

1. (Liv., xxvii., 9; xxix., 15.)

It is true that ambitious states, such as Athens, sometimes claimed dominion over other states on the ground of relationship; but, as a general rule, colonies may be regarded as independent states, attached to their metropolis by ties of sympathy and common descent, but no farther. The case of Potidæa, to which the Corinthians sent annually the chief magistrates (*δημοπορτοί*), appears to have been an exception to the general rule.¹

COLORES. The Greeks and Romans had a very extensive acquaintance with colours as pigments. Book vii. of Vitruvius, and several chapters of books xxxiii., xxxiv., and xxxv. of Pliny's Natural History, contain much interesting matter upon their nature and composition; and these works, together with what is contained in book v. of Dioscorides, and some remarks in Theophrastus,² constitute the whole of our information of any importance upon the subject of ancient pigments. From these sources, through the experiments and observations of Sir Humphrey Davy³ on some remains of ancient colours and paintings in the baths of Titus and of Livia, and in other ruins of antiquity, we are enabled to collect a tolerably satisfactory account of the colouring materials employed by the Greek and Roman painters.

The painting of the Greeks is very generally considered to have been inferior to their sculpture; this partially arises from very imperfect information, and a very erroneous notion respecting the resources of the Greek painters in colouring. The error originated apparently with Pliny himself, who says, "*Quatuor coloribus solis immortalia illa opera fecere, ex albis Melino, ex silaccis Attico, ex rubris Sinopide Pontica, ex nigris atramento, Apelles, Echion, Melanthius, Nicomachus, clarissimi pictores;*" and "*Legentes meminerint omnia ea quatuor coloribus facta.*" This mistake, as Sir H. Davy has supposed, may have arisen from an imperfect recollection of a passage in Cicero,⁴ which, however, directly contradicts the statement of Pliny: "*In pictura Zeuxim et Polygnotum, et Timanthen, et eorum, qui non sunt usi plusquam quatuor coloribus, formas et lineamenta laudamus: at in Echione, Nicomacho, Protogene, Apelle jam perfecta sunt omnia.*" Here Cicero extols the design and drawing of Polygnotus, Zeuxis, and Timanthes, and those who used but four colours; and observes in contradistinction, that in Echion, Nicomachus, Protogenes, and Apelles, all things were perfect. But the remark of Pliny, that Apelles, Echion, Melanthius, and Nicomachus used but four colours, including both black and white to the exclusion of all blue (unless we understand by "*ex nigris atramento*" black and indigo), is evidently an error, independently of its contradiction to Cicero; and the conclusion drawn by some from it and the remark of Cicero, that the early Greek painters were acquainted with but four pigments, is equally without foundation. Pliny himself speaks of two other colours, besides the four in question, which were used by the earliest painters; the *testa-trita*⁵ and *cinnabaris* or vermillion, which he calls also minium.⁶ He mentions also⁷ the Eretrian earth used by Nicomachus, and the *elephantium*, or ivory-black, used by Apelles,⁸ thus contradicting himself when he asserted that Apelles and Nicomachus used but four colours. The above tradition, and the *simplex color* of Quintilian,⁹ are our only authorities for defining any limits to the use of colours by the early Greeks as applied to painting; but we have no authority whatever for supposing that they were limited in

any remarkable way in their acquaintance with them. That the painters of the earliest period had not such abundant resources in this department of art as those of the later, is quite consistent with experience, and does not require demonstration, but to suppose that they were confined to four pigments, is quite a gratuitous supposition, and is opposed to both reason and evidence. (*Vid. PICTURA.*)

Sir H. Davy also analyzed the colours of the so-called "Aldobrandini marriage," all the reds and yellows of which he discovered to be ochres; the blues and greens, to be oxides of copper; the blacks, all carbonaceous; the browns, mixtures of ochres and black, and some containing oxide of manganese; the whites were all carbonates of lime.

The reds discovered in an earthen vase containing a variety of colours were, red oxide of lead (*minium*), and two iron ochres of different tints, a dull red, and a purplish red nearly of the same tint as prussiate of copper; they were all mixed with chalk or carbonate of lime. The yellows were pure ochres with carbonate of lime, and ochre mixed with minium and carbonate of lime. The blues were oxides of copper with carbonate of lime. Sir H. Davy discovered a frit, made by means of soda, and coloured with oxide of copper, approaching ultramarine in tint, which he supposed to be the frit of Alexandria; its composition, he says, was perfect: "that of embodying the colour in a composition resembling stone, so as to prevent the escape of elastic matter from it, or the decomposing action of the elements; this is a species of artificial lapis-lazuli, the colouring matter of which is naturally inherent in a hard silicious stone."

Of greens there were many shades, all, however, either carbonate or oxide of copper, mixed with carbonate of lime. The browns consisted of ochres calcined, and oxides of iron and of manganese, and compounds of ochres and blacks. Sir H. Davy could not ascertain whether the lake which he discovered was of animal or of vegetable origin; if of animal, he supposed that it was very probably the Tyrian or marine purple. He discovered also a colour which he supposed to be black wad, or hydrated binocide of manganese; also, a black colour composed of chalk, mixed with the ink of the sepia officinalis, or cuttle-fish. The transparent blue glass of the ancients he found to be stained with oxide of cobalt, and the purple with oxide of manganese.

The following list, compiled from the different sources of our information concerning the pigments known to the ancients, will serve to convey an idea of the great resources of the Greek and Roman painters in this department of their art; and which, in the opinion of Sir H. Davy, were fully equal to the resources of the great Italian painters in the sixteenth century:

Red. The ancient reds were very numerous. *Κιννάβαρι, μίλτος, cinnabaris*, cinnabar, vermillion, bisulphuret of mercury, called also by Pliny and Vitruvius *minium*.

The *κιννάβαρι Ἰνδικόν, cinnabaris Indica*, mentioned by Pliny and Dioscorides, was what is vulgarly called dragon's-blood, the resin obtained from various species of the *calamus palm*.

Μίλτος seems to have had various significations; it was used for *cinnabaris*, *minium*, red lead, and *rubrica*, red ochre. There were various kinds of *rubrica*, the Cappadocian, the Egyptian, the Spanish, and the Lemnian; all were, however, red iron oxides, of which the best were the Lemnian, from the isle of Lemnos, and the Cappadocian, called by the Romans *rubrica Sinopica*, by the Greeks *Σινωπίς*, from Sinope in Paphlagonia, whence it was first brought. There was also an African *rubrica* called *cicrculum*.

1. (Thucyd., i., 56.)—2. (De Lapidibus.)—3. (Phil. Trans. of the Royal Society, 1815.)—4. (xxxv., 32.)—5. (xxxv., 36.)—6. (Brutus, c. 18.)—7. (xxxv., 5.)—8. (xxxviii., 36.)—9. (xxxv., 31.)—10. (xxxv., 25.)—11. (Orat. Inst., xii., 10.)

Minium, red oxide of lead, red lead, was called by the Romans *cerussa usta*, and, according to Vitruvius, *sandaracha*; by the Greeks, *μύλος*, and, according to Dioscorides,¹ *σανδαράκη*. Pliny tells us that it was discovered through the accidental calcination of some *cerussa* (white lead) by a fire in the Piræus, and was first used as a pigment by Nicias of Athens, about 330 B.C.

The Roman *sandaracha* seems to have had various significations, and it is evidently used differently by the Greek and Roman writers. Pliny speaks of different shades of *sandaracha*, the pale or massicot (yellow oxide of lead), and a mixture of the pale with minium; it apparently also signified realgar or the red sulphuret of arsenic: there was also a compound colour of equal parts of *sandaracha* and *rubrica* calcined, called *sandyx*, *σάνδυξ*. Sir H. Davy supposed this colour to approach our crimson in tint; in painting it was frequently glazed with purple, to give it additional lustre.

Pliny speaks of a dark ochre from the isle of Syros, which he calls *Syricum*; but he says also that it was made by mixing *sandyx* with *rubrica* Sinopica.

YELLOW. Yellow ochre, hydrated peroxide of iron, the *sil* of the Romans, the *όχρα* of the Greeks, formed the base of many other yellows, mixed with various colours and carbonate of lime. Ochre was procured from different parts; the Attic was considered the best; it was first used in painting, according to Pliny, by Polygnotus and Micon, at Athens, about 460 B.C.

Ἀρσενικόν, *auripigmentum*, orpiment (yellow sulphuret of arsenic), was also an important yellow; but it has not been discovered in any of the ancient paintings. (*Vid. ARSENICON.*) The *sandaracha* has been already mentioned.

GREEN. *Chrysocolla*, *χρυσόκολλα*, which appears to have been green carbonate of copper or malachite (green verditer), was the green most approved of by the ancients; its tint depended upon the quantity of carbonate of lime mixed with it.

Pliny mentions various kinds of verdigris (diacetate of copper), *arugo*, *λός*, *λὸς χαλκοῦ*, *cypria arugo*, and *arucia*, and a particular preparation of verdigris called *solecia*. Sir H. Davy supposes the ancients to have used, also, acetate of copper (distilled verdigris) as a pigment. Besides the above were several green earths, all cupreous oxides: *Theodotium* (*Θεοδότιον*), so called from being found upon the estate of Theodotus, near Smyrna; *Appianum*; and the *creta viridis*, common green earth of Verona.

BLUE. The ancient blues were also very numerous; the principal of these was *cæruleum*, *κύανος*, azure, a species of verditer or blue carbonate of copper, of which there were many varieties. It was generally mixed with carbonate of lime. Vitruvius and Pliny speak of the Alexandrian, the Cyprian, and the Seythian; the Alexandrian was the most valued, as approaching nearest to ultramarine. It was made also at Pozzuoli by a certain Vestorius, who had learned the method of its preparation in Egypt; this was distinguished by the name of *cælon*. There was also a washed *cæruleum* called *tomentum*, and an inferior description of this called *tritum*.

It appears that ultramarine (lapis-lazuli) was known to the ancients under the name of *Armenium*, *Ἀρμένιον*, from Armenia, whence it was procured. Sulphuret of sodium is the colouring principle of lapis-lazuli, according to M. Gmelin of Tübingen.

Indigo, *Indicum*, *Ἰνδικόν*, was well known to the ancients.

Cobalt. The ancient name for this mineral is

not known; but it has been supposed to be the *χαλκός* of Theophrastus, which he mentions was used for staining glass. No cobalt, however, has been discovered in any of the remains of ancient painting.

PURPLE. The ancients had also several kinds of purple, *purpurissum*, *ostrum*, *hyssinum*, and various compound colours. The most valuable of these was the *purpurissum*, prepared by mixing the *creta argenteria* with the purple secretion of the *murex* (*πορφύρα*).

Hyssinum, *ύσγινον* (*ύσγη*, woad?), according to Vitruvius, is a colour between scarlet and purple.

The Roman *ostrum* was a compound of red ochre and blue oxide of copper.

Vitruvius mentions a purple which was obtained by cooling the *ochra usta* with wine vinegar.

Rubie radix, madder-root.

BROWN. *Ochra usta*, burned ochre. The browns were ochres calcined, oxides of iron and of manganese, and compounds of ochres and blacks.

BLACK. *atramentum*, *μίλαν*. The ancient blacks were mostly carbonaceous. The best for the purposes of painting were *elephantinum*, *ελεφάντινον*, ivory-black; and *trygium*, *τρίγινον*, vine-black, made of burned vine twigs. The former was used by Apelles, the latter by Polygnotus and Micon.

The *atramentum Indicum*, mentioned by Pliny and Vitruvius, was probably the Chinese Indian ink. The blacks from sepia, and the black woad, have been already mentioned.

WHITE. The ordinary Greek white was *milium*, *μηλιάς*, an earth from the Isle of Melos; for fresco painting, the best was the African *paratonium*, *παρατόνιον*, so called from the place of its origin on the coast of Africa, not far from Egypt. There was also a white earth of Eretria, and the annularian white, *creta annularia* or *onulæ*, made from the glass composition worn in the rings of the poor.

Carbonate of lead or white lead, *cerussa*, *ψιμίθειον*, was apparently not much used by the ancient painters; it was nowhere found among the Roman ruins.

Sir H. Davy is of opinion that the azure, the red and yellow ochres, and the blacks, have not undergone any change of colour whatever in the ancient fresco paintings; but that many of the greens, which are now carbonate of copper, were originally laid on in a state of acetate.

Pliny divides the colours into *colores floridi* and *colores austeri*; the *colores floridi* were those which, in his time, were supplied by the employer to the painter, on account of their expense, and to secure their being genuine; they were minium, Armenium, cinnabaris, chrysocolla, Indicum, and purpurissum; the rest were the *austeri*.

Both Pliny² and Vitruvius³ class the colours into natural and artificial; the natural are those obtained immediately from the earth, which, according to Pliny, are Sinopis, rubrica, paratonium, melinum, Eretria, and auripigmentum; to these Vitruvius adds ochra, sandarachia, minium (*ecrmilion*), and chrysocolla, being of metallic origin. The others are called artificial, on account of requiring some particular preparation to render them fit for use.

To the above list of colours more names might still be added; but, being for the most part merely compounds or modifications of those already mentioned, they would only take up space, without giving us any additional insight into the resources of the ancient painters; those which we have already enumerated are sufficient to form an infinite variety of colour, and conclusively prove that the ancient painters, if they had not more, had at least equal

resources in this most essential branch of painting with the artists of our own times.

COLOSSUS (κολοσσός). The origin of this word is not known, the suggestions of the grammarians being either ridiculous, or imperfect in point of etymology.¹ It is, however, very ancient, probably of Ionic extraction, and rarely occurs in the Attic writers.² It is used both by the Greeks and Romans to signify a statue larger than life,³ and thence a person of extraordinary stature is termed *colossetos*;⁴ and the architectural ornaments in the upper members of lofty buildings, which require to be of large dimensions in consequence of their remoteness, are termed *colossicitera* (κολοσσικώτερα⁵). Statues of this kind, simply colossal, but not preposterously large, were too common among the Greeks to excite observation rarely from their size, and are, therefore, rarely referred to as such, the word being more frequently applied to designate those figures of gigantic dimensions (*moles statuarum, turribus pares*⁶) which were first executed in Egypt, and of which some specimens may be seen in the British Museum.

Among the colossal statues of Greece, the most celebrated was the bronze *colossus* at Rhodes, dedicated to the sun, which was commenced by Chares of Lindus, a pupil of Lysippus, and terminated, at the expiration of twelve years, by Laches, of the same place, at a cost of 300 talents. Its height was 90 feet according to Hyginus,⁷ 70 cubits according to Pliny, or 105 according to Festus. It was thrown down by an earthquake fifty-six years after its erection.⁸ It is to this statue that Statius refers.⁹

Another Greek colossus, the work of Calamis, which cost 500 talents, and was twenty cubits high, dedicated to Apollo, in the city of Apollonia, was transferred from thence to the Capitol by M. Lucullus.¹⁰ Some fragments in marble, supposed to have belonged to this statue, are still preserved in the courtyard of the Museo Capitolino.

There were two colossal statues in bronze, of Greek workmanship, at Tarentum: one of Jupiter; the other and lesser one of Hercules, by Lysippus, which was transplanted to the Capitol by Fabius Maximus.¹¹

Among the works of this description made expressly by or for the Romans, those most frequently alluded to are the following: 1. A statue of Jupiter upon the Capitol, made by order of Sp. Carvilius, from the armour of the Samnites, which was so large that it could be seen from the Alban Mount.¹² 2. A bronze statue of Apollo at the Palatine Library,¹³ to which the bronze head now preserved in the Capitol probably belonged. 3. A bronze statue of Augustus, in the Forum, which bore his name.¹⁴ 4. The colossus of Nero, which was executed by Zenodorus in marble, and therefore quoted by Pliny in proof that the art of casting metal was then lost. Its height was 110 or 120 feet.¹⁵ It was originally placed in the vestibule of the domus anrea,¹⁶ at the bottom of the Via Sacra, where the basement upon which it stood is still to be seen, and from it the contiguous amphitheatre is supposed to have gained the name of "Colosseum." Twenty-four elephants were employed by Hadrian to remove it, when he was about to build the Temple of Rome.¹⁷ Having

suffered in the fire which destroyed the Golden House, it was repaired by Vespasian, and by him converted into a statue of the Sun.¹ 5. An equestrian statue of Domitian, of bronze gilt, which was placed in the centre of the Forum.²

***COLOTTES** (κολώτης), another name for the *ακαλαβότης*, or Spotted Lizard. (*Vid. ASCALABOTES*.) Aristotle, however, in one part,³ would seem to apply it to some other animal than this. Some have taken it for a bird; while Scaliger rather thinks it was a species of *Scarabæus*.⁴

***COLOUTEA** (κολούτεια), a plant, which has been referred to the genus *Colytea*, L., or Bladder-Senna. Three species are described by Theophrastus, namely, *Ίδαία, περί Λιπάρων, and φρυγανώδης*.⁵

***COLUBER**, a species of Serpent, considered by some to be the same with the *Boas* of Pliny. (*Vid. DRACO*.)

***COLUMBA**, the Pigeon. (*Vid. PERISTERA*.)

COLUM (ἡθύος), a strainer or colander. Various specimens of this utensil have been found at Pompeii. The annexed woodcut shows the plan and profile of one which is of silver.⁶

Wine-strainers (*ἡθύρια*) were also made of bronze,⁷ and their perforations sometimes formed an elegant pattern. The poor used linen strainers;⁸ and, where nicety was not required, they were made of broom or of rushes.⁹ The Romans filled the strainer with ice or snow (*cola nivaria*) in order to cool and dilute the wine at the same time that it was cleared. The bone of the nose, which is minutely perforated for the passage of the olfactory nerves, was called *ἡθύος*, the ethmoid bone, from its exact resemblance to a strainer.

COLUMBARIUM, a Dovecote or Pigeon-house. The word occurs more frequently in the plural number, in which it is used to express a variety of objects, all of which, however, derive their name from their resemblance to a dovecote.

I. In the singular, **COLUMBARIUM** means one of those sepulchral chambers formed to receive the ashes of the lower orders, or dependants of great families; and in the plural, the niches in which the cinerary urns (*olla*) were deposited. Several of these chambers are still to be seen at Rome. One of the most perfect of them, which was discovered in the year 1822, at the villa Rufini, about two miles beyond the Porta Pia, is represented in the annexed woodcut.

Each of the niches contained a pair of urns, with the names of the persons whose ashes they contained inscribed over them. The use of the word, and

mode of occupation, is testified in the following inscription :

L. ABUCIUS HERMES IN HOC
ORDINE AB IMO AD SUMMUM
COLUMBARIA IX. OLLÆ XVIII.
SIBI POSTERISQUE SUIS.

II. In a machine used to raise water for the purpose of irrigation, as described by Vitruvius,² the vents through which the water was conveyed into the receiving trough were termed COLUMBARIA. This will be understood by referring to the woodcut at p. 65. (*Vid. ANTILIA*.) The difference between that representation and the machine now under consideration consisted in the following points: The wheel of the latter is a solid one (*tympanum*) instead of radiated (*rota*), and was worked as a treadmill, by men who stood upon platforms projecting from the flat sides instead of being turned by a stream. Between the intervals of each platform a series of grooves or channels (*columbaria*) were formed in the sides of the tympanum, through which the water taken up by a number of scoops placed on the outer margin of the wheel, like the jars in the cut referred to, was conducted into a wooden trough below (*labrum ligneum suppositum*).³

III. The cavities into which the extreme ends of the beams upon which a roof is supported (*ignorum cubilia*), and which are represented by triglyphs in the Doric order, were termed COLUMBARIA by the Roman architects;⁴ that is, while they remained empty, and until filled up by the head of the beam.⁵

COLUMNA (*κίον, dim. κιονίς, κίωνιον, κιονίσκος, στύλος, dim. στύλις, στύλίσκος*), a Pillar or Column.

The use of the trunks of trees placed upright for supporting buildings, unquestionably led to the adoption of similar supports wrought in stone. Among the agricultural Greeks of Asia Minor, whose modes of life appear to have suffered little change for more than two thousand years, Mr. Fellows observed an exact conformity of style and arrangement between the wooden huts now occupied by the peasantry, of one of which he has given a sketch⁶ (see woodcut),

and the splendid tombs and temples, which were

hewn out of the rock, and constructed at the expense of the most wealthy of the ancient inhabitants. We have also direct testimonies to prove that the ancients made use of wooden columns in their edifices. Pausanias¹ describes a very ancient monument in the market-place at Elis, consisting of a roof supported by pillars of oak. A temple of Juno at Metapontum was supported by pillars made from the trunks of vines.² In the Egyptian architecture, many of the greatest stone columns are manifest imitations of the trunk of the palm.³

As the tree required to be based upon a flat square stone, and to have a stone or tile of similar form fixed on its summit to preserve it from decay, so the column was made with a square base, and was covered with an *abacus*. (*Vid. ABACUS*.) Hence the principal parts of which every column consists are three, the base, the shaft, and the capital.

In the Doric, which is the oldest style of Greek architecture, we must consider all the columns in the same row as having one common base (*podium*), whereas in the Ionic and Corinthian each column has a separate base, called *στειρα*. (*Vid. STIRA*.) The capitals of these two latter orders show, on comparison with the Doric, a yet greater degree of complexity and a much richer style of ornament; and the character of lightness and elegance is farther obtained in them by their more slender shaft, its height being much greater in proportion to its thickness. Of all these circumstances, some idea may be formed by the inspection of the three accompanying specimens of pillars, selected from each of the principal orders of ancient architecture. The first is from a column of the Parthenon at Athens, the capital of which is shown on a larger scale at p. 9. The second is from the temple of Bacchus at Teos, the capital of which is introduced at p. 116. The third is from the remains of the temple of Jupiter at Labranda.

In all the orders, the shaft (*scapus*) tapers from the bottom towards the top, thus imitating the natural form of the trunk of a tree, and at the same time conforming to a general law in regard to the attainment of strength and solidity in all upright bodies. The shaft was, however, made with a slight swelling in the middle, which was called the *entasis*. It was, moreover, almost universally, and from the earliest times, channelled or fluted, i. e., the outside was striped with incisions parallel to the axis.⁴ These incisions, called *striae*, were always worked with extreme regularity. The section of them by a plane parallel to the base was, in the Ionic and Corinthian orders, a semicircle; in

1. (Spon., *Misc. Ant. Erudit.*, ix., p. 287.)—2. (x., 9.)—3. (Vitruv., i. c. 4.)—4. (Vitruv., iv., 2, p. 110, ed. Bipont.)—5. (Marquez, *Dell' Ordine Dorico*, vii., 37.)—6. (*Journal*, p. 234.)

the Doric, it was an arc much less than a semicircle. Their number was 20 in the columns of the Parthenon above represented; in other instances, 24, 28, or 32.

The capital was commonly wrought out of one block of stone, the shaft consisting of several cylindrical pieces fitted to one another. When the column was erected, its component parts were firmly joined together, not by mortar or cement, but by iron cramps fixed in the direction of the axis. The annexed woodcut is copied from an engraving in Swinburne's *Tour in the Two Sicilies*,¹ and represents a Doric column, which has been thrown prostrate in such a manner as to show the capital lying separate, and the five drums of the shaft, each four feet long, with the holes for the iron cramps by which they were united together.

Columns of an astonishing size were nevertheless erected, in which the shaft was one piece of stone. For this purpose it was hewn in the quarry into the requisite form,² and was then rolled over the ground, or moved by the aid of various mechanical contrivances, and by immense labour, to the spot where it was to be set up. The traveller now sometimes views with wonder the unfinished pillars, either occupying their original site in the quarry, or left after having performed one half their journey, while he finds other shafts arranged in their intended position, and consisting each of a single piece of marble, alabaster, porphyry, jasper, or granite, which is either corroded by time, or retains its polish and its varied and beautiful colours, according to the situation in which it has been placed, or the durability of its substance. The mausoleum of the Emperor Adrian, a circular building of such dimensions that it serves as the fortress of modern Rome, was surrounded by forty-eight lofty and most beautiful Corinthian pillars, the shaft of each pillar being a single piece of marble. About the time of Constantine, some of these were taken to support the interior of a church dedicated to St. Paul, which a few years ago was destroyed by fire. The interest attached to the working and erection of these noble columns, the undivided shafts of which consisted of the most valuable and splendid materials, led munificent individuals to employ their wealth in presenting them to public structures. Thus Cræsus contributed the greater part of the pillars to the temple at Ephesus.³ In the ruins at Labranda, now called Jackly, in Caria, tablets in front of the columns record the names of the donors, as is shown in the specimen of them above exhibited.

"The capitals used in the architecture of the Greeks," observes Stuart,⁴ "though with numberless minute variations of ornaments and proportions, arrange themselves into three general classes, and offer the most obvious distinction between the orders. The Doric capital, which preserves more of the primitive type than any other, is extremely plain, but its simplicity is not without beauty. It consists of a broad and massy abacus, an ovolo under the abacus, from three to five fillets under the
